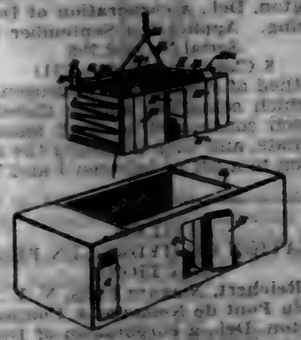
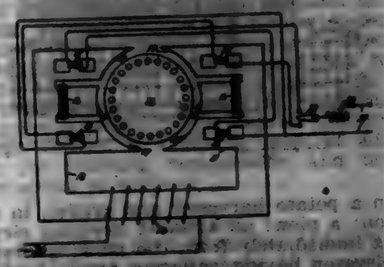
1. A resilient coupling comprising a pair of coupling disks having peripheral slots formed therein, a circular series of parallel members each slidably engaged in slots in both disks and providing a resilient torque transmitting connection between said disks, and a lubricant retaining housing surrounding said disks and tiltable relative to both of them, said members being confined by said housing and tiltable therewith as a unit to thereby effect longitudinal shifting of said members relative to both of said disks in response to misalignment between the disk axes.

2,027,843
TWIN CYLINDER STEAM ENGINE
John M. Shimer, Dallas, Tex., assignor to Wilson-Snyder Manufacturing Corporation, Braddock, Pa., a corporation of Pennsylvania
Application April 9, 1935, Serial No. 15,477
2 Claims. (Cl. 121—194)



1. A twin cylinder engine comprising an integral cylinder block having a pair of cylinders, one cylinder at each end of the block, inlet and outlet manifolds positioned centrally and spaced from each other, control valves between said cylinders and said manifolds and separate spaced connecting passages between said cylinders, valves and manifolds, said passageways having expansion bends to prevent twisting said cylinders out of alinement through unequal expansion of said passageways, a bearing frame having cross-head guideways alined with said cylinders when said cylinder block is at working temperatures, and bolts securing said frames to said cylinder block and being provided with clearance spaces to permit said cylinder block to contract and draw said cylinders out of alinement with said guideways when cooled below working temperatures.

2,027,844
FAN
William K. Sheffield, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application July 3, 1934, Serial No. 733,566
8 Claims. (Cl. 230—256)



1. A fan construction comprising in combination, a supporting frame, a motor having a drive shaft, pivotal supports for said motor in said frame on an axis transverse to the axis of said shaft, a fan blade carrier having an annular track rotatably mounted on an axis transverse to the axes of said shaft and said pivotal supports, driving means secured to said shaft on each side of the axis of said carrier, and means to pivot said motor shaft in said supports for selectively engaging either of said driving means with said track to selectively drive said fan carrier in opposite directions.

2,027,845
REFRIGERATING CABINET
William P. J. Speicher, North East Township, Erie County, Pa., assignor to General Electric Company, a corporation of New York
Application October 31, 1933, Serial No. 695,021
2 Claims. (Cl. 62—89)

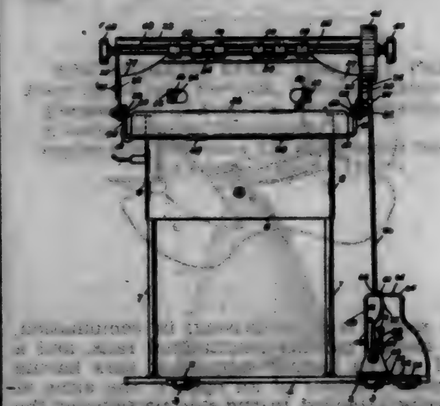
1. In a vehicle body including a refrigerator cabinet having a chamber to be cooled, a metal shell conforming to the walls of said chamber and having one portion formed of a metal of high thermal conductivity and the remaining portion formed of a metal having a high tensile strength, an evaporator comprising a refrigerant conduit secured to the portion of said shell having high thermal conductivity, one of the walls of said cabinet being removable therefrom, and said metal shell and said evaporator being removable bodily from said chamber.

2,027,846
REVERSIBLE SHADED POLE MOTOR
Chauncey G. Suits, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 15, 1934, Serial No. 711,267
8 Claims. (Cl. 172—278)

7. A dynamo electric device having a field structure with a pole split into three portions, means for producing an alternating magnetic field in said field structure, a shading coil on the center portion of said pole, and means for saturating a pole portion at one side of said center pole portion to control said device.

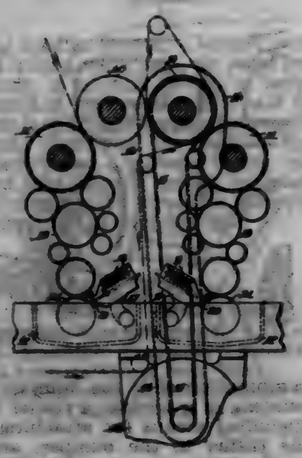
2,027,847
REENFORCE FOR GASKETS
John H. Victor, Evanston, and William A. Heinze, Chicago, Ill., assignors to Victor Manufacturing & Gasket Company, Chicago, Ill., a corporation of Illinois
Application January 17, 1934, Serial No. 706,539
1 Claim. (Cl. 288—1)

A gasket reenforce, comprising a metal sheet having rectangular openings arranged therein, the metal displaced in forming said openings projecting outwardly in the form of prongs in pairs and at opposite ends of the openings, the pairs of prongs projecting alternately upwardly and downwardly, each prong being longer at one side edge than at its other side edge and having an inclined shearing outer end, the high corners of each pair of prongs being located diagonally opposite across the openings, said prongs being twisted to project the high corners thereof over the adjacent edges of the opening in the sheet to aid in penetrating and clinching the gasket material to the reenforce.



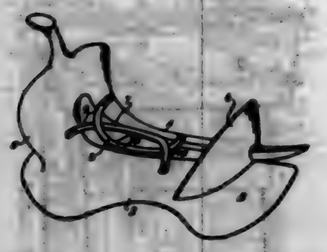
2,027,848
EMERGENCY TRIPPING DEVICE
Donald F. Warner, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application October 2, 1933, Serial No. 43,227
9 Claims. (Cl. 74—3)

1. An emergency tripping device including the combination of a speed responsive element, a combined trigger and tripping post in co-operative relation with said element, and a combined trigger and tripping post spring for maintaining the trigger and tripping post in co-operative relation with said element and for effecting movement of the combined trigger and tripping post in response to movement of said element.



2,027,849
COPYHOLDER
Herman C. Welter, Rochester, N. Y., assignor to The Dawn Mfg. Corp., Rochester, N. Y., a corporation of New York
Application April 16, 1935, Serial No. 16,641
23 Claims. (Cl. 129—39)

1. In a copyholder, the combination with a standard embodying vertical guides and a copy support movable on the guides between a raised operative position and a collapsed inoperative position, of feed rolls cooperating with the support when in operative position to pinch and feed



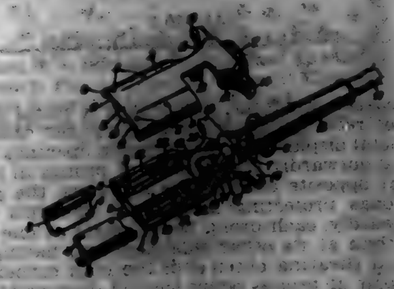
a copy sheet upwardly and rearwardly and means for holding the rolls free of the support when the latter is in inoperative position.

2,027,850
INK FOUNTAIN BACK
Henry A. Wise Wood, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia
Application July 7, 1932, Serial No. 621,213
4 Claims. (Cl. 101—350)

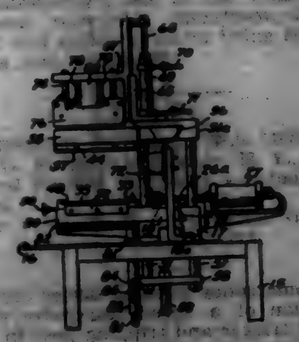
1. In a printing press, the combination with a pair of printing couples and inking mechanisms therefor comprising fountain rolls, of a motor for driving the press located below the inking mechanisms having a connection with the printing couples for driving them, a fountain blade for each of the fountain rolls adapted to be adjusted at different points along its length, a series of plungers for providing the adjustment, and a series of screws for operating said plungers, said screws all extending to the end of the press opposite that at which the motor is located.

2,027,851
SADDLE TREE
Stanley E. Worcester, Phoenix, Ariz.
Application June 4, 1935, Serial No. 24,573
4 Claims. (Cl. 54—44)

1. A saddle tree comprising, in combination, a tree having parallel longitudinal rails, and a pair of stirrup leather supporting bars having the general contour of an open C the arms of each being attached to the side portions of the tree so that the arcuate interconnecting portion extends from the said side of attachment across the opening between the rails toward and above the opposite rail to form a hanger bar to support a stirrup leather depending from the side opposite that of attachment.



2,027,852
TRAILER HITCH CONNECTION
Alexander M. Allan, Bangalow, Ohio.
Application November 5, 1934, Serial No. 751,549
16 Claims. (Cl. 280—33.44)



7. In combination with the bumper and spare wheel mounting of a vehicle, a trailer hitch connection including means for attaching the draw bar of the trailer to the bumper, and bracing means for the bumper connected with the spare wheel mounting.

2,027,853
PLUG CONNECTER
George B. Benander, Taleville, Conn., assignor to The Manowatt Electric Corporation, a corporation of Connecticut
Application May 19, 1934, Serial No. 726,538
4 Claims. (Cl. 173—332)

1. As an article of manufacture, a plug comprising two complementary members of insulating material having bottom and side walls defining a recess provided with a pair of openings at one end for the insertion of terminals, terminal contacts disposed within said recess in alignment with said openings, said contacts having terminal receiving portions adjacent said openings and conductor receiving portions at the opposite ends thereof, reentrant portions in the side walls beginning at a point substantially opposite the conductor receiving ends of said contacts and terminating in outwardly extending arms which provide means for gripping the plug, and strain relieving means between said reentrant portions for a conductor cord connected to said contacts.

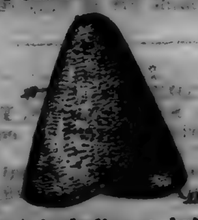
2,027,854
TUBE SPLICER
Walter J. Breth and Max Ziegler, Akron, Ohio, assignors to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application November 14, 1934, Serial No. 753,414
14 Claims. (Cl. 154—9)

1. In an apparatus for splicing tubes, a pair of spaced tube end supporting members, each disposed to support an end of a tube with a portion of the end projecting beyond the same, means for moving one of said members transversely relative to the other to align the ends of the tube with each other, a pair of spaced clamping members, means for moving said clamping members toward said supporting members to clamp the supported ends of the tube against said supporting members, means for severing the projecting ends of the tube, and means for moving the members which clamp one end of the tube toward the other members to bring the ends of the tube into engagement with each other.

2,027,854
PROCESS FOR THE REGENERATION OF CATALYSTS
Ralph Lyman Brown, Syracuse, N. Y., assignor to Atmospheric Nitrogen Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 4, 1932, Serial No. 636,253
6 Claims. (Cl. 23—288)

6. The process for the regeneration of spent tungsten oxide catalysts which are relatively insoluble in aqua ammonia, which comprises dissolving the spent catalyst in a solution of a strong base forming a soluble tungstate with the tungsten oxide, acidifying the solution thus obtained to precipitate tungsten oxide therefrom, dissolving the precipitated tungsten oxide in ammonium hydroxide and acidifying the resulting solution to precipitate therefrom a catalytically active tungsten oxide.

2,027,855
PROCESS FOR PREPARING SUBSTITUTED ALDOLS
Kurt Billig, Frankfort-on-the-Main-Hoechst, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application May 28, 1934, Serial No. 727,587. In Germany June 2, 1933
10 Claims. (Cl. 260—140)



1. In the process of preparing substituted aldols by condensing a homologue of acetaldehyde the step which comprises admixing said homologue with an amine selected from the group consisting of the amines of the aliphatic series and those containing a saturated heterocyclic ring and condensing said homologue in the presence of said amine.

2,027,856
PENCIL STAND
Christian Buehner, Milwaukee, Wis.
Application June 19, 1935, Serial No. 27,328
3 Claims. (Cl. 120—3)

1. In a device of the character described, a base, a coil spring-formed column supported by said base, an extensible article retracting means comprising a series of balls confined within said column, said column being constructed and formed to automatically return to its normal vertical position from a ninety degree bent position of its bottom portion and with the article concurrently gravitating and depending from the free end of the column, the device normally freely supporting the article in suspended position.

2,027,856
REINFORCED EDGE FOR HAT BRIMS
John Cavanagh, Norwalk, Conn., assignor to Hat Corporation of America, South Norwalk, Conn., a corporation of Delaware
Application February 23, 1935, Serial No. 7,696
4 Claims. (Cl. 2—178)

1. A felt hat including a brim having a reenforced edge formed of multiple layers of felt relatively thinner than the brim and a filling of fibrous yarn, all felted together to form an integral welt edge.

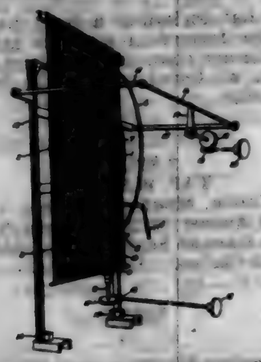
2,027,857
TAP WASHER
Harry Cohen, Montreal, Quebec, Canada
Application August 30, 1934, Serial No. 741,942
In Canada September 1, 1933
2 Claims. (Cl. 251—140)

2. A tap washer having a leather body for engagement with a valve seat, an axial bore in said leather body, a bushing having a flange at each end mounted in said bore, one of said flanges engaging one face of said leather body and the other flange being flush with the opposite face of said leather body, and a rubber facing on the last mentioned face of said leather body and having a central perforation equal in diameter to the interior diameter of said bushing.

2,027,858
ENGINE STARTER
Calvin Cummins, New Brunswick, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a corporation of New York
Application February 27, 1931, Serial No. 518,067
8 Claims. (Cl. 74—9)

1. In combination with a rotatable shaft, a driving member fixed to said shaft, a driven

member slidable on said shaft, a pair of helical springs with the convolutions of one threadedly connected with the convolutions of the other, the outer ends of the springs being respectively connected to said driving member and said driven member, coacting stop elements provided on the inner ends of said springs and disposed in the path of movement of each of other for forming a resilient driving connection between said driving member and said driven member, and coacting catch elements between the innermost convolutions of said springs and said driving member and driven member respectively for temporarily holding said springs against movement when the same are in fully retracted position.



2,027,861

COUPLING COIL

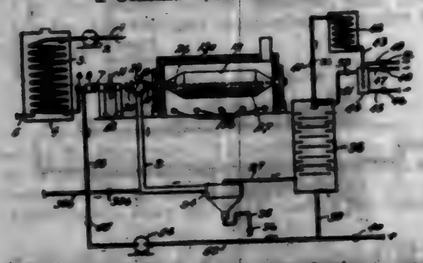
George W. Fyler, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application March 16, 1934, Serial No. 715,463

7 Claims. (Cl. 171—119)

7. The combination of a first coil and a second coil, said first coil comprising a conductor arranged in a single plane, said coils being arranged side by side, and means to rotate a portion of a turn of said first coil about an axis substantially in the plane of said first coil to vary the inductance of said first coil while maintaining the variations of coupling between said coils at a minimum.

2,027,862



PROCESS OF CONVERTING HYDROCARBONS

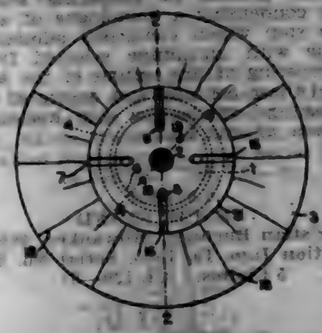
Norris Goodwin, Los Angeles, and Robert Wade Poindexter, Long Beach, Calif., assignors to Industrial Process Company, Los Angeles, Calif., a corporation of California

Application November 26, 1928, Serial No. 321,342

Renewed January 22, 1934

1 Claim. (Cl. 196—69)

A continuous process of producing gasoline from a heavier hydrocarbon oil by super-atmospheric-pressure cracking, which consists in continuously pre-heating a stream of hydrocarbon oil; passing such pre-heated hydrocarbon oil into a receiving still forming a single chamber the diameter of which is at least twice that of the stream while being pre-heated, in order to diminish the velocity of flow through the chamber; subjecting the liquid in the chamber to a cracking temperature in the presence of a quantity of metal balls, the liquid and the balls together continuously filling approximately half of the chamber; continuously withdrawing all the products of cracking in a single stream from a point near the liquid level in the chamber at a rate of from two to three gallons of gasoline and/or two to three pounds of carbon per square foot of heated inner surface of the chamber per hour; whereby to avoid incrustation of the wall of the chamber by reason of the presence of the balls which break up the carbon and keep it in suspension, and the rate of withdrawal being the same as the rate of flow of the pre-heated liquid so that there is maintained in the chamber at all times the said quantity of hydrocarbon oil impregnated with carbon particles to accelerate the cracking action.



2,027,863

VENTILATED BUFFING WHEEL

Ethan Winthrop Hall, Belmont, Mass.

Application August 9, 1933, Serial No. 684,496

7 Claims. (Cl. 51—193)

1. A ventilated buffing wheel formed of a plurality of assembled buffing units having hubs provided with alined apertures, a plurality of annular layers of buffing material fitting upon said hub and secured thereto, integral disks of rigid material forming separator plates interposed between adjacent buffing units having slots communicating with said alined apertures and extending therefrom through the periphery of said separator plates, and means for admitting air to said apertures.

2,027,864

PHASE-SEQUENCE INDICATOR

Arthur R. Hand, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application October 25, 1934, Serial No. 749,989

5 Claims. (Cl. 172—245)

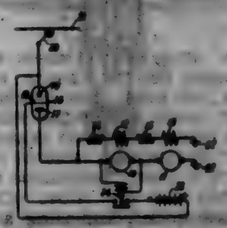
1. A phase-sequence indicator for a polyphase system comprising in combination, a pair of neon

discharge tubes and a condenser connected in Y, said tubes having a critical voltage greater than

$$\left(\frac{\sqrt{3}-1}{2}\right)$$

times the line voltage of the system.

2,027,865



REGENERATIVE BRAKING SYSTEM

Hermann Hernale, Berlin-Lankwitz, Germany, assignor to General Electric Company, a corporation of New York

Application March 1, 1933, Serial No. 659,861

In Germany April 18, 1924

5 Claims. (Cl. 172—179)

1. The combination with a regenerative braking circuit for a motor arranged to return power to a supply circuit, of an electric valve connected between said circuits and normally conductive to current flowing from said regenerative circuit to said supply circuit, and means responsive to a predetermined voltage of said motor for rendering said valve non-conductive.

2,027,866

WEB ROLL TENSIONING DEVICE

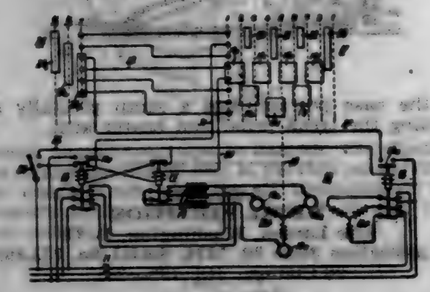
John A. Isbell, Plainfield, and Charles L. Ricards, South Plainfield, N. J., assignors to Wood Newspaper Machinery Corporation, New York, N. Y., a corporation of Virginia

Application March 25, 1931, Serial No. 524,543

6 Claims. (Cl. 242—75)

1. The combination with a rotatable reel for supporting a running roll and a fresh roll for a web delivering machine, of straps supported at their upper ends above the fresh roll, movable means for supporting the lower ends of said straps below the running roll, and means for connecting said movable means with the reel to move therewith but in a direction to increase the wrap around the running roll as that roll is moved toward discharging position.

2,027,867



ELECTRIC MOTOR

Harold F. Jefferson, Rugby, England, assignor to General Electric Company, a corporation of New York

Application May 28, 1934, Serial No. 728,923

In Great Britain June 15, 1933

9 Claims. (Cl. 172—239)

2. In combination an alternating current motor having rotor and stator windings, means for connecting one of said windings to a source and means providing a closed circuit for the other of said windings to provide motoring operation, and means controlled by the operation of said motor for conecting the other of said windings to said source to stop said motor after a predetermined amount of rotation.

2,027,868

METHOD OF TREATING STEEL MAKING SLAGS

Augustus B. Kinzel, Douglaston, N. Y., assignor to Electro Metallurgical Company, a corporation of West Virginia

No Drawing. Application August 17, 1934, Serial No. 740,304

5 Claims. (Cl. 75—46)

1. Method of improving the working characteristics of basic open hearth steel slags which comprises adding to said slags a substantial proportion of zirconium oxide, whereby the fluidity of said slags is permanently increased to a considerable degree while at the same time their cutting action on the hearth and lining of the furnace is decreased.

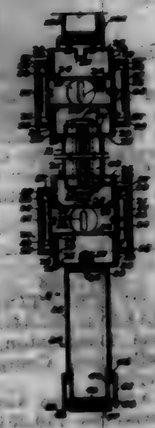
2,027,869

DRUM PEDAL

Frederick J. La Londe, Virginia, Minn., assignor to Gordon E. Thomas and Ernest E. Thomas, both of Virginia, Minn.

Application April 28, 1934, Serial No. 722,978

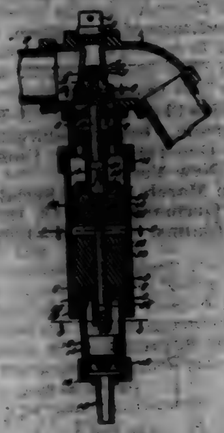
2 Claims. (Cl. 84—422)



1. A foot pedal for drums comprising a base portion, spaced columns extending upwardly from said base portion, a tread pedal pivotally mounted upon said base portion and extending intermediate of said columns, a hub pivotally carried in the upper ends of said columns, a beater arm adjustably carried in said hub, a

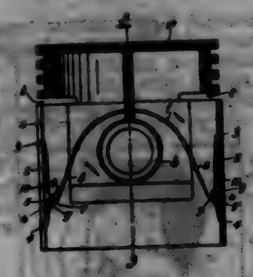
transverse shaft having bent ends and supported in said hub, spring means attached at one end to said bent ends and at the other end

to the base portion, and a strap pivotally attaching the tread pedal and heater arm.



2,027,570
METAL PARTITION
Eric Larsen, Washington, D. C.
Application June 30, 1934, Serial No. 733,295
20 Claims. (Cl. 189—34)

1. In a metal partition, a post unit comprising a pair of spaced posts, vertically spaced U-shaped clips having sides and a base arranged within the space between the posts in the unit and extending transversely of the partition and provided near the ends of the sides and near the base with elements having shoulders, said elements being disposed exteriorly of the posts, and cover strips disposed to extend across the space between the posts and having flanges to engage with the shoulders so that the cover strips may be held in place.



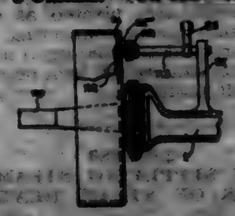
16. In a metal partition, a pair of spaced hollow posts, a partition structure arranged between the posts and connected therewith and including a hollow part, and a fixed electric wire guiding tube constituting a part of the completely assembled partition and extending through the hollow part of the partition structure and having its open ends in communication with the interior of the hollow posts whereby an electric wire may be passed from one hollow post to the other through the tube.

2,027,571
ANGLE COCK
Stephen McKnight, Russell, Ky.
Application April 13, 1935, Serial No. 16,075
4 Claims. (Cl. 303—36)

1. An angle cock comprising a casing, a plug operable in said casing, a cylinder mounted on said casing and having communication therewith, a housing mounted on said cylinder, a stem extending from the plug into said housing, means for releasably locking said stem to the housing, resilient means for disconnecting said locking means, and a fluid operated piston slidably mounted on the stem and operable in the cylinder for engaging the locking means.

2,027,572
PISTON SKIRT EXPANDER
George J. Mueller, St. Louis, Mo., assignor to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo., a corporation of Missouri
Application October 31, 1935, Serial No. 47,604
22 Claims. (Cl. 309—12)

1. A piston skirt expander comprising a U-shaped spring element, and piston engaging shoes hinged to the ends of the spring element, said shoes being provided with skirt gripping means.



2,027,573
BRAKE-EQUALIZING MECHANISM FOR MOTOR VEHICLES
John L. Nail, Danville, Va.
Application March 2, 1934, Serial No. 714,722
5 Claims. (Cl. 188—204)

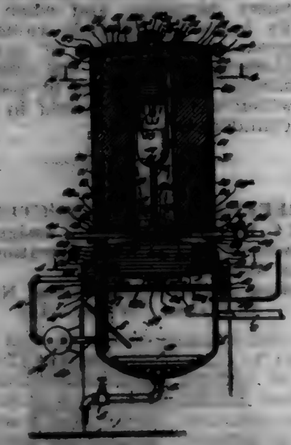
1. Equalizing mechanism of the class described including front and rear brake units having operating members, an equalizer frame provided with side members having front and rear horizontal slots, front and rear slidable equalizing levers operating in said slots and provided at the inner faces of the side members of the frame with stops for retaining the said levers in the slots, means for connecting the ends of the slidable equalizing levers with the operating members of the brake units, a combined guiding and supporting member carried by the said frame and having a horizontal slot at its rear portion and

provided at its front portion with vertical and horizontal slots, a rear pivoted equalizing lever mounted in said rear horizontal slot, a front pivoted and slidable equalizing lever operating in the front horizontal slot and having a pivot slidable in the said vertical slot, means for connecting the pivoted equalizing levers with each other and also with the front and rear slidable equalizing levers, and operating mechanism connected with the front pivoted equalizing lever.

2,027,574
BRAKE SHOE EQUALIZING DEVICE
John L. Nail, Danville, Va.
Application February 4, 1933, Serial No. 4,949
2 Claims. (Cl. 188—79)

1. In combination with a brake drum, brake shoe equalising means comprising a pair of brake shoes, substantially radially arranged levers located at opposite sides of the center of the brake drum and pivotally mounted at their inner ends and each pivoted at its outer end to one of the brake shoes, an operating rock shaft having an arm, an equalizing lever centrally pivoted to the arm of the rock shaft and arranged to be carried through an arc by the rock shaft, a pair of diverging links pivoted at one end to the ends of the equalizing lever and having their other ends located at opposite sides of the center of the brake drums, and means for connecting the last mentioned ends of the diverging links with the brake shoe actuating levers.

2,027,575
PRESSURE GAUGE
Charles J. Odend'hal, Washington, D. C.
Application October 24, 1933, Serial No. 695,122
11 Claims. (Cl. 73—136)



9. A pressure gauge consisting of a tube, a fluid charging connection to the interior of said tube, a support, a second tube having a vacuumized interior, means on said support, a main link pivotally mounted on said bosses, and a connection

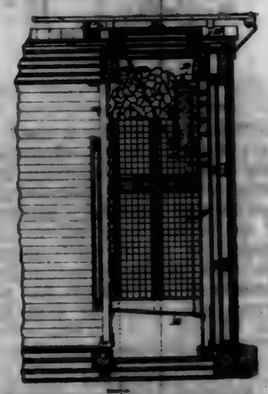
from said link to the second tube, an indicating needle, a quadrant pivotally supported in said main link having one of its ends connected to drive said indicating needle and its other end connected to said first named tube whereby said

second named tube acts to dampen vibrations of the indicating needle and to prevent operation of the needle from changes of temperature and pressure acting upon the exterior of said tube first named.

2,027,576
OIL FILTER
Robert H. Pennebaker, Baton Rouge, La.
Application December 6, 1934, Serial No. 756,338
20 Claims. (Cl. 210—131)

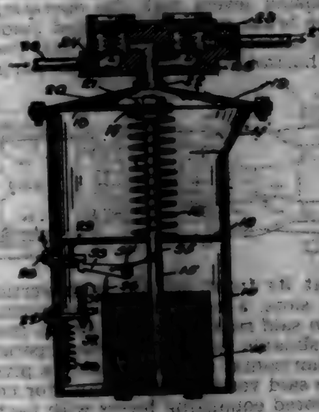
1. An oil filter comprising a used oil receiving reservoir, a primary filtering chamber, a secondary filtering chamber of annular shape, and a final filtering chamber concentrically disposed with respect to said secondary filtering chamber; means for delivering used oil to said used oil receiving reservoir, means for pumping the used oil through said primary, secondary and final filtering chambers, and means for delivering filtered oil from the outlet of said final filtering chamber.

2,027,577
MOTOR COMPRESSOR
Raul Pateras Pescara, Paris, France
Application February 23, 1932, Serial No. 594,174
In France February 23, 1932
30 Claims. (Cl. 230—58)



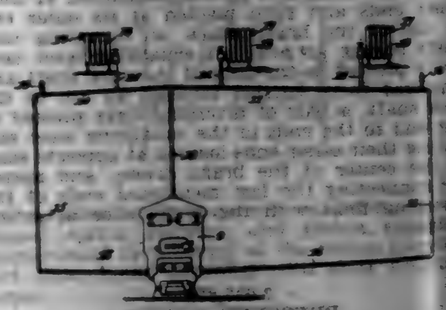
1. A motor compressor of the type described comprising in combination, at least two power

cylinders, at least two pairs of opposed pistons adapted to reciprocate in said cylinders respectively, means for feeding fuel into said cylinders, at least two pairs of compression cylinders adapted to receive the outer ends of said two pairs of pistons respectively, connecting means between the pistons of said two pairs respectively for causing the outward stroke of one pair to imperatively control the inward stroke of the other pair, the dimensions of said parts being so chosen that, when the sum of the energy of the explosive mixture in one power cylinder and of the energy stored in the fluid compressed at the end of the compression stroke in the compression



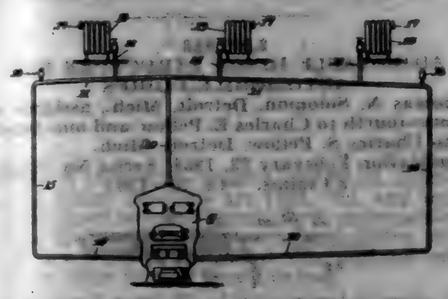
cylinders corresponding to the other cylinder falls down to its lowest admissible value, an accidental decrease in the length of stroke of the pistons causes said energy of the explosive mixture to decrease by an amount at most equal to that by which the energy stored in said compression cylinders decreases, and when said sum reaches its highest admissible value an accidental increase in the length of stroke of the pistons causes said energy of the explosive mixture to increase by an amount at most equal to that by which the energy stored in said compression cylinders decreases.

1,927,578
REFRIGERATOR STRUCTURE
Raymond C. Pierce, Chicago, Ill., assignor to General American Tank Car Corporation, a corporation of West Virginia
Application April 26, 1933, Serial No. 18,461
18 Claims. (Cl. 62—15)



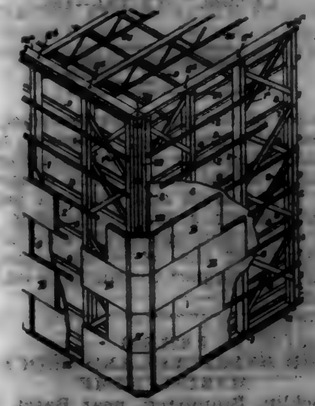
1. In a refrigerating structure, the combination with its ice compartment, of means operating automatically, when the ice in the compartment melts to a predetermined height, to supply salt to the ice.

1,927,579
PUMPING DEVICE
Nicholas F. A. Pisciotano, Weymouth, Mass.
Application November 24, 1934, Serial No. 754,048
Renewed November 2, 1935
6 Claims. (Cl. 103—53)



1. In a device of the kind described, a casing, a pump diaphragm at the top of said casing, a partition across said casing below said diaphragm, a spring between said partition and diaphragm urging the latter away from the partition, a solenoid winding on the opposite side of the partition to said diaphragm, a solenoid core extending through said partition into said solenoid and having fixed connection to said diaphragm, a switch arm pivoted at one side of said core, a snap spring connecting said switch arm to said core and adapted upon movement of the core to shift said switch arm between circuit and non-circuit positions.

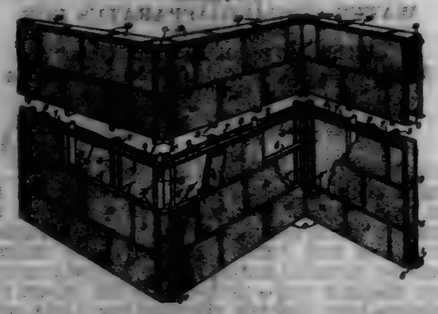
2,027,580
METHOD OF SUPPLYING STEAM TO THE RADIATORS OF STEAM HEATING SYSTEMS
Fred I. Raymond, River Forest, Ill.
Application June 22, 1931, Serial No. 546,128
26 Claims. (Cl. 237—12)



1. The method of supplying steam substantially simultaneously to a plurality of radiators connected with a steam main, which consists in preventing the air from the steam main while maintaining the air in the radiators against escape therefrom, and thereafter venting air from the radiators.

2,027,581
STEAM HEATING SYSTEM
Fred I. Raymond, River Forest, Ill.
Original application June 22, 1931, Serial No. 546,128. Divided and this application August 15, 1932, Serial No. 628,587
22 Claims. (Cl. 237—65)

1. A steam heating system comprising a source of steam, a steam main connected with said source, a plurality of radiators connected with said steam main, and automatically operating means for maintaining any air which may be present in the radiators against escape therefrom until the steam main has become filled with steam.



2,027,582
BUILDING CONSTRUCTION
David E. Rose, La Fayette, Ind., assignor to Restone, Incorporated, La Fayette, Ind., a corporation of Indiana
Application December 7, 1932, Serial No. 701,230
21 Claims. (Cl. 189—1)

1. Structural framing for buildings; comprising a plurality of pre-fabricated spaced vertical wall stud units, each comprising two parallel spaced channel irons and metal K-braces interposed between and rigidly secured to the said irons; and a plurality of parallel wall-block-supporting members attached to and extending across the said units and the spaces between adjacent units except where openings are to be provided.

17. In metal framing for building, a preformed box-ended channel iron stud having the end portion of its web cut from the flanges and turned inwardly between the flanges, and the adjacent end portions of its flanges turned inwardly and overlapping the said inturned web and portion to form a bearing surface for the stud.

2,027,583
BUILDING CONSTRUCTION
David E. Rose, La Fayette, Ind., assignor to Restone, Incorporated, La Fayette, Ind., a corporation of Indiana
Application February 4, 1935, Serial No. 4,963
12 Claims. (Cl. 72—19)

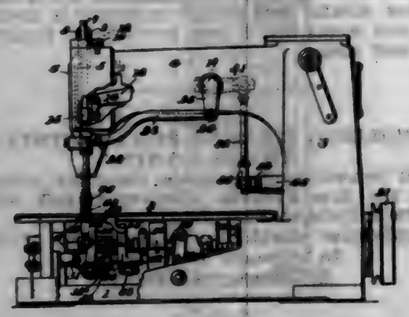
1. In a wall construction; a frame, a horizontal series of spaced parallel pre-fabricated members mounted upon the frame, each member having a portion projecting substantially normal to the wall with spaced wall engaging members thereon; courses of pre-formed blocks seated upon their respective projecting portions and filling the spaces between adjacent members, said blocks having spaced pre-drilled holes in their upper and lower edges adapted to receive the wall engaging members of the projecting portions.

2,027,584
BRUSH
Walford A. Schwab, Chicago, Ill.
Application February 25, 1933, Serial No. 658,613
8 Claims. (Cl. 15—186)

1. As a new article of manufacture, a brush adapted to stimulate the growth of hair by securing maximum pull on the hair in brushing having bristles comprising metallic stems and a rubber sheath, said sheath including a covering for said stems and a base providing a mounting for said stems.

2,027,585
BUILDING ELEMENT FOR CONSTRUCTIONAL GAMES
Oscar Schwarzbach, Bautzen, Germany, assignor to the firm Fraplde Spielwarenfabrik Alfred Krauss, Cologne-Ehrenfeld, Germany
Application March 18, 1935, Serial No. 11,714
In Germany March 6, 1933
7 Claims. (Cl. 46—23)

1. A building element in the form of a C-shaped connecting member for bars, struts, plates and the like in constructional toys, the ends of



the connecting member being formed with slits opening through said ends and said connecting member being formed with projections at the sides of the slits.

2,027,836
WATER COOLING APPARATUS FOR ENGINES
Elbert W. Shall, Lawton, Okla.
Application May 3, 1934, Serial No. 723,784
4 Claims. (Cl. 257—229)

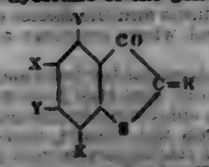
1. A water cooling apparatus of the class described comprising a casing for the passage of air, and a radiator mounted in said casing, said radiator including a U-tube, an intake pipe having one end closed and connected to the bight portion of the U-tube, a plurality of coils encircling the intake pipe and having one end connected thereto and their other ends connected alternately to the legs of the U-tube, and a return pipe connected to the bight portion of said U-tube.

2,027,837
ZIGZAG STITCHING MECHANISM
Clarence C. Smith, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application July 26, 1934, Serial No. 737,122
6 Claims. (Cl. 112—158)

1. A sewing machine including a work support, an overhanging arm, a main actuating shaft beneath the work support, a needle bar mounted on said overhanging arm for reciprocation and for lateral movement, a transverse shaft mounted on said overhanging arm, means for oscillating said shaft from said main actuating shaft, means connected to said oscillating shaft for moving said needle bar laterally, a needle reciprocating lever mounted on said oscillating shaft for free movement thereon, means for connecting said lever to said needle bar, and means for oscillating said lever from said main actuating shaft.

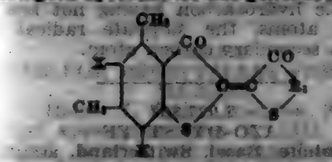
2,027,838
ADJUSTABLE HINGE STRUCTURE FOR AUTOMOBILE BODIES
Thomas N. Solomon, Detroit, Mich., assignor of one-fourth to Charles E. Pellow and one-fourth to Charles S. Pellow, Detroit, Mich.
Application February 22, 1934, Serial No. 712,633
3 Claims. (Cl. 16—130)

1. In a structure of the class described, the combination of a pillar provided with a pocket, a panel over said pocket, a stationary plate within said pocket, an adjustable plate extending through said panel and into said pocket and in engagement with said stationary plate, a door-engaging plate hingedly mounted on said adjustable plate, and means extending through said panel, adjustable plate and stationary plate for holding the same together.



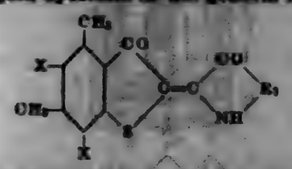
2,027,839
COMBINATION BOOK AND ATTACHING DEVICE
Charles G. Stewart, New York, N. Y.
Application November 16, 1931, Serial No. 575,410
1 Claim. (Cl. 281—15)

In a device of the character described, a loose leaf binder including cover members having a hinged back connection, a hinge barrel extending longitudinally of the hinged back connection at the inner side thereof and adjacent one of the cover members and a pintle extending through the hinge barrel and having its ends projecting from the ends of the barrel and adapted for attachment to a support for the loose leaf binder.



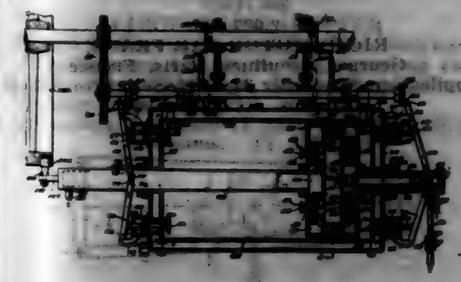
2,027,840
INDIGOID DYESTUFFS AND PROCESS OF MAKING SAME
Ernst Stöcklin, Binningen, near Basel, Switzerland, assignor to "Society of Chemical Industry in Basle", Basel, Switzerland
No Drawing. Application September 18, 1934, Serial No. 743,457. In Switzerland September 22, 1933
13 Claims. (Cl. 260—52)

1. Indigoid dyestuffs of the general formula



wherein X represents halogen, Y methyl and R the radical of an indigoid component, which products are scarlet, pink, red, red-violet, violet, and violet-blue to blue powders, dissolving in concentrated sulfuric acid to green, to blue-green solutions, and dyeing cotton from a yellow, orange to red to violet vat scarlet, pink, red, red-violet, violet and violet-blue to blue tints of good fastness.

3. Indigoid dyestuffs of the general formula



wherein X represents halogen and R_1 an arylene radical, which products are pink, red, and red-violet to violet powders, dissolving in concentrated sulfuric acid to a green solution, and dyeing cotton from a yellow to orange vat pink, red, and red-violet to violet tints of good fastness.

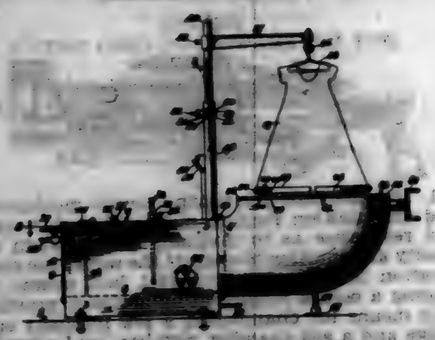
8. Indigoid dyestuffs of the general formula

wherein X represents halogen and R_2 an arylene radical, which products are violet, violet-blue to blue powders, dissolving in concentrated sulfuric acid to a green solution, and dyeing cotton from a yellow vat violet, violet-blue to blue tints of good fastness.

2,027,891
INTERNAL COMBUSTION ENGINE
Edward L. Wallace, Duluth, Minn.
Application July 6, 1934, Serial No. 734,988
7 Claims. (Cl. 123—32)

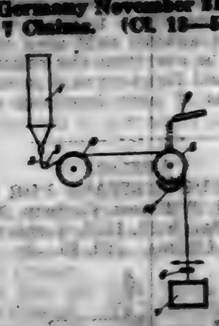
1. In an internal combustion engine of the Diesel type, a cylinder, a piston dividing the cylinder into a pair of combustion chambers, one at each side of the piston, the piston having a chamber, passages connecting the chamber with the combustion chambers, inlet valves for controlling the passages, springs co-operating with the differential pressures between the piston chamber and the combustion chambers for causing closing of the valves, said differential pressures causing opening of said valves, a tube having one end opening into the chamber in the piston, the other end projecting beyond the adjacent end of the cylinder and connected with a source of compressed air.

2,027,892
GUN
David M. Williams, Godwin, N. C.
Application March 19, 1935, Serial No. 11,879
24 Claims. (Cl. 89—3)



1. In a machine gun having breech mechanism and ammunition feeding means of such weight and resistance as to normally require high intensity ammunition to operate the same; the combination of a stationary barrel, bolt means including a bolt, a reciprocating actuator provided with means for chambering a low intensity cartridge and a gas chamber member, said actuator having a gas chamber formed therein communicating with said cartridge chambering means, said gas chamber member being mounted in telescopic relationship with the rear portion of the barrel, the gas chamber member and the barrel being arranged to prevent the escape of expanding gases resulting from the firing of ammunition until after the former has moved a predetermined distance rearwardly, a gas contact area in said gas chamber to initiate movement of the actuator under the influence of the gas, the actuator initiating rearward movement of the bolt, the area of said gas contact surface being predetermined in accordance with the resistance of the moving parts of the gun, the force required to function said means, and the working pressure generated by said low intensity cartridge so that when the said cartridge is fired, the explosion gases will react against said area to produce a force sufficient to overcome the resistance of the moving parts and function said moving parts as satisfactorily as if high intensity ammunition were used.

2,027,893
BELT FEEDING MEANS FOR GUNS
David M. Williams, Godwin, N. C.
Application March 19, 1935, Serial No. 11,880
23 Claims. (Cl. 89—3)



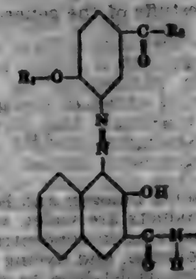
1. In a machine gun for using uniformly spaced belt carried cartridges, a belt feed including a fixed guide and a feed block, a slide mounted in said guide for reciprocating motion, a feed pawl pivoted to said slide and spring urged into engagement with the belt to feed the latter as the slide moves in one direction, and a cam fixed on the feed block and on which said feed pawl travels, said cam being arranged to permit feeding engagement of the feed pawl with the belt for a distance equal to the distance between successive cartridges during movement of the slide in belt feeding direction and to hold the feed pawl out of feeding engagement with the belt during the remainder of the feeding movement of said pawl.

1,027,894
RESIZING AND DRYING MACHINE
Walter Alcorn and Lloyd Hamilter, Columbia, S. C.
Application September 26, 1934, Serial No. 745,442
12 Claims. (Cl. 68—23)

1. A machine of the character described comprising means for holding a garment in an open position, means for discharging sizing into the open garment, and a fan for driving a current of air into the garment, first to aid in depositing the sizing in the interstices of the cloth, second to dry the cloth.

1,027,895
PRODUCTION OF ARTIFICIAL SILK BY THE STRETCH SPINNING PROCESS
Gotthard Baurichel and Ewald Knoke, Barmen, Germany, assignors to American Bemberg Corporation, New York, N. Y.
Application November 12, 1928, Serial No. 318,785
In Germany November 21, 1927
7 Claims. (Cl. 18—54)

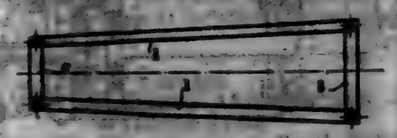
1. A process for the production of artificial thread comprising forming the thread preliminarily by the supramaximum stretch spinning process in a stream of precipitating liquid, then subjecting the thread to a considerable stretching, and winding the thread upon a rigid winding device under reduced tension.



1,027,896
PRODUCTION OF ALKYL SULPHATES OF HIGH MOLECULAR WEIGHT
Heinrich Bertsch, Chemnitz, Germany, assignor to the firm H. Th. Böhme, Aktiengesellschaft, Chemnitz, Germany
No Drawing. Application November 3, 1934, Serial No. 752,243. In Germany November 4, 1929
13 Claims. (Cl. 260—99.13)

1. The production of wetting, dispersing, foaming, and smoothing agents for use in the textile, leather, and other industries consisting in the conversion of unsaturated aliphatic hydrocarbons with not less than 16 carbon atoms into sulphuric esters of the corresponding hydroxy compounds by treating said unsaturated hydrocarbons with mildly acting sulphating means at a temperature not exceeding 8° C.

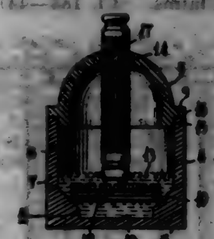
8. As a new compound, the sulphate ester of an aliphatic hydrocarbon having not less than 10 carbon atoms, the sulphate radical being joined at a secondary carbon atom.



1,027,897
AZO-DYESTUFF
Gérald Bonhôte, Basel, Switzerland, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application May 5, 1925, Serial No. 28,679. In Switzerland May 15, 1924
8 Claims. (Cl. 260—96)

1. The dyestuffs of the general formula

in which R_3 stands for an aryl radical of the benzene series, R_2 for an alkyl radical containing not more than two carbon atoms, and R^1 for a radical of the benzene or naphthalene series, which dyestuffs are red powders insoluble in water, but dissolving in pyridine to red-orange solutions, and which dyestuffs when prepared on the fiber, dye the same fast vivid scarlet to red tints.



1,027,898
RIGID MOTOR CAR FRAME
Georges Brouhot, Paris, France
Application November 24, 1931, Serial No. 577,134
4 Claims. (Cl. 280—106)

3. A frame for automobiles, consisting of two tubular longitudinal frame members and two tubular transverse frame members for connecting the longitudinal members with each other adjacent their ends, and means for joining the transverse and longitudinal members, the ends of the transverse and longitudinal members being so formed that the end of one member extends into and lies with its upper and lower exterior surfaces flat against the upper and lower interior surface of the end of the other member, said joining means comprising bolts which extend completely through the interextending portions of said members, and spacing means arranged within said portions and inside said members to prevent crushing the said members by tightening of said bolts, said means being of such

strength and holding the members so rigidly against relative movement as to transmit from member to member the largest torsional stresses which arise in the operation of the automobile, whereby the complete frame is equivalent to a tube-like ring which can resist at all places the largest torsional stresses.

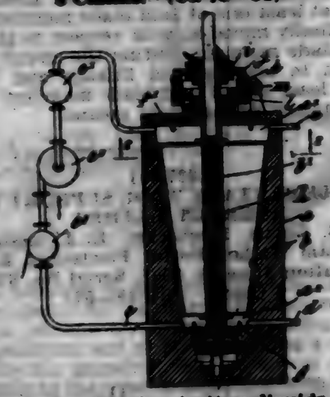
1,027,899
COVER FOR RECEPTACLES FOR SAFETY RAZORS
Homer L. Bruce, Houston, Tex.
Original application May 2, 1932, Serial No. 608,812. Divided and this application November 26, 1934, Serial No. 754,021
1 Claim. (Cl. 206—16)

A detachable lid for a safety razor receptacle or the like, comprising a hollow substantially dome-shaped rigid body having an aperture in its top of such a size as to loosely receive and support a safety razor handle or the like, said lid having an external flange positioned near its lower end and spaced a relatively great distance below its upper end to permit the portion of the lid above the flange to provide a handle for the lid, each of the portions of the lid immediately above and below the flange being of substantially identical size and shape to fit within a hollow body of a safety razor receptacle.

1,027,900
CIRCUIT INTERRUPTER
Herbert J. Crabbs, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1932, Serial No. 642,611
16 Claims. (Cl. 200—48)

1. In an electric switch, a supporting insulator, a contact means associated with said insulator, a second supporting insulator, a pair of blade members supported on said second insulator for swingable movement in a plane substantially parallel to the longitudinal axis thereof, and actuating means supported independently of said insulators for moving said blade members into and out of engagement with said contact means, said blade members being joined together adjacent the end thereof which engages said contact means by a linkage, at least one of said blade members being longitudinally movable, with respect to the other of said blade members, during the circuit closing operation to actuate said linkage and thereby cause at least one of said blade members to intimately engage said contact means.

1,027,901
SUPPLEMENTARY TOOL SUPPORT FOR TURRET LATHES
Myron S. Curtis, Pawtucket, R. I., assignor to William Wallace Potter, Pawtucket, R. I.
Application June 29, 1932, Serial No. 620,629
1 Claim. (Cl. 29—57)



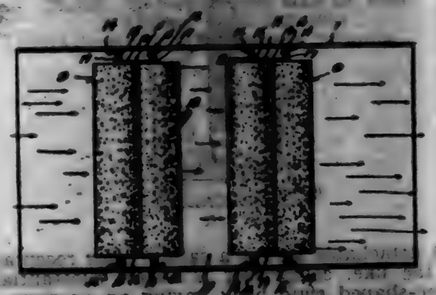
In a machine tool having a spindle supporting housing and a to and fro moving main slide, an auxiliary tool slide, a bracket projecting from the forward side of said housing and with which a surface on the housing has a thrust contact in the direction of movement of the main slide, means pivotally connecting the auxiliary tool slide to said bracket to change the direction of path of the auxiliary slide, means for holding it in adjusted position, means for imparting movement to the auxiliary slide from the main slide, comprising a rack and pinion, the rack being slidable in said bracket in the direction of movement of the main slide and a part carried by the main slide and acting upon said rack to move the rack, a shaft on which the pinion is mounted, a clutch between shaft and pinion releasable to permit turning of the pinion on the shaft for adjustment, and hand means to rotate the auxiliary slide to change its angle, comprising a gear on said shafts and a crank-operable pinion meshing with the gear.

1,027,902
PRODUCTION OF N-SUBSTITUTED AMINOPHENOLS
Miles Augustinus Dahlen, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 20, 1933, Serial No. 667,111
16 Claims. (Cl. 260—130)

1. The process which comprises reacting a nitrophenol with a reducing agent under conditions forming the corresponding primary aminophenol, in the presence of an inert solvent for the aminophenol, and reacting the resultant solution with an aldehyde.

2,027,903
APPARATUS FOR TESTING LIQUIDS, AND ESPECIALLY LUBRICANTS
Jean Georges Dintilhac, Paris, France, assignor to Society "L'Huile Des Records Du Monde S. A. F.", Paris, France
Application November 29, 1932, Serial No. 646,235
In Belgium November 29, 1932
6 Claims. (Cl. 73—51)

6. An apparatus for testing liquids, and especially lubricants, which comprises, in combination, a closed vessel the inner surface of which is of the shape of a frustum of a cone, a closed rotor of the same shape coaxially disposed in said vessel so as to leave a very small clearance space between the lateral outer surface of said rotor and the inner surface of said vessel, said vessel being formed with two chambers at both ends of said vessel respectively, means for rotating said rotor and said vessel relatively to each other, a closed circulation system for said liquid, including said two chambers and said clearance space, means for causing liquid to flow centrifugally through said circulation system, and means for moving said vessel and said rotor relatively to each other in the direction of their common axis, so that it is possible to vary the interval between their lateral cooperating walls.



2,027,904
METHOD OF POLYMERIZING MONOSACCHARIDES
Edward Flieber, Heidelberg, Germany, assignor, by mesne assignments, to N. V. Internationale Suiker en Alcohol Compagnie International Sugar and Alcohol Company "Insac", The Hague, Netherlands
No Drawing. Application February 6, 1934, Serial No. 709,951. In Germany February 15, 1933
8 Claims. (Cl. 260—140)

1. The method of polymerizing carbohydrates which comprises melting carbohydrate monoses with materially less than 0.1 part (per 100 parts of the carbohydrates) of free strong mineral acid, heating to remove water and applying temperatures between 120°–180° C. and below those which cause material decomposition.

2,027,905
RECTAL NARCOTIC
Erich Goth, Wuppertal-Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application October 20, 1931, Serial No. 571,989. In Germany October 30, 1930
17 Claims. (Cl. 167—81)

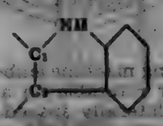
1. An anhydrous composition of matter which is liquid at room temperature comprising tribromethylalcohol and an amide like complound of the group consisting of amides of the lower carboxylic acids containing at least two carbon atoms, mono- or dialkylated amides of the lower aliphatic carboxylic acids, esters of the carbamic acid and N-alkylated substitution products thereof, urea and alkylated ureas, the said amide grouping being present in an open or cyclic chain, said composition of matter being stable to light and heating and being suitable for pharmaceutical purposes.

2,027,906
AIR FILTER
Leo Hund, St. Louis, Mo.
Application August 8, 1933, Serial No. 684,515
8 Claims. (Cl. 183—64)

1. An air filter of the class described comprising an elongated casing of polygonal cross section open at its ends, and filtering units mounted at longitudinally spaced points in said casing, each unit including a removable frame comprising substantially channel-shaped side, top and bottom members, said top and bottom members having staggered notches therein, spirally twisted wire cores mounted vertically in the frame and terminating, at their ends, in hooks engaged in the notches, and bristles mounted on the cores and projecting therefrom.

2,027,907
CONCRETE ROAD BUILDING MACHINE
Jacquelin T. Harvey, Jr., Valdosta, Ga., assignor to Cyrus Kehr, Washington, D. C.
Application August 30, 1932, Serial No. 630,411
29 Claims. (Cl. 94—39)

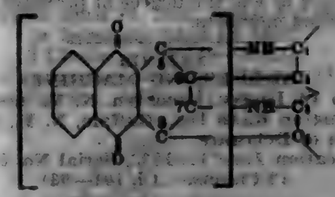
1. The combination with a carriage structure adapted to travel parallel to a road form, of an upright spading member, and means for supporting the spading member, said supporting means being partially turnable about on an approximately upright axial line to position the forward part and the rear part of the spading member relative to the road form, one of said parts being placed near and the other away from the form.



2,027,908
CARBAZOLE DERIVATIVES AND PROCESS OF MAKING SAME
Hermann Hauser, Basel, and Max Remmer, Riehen, near Basel, Switzerland, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application July 7, 1934, Serial No. 734,906. In Switzerland July 19, 1933
11 Claims. (Cl. 260—44)

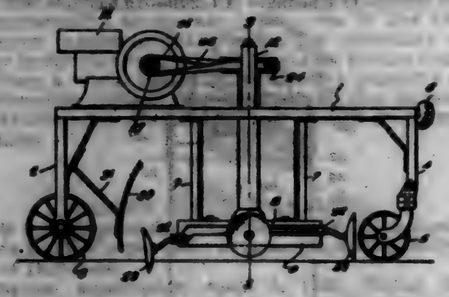
1. Process for the production of carbazole derivatives, consisting in treating with dissolving agents compounds of the general formula

wherein the carbon pair C_1C_2 belong to an anthraquinone radical in which at least one carbon atom standing in ortho-position to the imino-group is unsubstituted and in which the amino-group is in ortho-position to the imino-group, and heating the amides thus formed.



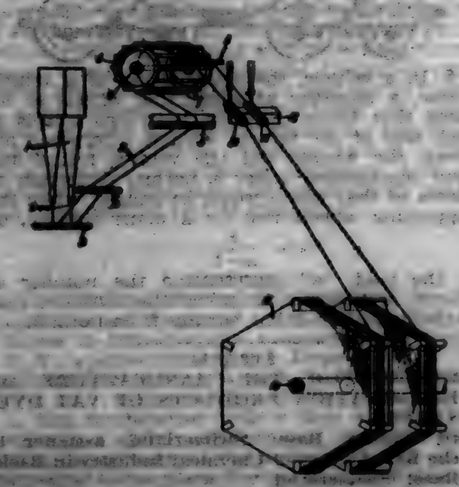
10. Carbazole derivatives of the general formula

wherein the carbon pair C_1C_2 belongs to an anthraquinone radical substituted by a benzoyl-amino-group, which products constitute olive to brown to red to yellow colored powders which dissolve in concentrated sulfuric acid to blue-green to green solutions, and dye cotton from the vat olive to brown to red to yellow tints of very good fastness properties.



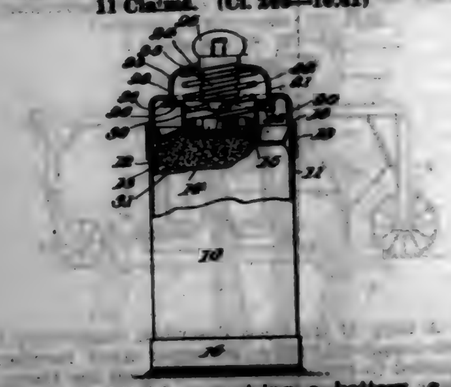
2,027,909
CARBAZOLE DERIVATIVES
Hermann Hauser, Basel, and Max Remmer, Riehen, near Basel, Switzerland, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application July 7, 1934, Serial No. 734,907. In Switzerland July 21, 1933
3 Claims. (Cl. 260—44)

1. The carbazole derivatives of the general formula



wherein the carbon pair C_1C_2 belongs to a phenyl radical, the carbon pair C_3C_4 to an anthraquinone radical, and wherein the carbon pair C_3C_4 is linked with the carbon pair C_1C_2 and the carbon pair C_3C_4 is linked with the carbon pair C_3C_4, which products constitute brown to red to blue to grey to black powders which dissolve in concentrated sulfuric acid to brown to blue to violet to grey to green solutions and dye cotton from grey to brown to bordeaux vats brown to bordeaux to grey to green tints of very good fastness properties.

2,027,910
REVOLVING DISK PLOW
Felix Edgar Herring, Mount Airy, N. C.
Application March 7, 1935, Serial No. 9,849
1 Claim. (Cl. 97—41)



1. A plow of the class described comprising a wheel-supported frame, an upper track member supported in horizontal position upon the frame, a lower track member supported from the frame and parallel with the first track member, said members forming a cam slot between them, the rear portion of which is lower than the rest of the slot with the ends of the lower portion sloping upwardly and outwardly to the rest of the slot, radiating plow beams passing through the slot and having their outer ends curving downwardly, plows connected to said outer ends, a roller on each beam engaging the walls of the cam slot, a hub member to which the inner ends of the beams are pivoted for movement about horizontal axes, and means for rotating the hub member.

2,027,911
METHOD FOR CONDITIONING ARTIFICIAL THREAD
Hugo Hofmann, Johnson City, Tenn., assignor to American Bemberg Corporation, New York, N. Y., a corporation of Delaware
Application April 2, 1930, Serial No. 440,933
8 Claims. (Cl. 18—54)

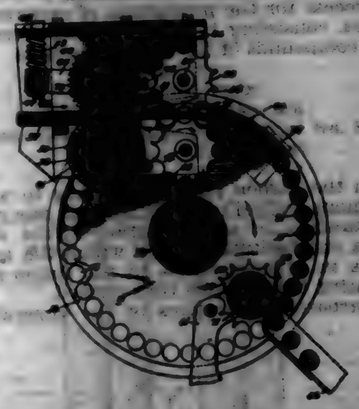
1. In the production of threads of the class described, the steps comprising precipitating the threads, stretching and shrinking the thread, then subjecting it to a fixing solution.

2,027,912
BATTERY LIGHT
Harry T. Kingsbury, Keene, N. H., assignor to Kingsbury Mfg. Company, Keene, N. H., a corporation of New Hampshire
Application April 29, 1933, Serial No. 668,646
11 Claims. (Cl. 240—10.61)

1. A flashlight comprising a battery, a cap member adapted to frictionally engage said battery, said cap member having an opening above the battery, cam surfaces around the edge of the opening in said cap member, a light bulb supporting member adapted to telescope within the opening in said cap member, means on said supporting member for engaging said cam surfaces to close an electric circuit upon rotation of said supporting member in one direction and said cam surfaces being adapted to limit the rotation of said supporting member in the opposite direction, and means for normally holding the light bulb terminal out of contact with the battery terminal.

2,027,913
SPRING-SUPPORTED VEHICLE
Robert D. Kinsale, Atlanta, Ga.
Application January 22, 1935, Serial No. 2,930
9 Claims. (Cl. 280—124)

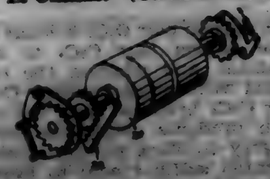
6. In a vehicle, the combination of a vehicle frame, a plurality of supporting wheels so located that there are more than two wheels at each side of the vehicle, springs interposed between the wheels and the vehicle frame and each maintained under a normal deflection in excess of that which would be caused, when the supporting wheels rest on a plane surface, by



$$\frac{a}{a-1}$$

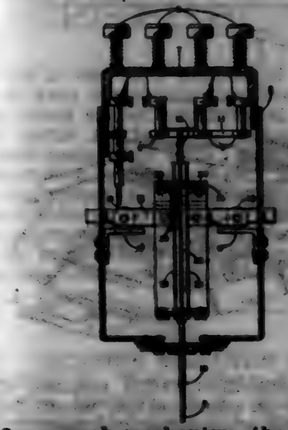
of the load, "a" representing the number of wheels, and means for preventing any decrease in the deflection of the springs from normal.

2,027,914
PROCESS FOR THE MANUFACTURE OF BROMINATION PRODUCTS OF VAT DYESTUFFS
Karl Krauer, Basel, Switzerland, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application May 9, 1935, Serial No. 20,672. In Switzerland May 19, 1934
12 Claims. (Cl. 260—61)



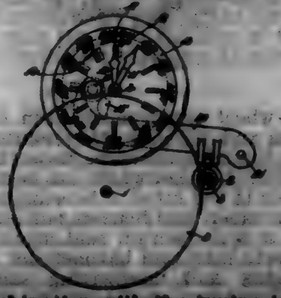
1. A manufacture of brominated derivatives of vat dyestuffs of the anthraquinonone series, wherein the bromination is conducted in an indifferent solvent in the presence of a zinc halide, the halogens of which have an atomatic weight greater than 30.

1,027,915
COMPRESSING MACHINE
Albert S. Kuz, Chicago, Ill.
Application January 27, 1933, Serial No. 653,787
2 Claims. (Cl. 18—30)



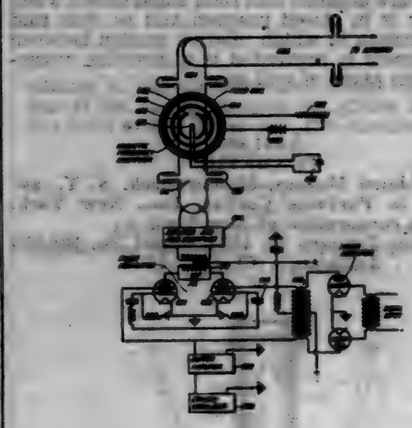
1. A compressing machine embodying a plunger carrying member rotatable on a horizontal axis and comprising laterally spaced flanges of considerable thickness provided with horizontal openings therethrough and respectively registering, plungers respectively projecting into said openings and supported by the respective flanges, the plunger carrying openings in one of said flanges also constituting compression chambers for the material, means for moving the plungers toward each other and into the compression chambers, the said means so constructed and arranged as to cause the plungers to remove the compressed product from the chambers while the product is held between said plungers, feeding and partially shaping cooperating rotatable members for the material, rotatable cutting members between which the material passes, said cutting members being separate from the plunger carrying member and rotatable upon axes separate from and parallel with the axis of the last said member, said cutting members operating between the said flanges and co-operating plungers and presenting the severed material to the plungers outside of the compression chambers, and means for varying at will the degree of pressure between said feeding members.

2,027,916
ADDRESSING MACHINE
William W. Lasker, Brooklyn, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application June 13, 1932, Serial No. 616,927
12 Claims. (Cl. 101—93)



1. In a machine of the class described, the combination of record feeding mechanism, a record having printed fields thereon, a sensing mechanism for reading said record and automatic means for causing the feeding mechanism to present each field of the record to the sensing mechanism comprising a stepped stop member and a cam for the actuation thereof, adapted to cooperate with said record feeding mechanism to convey said record to and against said stepped stops in succession at successive stages in the operation of the machine.

2,027,917
CARD PUNCH
William W. Lasker, Brooklyn, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application April 15, 1933, Serial No. 16,962
4 Claims. (Cl. 164—112)

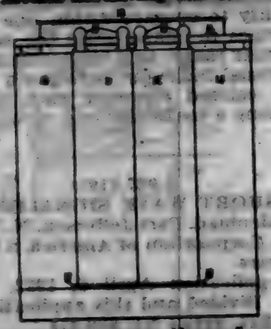


1. In a punch mechanism, the combination of a keyboard, a punch and punch setting mechanism controllable thereby, and a plurality of coding mechanisms cooperating therebetween, said keyboard mechanism comprising key-tail-members positioned in a single line, said coding mechanism comprising a movable carriage having therein a plurality of sets of interponent members respectively comprising effect interponents and flag members.

2,027,918
DEVICE INDICATING THE POSITION OF ADJUSTABLE PARTS OF RADIO SETS AND THE LIKE
Max Leeuwin, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application April 17, 1933, Serial No. 666,566
In Germany April 18, 1932
3 Claims. (Cl. 116—124.1)
(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)

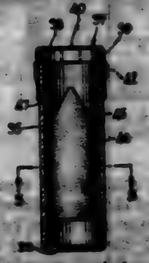
1. In combination with the tuning instrumentality of a multi-range radio receiver or the like, selecting means for adjusting the tuning instrumentality to operate within any desired one of a plurality of frequency ranges, operable means providing for adjustment of said tuning instrumentality within the selected range, frequency range indicating means operative upon operation of the selecting means to adjust the tuning instrumentality to operate within one of the frequency ranges to characterize the selectance of any particular range, said indicating means comprising a visual indicator including a plurality of differently colored elements each one thereof characterizing a particular one of said frequency ranges.

2,027,919
SHORT WAVE SIGNALING
Nils E. Lindenblad, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application April 5, 1932, Serial No. 603,316. Divided and this application November 23, 1933, Serial No. 699,378
7 Claims. (Cl. 250—36)



1. A frequency multiplier comprising a multi-electrode device having a cathode and a plurality of anodes the active surfaces of which are equidistantly disposed around said cathode, a tuned circuit tuned to a fundamental frequency connected between said anodes, a tuned circuit tuned to a harmonically related frequency also connected between said anodes, means for supplying energy of fundamental frequency to said circuit tuned to said fundamental frequency, and an output circuit coupled to said tuned circuit tuned to a harmonically related frequency.

2,027,920
DOOR GUIDING EQUIPMENT
David Leonard Lindquist, Hartsdale, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application December 29, 1933, Serial No. 703,199
5 Claims. (Cl. 20—19)

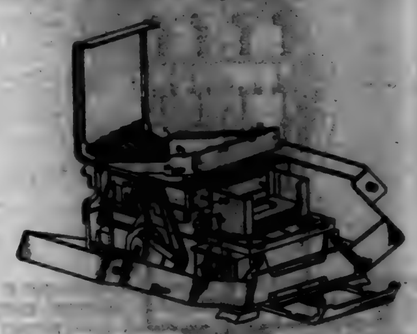


1. The combination with a door guide at the bottom of a sliding elevator door, of means preventing movement of the bottom of said door transverse to the plane thereof when said door is in closed position, said means comprising: a member having two exterior surfaces disposed at an acute angle to each other; a member having two interior surfaces disposed at a corresponding angle to each other, said members, when

moved into engagement with said exterior surfaces of the first member in engagement with the corresponding interior surfaces of the second member, preventing relative motion in a given direction between said members, and also in the direction opposite thereto, when in such engagement; and means mounting one of said members

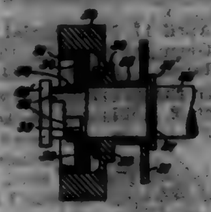
on said door at the bottom thereof and the other of said members on the threshold so that said members are brought into such engagement when said door is in closed position and so that said given direction in which relative motion between said members is prevented is a direction transverse to the plane of said door.

2,027,921
COSMETIC
Charles Lionel Marcus, Massapequa, N. Y., assignor to Parfums Cerday, Inc., New York, N. Y., a corporation of New York
Application January 27, 1934, Serial No. 708,599
3 Claims. (Cl. 206—46)



1. In combination, a container, a stick of rouge therein, and a sheet of paper wrapped around said stick of rouge and projecting from the opposite ends thereof.

2,027,922
METHOD OF MAKING WRENCH SOCKETS
Norris F. McNaught, Chicago, Ill., assignor to Duro Metal Products Company, Chicago, Ill., a corporation of Illinois
Application May 29, 1934, Serial No. 23,926
4 Claims. (Cl. 76—114)

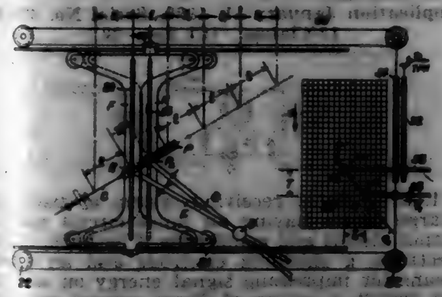


1. The method which consists in heating to forging temperature a hollow socket turned from stock, confining the exterior of the socket in a side wall retainer, and conforming the interior of the socket for nut embracement by the forcible insertion of a broaching tool which acts to shift hot metal from the nut receiving region of the socket to an adjacent interior region thereof.

2,027,923
SUPPORTING AND LOCKING MEANS FOR PRINTING INTERPRETERS
Harold P. Minor, Floral Park, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application August 2, 1934, Serial No. 738,171
5 Claims. (Cl. 101—93)

1. In a printing interpreting machine of the class described, in combination, means for assembling a group of printing interpreting plates as a single unit, a rockable frame adapted to hold a plurality of such single units, means for automatically locking said rockable frame against movement, automatic means for preventing the return of said rockable frame to its normal operative position, and means whereby said locking means can be rendered ineffective.

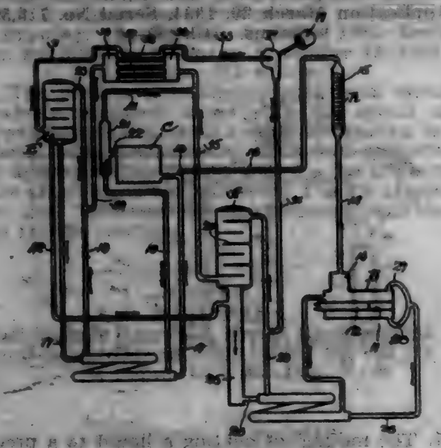
2,027,924
FREEWHEEL DEVICE
Pierre Mercon, Neuilly, France
Application April 12, 1933, Serial No. 665,761
In France April 13, 1932
9 Claims. (Cl. 192—46)



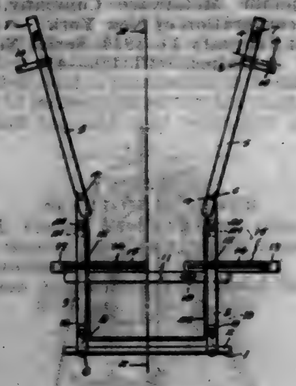
1. Free-wheel clutch mechanism for connecting driving and driven shafts comprising two cooperating threaded members through which the drive is effected, one of which can be moved axially relatively to the other, a housing to guide said movable member, said housing embodying a bayonet slot, a projection on said movable member to co-operate with said bayonet slot, and means for engaging and disengaging said threaded members dependent on the relative speeds of the driving and driven shafts.

2,027,925
METHOD AND APPARATUS FOR CUTTING FABRIC BLANKS
Ernest E. Murray, Jackson, Mich., assignor, by direct and mesne assignments, of one-fourth to Joseph W. Myers, Philadelphia, Pa., and one-half to L. W. MacFarland, Long Island City, N. Y.
Application December 4, 1931, Serial No. 578,219
12 Claims. (Cl. 164—17)

1. As a step in a method of cutting circular fabric discs comprising the severing of a fabric strip along spaced symmetrical undulate paths, said paths tracing arcs of imaginary circles scribed upon said strip, said circles being of substantially equal diameter and having their centers located in substantially parallel rows and spaced substantially the distance of a diameter, the centers of the circles of alternate rows being spaced substantially a diameter from centers of adjacent circles of intermediate rows.



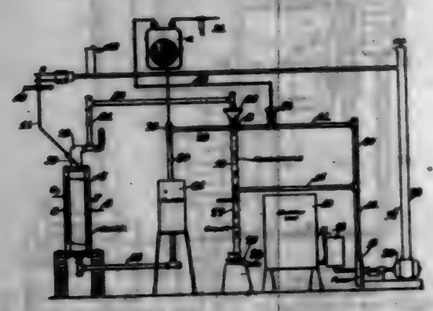
2,027,926
GUNNERY DIRECTOR SYSTEM
Shierfield G. Myers, Freeport, and Earl W. Chafee, Brooklyn, N. Y., assignors to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a corporation of New York
Application March 30, 1929, Serial No. 347,557
Renewed March 9, 1935
20 Claims. (Cl. 235—61.5)



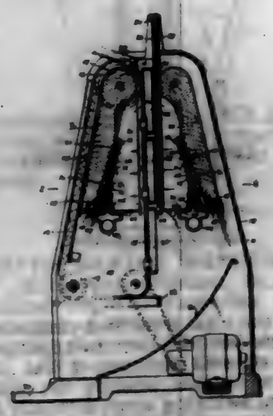
16. In a fire control director, means for resolving the target's position as observed from the director into fixed rectilinear components, means for indicating the rate of movement of the target along each component, and means for combining each rate with the time of flight of the shell to locate the predicted position by its components.

2,027,927
ABSORPTION REFRIGERATION
Rudolph S. Nelson, Rockford, Ill., assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application October 6, 1931, Serial No. 567,966
9 Claims. (Cl. 62—119.5)

5. In a continuous absorption refrigerating system, the combination of an evaporator for producing cold, an absorber, a boiler located below the absorber, gas pumping means forming part of the system for removing gas from a part of the system and raising the pressure thereof to a pressure on the gas over that normally prevailing in the absorber and means utilizing the gas at the raised pressure for lifting liquid from the level of the boiler into the absorber.



2,027,928
RACK
Elise E. Norwood, Fairfax, Calif.
Application September 25, 1934, Serial No. 745,465
1 Claim. (Cl. 45—89)



A rack of the class described comprising a base member, arms secured thereto adjacent the opposite ends of said member, a bar connecting said arms for further holding the same in desired relation, swinging arms pivotally connected with the outer end portions of the first arms, engaging means carried by the outer end portions of the swinging arms, engaging means carried by the member and coacting with the first named arms, movable arms engaging the bar from above, coacting means carried by the first arms and said movable arms for holding the same against endwise movement in opposite directions with respect to the first named arms and for locking said movable arms in desired adjustment, and coacting means carried by said movable arms.

1,027,925
HEAT EXCHANGE SYSTEM
Raymond E. Olsen, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application March 26, 1934, Serial No. 716,567
9 Claims. (Cl. 257—2)

1. The method of heating a liquid to a predetermined temperature in a system including a heater which comprises mixing, externally of said heater, a portion of said liquid in a partially heated state with a portion of said liquid in a cool state to provide a resulting mixture of a given uniform temperature less than the predetermined temperature, and heating the resulting mixture in said heater to the predetermined temperature.

1,027,930
GAS HEATED TOASTING DEVICE
Lester E. Padelford, Buffalo, N. Y., assignor to The Republic Metalware Company, Buffalo, N. Y., a corporation of New York
Application February 11, 1930, Serial No. 427,620
9 Claims. (Cl. 126—41)

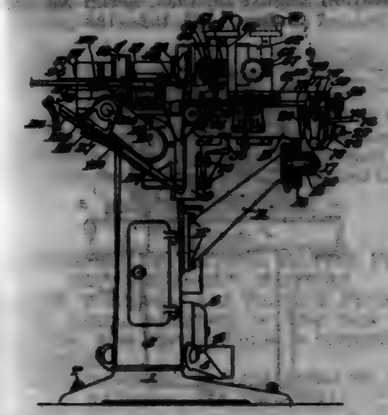
4. A toasting device comprising a casing, a toasting chamber within the casing, the chamber being formed by oppositely arranged oven walls, sprocket chains carried by the casing, and a plurality of toast baskets rigidly attached to the sprocket chains, the downward passes of the chains being substantially vertical and extending through the toasting chamber, and the upward passes thereof being inclined rearwardly and being exposed on the exterior of the casing, whereby toast placed within the baskets on the upward pass will be retained in position and then passed downwardly through the toasting chamber.

1,027,931
METHOD OF DEPOSITING SILICA ON MATERIAL
Arthur B. Ray, Bayside, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application January 20, 1934, Serial No. 707,543
20 Claims. (Cl. 91—68)

1. A method of producing a form of silica capable of adhering to material which comprises treating such material with a solution containing a silicic acid ester of a polyhydric alcohol and causing the deposition of silica by hydrolysis.

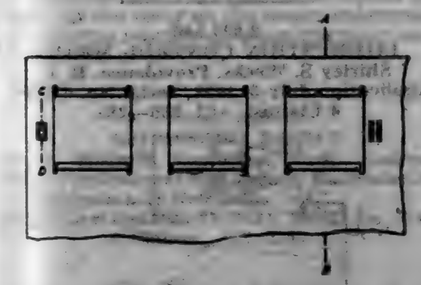
1,027,932
MOLD AND METHOD FOR ITS PRODUCTION
Arthur B. Ray, Bayside, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application January 20, 1934, Serial No. 707,542
22 Claims. (Cl. 22—196)

5. A sand mold adapted for use with high melting alloys and having the molding surface rendered smooth and hard by the deposition of adherent unfused silica on the molding surface and in the body of the mold adjacent to the surface.



1,027,933
SUPERHETERODYNE CIRCUIT
Walter van B. Roberts, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 11, 1928. Serial No. 246,113
12 Claims. (Cl. 250—20)

1. In a signal receiving system a space discharge device having an input circuit and an output circuit and comprising a cathode, a grid electrode, a shielding electrode and an anode, means for impressing signal energy on said input circuit, a source of direct current potential for said shielding electrode, a source of direct current potential for said anode, the direct current potentials applied to said shielding electrode and said anode being normally so related that the conductivity of said output circuit is approximately zero irrespective of energy impressed upon said input circuit and means for periodically varying the anode potential.

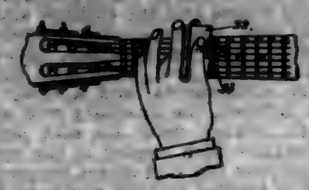


1,027,934
LINING AND BEVELING MACHINE
Vernon Royle, Paterson, N. J.
Original application May 29, 1929, Serial No. 367,992. Divided and this application May 3, 1934, Serial No. 723,656
5 Claims. (Cl. 29—31)

1. In a lining and beveling machine, a table for supporting the work, vertically disposed ways mounted to slide on the opposite sides of the table, a clamp extending between said ways and vertically movable therein for engaging the entire

length of the work on the table, and means for moving the ways simultaneously for adjusting the clamp laterally across the table.

1,027,935
METALLIC CHASSIS FOR ELECTRON TUBE AMPLIFIERS
Franz Sass, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 13, 1933, Serial No. 680,245
In Germany June 30, 1933
2 Claims. (Cl. 250—18)



1. The combination of a substantially plane base support for electrical apparatus and the like, of the type which is positioned on one side of the support plane and provision is made to electrically connect to terminals of the apparatus from the other side of the support plane, said base being provided with a plurality of apertures through which the said electrical connections are made, a plurality of integrally formed lugs extending below the plane of the base portion along two opposite edges of each of the apertures, a sheet of insulation material having a width substantially equal to the distance between the oppositely disposed lugs and slidable therebetween and means for securing said insulation sheet in position between said lugs, said insulation sheet being provided with a plurality of apertures positioned so as to register with the apertures in the base support when the insulation sheet is in position.

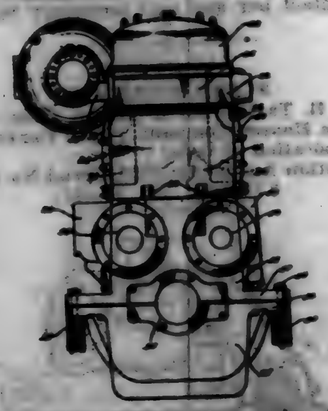
1,027,936
PROCESS OF MANUFACTURING SOAPS
Walther Schrauth, Berlin-Dahlem, Germany, assignor, by mesne assignments, to "Unichem" Chemikalien Handels, A.-G., Zurich, Switzerland, a corporation of Switzerland
No Drawing. Application April 24, 1931, Serial No. 533,686. In Germany November 19, 1928
8 Claims. (Cl. 91—9)

1. The process of producing soap from sperm oil which comprises saponifying the sperm oil and oxidizing the alcohols formed by treating the material with concentrated alkali at a temperature approximating 200 to 250° C., the quantity of the alkali being approximately 1 to 2% greater than that indicated by stoichiometric calculations for the reaction.

1,027,937
TONE BAR
Carl Temple Schrickel, Mount Healthy, Ohio
Application July 29, 1932, Serial No. 624,277
1 Claim. (Cl. 84—319)

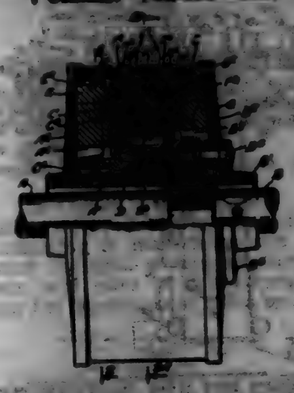
A tone bar comprising a body portion having a string engaging edge forming a contact bar for all the guitar strings, a secondary bar extending laterally from said body portion at substantially right angles thereto and comprising a fixed member and a cooperating sliding member supported thereby, said sliding member terminating in a string contacting surface, resilient means normally and constantly urging said sliding member to its extended position from said body portion, and a manipulating thumb rest on said slide to manually shorten the space between said contact bar and said secondary bar.

1,027,938
SUCTION CLEANER
Charles H. Taylor, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application August 30, 1933, Serial No. 687,412
3 Claims. (Cl. 15—14)



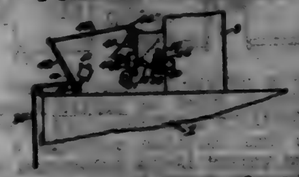
3. In a suction cleaner, suction-creating means, a nozzle, pile penetrating lips defining the sides of said nozzle, an air tunnel having a downwardly directed mouth and interiorly connected to atmosphere, pile penetrating lips defining the sides of said air tunnel, and means to limit the penetration of said lips into a surface covering undergoing cleaning comprising an undriven surface-contacting roller positioned in said tunnel.

2,027,580
AUTOMATIC DEMODULATOR SENSITIVITY CONTROL
Rudolf Urtel and Karl Steimel, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application October 31, 1933, Serial No. 694,666
In Germany December 23, 1932
6 Claims. (Cl. 250—27)



1. In combination with a source of signals to be demodulated and a network for utilizing the audio component of the demodulated signals, an electron discharge tube provided with a cathode, a plate, a control grid adjacent the cathode, an auxiliary grid adjacent the plate, and a positive screen grid between the two grids, a second network, including a signal input circuit, coupled between said source and the cathode and control grid of said tube, means in said second network for developing from said signals, between said cathode and control grid, audio and direct current voltage components, and a direct current connection between the auxiliary grid and a direct current voltage point on said last means which is negative with respect to the cathode of the tube whereby the said direct current voltage component is applied to said auxiliary grid as a gain regulation voltage for the tube, and said audio component being repeated into the plate circuit of the tube.

2,027,940
INTERNAL COMBUSTION ENGINE
Jesse G. Vincent, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application December 23, 1931, Serial No. 582,910
5 Claims. (Cl. 121—194)



1. In an internal combustion engine, the combination of upper and lower crank case sections, said sections being of box formation in cross section with the sides extending substantially in line vertically, said upper box section having open sides, supporting flanges extending outwardly from the adjacent side walls of the sections, cover plates secured against the sides of the upper section over the openings therein, and means securing said supporting flanges together and to a support.

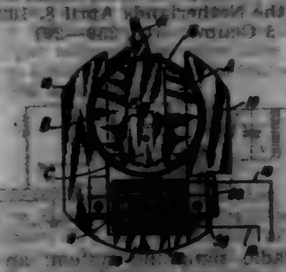
2,027,942
CLUTCH MECHANISM
Harold D. Waterhouse, Rochester, N. Y.
Application August 16, 1927, Serial No. 213,338
7 Claims. (Cl. 192—103)

1. A device of the class described comprising in combination a driving member, a driven member, a floating member, two independently operating clutch mechanisms operatively interposed between the floating and driven members, one of said mechanisms being effective at floating member starting speeds and including means rendering it ineffective at normal operating speeds of the floating member and the other of said mechanisms being ineffective at slower member starting speeds and including means rendering it effective at normal driven member speeds, and a third clutch mechanism ineffective when the driving member is at rest but rendered effective to cause said floating member to rotate with the driving element by a driving member speed below normal running speeds.

2,027,943
COMBUSTION CONTROL MEANS
Shirley R. Weeks, Providence, R. I.
Application July 6, 1928, Serial No. 290,847
4 Claims. (Cl. 236—34)

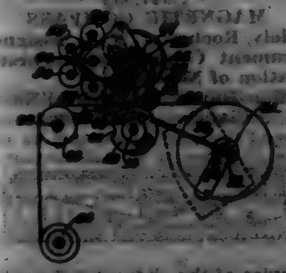
1. Combustion control means for a boiler comprising, in combination, mechanism for regulating the feed of fuel to the furnace; apparatus for compensating the gas flow through the boiler comprising an opening in the passage for said flow; a free-swinging counterbalanced damper in said opening movable in response to changes of pressure of said gas; and means actuated by the said regulating mechanism for changing the counterbalance of said damper in accordance with the regulation of said fuel.

2,027,945
PROTECTIVE HEATING MEANS FOR THIRD RAIL ELECTRIC RAILWAYS
Loren Stanford Wells, Great Neck, N. Y.
Application April 26, 1926, Serial No. 104,104
7 Claims. (Cl. 104—28)



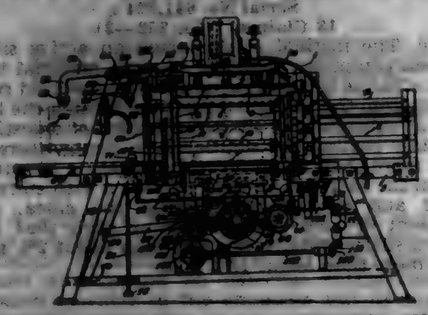
1. A protective heating means for third rail electric railways comprising in combination with

the track rails and contact rail parallel thereto, rolling stock adapted to be operated thereover having a plurality of contact shoes spaced substantial distances apart, heaters positioned for heating of the contact rail at spaced areas,



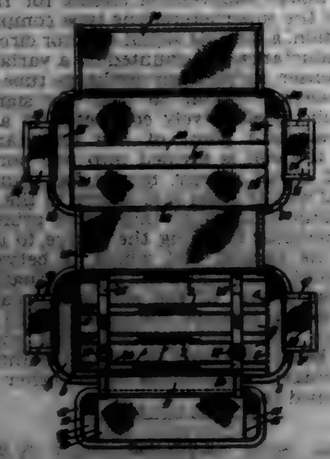
each area in length substantially equal to said contact shoe spacing and having the heated areas spaced relative to a determined minimum length of rolling stock to be operatively spanned thereby.

2,027,946
AUTOMATIC STARTING DEVICE FOR SYNCHRONOUS MOTORS
Richard H. Whitehead and Wilson E. Porter, New Haven, Conn., assignors to The New Haven Clock Co., New Haven, Conn., a corporation of Connecticut
Application November 28, 1929, Serial No. 410,808
9 Claims. (Cl. 172—279)



7. A synchronous motor having, in combination therewith, magnetic means that is attracted to said motor when the motor is energized, and that has a member that imparts an initial rotary impulse to the rotor of the motor independently of the driving reaction between the rotor and the stator of the motor.

2,027,945
RECORDING DEVICE
Jules A. Widmer, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application October 27, 1931, Serial No. 571,376
6 Claims. (Cl. 234—1)

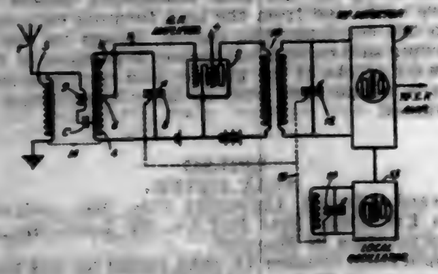


6. In combination, a time dry recording element, a chart normally out of contact with said marking element, means for effecting engagement between said chart and the edge of said element, and motor means for directly rotating said element about its own axis to make a mark on said chart independently of the movement of said chart.

2,027,946
CARTON FILLING MACHINE
Charles Henry Wild, Baltimore, Md., assignor to Ever Machine Company, Incorporated, Baltimore, Md., a corporation of Maryland
Application October 5, 1931, Serial No. 566,854
11 Claims. (Cl. 226—15)

1. The combination, in a machine for filling cartons with cans, of a load forming enclosure, means for feeding cans thereto, means within the load forming enclosure arranged in a plurality of tiers, one above the other for conducting the cans to their respective positions in the load, a plunger and means for reciprocating the same transversely to the said conducting means to move each load from the load forming enclosure into the corresponding carton, means for withdrawing said conducting means in advance of the forward stroke of the plunger and returning said means to operative position when the plunger is retracted.

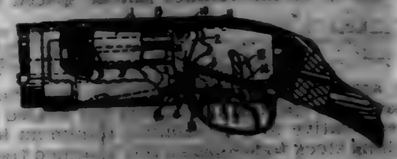
2,027,947
HEAT COVER
Edward Wittcoff, University City, Mo., assignor to Ever Klean Heat Pad Co., St. Louis, Mo., a corporation of Missouri
Application October 19, 1932, Serial No. 638,546
5 Claims. (Cl. 155—182)



4. A device of the kind described including a section adapted to cover a seat, a member connected to each end of said section to secure said section to said seat to maintain it in position thereon, reinforcement means connecting the ends of said section and attached to said member whereby to take the oppositely directed stress of said two securing members by tension within itself, whereby to prevent such stress from straining the first-mentioned section.

2,027,942
ADSORBENT
Herbert J. Wollner, Brooklyn, and John V. Shiras, Flushing, N. Y., assignors to General Chemical Company, New York, N. Y., a corporation of New York
No Drawing. Application November 4, 1932, Serial No. 641,224
18 Claims. (Cl. 252—3)

10. The method of preparing an active silica which comprises digesting siliceous material in a hot alkaline solution, separating undissolved residues from the solution while maintaining the latter at substantially the temperature of digestion, rapidly cooling the solution to a temperature of not more than about 50° C., separating the silica from the solution, treating the silica with sulfuric acid and substantially drying the silica, the amount of acid employed being such that the dried silica contains not less than about 2% and not more than about 12% acid.



2,027,949
IMAGE SUPPRESSION ARRANGEMENT
Jacob Yellin, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 26, 1933, Serial No. 695,596
4 Claims. (Cl. 250—20)

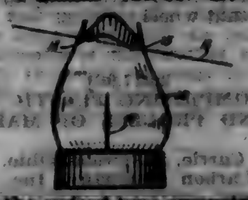
1. An image suppression circuit for radio receivers of the superheterodyne type comprising in combination, a tunable signal selector circuit having an inductance coil shunted by a variable tuning condenser, an electron discharge tube coupled to the selector circuit so that the signal grid of the tube is effectively connected to a tap on an intermediate point of the inductance coil whereby the coil is divided into two portions, a source of signal energy, means for transferring the signal energy from said source to the selector circuit comprising a high impedance primary coil for magnetically coupling the source to the portion of the tapped coil which is between the tapped point thereof and the low alternating current potential end of the coil and a capacitive coupling means between the signal source and the inductance coil, said magnetic and capacitive coupling being arranged so that substantially no signal voltage is introduced in the other portion of the tapped coil.

2,027,950
GUN
Charles A. Young, Springfield, Ohio
Application January 27, 1932, Serial No. 589,583
5 Claims. (Cl. 42—69)

1. In a gun having a chamber, a spring-pressed movable impact member in said chamber, a movable spring-pressed trigger member partly located in said chamber, a separate sear member in said chamber to hold the impact member cocked operated by said trigger member when pressure is applied thereto, and a detent in said chamber carried by said sear to hold the impact member cocked movable by said trigger to a position to engage the impact member when said

impact member is released by said sear, said detent being moved to disengage said impact member when pressure is released on said trigger member.

2,027,951
RADIO RECEIVING APPARATUS
Johan Willem Alexander, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application February 18, 1931, Serial No. 516,888
In the Netherlands April 8, 1930
5 Claims. (Cl. 250—20)



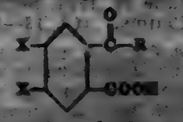
1. In a radio signaling system, an antenna circuit having natural capacity to ground, an amplifier tube comprising an anode, a cathode and at least one grid electrode, a capacity for connecting said antenna to said grid electrode, a connection including a capacity and an impedance for connecting said grid electrode to ground, said three capacities and said impedance forming a balanced bridge circuit, said grid electrode being also connected to ground through the natural capacity of said antenna, a signal input circuit connected between the grid electrode and the cathode and means for connecting the cathode to a point on said impedance such that the signal input circuit is effectively in a diagonal of the balanced bridge circuit.

2,027,952
MAGNETIC COMPASS
Erich Bandely, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application June 6, 1934, Serial No. 729,838
3 Claims. (Cl. 33—223)

1. In a device of the character described, a case having an upstanding rim, a dial member frictionally mounted in said case in spaced parallel relation to the bottom thereof, an index mounted for rotation in said case and having its ends terminating substantially in the principal plane of the dial member, a crystal closing said case, and a bezel integral with said dial member for holding said crystal.

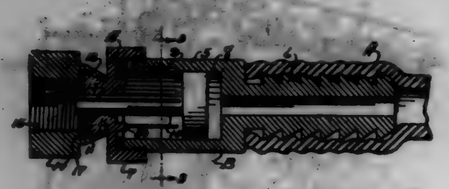
2,027,953
SHOE
Jean W. Barber, St. Davids, and Arnold Bertschi, Oakmont, Pa., assignors to J. Edwards & Co., Philadelphia, Pa., a corporation of Pennsylvania
Application July 27, 1934, Serial No. 737,178
1 Claim. (Cl. 36—45)

A shoe of the oxford type comprising a quarter having a part at the outer side designed to provide the usual snug fit with the foot of a wearer beneath the ankle bone, and a corresponding part at the inner side having its upper edge extending higher than the corresponding edge on the outer side, said inner side having the usual curved formation with the upper edge of the inner side being of a different curvature from the curvature of the upper edge of the outer side to provide a snug fit on the inner side of the foot of the wearer beneath the ankle bone.



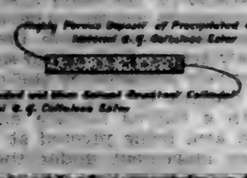
2,027,954
NOZZLE
Sidney Fraser Barclay, Manchester, England, assignor to General Fire Extinguisher Company, Providence, R. I., a corporation of Delaware
Application January 2, 1935, Serial No. 61
In Great Britain January 4, 1934
3 Claims. (Cl. 299—113)

1. A water projector for bombarding inflammable liquid comprising a fixed scroll device providing peripheral passages through which the water is caused to pass and which impart to it a swirling motion and a central hole diverging towards the delivery side of the scroll device for the delivery of a central jet, the latter striking the swirling jets at the throat of a converging nozzle and projecting the water drops with high velocity through said nozzle.



2,027,955
INTERMEDIATES FOR DYES
Ernest George Beckett, Grangemouth, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 14, 1934, Serial No. 739,806. In Great Britain August 18, 1933
6 Claims. (Cl. 260—94)

1. Compounds of the general formula

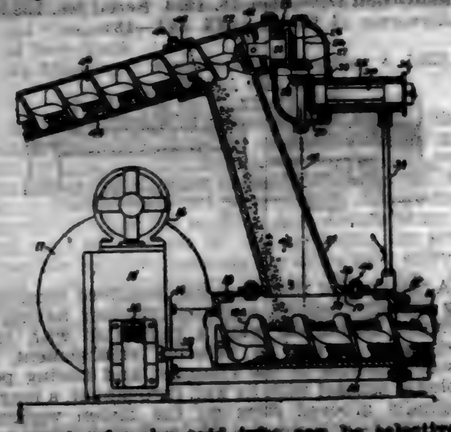


wherein R represents a hydrocarbon radical of the benzene or naphthalene series, one X stands for chlorine and the other X stands for NO_2 or NH_2.

2,027,956
AIR HOSE COUPLING FOR TIRES
Harley G. Bowser, South Bend, Ind.
Application December 18, 1934, Serial No. 758,099
1 Claim. (Cl. 284—18)

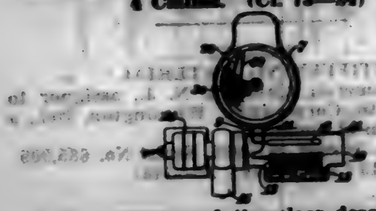
A coupling of the character described comprising a body forming a piston chamber having a straight cylindrical wall, a cap fitted with the body and having an external enlargement, a piston movable in the chamber and having peripheral contact with its wall throughout, a longitudinally grooved stem on the piston working through the enlargement, the wall of the chamber being formed with air channels extending for substantially one-half the length of said chamber for cooperation with the grooves in the stem of the piston, an attaching member swiveled to said enlargement and protruded stops on the cap and projecting into the chamber for contact by the piston to provide communication between the grooves in the wall and stem when the piston has moved close to said cap.

2,027,957
STIFFENING MATERIAL
Earle H. Cameron, Caldwell, N. J., assignor to The Celastic Corporation, Wilmington, Del., a corporation of Delaware
Application August 18, 1933, Serial No. 685,909
13 Claims. (Cl. 12—146)



9. A stiffening blank comprising a fabric whose interstices carry cellulosic derivative in precipitated form, the fabric also carrying, distributed uniformly throughout the precipitated derivative, cellulosic derivative in a relatively firmer, harder, colloided, and more solvent-resistant form, said blank being adapted to be treated with a cellulose derivative solvent to soften same, and then shaped and dried in the desired final form.

2,027,958
BIN CONVEYER
Haskell C. Carter, Portland, Oreg., assignor to Iron Fireman Manufacturing Company, Portland, Oreg.
Application September 15, 1934, Serial No. 744,549
4 Claims. (Cl. 198—34)



1. A bin conveyer having in combination a trough, an inclined neck mounted over said trough and communicating therewith, a coal feeding worm within said trough, a tube communicating with the upper end of said neck, a worm within said tube, a driving connection on

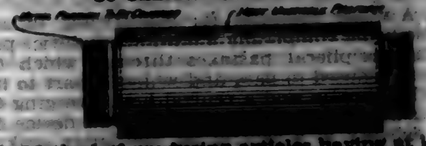
the upper side of said neck for rotating said last mentioned worm and a hinged joint for said driving connection coaxial with the lower end of

said neck whereby said tube can be selectively fixed with relation to said trough.

2,027,959
HYGROMETRIC APPARATUS
Albert E. Clawson, Springfield, Pa., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application October 10, 1931, Serial No. 568,125
4 Claims. (Cl. 73—24)

1. In apparatus of the class described, a dry element temperature-responsive device and a wet element temperature-responsive device, a cam plate rotatively actuated by one of said devices, a member rotatively actuated by the other of said devices and radially by said cam plate, an arm provided with a curved surface engaging said member, said arm being pivoted at one end for limited rotary movement under the control of said member, and indicating means actuated by said arm.

2,027,960
LANDING GEAR FOR AEROPLANES
William A. Crowley, Philadelphia, Pa.
Application August 15, 1934, Serial No. 739,967
8 Claims. (Cl. 244—8)



1. In an aeroplane, a fuselage, landing gear comprising a wheel, a pontoon attached to the fuselage and housing the upper portion of said wheel, and a cover member adapted to be held in a position not obstructing engagement of the lower portion of the wheel projecting beneath the pontoon with the ground, said cover member being movable to a position wherein it covers the projecting portion of said wheel and forms with said pontoon a fluid-tight housing completely surrounding said wheel.

2,027,961
ARTICLE COMPRISING PLASTIC COMPOSITIONS AND PROCESS OF MAKING THE SAME
Lauchlin M. Currie, Lakewood, Ohio, assignor to National Carbon Company, Inc., Cleveland, Ohio
Application March 2, 1933, Serial No. 659,457
17 Claims. (Cl. 18—55)

1. Method of making hollow articles having at least a portion thereof composed of a vinyl resin composition which comprises making a hollow preform of a vinyl resin composition, placing said preform within a matrix the interior of which defines the form of said vinyl resin portion of said article, subjecting said preform while heated to fluid pressure applied internally thereto until it assumes the form of said matrix and thereafter maintaining said pressure and subjecting the vinyl resin portion to heat to make it heat stable.

2,027,962
PRODUCTION OF ARTICLES FROM PLASTIC COMPOSITIONS
Lauchlin M. Currie, Lakewood, Ohio, assignor to National Carbon Company, Inc., Cleveland, Ohio
Application March 2, 1933, Serial No. 659,458
30 Claims. (Cl. 18—55)

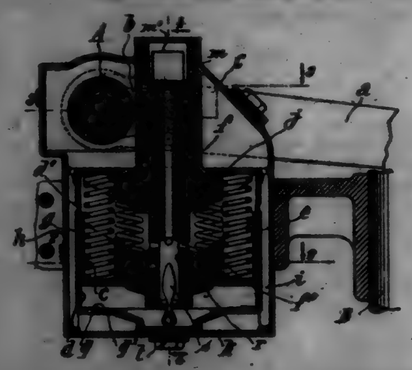
1. Method of producing articles having at least a portion thereof composed of a plastic composition containing thermoplastic resinous material, which comprises making a preform of said plastic portion and subjecting said preform to heat treatment solely to cause it to alter its physical form and to assume its final shape in said article and to make it heat stable.

2,027,963
APPARATUS FOR PREPARING SYNTHETIC CARBONADO DIAMONDS
Jean Hubert Louis De Boit, East Orange, N. J.
Application June 26, 1934, Serial No. 731,413
7 Claims. (Cl. 12—36)

1. An improved apparatus for use in making synthetic Carbonado diamonds, comprising a

motor having a shaft, a two-part body member mounted on said shaft, said body member being of non-magnetic material, a carbonaceous member disposed between parts of said body member and clamped therein, said carbonaceous member being susceptible of heating by inductive currents, a plurality of crucible members formed in and associated with said carbonaceous heating member and peripherally disposed with respect to the apparatus, and an induction coil disposed externally of the heating member and concentrically therewith whereby to inductively heat the said heating member while the latter is being rotated by the said body member.

2,027,964
FURRIER'S CUTTING TOOL
Ange Cesar Delbos, New York, N. Y.
Application June 14, 1933, Serial No. 675,699
1 Claim. (Cl. 30—6)



A furrier's cutting tool, comprising a pair of sections of the same general contour, said sections having portions adapted to enclose the upper edge of a cutting blade and extensions at one end of said portions forming a handle, said sections being pivoted together adjacent the outer end of said handle-forming extensions and adapted to be swung about said pivot in substantially parallel planes, one of said sections having a plurality of blade-receiving studs and the other section having apertures adapted to be brought into registration with said studs and thereby assist in retaining the blade in place on said studs, a locking member having at least a part thereof of substantially U-shape pivotally secured to one of the sections and swingable into a position in which the legs of the U-shape portion straddle both sections to hold them together, and a blade held in place on said studs and between the sections and having a pointed piercing end extending beyond the outer end of the blade-enclosing portions of the sections.

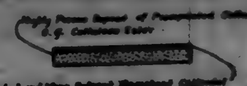
2,027,965
METHOD OF DEMULSIFYING THE SEALING OILS OF WATERLESS GASHOLDERS
Hans Dellmann, Mainz, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Nuernberg, Germany, a corporation of Germany
No Drawing. Application February 15, 1932, Serial No. 595,234. In Germany February 25, 1931
2 Claims. (Cl. 196—15)

1. A method of removing emulsion-forming impurities, such as dust, metal dust, linseed oil and the like, from already used sealing or packing liquids of waterless gasholders substantially free of sulphonated hydrocarbons, consisting in slightly heating the water-oil emulsion which has formed during use, adding thereto at atmospheric pressure a mixture containing material amounts both of soap and of water-glass, the total amount of soap and water-glass amounting to at least 1% by weight, leaving the mixture to

itself until it has separated into a lower layer of oil and an upper layer of water and impurities, and separating said upper layer from said lower one.

2,027,966
SUSPENSION DEVICE
André Dubonnet, Neuilly, France
Application May 26, 1933, Serial No. 672,986
21 Claims. (Cl. 267—34)

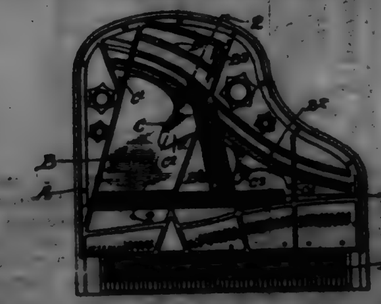
1. In a vehicle including a suspended part, wheels, and axles for said wheels, a suspension device of the type described which comprises in combination, an element pivoted to said suspended part about a vertical axis, an arm carrying a wheel axle and pivoted to said element about an axis parallel to said axle, a plate rigidly fixed to said element, another plate parallel to the first one and vertically movable with respect thereto, a lever pivoted to said element about the same axis as said arm in fixed angular relation to said arm, a vertical rod rigidly fixed to said second plate and operatively connected with said lever so as to cause said second plate to move vertically with respect to said first plate responsive to angular displacements of said lever, and a plurality of springs each interposed between said two members so as to oppose angular displacements of said arm with respect to said element.



2,027,967
ANTHELMINTIC
William F. Hinsie and Frai Caldwell, Quincy, Ill., assignors to Moorman Manufacturing Company, Quincy, Ill., a corporation of Illinois
No Drawing. Application December 15, 1934, Serial No. 757,823
2 Claims. (Cl. 167—53)

1. An anthelmintic ration of the type described, comprising a quantity of an alimentary product having admixed therewith a small quantity of a fluorine-containing salt of the type operable to supply soluble fluorine in the internal organs of an animal, the quantity of said salt being insufficient substantially to injure the animal.

2,027,968
STIFFENING MATERIAL
Joseph Passoa, Melrose Highlands, Mass., assignor to The Celastic Corporation, Wilmington, Del., a corporation of Delaware
Application August 19, 1933, Serial No. 685,948
10 Claims. (Cl. 15—168)



7. A stiffening blank comprising a fabric having a cellulosic derivative in precipitated form

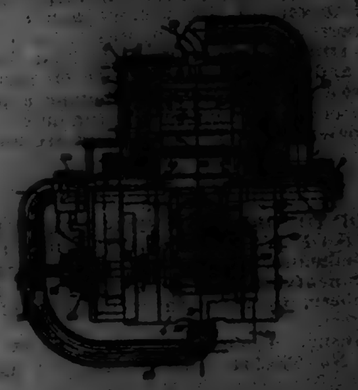
in the interstices thereof on one side and having said cellulosic derivative in a colloided solvent resistant form on the other side, said blank be-

ing adapted to be treated with a cellulosic derivative solvent to soften same, and then shaped and dried in the desired final form.

2,027,969
PIANO SOUNDING BOARD
Hermann Fischer, De Kalb, Ill., assignor to Wurlitzer Grand Piano Company, De Kalb, Ill., a corporation of Illinois
Application September 9, 1933, Serial No. 688,763
3 Claims. (Cl. 84—312)

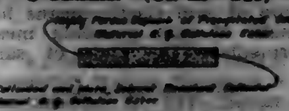
1. In combination with a piano sounding board, a bridge, wires associated with said bridge and a layer of vibration transmitting material interposed between said bridge and sounding board and firmly secured to said sounding board, both sounding board and layer being of wood, the grain of both extending, in general parallelism, transversely across the wires.

2,027,970
CENTRIFUGAL CLUTCH
Alfred James Gillies, Toronto, Ontario, Canada
Application April 4, 1934, Serial No. 14,579
In Great Britain April 22, 1934
4 Claims. (Cl. 192—105)



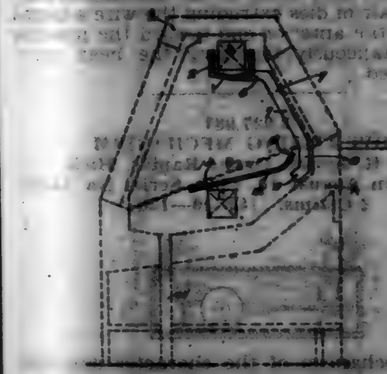
1. A centrifugal clutch comprising a driving member, centrifugal shoes arranged in series side by side and guided on the driving member for radial movement and a driven member having a drum engageable by the shoes characterized in that adjacent shoes have cylindrical holes formed in adjacent sides having their axes at right angles to a plane bisecting the angle between the radial planes of the direction of movement of the adjacent shoes and cylindrical pins are provided engaging in said holes and slidable in one or both of them.

2,027,971
WINDSHIELD WIPING BLADE
Lee R. Godown, Kingman, Kans., assignor of one-fifth to Vern L. Cline, Kingman, Kans.
Application June 9, 1934, Serial No. 729,709
1 Claim. (Cl. 15—250)



In a windshield wiping blade of the class described, comprising a channel body and means to attach the same to the free end of a reciprocator arm as actuating means for the blade upon a windshield, a fibrous element with rubber sides, a marginal edge of which is clamped within the channel slantingly with respect to the channel longitudinally, providing an open space between the element and channel converging downward and closing a spaced distance from the lower end of the channel substantially as shown.

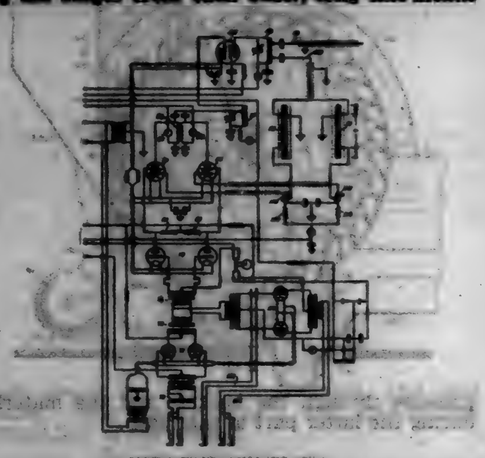
2,027,972
INTERNAL COMBUSTION ENGINE
John Heller and Lucile A. Lee, Detroit, Mich.
Application July 25, 1933, Serial No. 681,843
4 Claims. (Cl. 123—58)



2. In a rotary internal combustion engine, a stator, a rotor, a series of blades carried by the rotor, a pair of guide arms flexibly connected with each end of each blade, a pair of cams at each end of each blade, a roller rotatably mounted in the end of each guide arm and riding on its respective cam, the arrangement being such that during rotation of the rotor the rollers on the arms traverse the respective cams to limit the upper edge of the blade to travel in contact with the inner face of the stator.

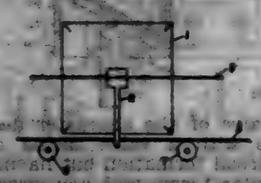
2,027,973
STIFFENING MATERIAL
Russell Hamilton, Bloomfield, N. J., assignor to The Celastic Corporation, Wilmington, Del., a corporation of Delaware
Application August 10, 1933, Serial No. 685,910
3 Claims. (Cl. 12—146)

1. Method comprising impregnating a fabric throughout with a cellulose derivative solution, passing the fabric without drying into a precipitating bath, the solvent-liquid content of said solution and said precipitating bath being at least partially immiscible and the fabric being subjected to said precipitating bath for a period of time only sufficient to precipitate part of the cellulose derivative, drying said impregnated fabric, and thereafter treating said fabric with a cellulose derivative solvent to soften it, shaping it, and allowing it to dry in the desired final form.



2,027,974
AIR CIRCULATING MECHANISM FOR REFRIGERATED CASES
Herbert J. Hankin and James J. Hankin, Cleveland, Ohio
Application July 2, 1932, Serial No. 620,858
Renewed June 12, 1935
3 Claims. (Cl. 62—89.5)

1. In a refrigerated chamber having a refrigerating coil in the upper part thereof, a receptacle like body designed to partly surround and extend beneath the coil, an area member of tubular formation having one end opening through the bottom of said body into the interior thereof and having its other end formed in and discharging into the lower part of the chamber, said area being designed to circulate cold air from the body to the lower part of the chamber and having its lower end formed to direct the cold air forwardly in the chamber, and a baffle plate overlying the forwardly directed end of said area.

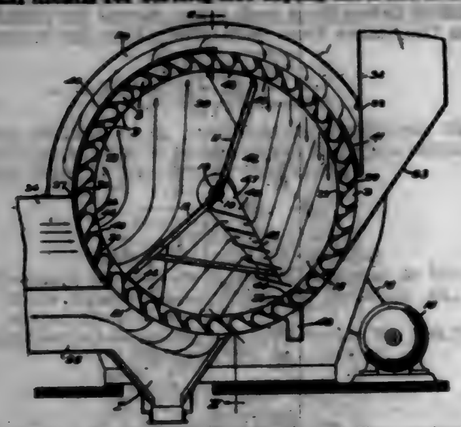


2,027,975
FREQUENCY MODULATION
Clarence Weston Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 25, 1930, Serial No. 463,614
23 Claims. (Cl. 179—171)

6. In radio signaling apparatus a transmitter comprising a plurality of high frequency stages, each stage comprising an electron discharge device having a pair of grids, means for shielding the input and output circuit of each electron discharge device from each other, means for shielding the stages from each other, long line means

for establishing high frequency feed back from one stage to another stage, and means for applying modulating energy to one of the grids of an electron discharge device in one of said stages.

2,027,976
PROCESS FOR TREATING MATERIALS ELECTROSTATICALLY
Thomas J. Headley, New Brunswick, N. J., assignor to Endowment Foundation, New Brunswick, N. J., a corporation of New Jersey
Application March 17, 1933, Serial No. 661,294
8 Claims. (Cl. 175—311)

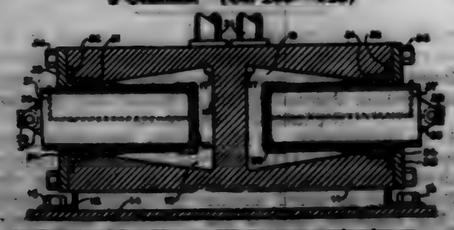


1. The process of treating plant-products which consists in passing said products along on a conveyor and at the same time subjecting the products to an electrostatic field established between suitable electrodes by a source of energy having a frequency preferably not less than 1,000,000 cycles, and a voltage preferably of the order of 4,000 volts per linear inch between said electrodes, the speed of movement through said field being such that the plant products being treated are not injured, while the insects or the like infesting said products are killed.

2,027,977
DRIER
Henry F. Hebley and Klaus Prinz, Chicago, Ill.
Application August 9, 1933, Serial No. 684,306
5 Claims. (Cl. 34—4)

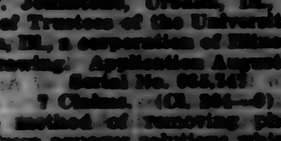
1. In apparatus of the class described, the combination of a rotary drum having peripheral depressions forming buckets for receiving the material to be dried, means for feeding material to the buckets, means for rotating said drum to carry the filled buckets through a fixed path, means for applying pressure to the material

in said drums during the first part of said path whereby to squeeze moisture out of the material, and means for forcing hot drying medium under



pressure through the buckets and the material during the latter part of said path.

2,027,978
VALVE
Joseph B. Holt, Philadelphia, Pa.
Application May 25, 1935, Serial No. 22,426
6 Claims. (Cl. 251—11)



1. In a valve of the character described, the combination with a valve casing of substantially cylindrical formation but having a portion of non-circular form, said non-circular portion being defined by a pair of spaced parallel flats formed in the casing of a valve member conforming to the shape of the cross-section of the casing and pivotally mounted between the flats.

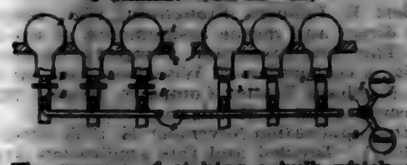
2,027,979
BOOT PUMP
Robert K. Hopkins, New York, N. Y., assignor to M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application July 14, 1934, Serial No. 735,187
5 Claims. (Cl. 103—148)

1. In combination with a pump body, a pump chamber formed in said body, fluid inlet means communicating with said chamber, fluid outlet means communicating with said chamber, pumping means movable in said chamber, and elastic means fastened to said body and extending into said chamber adapted to surround said pumping means, said elastic means being of substantial thickness intermediate the ends thereof whereby the distortion of said elastic means incident to the movement of said pumping means takes place intermediate the ends of said elastic means.

2,027,980
MANUFACTURE OF SCREWS AND BOLTS
William H. Horton, Sewickley, Pa., assignor to Pittsburgh Screw & Bolt Corporation, a corporation of Pennsylvania
Application August 28, 1933, Serial No. 686,155
1 Claim. (Cl. 10—27)

The method herein described of producing a headed blank for screw and bolt manufacture from a length of wire which consists in, first, extruding the wire from the anterior end thereof toward the posterior to reduced diameter and increased length, second, restricting the next operation to the spreading the substance of the wire at the unswaged posterior end thereof to form a head, and, third, in the continuous traverse of a pair of dies extruding the wire a second time from the anterior end toward the posterior and simultaneously trimming the head previously formed.

2,027,981
ADVERTISING MECHANISM
Fred H. Jensen, Grand Rapids, Mich.
Application August 14, 1935, Serial No. 35,576
3 Claims. (Cl. 40—130)



1. In mechanism of the character described: a platform having outwardly extending flexible bristles, a belt beneath the platform movable in a direction parallel therewith; devices above the platform having downwardly extending members, some of said members being fastened on the belt for circuitously traveling the devices by the belt and some of said members being vibratile and frictionally engaging the bristles in the movement of the belt to vibrate the devices.

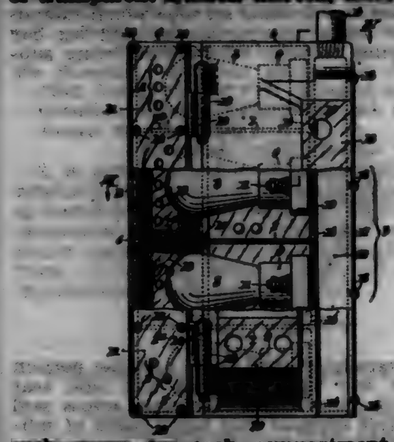
2,027,982
PROCESS FOR REMOVING CATALYSES INHIBITORS FROM AQUEOUS SOLUTIONS
Henry F. Johnstone, Urbana, Ill., assignor to Board of Trustees of the University of Illinois, Urbana, Ill., a corporation of Illinois
No Drawing. Application August 16, 1933, Serial No. 685,547
7 Claims. (Cl. 204—6)

1. The method of removing phenolic compounds from aqueous solutions which comprises subjecting the solutions to direct current electrolysis, simultaneously aerating said solutions

controlling the anodic current density in accordance with the character of the phenolic compounds to completely remove said compounds by oxidation from said solutions, and controlling the rate of flow of said solutions in accordance with the concentration of said compounds.

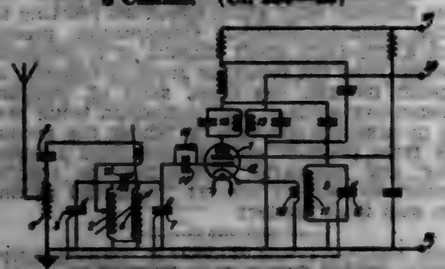
2,027,983
ELECTRIC LAMP BULB
Frederick Kallus, Hoboken, N. J.
Application January 27, 1933, Serial No. 653,845
3 Claims. (Cl. 41—42)

3. The process of etching a bulb which comprises subjecting the same to an etching fluid and then without washing, immediately subjecting the same to the action of a limited quantity of steam and then after an interval of time, washing out the bulb by flooding with an additional quantity of steam.



2,027,984
COLLAPSIBLE SHADE TENT
Stanley E. Kapp, New York, N. Y.
Application May 6, 1935, Serial No. 19,751
4 Claims. (Cl. 135—7.1)

1. A supporting frame for a booth, comprising a cross bar, a pair of secondary bars pivotally connected to the cross bar at approximately the center thereof, legs pivotally connected to the said bars, means for releasably locking the said bars in extended position, and means for releasably locking the legs in extended position.



2,027,985
SIGNAL INDICATOR FOR RAILROAD VEHICLES
John A. C. King, Lansdowne, Pa.
Application February 23, 1934, Serial No. 712,583
3 Claims. (Cl. 246—131)

1. In a railroad vehicle, a signal indicator comprising an integrally cast casing divided by horizontal partitions into a series of compartments, a lamp positioned within each compartment, and a hinged V-shaped cover thereon pointing rearwardly and divided by horizontal partitions into a corresponding series of compartments, each side of said cover having groups of transparent symbols thereon, there being one

such group for each compartment, and said casing being disposed near the longitudinal center line of the vehicle.

2,027,986
SUPERHETERODYNE RECEIVER
Rupert L. Kinnear, London, England, assignor to Electric & Musical Industries, Ltd., Hayes, Middlesex, England, a corporation of Great Britain
Application November 15, 1933, Serial No. 697,393
In Great Britain December 19, 1932
8 Claims. (Cl. 250—20)

1. A supersonic heterodyne wireless receiver comprising an input circuit, a second circuit and a coupling between these circuits such that oscillations are transferred from said input circuit to said second circuit, at least one of said circuits being tunable to the frequency of a wanted oscillation, auxiliary coupling means between said circuits comprising an inductive coupling and a capacitive coupling said auxiliary coupling means acting to transfer energy from the input circuit to the second circuit in phase opposition with respect to the energy transferred by the first named coupling and of such intensity to substantially buck out unwanted oscillations transferred from the input circuit to the second circuit through the first named coupling.

2,027,987
UNDERGARMENT
Arthur M. Ross, New York, N. Y.
Application May 14, 1932, Serial No. 611,463
2 Claims. (Cl. 2—244)

1. In an undergarment, a blank of knitted material having wales extending longitudinally thereof and forming a front portion, a crotch portion and a seat portion, a substantially half-

heart shaped leg bay in each side of said blank, the rounded end of each leg bay being in said front portion and defining an edge which extends across said wales, the portion of said leg bay which extends through said crotch being substantially parallel to said wales and the portion of said leg bay which extends into said seat being slightly curved and extending across said wales, the side edges of said blank being of substantially equal length and being stitched together to form leg openings.

2,027,983

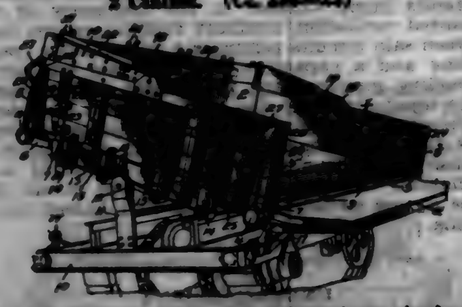
PROCESS OF PREPARING ODORLESS SYNTHETIC RESINOUS PRODUCTS

Gustave E. Lamb, Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware

No Drawing. Application February 16, 1934, Serial No. 711,618

4 Claims. (Cl. 260—4)

1. The process of making an infusible, insoluble phenolic-aldehyde resinous product free from phenolic odor which comprises reacting the initial phenolic-aldehyde condensation product with a relatively small amount of a compound selected from the following group:—halogen, inorganic halogen oxy-acids, salts of inorganic halogen oxy-acids—, said compound being present in sufficient amounts to render the product free from phenolic odor in the final, infusible state, and thereafter subjecting the reaction product to heat to convert the initial product into said final product.



2,027,989

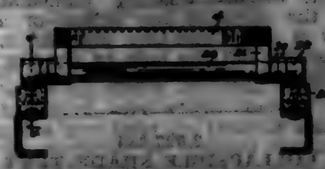
DUMP BODY FOR VEHICLES

Holman Harry Linn, Morris, N. Y., assignor to The Linn Manufacturing Corporation, Morris, N. Y., a corporation of New York

Application September 28, 1931, Serial No. 565,114

2 Claims. (Cl. 298—22)

1. A dump body having side gates swingingly connected thereto, arms carried by and movable with the side gates, a cable connecting the arms at the smaller ends of opposing side gates, a fixed element cooperating with the cable to move the arms to a predetermined position for the closing of a side gate when the body is returned to normal position and freeing the cable to permit the arms to move with the selected side gate for opening the side gate, and spring-pressed bars underlying and engaged by the arms in their movement to inoperative position, said bars serving to cushion such arms movement and to assist movement of the arms in the opposite direction on slackening of the cable.



2,027,990

FLEXIBLE AND RESILIENT VEHICLE COUPLING

Lubbert E. Lubbers, Stoughton, Wis., assignor, by direct and mesne assignments, of one-half to The New Stoughton Company, Stoughton, Wis., a corporation of Wisconsin, and one-half to Fruehauf Trailer Company, Detroit, Mich., a corporation of Michigan

Original application November 24, 1933, Serial No. 699,611. Divided and this application August 9, 1934, Serial No. 739,161

10 Claims. (Cl. 280—33.1)

1. The combination with a tractor and semi-trailer having cooperating fifth wheel members for establishing an articulated connection, of pivotally mounted supporting devices on a fifth wheel member by which it is supported on one vehicle, and means connecting said vehicle to the pivotally mounted devices including rubber elements for insulating metal to metal contact between said devices and said vehicle and bodily movable with the vehicle.

2,027,991

ESTERS OF ETHERIFIED GLYCOLLIC ACIDS

Wolfgang Libbert and Ernst Ludwig Müller, Duesseldorf, Germany, assignors to Henkel & Cie. G. m. b. H., Duesseldorf, Germany

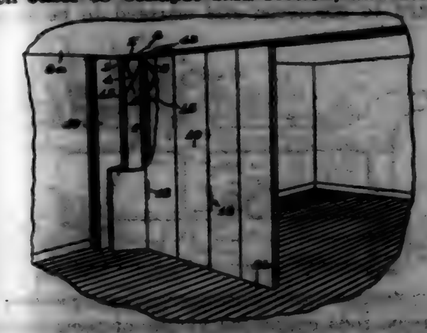
No Drawing. Application November 20, 1931, Serial No. 575,011. In Germany December 5, 1931

7 Claims. (Cl. 260—103)

1. The esters having the general formula $R^1XCH_2COOR^2$ where X signifies a divalent non-metallic atom of the group consisting of oxygen and sulphur, R^1 represents a member selected from the group consisting of the hydroxyethyl-radical, the phenyl-radical and the carboxy-methyl-radical, and R^2 signifies an alkyl radical having at least 2 carbon atoms.

2,027,992

COLLAPSIBLE PARTITION



Herman W. Mesner, Cleveland Heights, Ohio

Application October 31, 1930, Serial No. 492,481

Renewed July 3, 1935

10 Claims. (Cl. 20—4)

1. In a foldable partition, a plurality of collapsible partition sections, each including a pair of vertical columns held against movement transversely of said partition, said columns being movable toward each other, a pair of panels for each side of said section normally lying in the same plane, each pair of panels being hingedly connected, one panel of each pair being hinged to one of said columns and the other panel of each pair being hinged to the other of said columns, whereby when said pairs of panels are swung outwardly and the panels of each pair are swung toward each other said columns are moved toward each other to collapse said section, and means releasably engaged with said panels to normally prevent swinging movement thereof and to hold each pair in the same plane, and means to release said first mentioned means from engagement with said panels.

2,027,993

DEVICE FOR CUTTING ICE CUBES

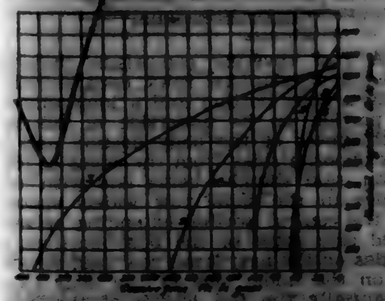
John E. Mathews, Middletown, Ohio

Application February 7, 1933, Serial No. 5,466

3 Claims. (Cl. 312—31)

2. An ice cutter, including a casing formed of a rectangular frame formed of tubular members and a plurality of hollow transverse bars of substantially the same diameter as said members, a resistance wire extending through said casing and said hollow bars, said wire being so arranged that there will be two runs extending through each part of the casing and each part of each of said bars, an insulation surrounding said wire, and means for supplying electrical energy to said wire.

2,027,994



MAGNET STEEL CONTAINING NICKEL AND ALUMINUM

Tokushichi Mishima, Ochini-machi, Toyotama-geri, Tokyo, Japan

Application January 20, 1932, Serial No. 587,522

In Japan March 9, 1931

4 Claims. (Cl. 175—21)

2. A permanent magnet comprising 5 to 40% nickel, 7 to 20% aluminum and the remainder substantially iron.

2,027,995

STRONG PERMANENT MAGNET WITH TUNGSTEN, MOLYBDENUM, OR CHROMIUM

Tokushichi Mishima, Ochini-machi, Toyotama-geri, Tokyo, Japan

No Drawing. Original application January 20, 1932, Serial No. 587,522. Divided and this application May 31, 1933, Serial No. 673,795. In Japan March 9, 1931

8 Claims. (Cl. 175—21)

2. A permanent magnet comprising main and auxiliary elements, the main elements consisting of nickel 5 to 40%, aluminum 7 to 20% and the remainder substantially iron; the auxiliary elements consisting of one of the metals chromium from 1.0 to 5%, tungsten from 0.5 to 8% and molybdenum from trace to 10%.

2,027,996

STRONG PERMANENT MAGNET WITH COBALT

Tokushichi Mishima, Ochini-machi, Toyotama-geri, Tokyo, Japan

No Drawing. Original application January 20, 1932, Serial No. 587,522. Divided and this application May 31, 1933, Serial No. 673,795. In Japan August 27, 1931

4 Claims. (Cl. 175—21)

2. A permanent magnet comprising 5 to 40% nickel, 7 to 20% aluminum, 0.5 to 30% cobalt and the remainder substantially iron.

2,027,997

PERMANENT MAGNET CONTAINING COPPER

Tokushichi Mishima, Yodobashi-ku, Tokyo, Japan

No Drawing. Original application January 20, 1932, Serial No. 587,522. Divided and this application March 4, 1935, Serial No. 9,695. In Japan March 9, 1931

4 Claims. (Cl. 175—21)

2. A permanent magnet comprising 5 to 40% nickel, 7 to 20% aluminum, from trace to 20% copper and the remainder substantially iron.

2,027,998

PERMANENT MAGNET CONTAINING NICKEL, ALUMINUM, COBALT, AND CHROMIUM

Tokushichi Mishima, Yodobashi-ku, Tokyo, Japan

No Drawing. Original application January 20, 1932, Serial No. 587,522. Divided and this application August 7, 1935, Serial No. 35,397. In Japan August 27, 1931

4 Claims. (Cl. 175—21)

2. A permanent magnet comprising 5 to 40% nickel, 7 to 20% aluminum, 0.5 to 30% cobalt, 1 to 5% chromium and the remainder substantially iron.

2,027,999

PERMANENT MAGNET CONTAINING NICKEL, ALUMINUM, AND MANGANESE

Tokushichi Mishima, Yodobashi-ku, Tokyo, Japan

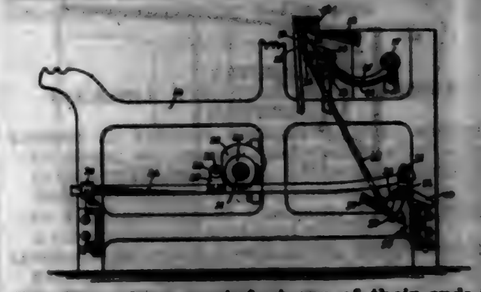
No Drawing. Original application January 20, 1932, Serial No. 587,522. Divided and this application August 7, 1935, Serial No. 35,398. In Japan August 27, 1931

4 Claims. (Cl. 175—21)

3. A permanent magnet comprising 5 to 40% nickel, 7 to 20% aluminum, 0.5 to 10% manganese and the remainder substantially iron.

2,022,690
PERMANENT MAGNET CONTAINING NICKEL, ALUMINUM, AND VANADIUM
Tokuhichi Mishima, Yodobashi-ku, Tokyo, Japan
No Drawing. Original application January 20, 1933, Serial No. 652,822. Divided and this application August 7, 1935, Serial No. 35,200. In Japan August 27, 1931
4 Claims. (Cl. 175—31)

2. A permanent magnet comprising 5 to 40% nickel, 7 to 20% aluminum, from trace to 10% vanadium, and the remainder substantially iron.



2,022,691
CULTIVATING TOOL
John Moran, Long Island, N. Y.
Application July 16, 1935, Serial No. 30,720
1 Claim. (Cl. 97—43)

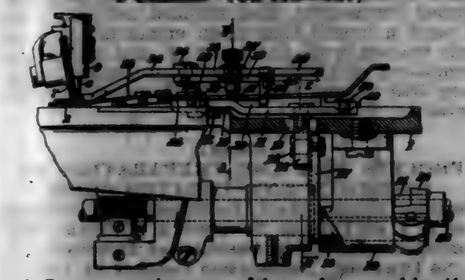
In a cultivating tool, a cross head of square cross section having squared front, bottom, top and rear faces, a set of equally spaced pointed tines integral at their upper ends with the lower face and flush with the front and rear faces of the cross head, the outer tines of said set being arranged inwardly adjacent to the ends of said cross head, said tines extending rearwardly with respect to said cross head and having the front and back thereof respectively upon irregular convex and concave curves whereby the body of the tines will gradually decrease in cross sectional area from their upper to their lower ends, said tines having their upper terminal portions laterally flared sidewise in a direction lengthwise with respect to the lower face of the cross head and of rectangular contour in cross section, said tines having their remaining portions of substantially oval contour in cross section gradually decreasing in width and breadth to their lower ends, and a handle connecting shank including an upstanding rearwardly directed curved forward end part terminating in a downwardly extending rearwardly directed part of compound curvature merging into a rearwardly directed upwardly inclined squared portion having a pointed end, the lower end of said forward end part being integral with the top of the cross head at the transverse center of the latter.

2,022,692
LOOM
Anthony M. Muldoon, Englishtown, N. J.
Application July 17, 1935, Serial No. 31,781
2 Claims. (Cl. 139—7)

1. In a loom for making tuft pile fabrics having the tuft bights visible at the rear of the fabric, a drive shaft, a comb, a plate positioned adjacent the comb and having its upper edge normally protruding above the top edge of the comb for positioning the tuft bights, said plate being adapted to be moved by engagement with the warp threads of the fabric so that its upper edge is moved down even with the upper edge of the comb, springs for normally urging said plate to its uppermost position when it rides free of the warps, and mechanism for moving said plate against the action of said springs and independently of the warp threads when it rides free of the latter so that its upper edge is below the upper edge of the comb, said mechanism comprising a lever operatively connected to the drive shaft, another shaft connected to the lever and adapted to be rocked

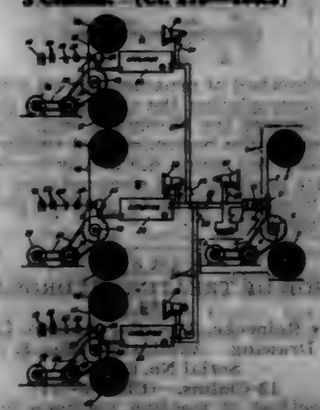
thereby, rods connected at one of their ends to said latter shaft and their other ends fastened to the plate whereby movement of the lever is communicated to the plate, said latter movement being timed to occur after the plate has moved free of the warps.

2,022,693
VEHICLE TIRE
Arthur H. Nellen, Merion, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a corporation of New York
Application March 21, 1935, Serial No. 12,131
10 Claims. (Cl. 152—11)



1. A cord fabric carcass ply for pneumatic tires fabricated of cords of 3/3 construction having a twist not less than 19—9, a gauge not exceeding 0.032 inch and a maximum permissible elongation of 11 percent subsequent to the application of a 2 pound load thereto when tested bone-dry and before impregnating or coating the cord with rubber compound.

2,022,694
ROOF COVERING
Harry T. Nichols, Bridgeport, Conn.
Application February 12, 1931, Serial No. 515,281
9 Claims. (Cl. 189—3)



1. A roof covering comprising shingles arranged in overlapping rows, each shingle comprising a body portion and a longitudinal central portion on its underside of substantially the thickness of the body portion and spaced at its opposite sides from the edges of the body portion, said shingles being laid with adjacent shingles in the same row widely spaced and with the central portion extending between the spaced side edges of the body portions of the shingles on the next lower row, said central portion on the under side of the body extending substantially the full length of the body and formed as an integral part of the body so that the body and this portion are mounted as a unit by the single operation of mounting the body.

2,022,695
SEWING MACHINE
Henry C. Mason, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application April 27, 1933, Serial No. 667,519
5 Claims. (Cl. 112—127)

1. In a sewing machine, in combination, stitch-forming mechanism, trimmer mechanism including a work-severing knife adapted to be shifted into and out of operative position, an edge-guide for directing work past said stitch-forming mechanism, edge-guide supporting means providing for shifting said edge-guide into and out of operative position relatively to said knife, and means for releasably coupling said edge-guide and knife for simultaneous movement thereof out of operative position.

2,022,696
PHOTOGRAPHIC SOUND RECORDING APPARATUS
Freeman H. Owens, New York, N. Y.
Application July 9, 1930, Serial No. 466,728
3 Claims. (Cl. 179—100.3)

1. A photographic sound recording apparatus, comprising in combination, means for supporting a traveling sensitized film, a plurality of individual sound record translating units, means for simultaneously combining the translated sound from all of said units and re-recording the same as a single composite sound record on said sensitized film, and means for rendering said translated sounds from each of said units audible at the time of such re-recording.

2,022,697
SANITARY GIRDLE
Cecil E. Percival, Vancouver, British Columbia, Canada
Application December 22, 1933, Serial No. 703,502
3 Claims. (Cl. 128—239)

1. A sanitary and hygienic girdle of the kind described composed of a section of sheet material and comprising a girdle, said girdle having a waist-band, buttock and pelvis shields integral with said waist-band, a pad retaining member intermediate of said shields and integral therewith, said pad retaining member having flared ends and a tapering centre portion, loops located

at each end of said pad retaining member, shoulders located under said loops, said shoulders each comprising a restriction within said loops adapted to hold and prevent a pad positioned under said loops from creeping and crawling thereunder.

2,022,698
APPARATUS FOR CONTINUOUS MACHINING OF WORK-PIECES AND PARTICULARLY IN HOUSINGS FOR AXIAL BEARINGS OF REAR VEHICLES
Walter Feyinghaus, Egge, near Volmarstein-on-the-Ruhr, Germany
Application August 4, 1932, Serial No. 627,476
In Germany August 19, 1931
9 Claims. (Cl. 29—33)

1. Apparatus for the continuous machining of work pieces, in particular the housings for axle bearings of rail vehicles, comprising in combination working machines for the faces of the work piece to be treated, a main table, said working machines arranged behind each other along the said main table, a travelling table on said main table according to the work pieces to be treated simultaneously at a working station, operative means between main table and travelling table for facilitating the travel of the travelling table on the main table, clamping devices for the work pieces on the said travelling table adapted for the faces of the work pieces to be treated by the working machines, each working station having a clamping table on said longitudinal table, said clamping tables being designed in the form of a support for machine tools and adjustably arranged to move only under sliding friction, said clamping tables adapted for receiving the travelling tables at the working stations, means for rigidly securing together the travelling and clamping tables at the working stations.

2,022,699
ELECTRIC OUTLET
Oliver N. Plante, Worcester, Mass.
Application November 1, 1933, Serial No. 696,235
1 Claim. (Cl. 173—330)

In an electric outlet, the combination of a bracket, a block of insulating material therein

comprising a hollow cylindrical outer member and a central solid inner cylindrical member spaced therefrom, an insulating cap at one end of the block covering one end of each cylindrical member to separate any metallic parts therein from the bracket, said block being provided with two concentric registering substantially semicircular grooves extending in from its outer face between said two members for receiving the flat tangential prongs of an electric plug at any point around said grooves, means integrally connecting the inner and outer cylindrical members and separating the grooves and having spaces at the end of said grooves, a substantially semicircular conically concave spring metallic contactor member on each side of the inner cylindrical member in said spaces, extending from end to end of the block and engaging the central cylindrical member at one end thereof only, and means for fastening the cap and insulating block together, comprising an assembly nut, and a screw for entering the nut, said block being provided with shoulders for receiving said nut and holding it against the action of the screw.

2,028,011

SOCKET DEVICE

Alfred Pleger, Oak Park, Ill., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware

Application October 23, 1931, Serial No. 570,013

4 Claims. (Cl. 173—328)

1. In a socket device for radio tubes or the like, an insulating base having an opening for the reception of a contact prong, and a socket element attached to said base in cooperative relation with said opening, said socket element being formed of resilient sheet metal, and having a seat portion attached to said base, a contact portion extending from said seat portion at an angle thereto into the path of said prong, resilient contact means carried by and projecting from said contact portion, and a rigid stop arm extending obliquely from one of said portions toward the other of said portions and forming with said portions a generally triangular formation, said stop arm being rigid throughout and serving as a brace to limit positively movement of said contact portion.

2,028,011

SAFETY RAZOR HANDLE

John D. Raymond, Detroit, Mich., assignor of one-third to James Halpin, Detroit, Mich.

Application August 21, 1933, Serial No. 685,991

1 Claim. (Cl. 30—35)

A safety razor handle of the class described comprising: a pair of rigid and axially aligned end sections, the adjacent ends of said sections being formed to provide cup-shaped formations, an axial prong projecting outwardly from the base of each of said cup-shaped formations, and a flexible rubber section of the same diameter as said end sections and having its ends cut away to provide reduced portions thereat with shoulders at the inner ends thereof, said reduced portions being of a size to permit a snug engagement in said cup-shaped formations, said prongs projecting axially into the ends of said reduced portions to spread the same and insure a frictional engagement with the walls of said cup-shaped formations, said reduced portions being of such a length that upon engagement of the ends thereof with the bases of said cup-shaped formations, the edges of said cup-shaped formations will engage said shoulders on said rubber sections.

2,028,012

PROCESS FOR THE PREPARATION OF ESTERS OF UNSATURATED ACIDS

Ebenezer Emmet Reid, Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 21, 1933, Serial No. 694,569

15 Claims. (Cl. 260—126)

1. A process for the preparation of an ester of methacrylic acid which comprises reacting phosgene and propylene in the presence of a condensation catalyst, esterifying the resulting betachlorisobutyryl chloride, and subsequently dehydrohalogenating the esterified and halogenated isobutyrate to give an ester of methacrylic acid.

2,028,013

ORNAMENTATION

Alfred F. Reilly, North Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a corporation of Massachusetts

Application March 11, 1935, Serial No. 10,551

4 Claims. (Cl. 41—12)

1. The method of ornamenting an article comprising electroplating the article with chromium, cutting through the chromium with a mechanical cutter in lines beginning and ending straight and parallel but being differently curved at intermediate portions, and electroplating with gold the cut lines only so as to produce an effect of varying elevation.

2,028,015

METHOD OF TREATING HYDROCARBON FUELS

Henry Reinecke, Toronto, Ontario, Canada

No Drawing. Application May 8, 1933, Serial No. 669,909

12 Claims. (Cl. 204—21)

1. A method of treating methane to produce hydrocarbon gases more easily liquefied which comprises the following steps, passing the methane, at sub-atmospheric pressure, through a reaction tube; and maintaining a silent electric discharge through the gas as it passes through the tube, the rate of flow being such that the contact of the molecules of the gas and the electric field is less than .03 of a second.

2,028,016

RESILIENT WHEEL AND METHOD OF MAKING THE SAME

Henry F. Schlegel, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

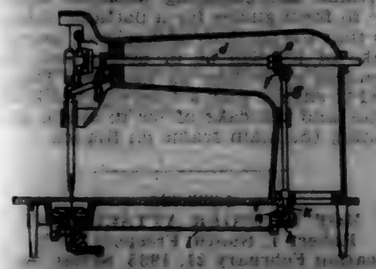
Application November 25, 1932, Serial No. 643,196

2 Claims. (Cl. 295—11)

1. A wheel comprising a rim structure, a wheel structure in interrelated relation with said rim structure, bodies of rubber between said structures, and means comprising a snap ring for holding said structures in association with the

rubber bodies held compressed between them a determinate amount in the axial direction, the snap ring having a beveled surface engaging a corresponding surface on the rim structure.

2,028,016



SEWING MACHINE

Curt Wilhelm Schweiger, Munich, Germany

Application November 23, 1933, Serial No. 703,103

In Germany September 19, 1933

1 Claim. (Cl. 112—154)

In a combination trimming and zigzag sewing machine with a ring looper oscillating in the horizontal plane, a needle bar moving transversely to the sewing direction in zigzag work, a swinging frame for said needle bar, and a looper disposed in front of the needle and being coaxial with said swinging frame, the point of said looper engaging the needle thread loop behind the needle.

2,028,017

CHROMITE MATERIAL AND METHOD OF MAKING THE SAME

Gilbert E. Bell, Conshohocken, Pa., assignor to E. J. Lavino and Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application May 27, 1931, Serial No. 540,495

19 Claims. (Cl. 106—9)

1. The process of making recrystallized chromite, having the gangue disseminated over the surfaces of the chromite crystals, from natural chrome ore which comprises heating natural chrome ore at a temperature above the recrystallization point of the chromite without fusion thereof to bring the ore, including the gangue, into physical and chemical equilibrium at said temperature and to distribute the gangue so that at no place in there a concentration of gangue present; and thereafter cooling said heated ore.

2,028,018

CHROMITE REFRACTORY MATERIALS

Gilbert E. Bell, Conshohocken, Pa., assignor to E. J. Lavino and Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application October 28, 1932, Serial No. 640,899

8 Claims. (Cl. 106—9)

1. A burned refractory material consisting substantially of undecomposed chromite spinel with magnesium silicate compounds in the form of forsterite.

2,028,019

SUBSTRUCTURE FOR OIL WELL DERRICKS

Samuel B. Sedlik and Herbert A. Johnson, Parkersburg, W. Va., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a corporation of West Virginia

Application September 12, 1935, Serial No. 40,332

15 Claims. (Cl. 189—21)

1. A substructure for derricks comprising a polygonal frame including a corner column at each corner thereof, each column having a flat portion arranged in a vertical plane substantially bi-secting the angle of the associated corner of said frame, and means for rigidly supporting the lower end of a derrick leg over and with respect to the upper end of each corner column.

2,028,020

HOOK FASTENER

Charles L. Sheldon, Watertown, Mass., assignor to Heel Rubber Company, Inc., Watertown, Mass., a corporation of Delaware

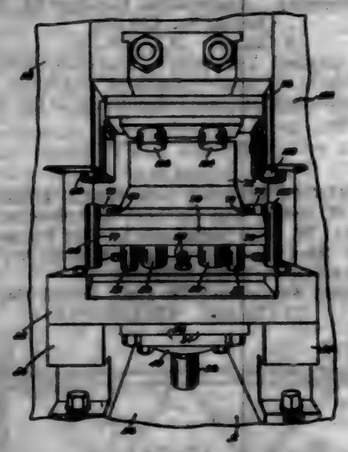
Application December 5, 1934, Serial No. 756,079

2 Claims. (Cl. 24—226)

1. A catch for engaging a hook fastener, said catch comprising a single piece of metal formed to provide a flat base member, a hook-engaging loop member extending along said base and spaced therefrom, and a lug formed on one of said members and extending toward the other and impinging therewith for holding said members in spaced relation said base member being directly beneath said loop member so as to be concealed thereby.

2,028,021

MOLDING DEVICE



Lee C. Shippy, Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application August 19, 1933, Serial No. 685,526

4 Claims. (Cl. 18—16)

1. A device for forming powdered material into blanks comprising, in combination, a mold member having an aperture; a stationary ram extending partly into said aperture; a shaft; a

crank arm on said shaft; a second ram moved by said crank arm toward and into said aperture; a piston under constant fluid pressure urging the mold member toward the movable ram; a stop preventing such movement of the

mold member when the latter attains a certain position relative to the stationary ram; a cam on said shaft; and a cam follower cooperating therewith for moving the mold member away from the movable ram thereby exposing the formed blank.

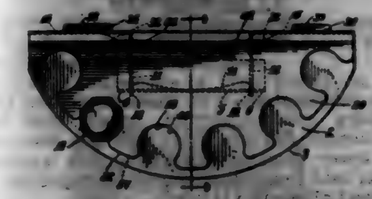
2,028,022
CUTTING AND SHAVING DEVICE
Henry Siemiatki, Jersey City, N. J.
Application February 11, 1935, Serial No. 6,852
16 Claims. (Cl. 30—31)

1. A device of the class described, comprising a holder terminating in a head shaped and sized to conform to predetermined characteristics of a cavity of the human body, whereby it may enter completely within such cavity and a cutting blade carried by said head, said head comprising a fluted portion converging from a point adjacent the blade into said holder, and a blade clamping screw threaded into said head.

2,028,023
ICE HANDLING TRUCK
Charles A. Smith, Wellsville, Kans.
Application November 1, 1934, Serial No. 751,959
1 Claim. (Cl. 280—56)

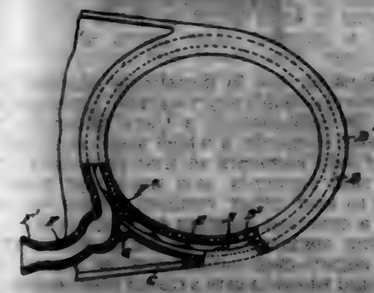
A truck for handling blocks of ice comprising a skeleton bed including side, end, transverse and longitudinal members, said side and end members secured together at the front end of the bed and the side members terminating in handles beyond the rear end of the bed, certain of said transverse members extending beyond the side members and bent to provide upstanding projections, a shoe arranged at the front end of the bed and including a transverse wall and short longitudinal walls secured to the projections of one of the transverse members, pairs of legs secured to the side members, an axle secured to one pair of legs, wheels journaled on the axle, braces secured to the bed and to the legs and diagonally extending braces connecting the side members and engaging the under faces of the longitudinal members of the bed.

2,028,024
ICE SCORING DEVICE
Charles A. Smith, Wellsville, Kans.
Application November 1, 1934, Serial No. 751,961
2 Claims. (Cl. 126—14)



1. An ice scoring device comprising a main frame adapted to be positioned about a cake of ice, and a plurality of elements carried by the main frame and engaging with the surface of the ice to form guides for a portable cutting device so that the sections or blocks of ice cut from the cake of ice will be of determined weights, a depending projection on the main frame and adapted to engage with a shoe of a truck between said shoe and the cake of ice to aid in properly positioning the main frame on the ice.

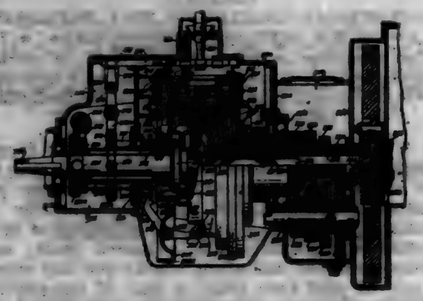
2,028,025
MOP WRINGER ATTACHMENT
Robert T. Smith, Prospect, N. Y.
Application February 21, 1935, Serial No. 7,611
2 Claims. (Cl. 15—119)



1. In a structure of the class described in combination, an elongated mop handle, a mop swab secured to one end of said handle, a sleeve longitudinally slidable on said handle and adapted to receive said mop swab, a pair of transverse pivotally connected to the lower end of said sleeve, a pair of substantially parallel rollers carried by said bracket, said rollers being adapted to be positioned on each side of said mop swab, resilient means normally urging said rollers together, and cable means secured to each of said brackets for pulling said rollers apart against the action of said spring.

2,028,026
FLASH-LIGHT DISPLAY RACK
Otto Peter Stersh, Ozone Park, N. Y., assignor to The United States Printing & Lithograph Company, New York, N. Y., a corporation of Ohio
Application July 7, 1933, Serial No. 679,416
5 Claims. (Cl. 211—13)

1. In a display rack, the combination with a blank having a back, a base and a notched section for receiving merchandise, of a second notched merchandise receiving section having projections attached to the back and spaced from the first section and braces on the back extending forward to hold the spaced notched sections in parallel positions.



2,028,027
WATER CLOSET
James M. Teahen, Detroit, Mich.
Application February 12, 1934, Serial No. 710,925
2 Claims. (Cl. 4—11)

1. A water closet comprising a bowl, an integral flushing tank and a channeled rim for the bowl extending therearound, the channel of said rim being provided with a water inlet connection and having a dead opposite end, water discharge ports distributed around said rim inclining downward therefrom in a direction opposite to the flow of water through the channel, and an air vent at the dead end of said channel connecting with the portion thereof last to be filled with water and directing water discharged therethrough into said tank.

2,028,028
CLUTCH MECHANISM FOR TRANSMISSIONS
Tracy Brooks Tyler, Detroit, Mich., assignor to The Monopower Corporation, Detroit, Mich., a corporation of Michigan
Application May 19, 1933, Serial No. 671,194
10 Claims. (Cl. 192—48)

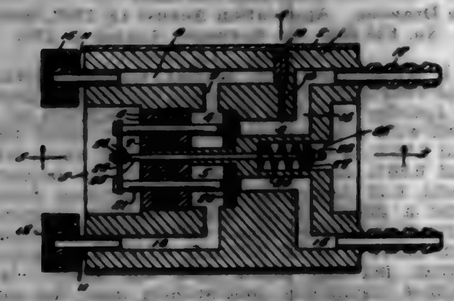
1. In a transmission, a plurality of clutches, engaging means in each clutch, pressure means, rods separately connected to different engaging means in different clutches and slidably associated with said pressure means, cams rotatably mounted on said pressure means and adapted to be rotated

relative to said pressure means to engage said rods individually, and means for moving said pressure means to move said rods and actuate the engaging means with which the engaged rods are connected.

2,028,029
WHEEL RIM
Herman Johan van Reyen, Herde in Westfalia, Germany
No Drawing. Application August 15, 1932, Serial No. 628,959. In Germany August 4, 1931
2 Claims. (Cl. 75—1)

1. Wheel rims and similar articles offering high resistance to abrasion and exhibiting a purely lamellar pearlitic structure, composed of a steel with a carbon content between about 0.65 and 0.78%, a silicon content between about 0.40 and 0.80% and a manganese content between about 0.40 and 0.85% and comprising metal from a group of the double carbide formers: chromium between about 0.30 and 0.80%, tungsten between about 0.25 and 0.70% and molybdenum between about 0.23 and 0.65%, the balance comprising substantially iron, the sum of said double carbide formers being so proportioned that the composition is eutectoid, the steel having also a lamellar pearlitic structure in the finished articles.

2,028,030
WATERPROOF CIGARETTE CASE
James Edward Walker, Dallas, Tex.
Application April 6, 1933, Serial No. 15,102
2 Claims. (Cl. 206—38)



1. A box of the character described comprising a pair of complemental sections each having a continuous wall provided with a pair of continuous spaced grooves, a compressible gasket secured in the outer continuous groove of one of the sections and a compressible gasket secured in the inner groove of the other section each projecting beyond its groove and adapted to be received in the opposed mating groove of the opposite section.

2,028,631
CLUTCH-FACING
Gustav Walters, Middletown, Conn.
Application October 24, 1934, Serial No. 749,736
6 Claims. (Cl. 192—107)

1. A clutch-facing comprising: a disk formed of impregnated multi-ply woven fabric having two ends adjacent one another and with one ply forming a friction-face ply and another ply forming a rear-face ply; and a plurality of splicing-members joining said adjacent ends; each splicing-member including a body-portion engaging one of said face plies, a pair of leg-portions extending through said adjacent ends, and a pair of clamping-fingers engaging the other of said face plies; the portions of said splicing-members engaging said friction-face ply being inset substantially below the surface of said friction-face.

2,028,632
AUTOMATIC LIGHTER AND GAS SAVER
Charles F. White, Detroit, Mich.
Application April 20, 1935, Serial No. 17,070
1 Claim. (Cl. 277—3)

In a device of the class described, a body having a recess in each end thereof, a pair of spaced longitudinally extending cylinders in the body opening out into one recess, means for closing the outer end of each cylinder, a piston in each cylinder, rods connected with the pistons and passing through the closing means, a cross piece connecting the outer ends of the rods together, a stem having one end connected with the central part of the cross piece, said stem being slidably supported in the central part of the body, a cylinder opening out into the other recess and into which the stem extends, a head on the stem slidably arranged in the last mentioned cylinder, a spring in said last mentioned cylinder bearing against the head for holding the pistons in the inner ends of the first mentioned cylinders, a manually operated member for moving the stem against the action of its spring to move the pistons toward the opposite ends of the cylinders, said body having a pair of discharge passages therein connecting with intermediate parts of the cylinders and a pair of inlet passages therein connecting with the inner ends of the cylinders, one discharge passage having an extension leading to a point adjacent an inlet passage, and the body having a lateral port therein connecting said extension with said inlet passage, and a screw valve passing through a side part of the body and controlling the port.

2,028,633
COFFEE MAKER
Frank E. Wolcott, West Hartford, Conn., assignor to The Silex Company, a corporation of Connecticut
Application July 13, 1934, Serial No. 735,031
20 Claims. (Cl. 219—43)

1. In combination, a vacuum type coffee maker comprising interconnected upper and lower bowls, electric heating means for the lower bowl, and a lower bowl supporting means axially located on said heating means and supporting said lower bowl above the latter.

2,028,634
MEANS FOR USE IN MAKING ANGULAR ADJUSTMENTS AND MEASUREMENTS
Charles Cyril Allen, Pietermaritzburg, Natal, Union of South Africa
Application January 12, 1935, Serial No. 1,281
In Union of South Africa October 22, 1934
5 Claims. (Cl. 33—69)

1. Means for use in measuring angular movement between relatively rotatable elements comprising, in combination, a track associated with one of said elements, a wheel associated with the other of said elements so that on relative rotation of said elements, said track and wheel roll relative to each other, resilient means for maintaining a constant yielding pressure between the contacting surfaces of the wheel and track to obviate slip or play, and indicating means operable by said wheel to give a direct precise measurement of the relative angular movement of said elements readable with the naked eye.

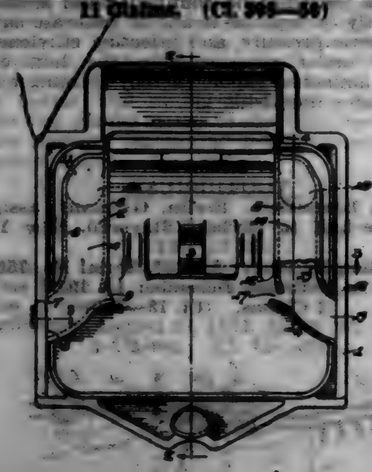
2,028,635
RADIO TUBE SOCKET
John F. Anderson, Chicago, Ill., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware
Application September 18, 1930, Serial No. 482,881
8 Claims. (Cl. 173—328)

1. A tube socket structure of the character described, comprising a flat support having an opening therein for the reception of a tube prong, a contact device having a flat base disposed beneath the under side of said support in parallel relation thereto and secured to said support adjacent said opening, a pair of opposed arms extending downwardly from said flat base and terminating in end portions extending beneath said opening for the reception of a tube prong inserted therethrough, and a spring device having a flat base interposed between said support and said first-mentioned base, and a pair of opposed spring arms extending downwardly from said last-mentioned base and along said end portions, said spring arms embracing said first-mentioned arms and said end portions.

2,028,636
STEAM BOILER
James W. Armour, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application September 18, 1933, Serial No. 689,937
5 Claims. (Cl. 122—235)

1. A steam boiler comprising a transverse horizontal water drum, a lower bank of tubes connected to the drum, an upper bank of tubes connected to the drum, walls forming a furnace chamber beneath the lower tube bank, water wall tubes associated with the side walls of the furnace chamber and arranged to discharge steam and water into the end portions of the drum, and baffle means within the drum to deflect steam toward the central portion of the drum.

2,028,637
PARKING REGISTER
Roger W. Babson, Wellesley, Mass.
Application February 13, 1932, Serial No. 591,839
27 Claims. (Cl. 177—311)



12. A parking register comprising a plurality of electric signals in different circuits, a signal changing switch shiftable to close one or another of said signal circuits exclusively, a main switch operable by placement of an automobile in parking position, means whereby such operation of the main switch causes the signal changing switch to be placed in one of its positions, a coin controlled switch, and means under the control of said coin controlled switch for causing placement of the signal changing switch into another of its signal operating positions.

2,028,638
MACHINE FOR CHARGING ANNEALING FURNACES AND THE LIKE
Harvey W. Ball, Alliance, Ohio, assignor to The Morgan Engineering Company, Alliance, Ohio
Application February 12, 1935, Serial No. 6,357
2 Claims. (Cl. 214—16)

1. A charging machine for furnaces, comprising a wheel supported truck adapted to aid in supporting an annealing box, said truck having a body provided with a vertical guideway extending lengthwise of the truck and opening through the top of the body, an elevating platform movable in said guideway and having an upper surface adapted to be brought into a position substantially flush with the top of the body to allow the body to support the annealing box until the platform is raised, means for moving said truck into and out of a furnace, toothed racks operatively connected to the platform, and means engaging the racks for raising and lowering the platform, whereby said annealing box may be raised from the truck body.

2,028,639
JOURNAL BOX
Donald S. Barrows, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a corporation of Maryland
Application September 8, 1934, Serial No. 743,288
11 Claims. (Cl. 308—36)

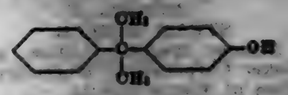
1. A journal box lid provided with a passageway for carrying air between an associated box and the exterior thereof, the area of the inner end of said passageway opening into said box being larger than the area of the outer end of said passageway, said outer end normally opening in a generally horizontal direction in order to provide for the efficient movement of said air.

2,028,040
SPINNING BUCKET
Frank H. Benge, Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware
Application March 14, 1933, Serial No. 660,749
2 Claims. (Cl. 117—27.5)

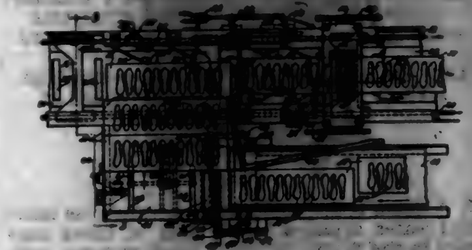
1. A hollow article, such as a spinning bucket, which may be subjected to excessive stress during use, comprising a base, and a generally cylindrical wall extending from said base formed of superposed reverse spirals or helices of binder-treated fibrous flat strip material with the turns of each spiral overlapping one another, whereby the fibrous strip portions are tied in or interlocked with one another in a strong balanced structure having uniform density.

2,028,041
PRODUCTION OF ETHYLENE DIAMINE
Frederick C. Bersworth, Hopkinton, Mass., assignor to Frank Kottek, Ashland, Mass., doing business as F. C. Bersworth Laboratories
No Drawing. Application August 14, 1931, Serial No. 556,999
3 Claims. (Cl. 260—127)

2. A process which comprises confining liquid ammonia, heating the confined liquid ammonia sufficiently to vaporize it and to generate superatmospheric pressure, and injecting ethylene dichloride under pressure into the hot, compressed ammonia vapor, thereby forming ethylene diamine hydrochloride.



2,028,042
TOOTHBRUSH
Schulim Braunstein, Berlin, Germany, assignor of one-half to Herbert Staverton, New York, N. Y.
Application December 5, 1934, Serial No. 756,143
In Germany December 11, 1933
2 Claims. (Cl. 15—129)

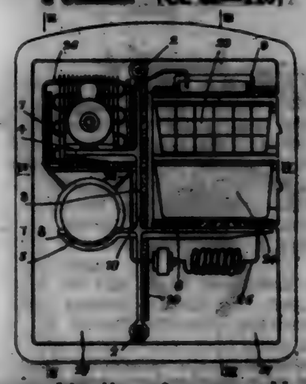


1. As a new article for use in the manner described, an elongated body of substantially semi-cylindrical form, and a plurality of apertured disks carried by the body and disposed in planes perpendicularly thereto and in spaced relation to each other, said disks being designed to receive therebetween correspondingly apertured disks of soluble substance.

2,028,043
CUMYL PHENOL
Edgar C. Britton, Midland, Mich., and Lawrence F. Martin, New Orleans, La., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application February 13, 1934, Serial No. 711,363
4 Claims. (Cl. 260—64)

4. Cumyl phenol, a compound boiling at approximately 182° C. at 9 millimeters pressure, melting at approximately 73°–75° C., and having probably the formula

2,028,044
APPARATUS FOR EXTRUDING PLASTIC MATERIAL
George F. Brownson, Braintree, and Harvey D. Ferris, Newton Center, Mass., assignors to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application January 5, 1935, Serial No. 541
6 Claims. (Cl. 18—30)



1. Apparatus for extruding plastic material, said apparatus comprising means for forcing plastic material through a delivery opening, continuously operated endless conveyor means for advancing a plurality of molds in spaced relation and in succession past said opening, and means controlled by the advancing means for so controlling the extruding means as to permit flow of plastic only when a mold is opposite said delivery opening.

2,028,045
MACHINE FOR CHARGING ANNEALING FURNACES AND THE LIKE
Homer Buck and Harvey W. Ball, Alliance, Ohio, assignors to The Morgan Engineering Company, Alliance, Ohio
Application March 6, 1935, Serial No. 9,310
8 Claims. (Cl. 214—34)

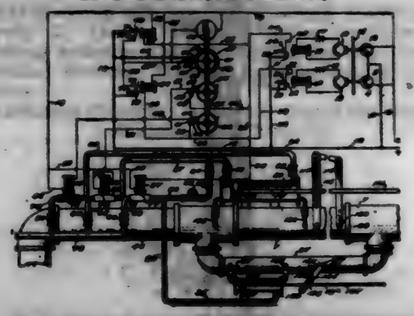
1. A charging machine for furnaces comprising a wheel-supported truck, an elevating platform carried by the truck, a gear mounted in the truck for rotation about a horizontal axis extending transversely of the truck, eccentric means movable with the gear for raising and lowering said platform, a longitudinally movable rack meshing with the gear for operating the latter, and means for limiting the upward movement of the rack away from said gear.

2,028,046
DOOR CONSTITUTING A REMOVABLE AND CHANGEABLE REFRIGERATING UNIT FOR REFRIGERATING PLANTS
Edmond Calabrusi, Paris, France
Application July 25, 1934, Serial No. 736,031
In France June 27, 1934
6 Claims. (Cl. 62—116)

1. The combination of a removable and interchangeable refrigerator-cabinet door having an outside wall and an inside wall, and a complete refrigerating and cooling plant carried by the door between said walls, said plant being of requisite capacity for food preservation in a corresponding cabinet.

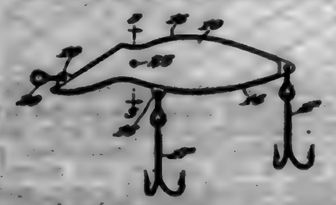
2,028,047
REFRIGERATION ICE TRAY
Arthur E. Cole, Grosse Pointe, Mich.
Application June 12, 1931, Serial No. 545,518
Renewed February 23, 1935
6 Claims. (Cl. 62—108.5)

1. An ice tray for refrigerators comprising a pan having upwardly and outwardly inclined side walls, a flexible removable grid in said pan comprising a sheet formed with corrugations alternately opening upwardly and downwardly in the pan and having the side edges thereof tapered to conform to the inclinations of said side walls, the apices of the corrugations at the top of the pan having substantially greater width than the apices of the corrugations at the bottom of the pan and said last apices being cut away adjacent the bottom longitudinal corners of the pan.



2,028,048
APPARATUS FOR MAKING COMPOSITE GEAR RIMS
Emile Merle d'Aubigne, Neuilly-sur-Seine, France, assignor to Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware
Original application November 19, 1932, Serial No. 643,513. Divided and this application July 17, 1934, Serial No. 735,654. In France November 24, 1931
11 Claims. (Cl. 154—1)

3. Apparatus for forming a non-metallic rim portion of a gear, comprising an annular receptacle, a guide extending tangentially from said receptacle, means for forming laminations of fibrous sheet material and an associated binder,



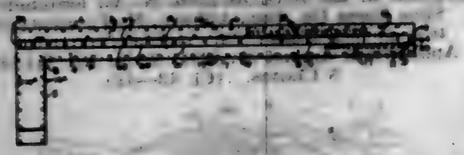
and means for positioning and moving said laminations side by side in said guide to arrange said laminations annularly in said receptacle.

2,028,049
FLUID PRESSURE CONTROL APPARATUS
Edwin L. Dennis, Reserve, La.
Application November 25, 1932, Serial No. 644,352
10 Claims. (Cl. 224—28)

1. In automatic control of fluid pressure, pressure regulating means, photo-electric actuated means responsive to one or another of selectively controlled light beams for moving said pressure regulating means in a plus or minus direction with respect to the value of the pressure to be regulated responsive to one or another of selectively controlled light beams, means movable in response to variations in the pressure to be regulated for actuating said photo-electric operated means by the selective occlusion of said light beams, and timing mechanism connected to the first named means to effect the movements of the pressure regulating means intermittently in timed steps.

2,028,050
FISH LURE
William J. De Witt, Auburn, N. Y., assignor to Shee Ferm Co., Inc., Auburn, N. Y., a corporation of New York
Application August 27, 1934, Serial No. 741,587
5 Claims. (Cl. 43—46)

1. A lure simulating a fish having a hollow body, and a partition dividing the internal compartment longitudinally into two chambers, and the walls of the body being provided with openings through which water enters both the

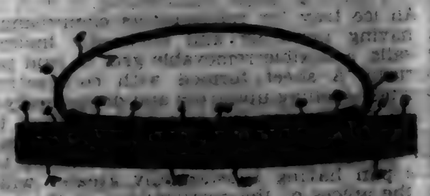


chambers and escapes therefrom as the lure is drawn through the water thereby creating spaced streams of bubbles to attract the attention of any fish nearby.

2,028,051
PERMANENT WAVING
Hobart N. Durham, Massey Park, N. Y., and George B. Finnegan, Jr., Mountain Lakes, N. J., assignors to Eugene, Ltd., New York, N. Y., a corporation of New York
Original application November 7, 1932, Serial No. 641,574. Divided and this application April 3, 1935, Serial No. 14,405. In Great Britain April 9, 1931
14 Claims. (Cl. 219—24)

1. In permanent waving the method of heating and steaming a tress of hair which comprises the steps of moistening the tress with an electrolyte, placing the tress between two electrodes, and generating heat and vapor in the electrolyte on and between the hairs of the moistened tress by passing electric current through said electrolyte by connecting the electrodes to circuit terminals of opposite polarities.

1,818,851
COMBINATION SQUARE AND SLIDE RULE
John I. Easterly, Hawthorne, Calif.
Application September 18, 1931, Serial No. 563,171
3 Claims. (Cl. 33—112)



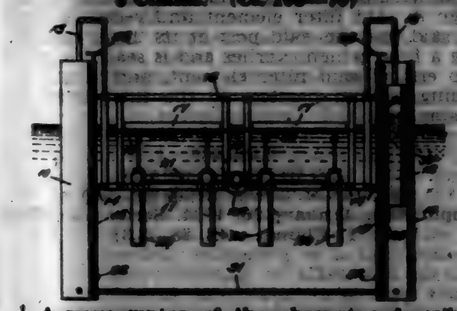
3. A carpenter's framing square of the class described comprising an arm, a second arm extending perpendicular to said first arm, said first arm being provided with a longitudinal groove extending into a side edge of said second arm, a strip slidably carried in said groove, said strip being movable to a position whereby an edge thereof bridges said side edge and forms a continuous edge along said second arm and means to releasably secure said strip in said position, said means being operable only when said strip is in said position.

2,028,053
CROSS-GROOVERS FOR TREES
William F. Ertle, Philadelphia, and George M. Pfundt, Churchville, Pa., assignors to Poss Manufacturing Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application June 19, 1935, Serial No. 27,228
11 Claims. (Cl. 90—24.5)

11. In a device of the character described, the combination of a carrier for support transversely above an intermittently rotatable tire to be circumferentially cross grooved, an arcuate track supported in a lower plane by and in advance of the carrier, a carriage on the track, a resiliently supported cutter head vertically adjustable in the carriage and having cutters at its lower end, means swingably supported by the carrier and universally coordinated with the carriage, whereby the carriage is reciprocable over the track to effect the cross grooving operation, and adjustable means on the carrier engagable with the swingably supported means to limit the swinging movement thereof.

2,028,054
SHOE
Percy G. Flint, Brockton, Mass., assignor to Flint and Flint Co., Brockton, Mass., a corporation of Massachusetts
Application July 5, 1934, Serial No. 733,836
5 Claims. (Cl. 36—17)

1. A shoe having an insole, welt, uppers and sole, said uppers at their lower edge portions being positioned between said welt and insole and the uppers and welt being secured to the sole by a line of stitching, the stitches of which extend from the under side of the welt to the under side of the insole, a layer of non-tacky, flaccid, waterproof material in adhering relation to the under side of said insole and welt but in non-adhering relation to said sole, said layer closing the joint between said welt, uppers and insole and the exposed sides of said line of stitching on the welt and insole, and a layer of similar material on an inner surface portion of said uppers above said insole and covering the adjacent portion of said uppers which is between said insole and welt.



2,028,055
FULL VIEW RIFLE FRONT SIGHT
Oscar B. Pershing, Kimball, Nebr.
Application April 23, 1935, Serial No. 17,571
6 Claims. (Cl. 33—47)

1. A sight of the class described comprising a tubular carrier, having a slot extending peripherally through its wall, a sight member comprising a ring having a portion of said ring resting on the bore wall of the carrier and a portion of said ring occupying said slot flush with the exterior of the carrier, and a mounting member having a tubular portion in which said carrier is telescoped with a portion overlapping said ring.

6. A sight of the class described comprising a ring, bead means within the ring, said ring consisting of circumferential portions differing in width from each other, said bead means comprising a pair of beads in radial alignment and each equidistantly spaced from the longitudinal axis of the ring and relatively fine supporting means for the beads extending inwardly from the wall of the ring.

2,028,056
WAVE MOTOR
Haddon A. Franklin, Cordova, Ala.
Application November 20, 1934, Serial No. 753,879
5 Claims. (Cl. 103—70)

1. A wave motor of the character described comprising a series of hollow piers, a cradle related with said piers and having floats working interiorly of the latter, valved inlet means mounted in the piers, means establishing communication between the series of piers for maintaining a uniform dead water level therein, pumps supported by said cradle, a reservoir having connection with said pumps, and wave operated floats actuating said pumps and carried in the cradle.

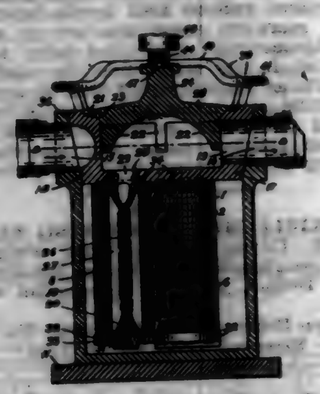
2,028,057
PICKER'S SACK CARRIER
Earl Lee Pugatt, Flatville, Texas.
Application July 15, 1933, Serial No. 11,533
1 Claim. (Cl. 280—8)

A cotton sack carrier comprising a rectangular frame, an axle member extending transversely across the same in front of the transverse center of the frame, and having its ends extending downwardly and then bent inwardly to form spindles, a side bar on each side of the frame and having its ends connected with the under face of the side portions of the frame and provided with an intermediate substantially horizontal part having a hole therein for receiving the outer end of the spindle forming part, portions of the side bar sloping upwardly from said horizontal portion to the ends of the bar, an inverted U-shaped brace member connected with the under face of the central portion of the axle member and having holes in the ends of its limbs for receiving the ends of the spindle forming parts, means for holding the said spindle forming parts in said holes, and a wheel on each spindle forming part located between a limb of the inverted U-shape member and a side bar, a platform covering the frame.

2,028,058
QUICK-ASSEMBLED SECTIONAL CABINET
Harvey D. Geyer, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 11, 1933, Serial No. 656,241
7 Claims. (Cl. 220—9)

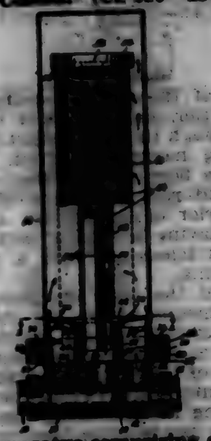
1. In a cabinet construction, in combination, a molded soft rubber corner strip having two angularly disposed grooves therein adapted to receive the edges of two adjoining wall panels, two individual cabinet wall panels having their adjacent marginal edges inserted in said two grooves respectively, inner and outer relatively rigid metal facing strips fixed to said rubber corner strip as a unitary part thereof, and means for clamping said inner and outer facing strips upon said soft rubber corner strip and thereby highly compressing same and simultaneously sealing the joints thereof with said panels.

2,028,059
FLEXIBLE METAL FREEZING TRAY
Harvey D. Geyer, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 16, 1933, Serial No. 656,989
Renewed February 25, 1935
9 Claims. (Cl. 62—108.5)



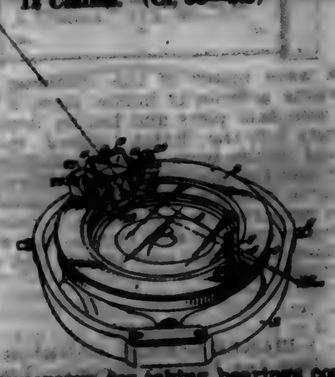
1. A freezing tray comprising: a unitary flexible metal pan having zig-zag side wall and a separate removable flexible grid inserted therein, said grid having portions substantially contacting the inwardly extending projections of said zig-zag side wall and forming therewith a series of ice compartments.

2,028,000
PROTECTOR
Ezell Gilbert, Jasper, Ala.
Application September 7, 1935, Serial No. 39,656
4 Claims. (Cl. 47—33)



1. A protector comprising a flexible foldable casing including front and rear portions, side portions and end portions, each end portion being formed with a pair of outwardly directed opposed legs, spaced grommets anchoring the legs at one end of the casing together, a pair of sets of spaced grommets, each set being anchored to one of the legs at the other end of the casing, said sets of grommets being arranged in registry, and a foldable inflatable resilient element encompassed by and abutting the said portions of said casing, said element being formed of a series of spaced, parallel hollow members and tubular means communicating with and coupling said members together.

2,028,061
FILTER
Maurice A. Goldman, Milford, N. H., assignor, by mesne assignments, to Commercial Filters Corporation, Boston, Mass., a corporation of Massachusetts
Original application December 29, 1930, Serial No. 505,247. Divided and this application March 16, 1934, Serial No. 716,963
8 Claims. (Cl. 210—184)



1. In a filtering apparatus, the combination of a container having inlet and outlet openings for the fluid to be filtered, said container being provided with a tapered seat, a cover correspondingly tapered to fit said seat, said cover being chambered to admit liquid from said inlet into the body of said container and to conduct the filtered liquid to said outlet, means accessible externally of said container for releasably holding said cover in its closed position, and means carried by said cover for removably supporting a tube filter in position to compel the liquid flowing from said inlet to said outlet to pass through the wall of said filter, said cover having a removable cap for closing the chamber therein for the filtered liquid.

2,028,062
FILTER APPARATUS
Maurice A. Goldman, Milford, N. H., assignor to Commercial Filters Corporation, Boston, Mass., a corporation of Massachusetts
Application June 20, 1934, Serial No. 731,839
8 Claims. (Cl. 210—184)

1. Filter apparatus comprising a base having a filter tube support and a passage opening in said support, an enclosing casing connected with said base and surrounding said support, a tubular filter element within said casing seated at its bottom end on said support with its passage registering with said passage, and an exteriorly channeled post extended loosely through the passage in said filter element and received loosely in said passage, said post at its upper end having a head which overlies and is seated upon the top end of said filter element, and means providing a fluid passage to the interior of said casing.

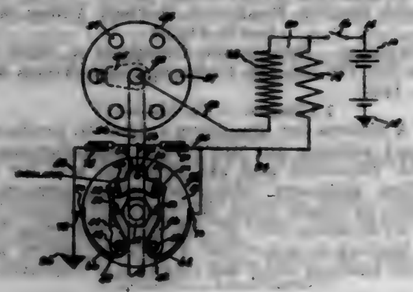
2,028,063
AZIMUTH COMPASS
Burton M. Green, Brooklyn, N. Y.
Application January 29, 1934, Serial No. 707,595
12 Claims. (Cl. 88—2.3)

1. An apparatus for taking bearings comprising, a compass, a ring revolubly associated with said compass, a sight at one side of said ring, a reflector associated with said ring at a point substantially diametrically opposite said sight to reflect readings of the compass, and a second reflector associated with said ring at a fixed location immediately adjacent to and within the field of vision with said first reflector as viewed through the sight and adjustably held to permit focusing of an image adjacent to the reflected compass reading.

2,028,064
MANUFACTURE OF GLYCOLLIC ACID
Ernest F. Grether and Russell B. Du Vall, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application March 29, 1935, Serial No. 13,798
10 Claims. (Cl. 260—113)

1. The method which comprises treating an aqueous solution of an alkali metal glycollate and alkali metal chloride with a water-soluble calcium salt in amount not appreciably exceeding the chemical equivalent of the glycollate, crystallizing calcium glycollate from the mixture, and subjecting the mixture to a temperature sufficiently high so that the crystals are obtained in anhydrous form.

10. The method which comprises hydrolyzing chloroacetic acid by heating the same with an aqueous solution containing approximately twice its chemical equivalent of an alkali metal base, treating the hydrolysis mixture at a temperature above 70° C. with a water-soluble calcium salt in amount representing not more than the chemical equivalent of the chloroacetic acid hydrolyzed, and crystallizing calcium glycollate from the mixture while maintaining the latter at a temperature above 70° C.



2,028,065
SIMULTANEOUS HYDROLYSIS AND AMMONOLYSIS OF ARYL HALIDES
William J. Hale, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application November 18, 1933, Serial No. 698,582
12 Claims. (Cl. 260—128)

6. In a method of making a phenolic compound and a corresponding monoaryl amine simultaneously, the step which consists in heating, at superatmospheric pressure to a reaction temperature between about 150° and about 260° C., an aryl chloride with:— at least 0.3 its chemical equivalent of ammonia, at least 0.2 its chemical equivalent of a cuprous compound, at least its chemical equivalent of a base selected from the class consisting of alkali and alkaline earth metal bases, and water in amount representing at least twice the weight of said base.

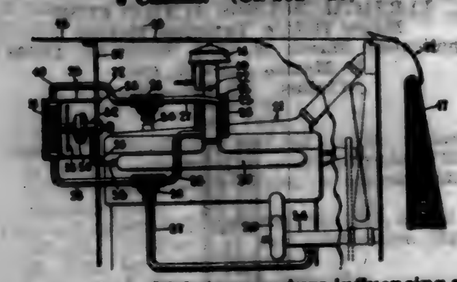
12. In a method of making cresol and ditolyl amine simultaneously, the step which consists in heating, at superatmospheric pressure to a temperature above about 260° C. but below that at which the reaction products are substantially decomposed, chlorotoluene with:— at least 0.3 its chemical equivalent of ammonia, at least 0.2 its chemical equivalent of a cuprous compound, at least its chemical equivalent of a base selected from the class consisting of alkali and alkaline earth metal bases, and water in amount representing at least twice the weight of said base.

2,028,066
IGNITION SYSTEM
Herman L. Hartsell, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 18, 1934, Serial No. 730,944
10 Claims. (Cl. 123—148)

1. In an ignition system, the combination comprising; a source of current; current transforming means including an induction coil having a primary and a secondary circuit; and means for making and breaking the primary circuit; said means comprising a plurality of sets of contacts connected in series with the primary winding and current source; and cam means for operating

said sets of contacts simultaneously to open and close the primary circuit.

2,028,067
VERTICAL DOUBLE ACTION PUMP
Birger Heftye, Tampico, Mexico
Application March 29, 1935, Serial No. 12,098
In Mexico April 21, 1934
3 Claims. (Cl. 103—193)



1. In a pumping apparatus of the class described, a pump chamber, a discharge pipe extending into the chamber, a piston in the chamber, means for reciprocating the piston, said piston having upper and lower chambers therein, a discharge conduit connected with the upper chamber and with the discharge pipe and said piston having a pair of vertically arranged bores therein, a sliding elongated tubular valve in each bore, one having its lower end closed and the other having its upper end closed, a conduit connecting the lower chamber with the fluid to be pumped, each of the upper and lower chambers being in communication with the bores and each valve having upper and lower ports therein, the upper one of which communicates with the upper chamber while the lower one is out of communication with the lower chamber and the upper port of the other valve being out of communication with the upper chamber when the upper port of the other valve is in communication with the chamber and vice versa, said valves being moved by the fluid being pumped.

2,028,668
PROCESS FOR DISSOLVING RUBBER FOR THE MANUFACTURE OF PAINTS, VARNISHES, AND LIKE PRODUCTS, AND FOR INSULATING PURPOSES
John Patrick Henhaven, Durban, Union of South Africa
No Drawing. Application December 5, 1934, Serial No. 756,180. In Union of South Africa May 19, 1934
7 Claims. (Cl. 134—17)

1. A process for dissolving rubber to produce a product suitable for use in the manufacture of paints, varnishes and like products and for insulating purposes which comprises heating a mixture of crude wood oil, rosin and boiled linseed oil at about 300° F., adding a drier and further heating to about 540° F., adding rubber and further heating until the rubber has dissolved.

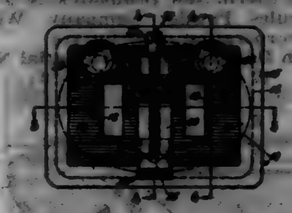
2,028,669
MOTOR VEHICLE HEATING AND COOLING SYSTEM
Erwin G. Horton, Hamburg, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application November 14, 1932, Serial No. 642,668
6 Claims. (Cl. 261—10)

1. A motor vehicle temperature influencing system comprising, in combination with the carburetor and the intake manifold of an internal combustion engine having a cooled portion, a thermal exchange element disposed about a part of said manifold for cooling said element, a second thermal exchange element for influencing the temperature of the passenger compartment of the vehicle, means connecting said elements for fluid circulation from one element to the other, the temperature of the intake manifold serving to cool the second element through and by virtue of the circulating fluid, and means for circulating air about the second element to cool the vehicle passenger compartment.

2,028,670
HANDKERCHIEF
James Herbert Johnson, Washington, D. C., assignor to The Rochester Company, Inc., San Antonio, Tex.
Application January 15, 1934, Serial No. 707,426
1 Claim. (Cl. 132—78.5)

A novelty handkerchief comprising an imperforate sheet of flexible textile material, front, first and second patches of similar material secured to the sheet along their sides and bottom edges so as to form a pocket open at the top, a reinforcing strip extending along the upper edges of the front and first patches and secured to those patches, a portion of a hookless fastener secured to the strip, another reinforcing strip extending along the upper edge of the second patch and said sheet and secured to the sheet and the second patch, another portion of a hookless fastener secured to the last mentioned strip, and a closing member cooperating with said portions of the hookless fastener for closing the pocket.

2,028,671
HANDLE ESCUTCHEON
Gilbert L. Kemper, Cincinnati, Ohio, assignor to Cincinnati Cabin Company, Cincinnati, Ohio, a corporation of Ohio
Application September 10, 1934, Serial No. 743,324
2 Claims. (Cl. 16—126)



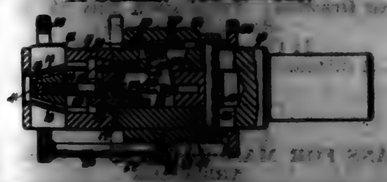
1. An escutcheon for a handle, comprising, a pair of sheet metal bracket plates, each plate having a flange extending from its underside providing a marginal rim to give the plate elevation and stability, each bracket plate adapted for individually supporting a handle bar carrying arm, and a sheet metal plate providing a spacer for said bracket plates and having means for separably interlocking with a side flange of each of said bracket plates.

2,028,672
PROCESS FOR PRESERVING MILK
Georg Alexander Krause, Munich, Germany, assignor to Katadyn, Inc., Dover, Del., a corporation of Delaware
No Drawing. Application February 24, 1931, Serial No. 518,039. In Germany February 24, 1930
6 Claims. (Cl. 99—15)

2. A process for treating milk for human consumption to permit longer storage thereof while retaining its potable qualities which comprises the partial sterilization of the milk by contact treatment with oligodynamically active bodies while in a previously heated condition, the heating being shorter than conventional pasteurization and insufficient to cause complete sterilization or to impart a boiled taste to the milk, the oligodynamic treatment being interrupted after less than four minutes so as to impart no change of color or taste to the milk, said milk when so treated having substantially the full vitamin value of untreated milk and rendered potable for from two to three times as long as untreated milk and coagulating only after at least a day after coagulation of untreated milk.

2,028,673
PEDAL PAD
Herbert H. Lesnquet, Brooklyn, N. Y., assignor to Kaster Specialty Mfg. Co., Inc., New York, N. Y., a corporation of New York
Application June 8, 1935, Serial No. 24,996
7 Claims. (Cl. 74—560)

1. A pedal pad comprising in combination a support, a facing of a resilient material, a clamping jaw movable transversely of the support, and a pair of clamping jaws pivotally mounted upon



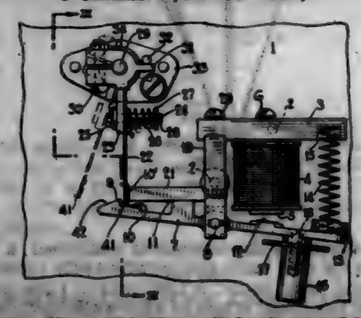
said support for movement in a plane parallel to the plane of said support.

2,028,674
METHOD OF PREPARING SECONDARY AROMATIC AMINES
Werner M. Lauter, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 2, 1933, Serial No. 674,167
23 Claims. (Cl. 260—128)

17. The process of preparing secondary aromatic amines which comprises reacting a mixture of a primary cyclic amine and an aromatic hydroxy compound of the benzene and naphthalene series in which at least one hydroxyl group is attached to the aromatic nucleus, under substantially anhydrous conditions and in the presence of a dehydrating agent selected from a group consisting of alkali metal bisulphates, alkali metal pyrosulphates and alkali metal acid phosphates.

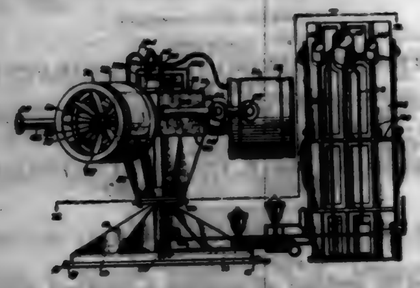
23. The process of preparing secondary aromatic amines which comprises reacting under substantially anhydrous conditions and in the presence of a dehydrating agent selected from a group consisting of alkali metal bisulphates, alkali metal pyrosulphates and alkali metal acid phosphates, a hydroxy aromatic compound in which at least one hydroxy group is attached to the aromatic nucleus and selected from a group consisting of naphthols, hydroxy phenols and alkyl phenols, with a primary amine selected from a group consisting of aniline, alkyl phenyl amines, naphthylamines, cyclohexylamine, furfuryl amine, benzyl amine, para phenetidine, amino biphenyls, amino phenols, halo-naphthylamines, and halo-phenylamines.

2,028,675
COLLAPSIBLE TAP
Frederic Nell, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a corporation of Pennsylvania
Application February 7, 1934, Serial No. 710,171
11 Claims. (Cl. 10—145)



1. A collapsible tap comprising a body portion having a head secured thereto, the head having radial slots for receiving thereof cutting elements, a collar slidably mounted on the body, a plunger in the body and having a beveled head engageable with the inner edges of the cutting elements, a latch operable by said collar, a ring plate secured to said plunger, a spring seated in said collar and engaging said ring plate for urging the collar forward and a second spring of greater tension than the first named spring in said collar, said last named spring being engageable with a fixed element on the body portion and with the said ring plate for urging the ring plate rearwardly of the body member to collapse the cutters when the said latch has been released.

2,028,676
METHOD OF MAKING PLYWOOD TRAYS OR THE LIKE
Charles B. Norris, Grand Rapids, Mich., assignor to Handcraft Manufacturing Corporation, a corporation of New York
Application June 8, 1934, Serial No. 729,561
4 Claims. (Cl. 144—309)

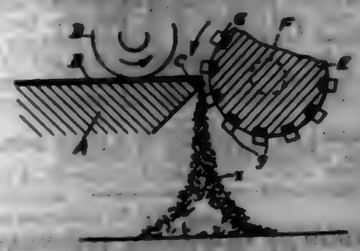


1. The method of making a plywood dished structure having a core and veneer facings on both sides, which comprises producing a core and two plywood facing panels, dampening said facing panels and sanding the faces thereof that are the exposed faces in the finished product, molding said panels while damp, and said core into the desired shape and drying them during the molding process, assembling the core and the panels in a dry condition with dry glue interposed between the same, maintaining the assembly until the moisture therein becomes uniformly distributed throughout the same, and then applying heat and pressure to secure the panels together.

2,028,677
THERMOSTATIC CIRCUIT CONTROLLER
Robert J. Parsons, Schenectady, N. Y., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y., a corporation of New York
Application May 9, 1934, Serial No. 724,716
5 Claims. (Cl. 175—375)

1. In a thermostatic switch, in combination: a rotatable shaft; a bi-metallic thermo-responsive strip spiralled about the shaft, having one end connected to the shaft and the other end fixed; a contact finger adapted for governing a circuit mounted on the shaft to move in one direction therewith; a latch positioned to engage and latch the contact finger; a pivot intermediate the ends of the latch; a compression spring having one end bearing on the portion of the lever on the other side of the pivot from the latch and having its other end bearing against a fixed abutment; manual means for moving the latch out of the path of the contact finger; electro-magnetic means for moving the latch out of the path of the contact finger.

2,028,075
TIRE BUILDING APPARATUS
Will C. State and Meindert Lammertse, Akron, and Charles E. Gardiner, Cuyahoga Falls, Ohio, assignors, by mesne assignments, to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application February 21, 1933, Serial No. 657,778
51 Claims. (Cl. 154—10)



1. In tire building apparatus of the character described, in combination, a rotatable turret, a plurality of spaced tire bead receiving drums reciprocally mounted on said turret, means for successively locking each of said drums in alinement with a single drum receiving chamber, and means for reciprocating each drum only when it becomes alined with said chamber.

2,028,079
FLOOR OILER OR WAXER
August Steigerwald, New York, N. Y., assignor to Emily Clark, New York, N. Y.
Application April 3, 1935, Serial No. 14,420
1 Claim. (Cl. 91—39)

In a device of the character described, a reservoir having end walls and downwardly converging front and rear walls, a distributor tube secured between the lower edges of said walls and forming the bottom of said reservoir, said tube having a valve opening in the wall enclosed within said reservoir and a plurality of discharge openings in the outer wall, a valve for regulating said valve opening and having a handle at the outside of said reservoir, a pair of sheet metal flaps secured at one edge respectively to the front and rear external walls of said reservoir substantially above the bottom thereof and extending substantially below the bottom, clamping means engaging said flaps below said tubular bottom for drawing the free portions of said flaps toward each other to clamp porous spreader pads against the front and rear walls of said reservoir above the distributor tube and from end to end thereof and against each other below said tube.

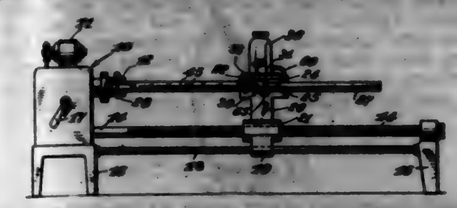
2,028,080
WOOD PULP ADAPTED FOR CHEMICAL USE
Raphael L. Stern, New Brunswick, N. J., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
Application December 28, 1934, Serial No. 759,506
17 Claims. (Cl. 92—20)

1. Wood pulp in the form of lengths of substantial length and cross section formed from a sheet of felted wood pulp and adapted for chemical treatment, the lengths being of a thickness less than the thickness of the original sheet and comprising wood cellulose fibres lying together in loosely felted relation.

5. Wood pulp in a form adapted for esterification comprising lengths characterized by their formation from a sheet of felted wood pulp by shearing in one direction with reference to the sheet and splitting in a direction transverse to the direction of shearing.

2,028,081
HALOGENATED PHENYL-DIPHENYL OXIDE
Wesley C. Siecenec, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application March 2, 1934, Serial No. 712,229
21 Claims. (Cl. 260—130)

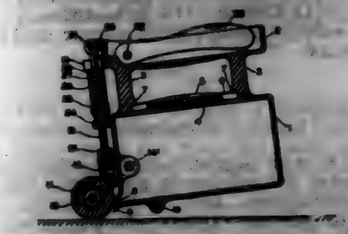
1. In a method of making a halogenated phenyl-diphenyl oxide, the step which consists in reacting a phenyl-diphenyl oxide with a halogen selected from the class consisting of bromine and chlorine.



17. A halogenated phenyl-diphenyl oxide preparable by reacting phenyl-diphenyl oxide with a halogen selected from the class consisting of bromine and chlorine.

2,028,082
METHOD OF PREPARING THIAZYL MONOSULPHIDES
Jan Teppema, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 29, 1933, Serial No. 683,596
21 Claims. (Cl. 260—44)

18. A dithiazyl mono sulphide.



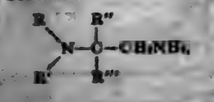
2,028,083
MEANS FOR MAKING COATED ROD-LIKE ARTICLES
John N. Whitehouse, New York, N. Y.
Application November 24, 1932, Serial No. 644,540
10 Claims. (Cl. 18—3)

1. Apparatus of the type described comprising mechanism for rotating a core, means for securing one end of a strip of coating material to one end of the core, and a tool for guiding said strip to said core in such fashion that the strip is wrapped spirally tightly around the core as the core is rotated, said tool having a bore fitting

snugly around the core and having an angular shoulder at one end of the bore to position the strip relative to the core as they contact.

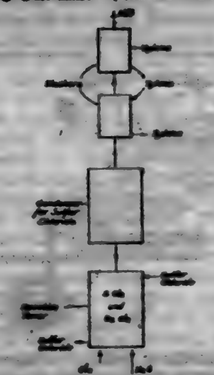
2,028,084
GLUE CONTAINER AND SPREADER
Stephen A. Brown, Chicago, Ill., assignor to Joseph Bechler, Chicago, Ill.
Application April 3, 1933, Serial No. 664,183
5 Claims. (Cl. 21—87.4)

1. A container for liquid or semi-liquid materials having an opening in the top for charging materials thereto, a narrow opening along the lower front edge for discharging materials therefrom, said lower front edge terminating in protruding lips shaped to fit a moveable closure for said narrow opening comprising a roller adapted to seal said narrow opening when held against said protruding lips and a foot integral with the bottom of said container.



2,028,085
CARTON HANDLE
John Paul Brunt, Chicago, Ill., assignor to Brunt & Company, Chicago, Ill., a corporation of Delaware
Application January 7, 1935, Serial No. 639
16 Claims. (Cl. 229—52)

10. In a collapsible container, three wall members lying in the same plane in the collapsed container, two of said members being hinged to opposite edges of the third member, and a handle having a portion thereof lying on the outside surface of the third wall member and end portions extending therethrough and secured to the inner surfaces of said hinged members.

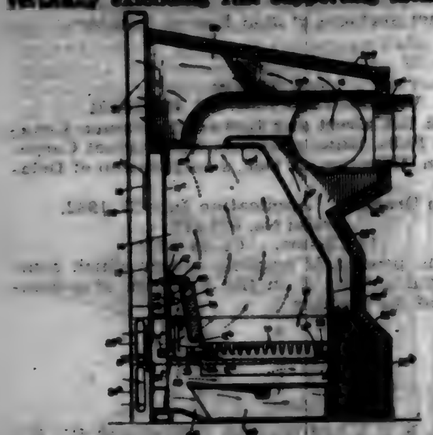


2,028,086
VULCANIZATION OF RUBBER
William C. Calvert and Howard I. Cramer, Cuyahoga Falls, Ohio, assignors to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 13, 1932, Serial No. 622,312
15 Claims. (Cl. 18—53)

6. The process of treating rubber which comprises vulcanizing it in the presence of a compound of the formula

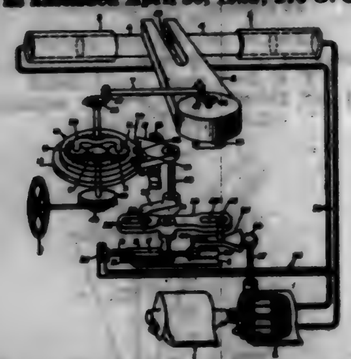
wherein R is a hydrocarbon radical and R', R'' and R''' are radicals selected from the group consisting of hydrogen and hydrocarbon radicals.

2,028,087
PRODUCTION OF HYDROGEN HALIDES
Albert M. Clifford, Stow, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application December 12, 1933, Serial No. 702,827
23 Claims. (Cl. 23—156)



1. The method of producing a hydrogen halide which comprises causing non-equimolecular proportions of a halogen and hydrogen sulfide to react in the presence of a sulfur halide in the liquid phase.

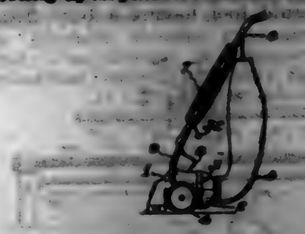
2,028,088
FIREPLACE STOVE AND HEATER
Robert L. Davison, New York, and Edgar V. Ludwig, Buffalo, N. Y., assignors to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application November 5, 1932, Serial No. 641,428
4 Claims. (Cl. 126—121)



1. A heater comprising a combustion chamber having an open front, grate means disposed in said chamber, means coacting with said grate means for the support of solid fuel, said coacting means including an imperforate portion extending from the front of said grate means upwardly toward the open front of the chamber, pivoted door means for closing the open front of the chamber, said door means being substantially flat and means carried by the door means for substan-

tially precluding the flow of air forwardly of the vertically extending fuel supporting means and

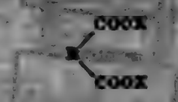
between the same and the inner face of the door means.



2,026,986
CONTROL FOR HYDRAULIC STEERING GEARS
Ralph Erling, Alexandria, Va.
Application September 29, 1932, Serial No. 635,379
22 Claims. (Cl. 60—51)
(Filed but not issued under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

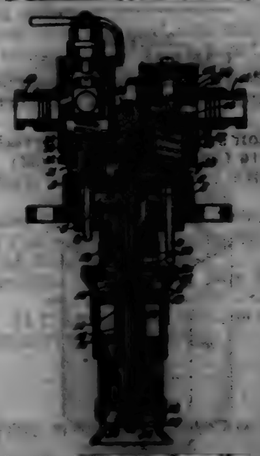
16. In combination with rudder mechanism and hydraulic actuating means connected thereto, a pump operatively connected to supply fluid under pressure to said actuating means, said pump having controls to vary the quantity and the direction of flow of liquid therefrom, a steering wheel, means responsive to the pressure of the output of said pump, a lever carried by the last mentioned means, said lever being operatively connected to the controls of said pump and adapted to have its effective length varied by said pressure responsive means and means including an intermittent gear operatively connecting said lever to said wheel.

2,026,990
SUCTION CLEANER
Walter A. Frantz, Cleveland Heights, Ohio, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application December 12, 1929, Serial No. 413,835
Renewed March 26, 1934
24 Claims. (Cl. 15—6)



1. A suction cleaner comprising, a motor, and a fan and brush operatively associated therewith, and a casing having upper and lower halves meeting upon planes which coincide substantially

with horizontal planes through the centers of said motor, fan and brush.



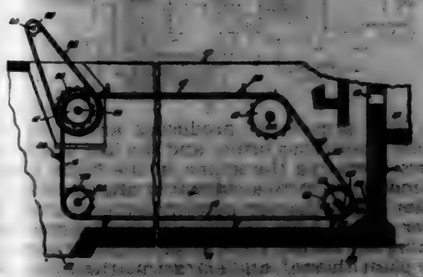
2,026,991
ESTERS OF SULPHONICARBOXYLIC ACIDS
Alphons O. Jaeger, Greenlawn, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application July 28, 1933, Serial No. 682,629
14 Claims. (Cl. 260—136)

1. An ester of an aliphatic dibasic acid having the formula

in which R is an aliphatic carbon chain containing at least one sulphonic group but free from other substituents, and X is hydrogen or an alcohol or phenol radical not connected by a carbon to carbon bond with R, at least one X being such an alcohol or phenol radical.

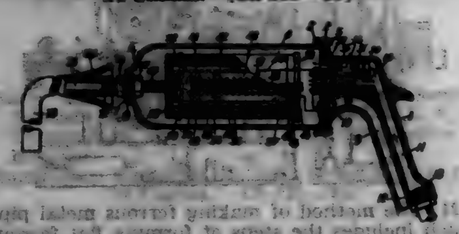
2,026,992
BOTTLE FILLING VALVE
James Kantor, Chicago, Ill., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application October 23, 1932, Serial No. 639,584
5 Claims. (Cl. 226—122)

1. In a bottle filling valve, the combination with a valve casing, of a filling tube supported by and extending downwardly from said casing and open at its lower end, a valve controlled inlet port in said casing communicating with said tube, a downwardly opening valve at the lower end of said tube for controlling the passage of



liquid from said tube, a stem extending through said tube for operating said valve and projecting through the top of said casing for engagement with operating means, said casing having an opening in the top thereof through which said stem projects and communicating with said tube, and a piston connected to said stem and operating in said opening to seal said opening against the escape of liquid through the top of the casing.

2,026,993
VALVE
Walter Douglas La Mont, North Colebrook, Conn., assignor, by mesne assignments, to American Chain Company, Inc., a corporation of New York
Original application April 6, 1932, Serial No. 603,242. Divided and this application September 12, 1931, Serial No. 562,473
2 Claims. (Cl. 251—167)

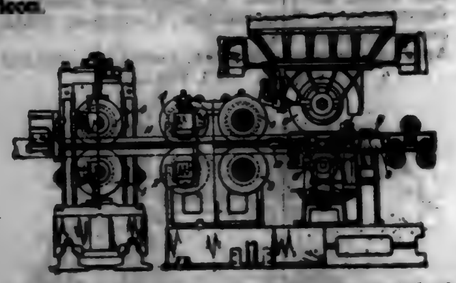


1. A gate valve comprising a housing having a port, a gate movable in the housing transversely to the port to open and close the same, the housing including a bearing surface surrounding the port and against which the gate is seated when in closed position, said surface being formed with a groove, said groove being undercut to form a storage chamber for a sealing fluid, and means for introducing the sealing fluid into said chamber and thence into the groove.

2,026,994
SLUDGE REMOVING APPARATUS
Samuel Shafer, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application April 17, 1931, Serial No. 16,279
5 Claims. (Cl. 210—8)

1. In sludge removal apparatus for settling tanks of the type having a curved or beveled corner portion at the juncture of two angularly disposed walls thereof, a movable belt provided with elements arranged to remove sludge from the surface of one of said walls; supporting and guiding means for said belt disposed adjacent said corner; and supplemental sludge removing means carried by said supporting and guiding means, arranged through movement of the latter to remove sludge deposits from said corner portion.

2,026,995
AIR HEATING DEVICE
Thomas J. Tully and Robert B. Jackson, Columbus, Ohio, assignors, by direct and mesne assignments, to Tuloran, Inc., Columbus, Ohio, a corporation of Ohio
Application May 14, 1934, Serial No. 725,547
14 Claims. (Cl. 219—39)



1. An air heating gun comprising a handle member, a main hollow casing secured to said handle member, said handle member having a passageway extending therethrough and communicating with the interior of said main casing for conducting air under pressure thereinto, an air injector disposed in said passageway through which the air under pressure must pass before entering said casing, said injector being of such a type that it will take in additional air from the atmosphere and will reduce the pressure of the air under pressure as it passes therethrough, an electric heating element disposed within said casing, a plurality of metallic tubular members surrounding said heating element, said tubular members being of various diameters, means for maintaining the various tubular members in spaced relation so that a plurality of chambers surrounding said heating element are formed, each of said tubular members having openings adjacent one end thereof, the openings in one tubular member being formed therein adjacent the end opposite to that of the adjacent tubular member in which the openings thereof are formed, all of said tubular members having polished surfaces so that they will readily reflect heat, said heating element having one of its ends supported on a flexible member in order to minimize shocks and jars thereon, said tubular members being so arranged that the air entering said main casing must travel through all of said chambers before reaching said heating element, a tube leading from the chamber in which said heating element is disposed to a point outside of said main casing, a nozzle member mounted on the outer end of said tube, a switch for controlling said heating element, said switch being automatically operable by the air under pressure which flows through said passageway to cause the circuit to said heating element to be completed when air under pressure is supplied to the gun and to be broken when the pressure of the air supplied to the gun falls below a predetermined degree.

2,026,996
WELDED METAL PIPE AND PROCESS OF MAKING SAME
George G. Walker, Poland, Ohio, assignor to Republic Steel Corporation, Youngstown, Ohio, a corporation of New Jersey
Application October 23, 1925, Serial No. 47,947
35 Claims. (Cl. 219—18)

20. A ferrous metal pipe having longitudinal electric resistance butt weld, a tensile strength in excess of about 70,000 pounds per square inch of metal and containing between about .10% and .45% of carbon, between about .70% and about

1.70% of manganese, between about .015% and about .020% phosphorous, between about .50% and about 1.05% copper and substantially no silicon.

21. The method of making ferrous metal pipe which includes the steps of forming flat ferrous metal into a pipe blank having a slightly oval cross sectional shape whose major axis is in line with the longitudinal seam and having a longitudinal seam defined by edge surfaces contacting at a point remote from their inner radial ends and diverging therefrom to such inner ends at a small included angle, and applying welding pressure and heat to the blank to unite the seam edges progressively from the point of initial contact of the edge surfaces with each other to their remote ends with a substantially uniform and continuous edge surface weld.

2,023,097

BOTTLE FILLING EQUIPMENT

Carl Zafuta, Arma, Kans.

Application February 16, 1934, Serial No. 711,633

3 Claims. (Cl. 226—122)

1. In combination with a receptacle containing a foamable liquid under pressure and having a draft fitting, a bottle filling apparatus including a sleeve member engageable with the draft fitting and having sealing means at its upper and lower ends, a tapping rod engageable within the sleeve member for removing a bung from the receptacle and extending into the interior of the receptacle having at its upper end liquid outlet perforations and a fluid inlet opening, the tapping rod being retained in position by the sealing means of the sleeve member, a hollow head on the lower end of the tapping rod provided with spaced nipples, a partition connected to the base of the head extending upwardly and terminating short of the perforations and sealing off the opening to divide the tapping rod into liquid outlet and fluid inlet channels, flexible tubes connected to the nipples, a valve fitting connected with the tubes and means on the valve fitting insertable within a bottle for filling the bottle and returning foamy fluid to the receptacle.

2,023,096

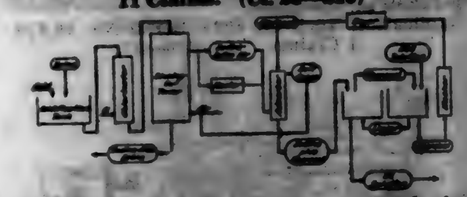
BEVERAGE DISPENSING DEVICE

Carl Zafuta, Arma, Kans., assignor of one-half to John Dobrasz, Franklin, Kans.

Application May 2, 1934, Serial No. 724,652

10 Claims. (Cl. 225—16)

1. In a device of the character described, a container, a stand for the container including a plate, arms pivotally connected with the plate, means for clamping the arms to the container, legs carried by the arms, and clamping means on the legs adapted to engage the chime of a barrel to support the container.



2,023,098

PROCESS FOR EXTRACTING IODINE

Leonard C. Chamberlain and George W. Hooker, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan

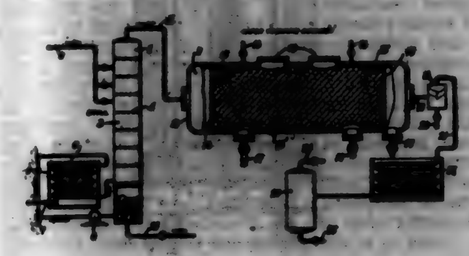
Application December 28, 1932, Serial No. 648,248

11 Claims. (Cl. 23—216)

1. The process of producing an iodide from natural iodiferous brines and the like which comprises liberating the iodine in the brine, blowing the iodine out with a current of air, adsorbing the iodine from the air current by contacting the latter with a body of active carbon, while maintaining the temperature of said current above the dew point thereof, and extracting the iodine from the carbon by treating with a hot solution of an alkali.

2,023,100

TREATMENT OF HYDROCARBON OILS



Richard J. Dearborn, Summit, N. J., and William M. Stratford, New York, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

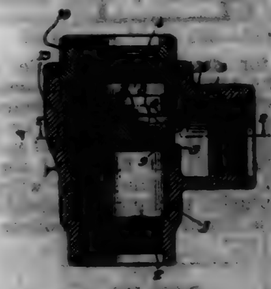
Application October 18, 1930, Serial No. 489,218

2 Claims. (Cl. 196—46)

3. The method of refining hydrocarbon vapors containing unstable unsaturated constituents

which comprises passing said vapors in a horizontal direction through a bed of solid adsorptive catalyst effective to promote polymerization of said unstable unsaturated constituents to compounds of higher boiling point, without substantial change in the direction of flow of the vapors out of the horizontal as they pass through the

bed, at a temperature below a cracking temperature, causing the polymers formed to condense and flow downwardly through the bed of catalytic material in a direction lateral to that of the flow of vapors, removing said polymers from the lower portion of the bed of catalytic material and separately removing the treated vapors.



2,023,161

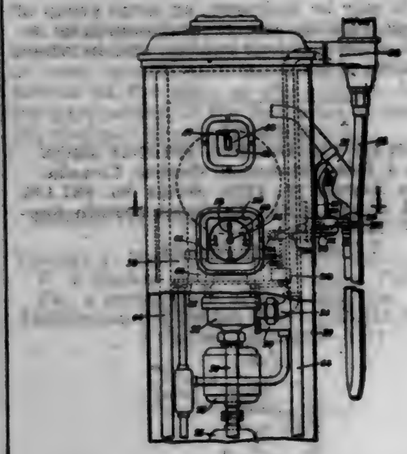
VACUUM BREAKER VALVE

Edward A. Fredrickson, Chicago, Ill., assignor to Crane Company, Chicago, Ill., a corporation of Illinois

Application March 30, 1932, Serial No. 601,902

2 Claims. (Cl. 4—70)

1. In a pressure actuated valve of the character described, a casing comprising respectively a fluid inlet, a fluid side outlet and a vent opening to atmosphere substantially coaxial with said inlet opening, a valve chamber within said casing positioned between the said inlet and the said vent, the said chamber having a side passageway to the said outlet, respective annular seats for the said inlet and the said vent within the said chamber, a plate type tiltable valve closure member normally seated by gravity at the lower portion of the said chamber and fitting closely therewithin for its entire maximum periphery except for that peripheral portion which is interrupted so as to form the said side passageway, the said closure member being freely movable axially within the said chamber and having respective seat bearing contacts upon its upper and lower surfaces, the lift of the said valve closure member being substantially less than the diameter of the said seats whereby the latter lift limitation allows for the tilting of the said closure member so that the said closure member upon its initial actuation by line pressure is capable of contacting simultaneously at both of its respective upper and lower seats.



2,023,162

LIQUID DISPENSING DEVICE

Harry T. Goss, Rutherford, N. J., and Bjornulf Johnsen, Brooklyn, N. Y., assignors to L. N. S. Corporation, New York, N. Y., a corporation of Delaware

Application December 16, 1932, Serial No. 647,596

36 Claims. (Cl. 221—95)

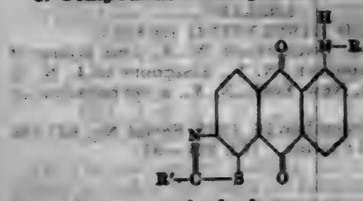
1. In liquid delivery apparatus having a delivery hose, in combination, a meter, an indicator movable away from zero position in proportion to the amount of fluid passed through the meter, mechanism for resetting the indicator to zero position, means for delivering liquid through the meter, actuating means for starting and stopping the delivery means, means interconnecting the resetting mechanism and the actuating means to insure the indicator being at zero position when the delivery means is started and means connected with the hose and preventing the starting of the delivery means except when the means connected with the hose is under tension.

2,023,163

ANTHRIMIDE CARBAZOLE VAT DYESTUFFS AND PROCESS OF PREPARING THE SAME

Donald F. Graham, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

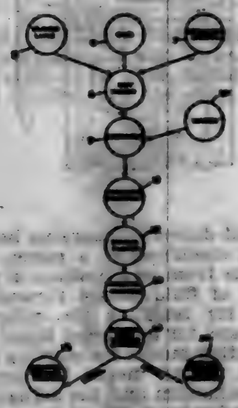
No Drawing. Application June 3, 1933, Serial No. 674,230



12 Claims. (Cl. 260—44)

1. A process of producing a vat dyestuff, which comprises fusing pentanthrimide with aluminum chloride at temperatures not materially above 200° C. and subjecting the product to oxidation.

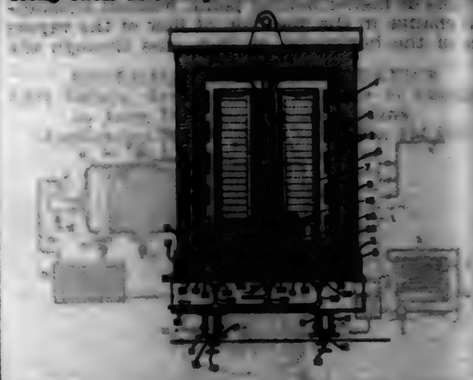
4. A vat dyestuff substantially identical with the product obtained according to claim 3, said dyestuff dyeing cotton in bright, yellowish-olive shades.



2,028,104
INTERMEDIATES AND DYESTUFFS OF THE ANTHRAQUINONE SERIES
Donald P. Graham, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 28, 1933, Serial No. 695,464
9 Claims. (Cl. 260—44)

1. Compounds of the general formula

in which R may be hydrogen, an aroyl group of the benzene, naphthalene or anthraquinone series, or an anthraquinone radical, and in which R' is a radical of the benzene series.



2,028,105
METHOD OF PRODUCING SPONGE IRON
Casimir J. Head, Montreal, Quebec, Canada
Application August 28, 1933, Serial No. 687,195. Renewed June 3, 1935. In Great Britain September 7, 1932
7 Claims. (Cl. 75—14)

1. A method of producing iron sponge which comprises mixing iron oxide ore with carbonaceous material and slaked lime, adding water, forming the mixture into briquettes, and aging the briquettes, in the absence of heat, for a period not less than five days to allow of the more effective chemical reaction between the alkaline hydrate and the acid content of the mix to take place, thus ensuring a slow and gradual evolution of the tenaciously held combined water from the briquettes during subsequent reduction thereof.

2,028,106
BELL TYPE ANNEALING FURNACE
Albert N. Otis, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application November 23, 1934, Serial No. 754,478
5 Claims. (Cl. 266—5)

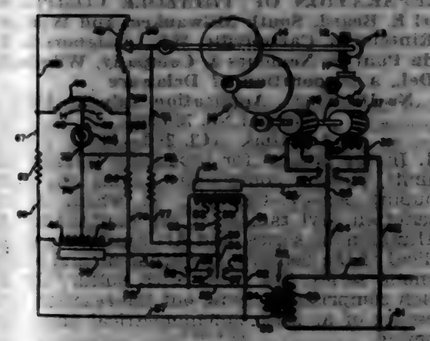
1. In a bell type annealing furnace, a base subject to the liberation of air comprising an annular portion constructed to support the bell of the furnace, a central portion constructed to support the work being annealed and an air tight sheet metal cover therefor inclosing parts covering each of said portions and an intermediate

resilient part connecting said first mentioned parts so as to provide for independent expansion and contraction of said parts.

2,028,107
METHOD OF AND MEANS FOR SEALING CONTAINERS AGAINST LEAKAGE AND TAMPERING
Edgar R. Shaner, Sharon, Pa., assignor to The Petroleum Iron Works Co. of Ohio, Sharon, Pa., a corporation of Ohio
Application August 8, 1935, Serial No. 471,722
8 Claims. (Cl. 220—39)

1. Means for stopping receptacle openings, comprising the combination with a standard assembly including a ring and its complemental bushing, of a filling throat having an upstanding flange adapted to be forced into packing retaining relation with the flange of the bushing in the act of securing the latter with relation to the receptacle, packing intermediate said flanges, and a closure for the bottom of said throat.

2,028,108
WICKET
Harry Shier, New York, N. Y.
Application August 4, 1932, Serial No. 627,515
16 Claims. (Cl. 20—39)



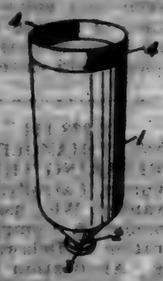
1. A wicket for a door to permit inspection of conditions on the side of the door obversely related to the observer without the necessity of

opening the door, and for association at an opening through the door for that purpose provided, which comprises a frame for the opening, a closure for the opening pivoted upon the frame at the inner face thereof, the closure being so pivoted that it tends normally to gravitate to a position where it will cover the entire opening, the closure moving in a plane substantially parallel to the door upon which it is to be mounted, an abutment on the frame, the abutment being formed to receive and support the closure when it reaches substantially the opening covering position, a projection from the closure, said projection, when the closure has gravitated to its opening covering position, being stopped against the abutment, and a latch carried by the plate, the latch, when the closure is moved to opening covering position, riding vertically over the abutment beyond the receiving and engaging portion of the abutment and assuming a position to engage against the abutment on the side removed from that with which the projection is to abut.

2,028,109
DISINFECTIONAL SPRAY
Irwin Stone, New York, N. Y.
No Drawing. Application April 9, 1934, Serial No. 719,748
6 Claims. (Cl. 167—33)

1. The process of facilitating the removal of spray residues which consists in incorporating in the spray compound an aqueous-insoluble material which is inert toward said compound, but which reacts with alkali wash solutions to form a gas which mechanically dislodges the residue film.

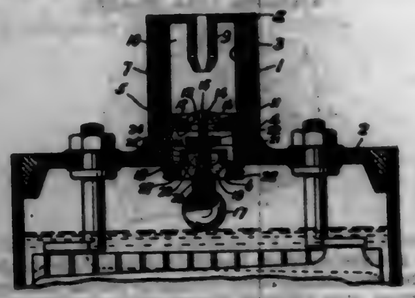
2,028,110
REMOTE CONTROL SYSTEM
Daniel G. Taylor, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 5, 1935, Serial No. 15,944
16 Claims. (Cl. 236—74)



1. In an air conditioning system, an element in control of the condition of a space to be controlled, electrical means in control of said element, a switch in control of said electrical means, a variably energizable electrical device in control of said switch, a condition responsive means in control of the energization of said device for varying the current flow thereto, and resistance means associated with said device and controlled by said switch, arranged to vary the current flow through said device, upon closure of said switch, in such manner as to increase the contact pressure of said switch.

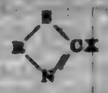
2,028,111
EYER COUNTER
Charles A. Thurston, Haverhill, Mass., assignor to John W. Herlihy, William W. Herlihy, and John J. Herlihy, all of Haverhill, Mass., doing business as Lowell Counter Company, Lowell, Mass.
Application August 2, 1935, Serial No. 34,410
6 Claims. (Cl. 36—68)

1. A shoe counter having an inwardly projecting bottom flange, and having a rib on the upper or inner side of said flange adjacent the inner surface of the sides of the counter, to support the edge portion of the flange out of contact with the heel part to which it is applied.



2,028,112
HERMETIC CLOSURE FOR COLLAPSIBLE TUBES
Charles J. Westin, Philadelphia, Pa., assignor to F. J. Stokes Machine Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 4, 1931, Serial No. 561,111
2 Claims. (Cl. 113—121)

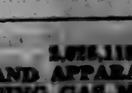
1. A process of hermetically sealing a tube of collapsible material, which process consists in, coating the entire circumferential surfaces on both sides of a tube adjacent one end thereof with cement before the tube is filled and restricting said cement to said surfaces, then closing the coated end of the tube by pressing the opposite inner walls of the tube into contact with each other without folds between them and by folding the coated end at the coated portion after the tube has been filled with the material it is to contain, and then causing the cement to unite into an impervious seal within the turns of the fold and surrounding the ends of the fold.



2. A collapsible tube of bendable metal having one end hermetically sealed by a clipless closure strong enough to withstand considerable manual handling, said closure comprising, the opposite inner walls of one end of the tube compressed into alignment with each other without folds between them, a layer of cement interposed between said inner walls also bonded to the outer walls and covering said closure so as to form a coating about said closure, and a fold formed transversely of the tube at said end of the tube.

2,028,113
NONSPILL VENT PLUG
Joseph Lester Woodbridge, Philadelphia, Pa., assignor to The Electric Storage Battery Co., Philadelphia, Pa., a corporation of New Jersey
Application September 27, 1933, Serial No. 691,149
7 Claims. (Cl. 136—178)

1. A vent plug for a container of fluids which evolve gas, said plug including, in combination, a body having a cavity therein and an inlet and an outlet therein connecting with said cavity, a valve seat in said cavity between said inlet and said outlet, a ledge on said body forming a support, a valve co-operating with said valve seat and having a downwardly projecting portion, and a weight having an edge normally supported on said ledge and capable of tilting movement on said ledge at the lateral wall of said cavity and having a cavity to receive said downwardly projecting portion of said valve therein, the engagement between said valve and said weight being at a surface of limited area just beneath the plane of said ledge so that tilting movement of said weight closes said valve on said seat.

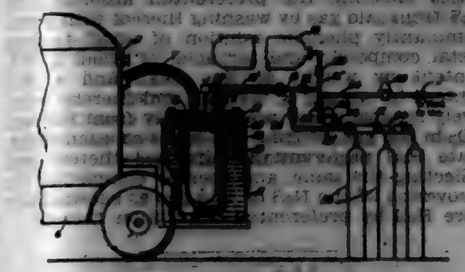


2,028,114
BENZANTHRONE THIAZOLE AND PROCESS OF PREPARING THE SAME
Alexander J. Wuerta, Carrollville, and Myron S. Whelen, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 29, 1933, Serial No. 668,628
13 Claims. (Cl. 260—44)
1. A compound of the general formula:

wherein R stands for a divalent benzanthrone radical to which the S and N are connected in the α and β positions respectively while X stands for hydrogen, alkyl or aryl.

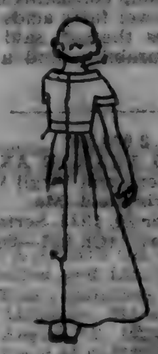
2,028,115
DIBENZANTHRONE-AZOLE AND PROCESS OF PREPARING THE SAME
Alexander J. Wuerta, Carrollville, and Myron S. Whelen, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 29, 1933, Serial No. 668,622
16 Claims. (Cl. 260—44)
1. A vat dyestuff of the dibenzanthrone-azole series, yielding upon cotton grey to dark blue and black dyeings, said dyestuff being obtainable by subjecting to alkali-fusion a compound of the group consisting of a benzanthrone-1,2-thiazole and a benzanthrone-1,2-selenazole.

2,028,116
BENZANTHRONE SELENAZOLE AND PROCESS OF PREPARING THE SAME
Alexander J. Wuerta, Carrollville, and Myron S. Whelen, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 29, 1933, Serial No. 668,631
13 Claims. (Cl. 260—44)
1. A compound of the general formula:



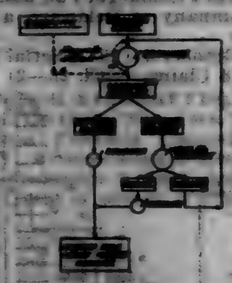
wherein R stands for a divalent benzanthrone radical to which the S and N are connected in the α and β positions respectively while X stands for hydrogen, alkyl or aryl.

2,028,117
MANUFACTURE OF DYESTUFFS AND INTERMEDIATES OF THE DIBENZANTHRONE SERIES
Alexander J. Wuerta, Carrollville, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 22, 1931, Serial No. 570,276
8 Claims. (Cl. 260—61)
1. In the preparation of dioxy-dibenzanthrone compounds, the step which comprises reacting an impure dioxy-dibenzanthrone compound in alkaline solution in the presence of a metal which in such alkaline solution liberates hydrogen.



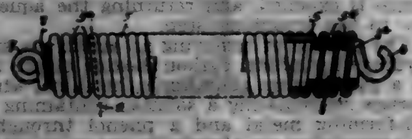
2,028,118
PREPARATION OF THIAZOLE COMPOUNDS
Earl E. Beard, South Milwaukee, and William L. Rintelman, Carrollville, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 26, 1934, Serial No. 736,964
4 Claims. (Cl. 260—44)
1. In the process for producing thiazole compounds wherein compounds having the atomic grouping Ar—N=CH—Ar', in which Ar represents an aryl radical of the naphthalene and anthraquinone series, and Ar' represents an aryl radical of the benzene, naphthalene and anthraquinone series, are fused with sulfur, the step which comprises carrying out the reaction in the presence of at least stoichiometrical amounts of bromine.

2,028,119
METHOD AND APPARATUS FOR DISPENSING GAS MATERIAL
George J. Boshkoff, Buffalo, N. Y., assignor to The Linde Air Products Company, New York, N. Y., a corporation of Ohio
Application May 23, 1934, Serial No. 726,497
12 Claims. (Cl. 62—1)
1. The method of dispensing gas material to consuming apparatus at a desired service pressure which comprises supplying a suitable vaporizing device with liquefied gas, converting the liquefied gas material into gaseous phase, discharging vaporized gas material into a plurality



of receivers operating on successively different pressures, and thereafter supplying consuming apparatus from said receivers by discharging the same successively.

2,028,120
DOLL AND COSTUME
Betty Campbell, New York, N. Y.
Application November 15, 1932, Serial No. 643,744
8 Claims. (Cl. 46—157)

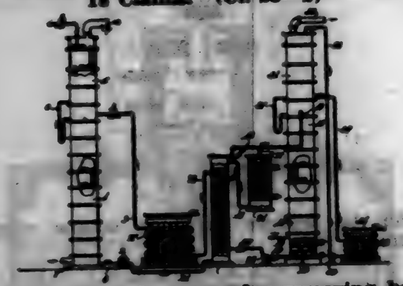


1. A garmented doll including a flat doll body of but two substantial dimensions, in combination with a three dimensional garment of stiff sheet material loosely hung on and encircling the doll and standing out on all sides away from the flat doll body, said garment terminating in a flattened upper portion fitted to the shoulders of the doll body and suspending the garment by supporting engagement with said shoulders.

2,028,121
HIGH OCTANE NUMBER GASOLINE AND METHOD OF MANUFACTURE
Osceola P. Cottrell, Scarsdale, N. Y., assignor to Edeleanu Gesellschaft m. b. H., a corporation of Germany
Application May 12, 1932, Serial No. 611,217
5 Claims. (Cl. 196—29)
1. A continuous process for converting substantially all of a straight run gasoline into high octane number gasoline, comprising the steps of separating the gasoline into a low boiling fraction and a high boiling fraction, treating the high boiling fraction with liquid SO_2 or like solvent, separating the raffinate and extract, removing the solvent therefrom, cracking the raffinate, recycling the cracked raffinate by mixing it with the straight run gasoline stock entering the cycle and blending said extract with said low boiling

fraction to produce the high octane number gasoline.

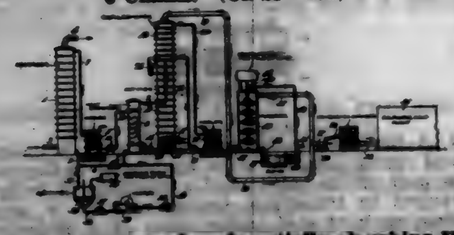
2,028,122
TERMINAL END FOR COILED SPRINGS
Alvin H. Flaveth, Chicago, Ill., assignor to Gardner Wire Co., Chicago, Ill., a corporation of Illinois
Application November 22, 1934, Serial No. 754,235
2 Claims. (Cl. 267—73)



1. A device of the kind described comprising an elongated spiral wire spring that is transversely flexible through its length and having convolutions of uniform pitch, and a universally flexible terminal member engaged with a plurality of convolutions at an end of said spring, said member consisting of a spiral wire spring having a plurality of convolutions of greater pitch than the convolutions of the spring which are engaged by said member and thereby force the plurality of engaged spring convolutions to a wider pitch than their normal pitch and maintain said engaged convolutions under tension, whereby the end portion of the spiral wire spring and the spiral wire member engaged therewith retain transverse flexibility and are expandable longitudinally.

2,028,123
SILENCER FOR FLUSH VALVES
Joseph Freed, San Francisco, Calif.
Application March 14, 1933, Serial No. 660,617
3 Claims. (Cl. 137—111)

1. A flush valve silencer comprising, a cylindrical casing adapted to be connected to the inflow port of the valve; and a plurality of baffles arranged in transverse spaced relation in said casing, each of said baffles being of a diameter corresponding to that of the interior of the casing and formed of material the periphery of which will yield from circumferential contact with the casing to permit the flow of fluid to the inflow port when the flush valve is opened.

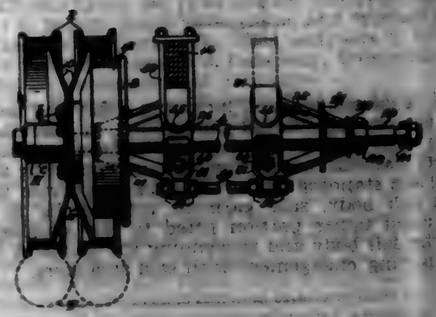


2,028,134
SEPARATION AND PURIFICATION OF GASEOUS MIXTURES
Joseph A. Shaw, Pittsburgh, Pa., assignor to The Koppers Company of Delaware, a corporation of Delaware
Application October 24, 1931, Serial No. 570,961
18 Claims. (Cl. 23—2)

1. An improved process for removing hydrogen sulfide from gas mixtures which comprises scrubbing the gas with a concentrated aqueous solution of an alkali salt of an acid of the class of phenol and its alkylated substitution products, separating the unabsorbed gas and heating the total liquid product from the absorption step to substantially boiling point, whereby the hydrogen sulphide is expelled, and returning the aqueous liquor to the scrubbing step.

5. The process of removing an acidic gas such as hydrogen sulphide, carbon dioxide or the like from a gas mixture containing the same, which comprises recirculating a solution containing an alkali-forming metal and a phenol through a cycle comprising an absorption stage, in which the solution is brought into contact with the gas mixture at an ordinary temperature for the absorption of said acidic gas therefrom, and an actification stage, in which the solution is heated to drive off said absorbed acidic gas and is thereby regenerated for further use, the molar ratio of said alkali-forming metal to said phenol being from 2:1 to 2:3, calculated as ROH (where R represents alkali-forming metal) and phenol, and effecting for the absorption stage a change in phase of the phenol from the phase in the actification stage whereby retarding by the phenol of absorption of acidic gas from the gas mixture by the alkali is minimized.

2,028,135
PROCESS OF OBTAINING HYDROGEN SULPHIDE
Joseph A. Shaw, Pittsburgh, Pa., assignor to The Koppers Company of Delaware, a corporation of Delaware
Application January 8, 1932, Serial No. 585,419
6 Claims. (Cl. 23—181)



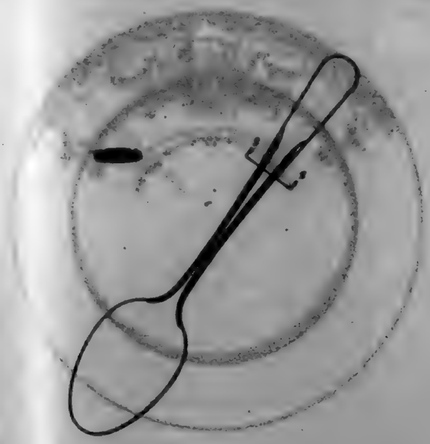
1. In a process of preferentially absorbing H_2S from gaseous mixture containing relatively small amounts of carbon dioxide as compared to hydrogen sulphide for recovery therefrom of substantially pure H_2S, the improvement which comprises effecting the preferential absorption of H_2S from said gas by washing thereof with a predominantly phenolic solution of alkali-forming metal compound and tar acid, of about a 10% content by weight of the alkali and a 15% content by weight of tar acid and thereby selectively removing H_2S preferentially from H_2S and CO_2 in the gas, heating the spent solution to liberate H_2S preferentially absorbed thereby and collecting the same, and thereby completing the recovering of the H_2S of said gas as substantially pure H_2S by preferential absorption thereof.

2,028,136
PHONOGRAPH RECORD
Richard F. Warren, Stratford, Conn., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application July 7, 1930, Serial No. 466,632
6 Claims. (Cl. 196—22)

1. A laminated sound record comprising a fibrous core at least the surface of which is impregnated with a hardened artificial resin to render the core moisture resistant, and which is provided with a playing groove receiving surface containing as the sole resinous constituent a vinyl resin of the group consisting of polymerized vinyl esters of the lower fatty acids, vinyl halides, styrol and mixtures thereof, said record being characterized by durability and a minimum of surface noise.

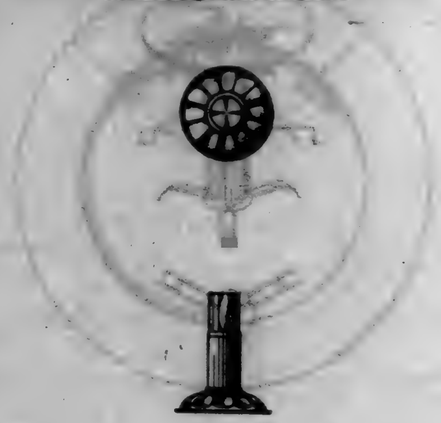
2,028,137
TRUSSED TRAILER AXLE
Charles T. Hutchens and Virgil V. Anderson, Springfield, Mo.
Application October 20, 1934, Serial No. 749,296
7 Claims. (Cl. 287—46)

1. A trussed vehicle axle including: trussing means carried adjacent either end of said axle and extending above and below the same, brace on either side of said axle and embedded in said trussing means, said braces being spaced from each other at the points of load but converging at the points of suspension, means extending at right angles to said axle and carried by said trussing means and the vehicle body to brace the same against torsional stresses, and means connecting said trussing means to each other.



DESIGNS

98,134
DESIGN FOR A SHOE
Jacob Abowitz, New York, N. Y.
Application December 2, 1935, Serial No. 59,576
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown and described.

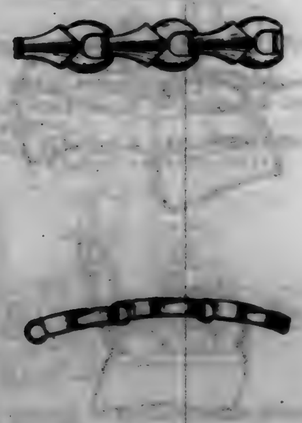
98,135
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Howard M. Bullen and Charles A. Joslin, North Attlebore, Mass., assignors to R. Blackinton & Co., North Attlebore, Mass., a copartnership
Application August 22, 1934, Serial No. 53,021
Term of patent 7 years

The ornamental design for a spoon or similar article, as shown and described.

98,136
DESIGN FOR A CIGARETTE LIGHTER
Richard Emil Berthold, New York, N. Y., assignor to Platinum Products Company, Inc., New York, N. Y., a corporation of New York
Application December 3, 1935, Serial No. 59,585
Term of patent 14 years

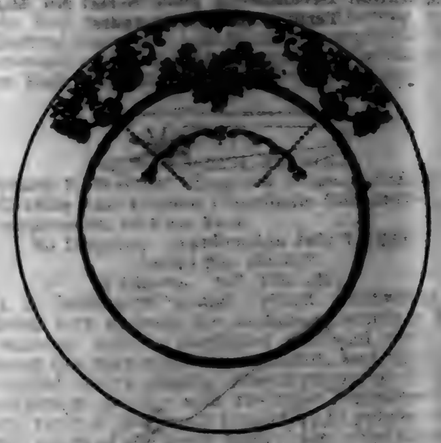
The ornamental design for a cigarette lighter, substantially as shown.

98,137
DESIGN FOR A SETTEE
Salvatore Bevelacqua, New York, N. Y., assignor to The McKay Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1935, Serial No. 59,481
Term of patent 7 years



The ornamental design for a settee, as shown.

98,138
DESIGN FOR A TABLE
Salvatore Bovalesqua, New York, N. Y., assignor to The McKay Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1935, Serial No. 50,632
Term of patent 7 years



The ornamental design for a table, as shown.

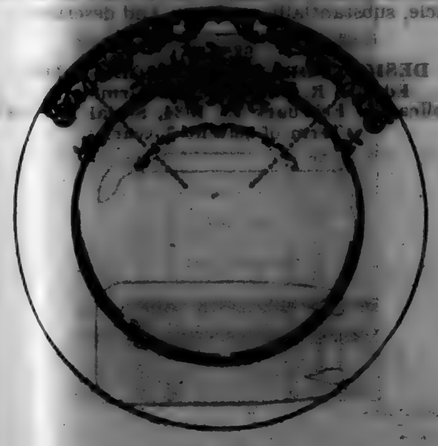
98,139
DESIGN FOR A WATCH BRACELET
Marvin J. Bruner, New York, N. Y.
Application November 26, 1935, Serial No. 50,768
Term of patent 3½ years

The ornamental design for a watch bracelet as shown.

98,140
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 50,671
Term of patent 7 years

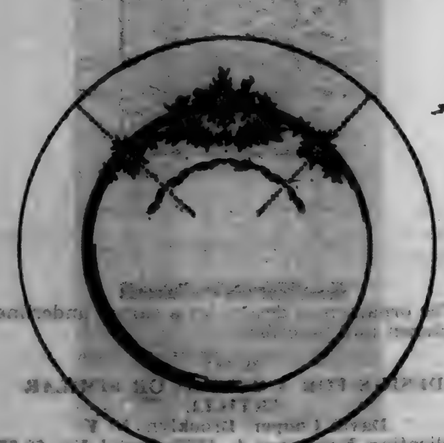
The ornamental design for a plate or similar article, as shown and described.

98,141
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 50,863
Term of patent 7 years



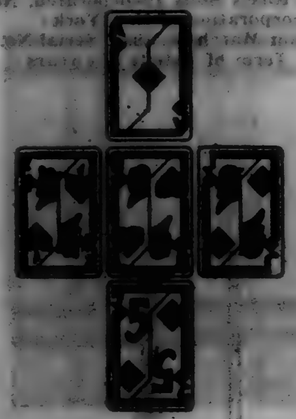
The ornamental design for a plate or similar article as shown and described.

98,142
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 50,864
Term of patent 7 years



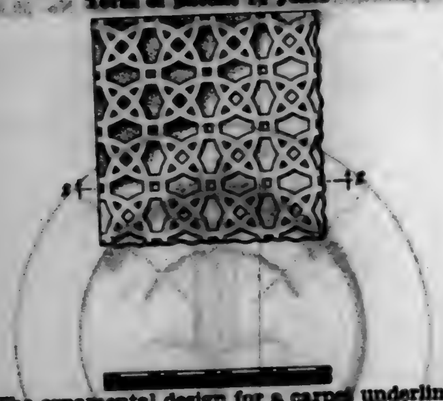
The ornamental design for a plate or similar article, as shown and described.

98,143
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 50,865
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

98,144
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 50,865
Term of patent 7 years

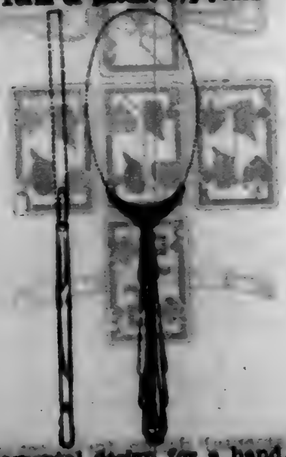


The ornamental design for a plate or similar article, as shown and described.

98,145
DESIGN FOR A SET OF PLAYING CARDS
Rudolf Busch, Mainz, Germany
Application February 19, 1934, Serial No. 50,777
In Germany October 19, 1935
Term of patent 3½ years

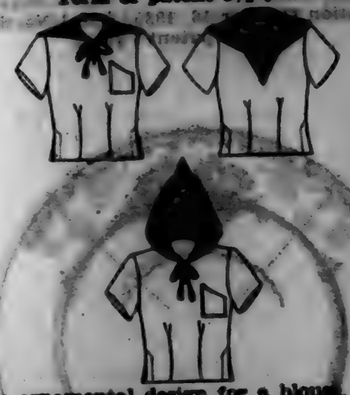
The ornamental design for a set of playing cards, as shown.

96,146
DESIGN FOR A CARPET UNDERLINER
Arthur L. Clements, Chicago, Ill., assignor to American Hair & Felt Company, Chicago, Ill., a corporation of Delaware
Application November 23, 1934, Serial No. 54,137
Term of patent 14 years



The ornamental design for a carpet underliner as shown and described.

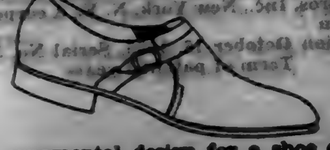
96,147
DESIGN FOR A BUCKLE OR SIMILAR ARTICLE
David Cooper, Brooklyn, N. Y.
Application November 4, 1935, Serial No. 59,370
Term of patent 3½ years



The ornamental design for a buckle or similar article as shown.

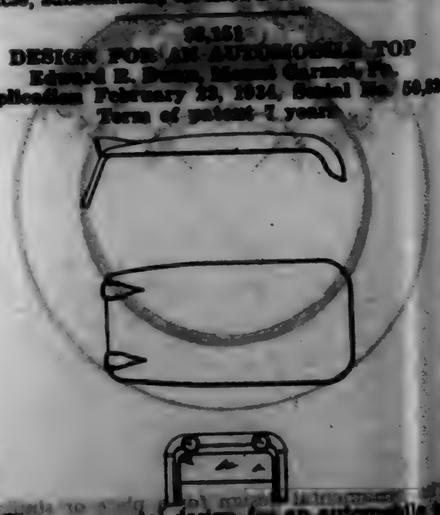
96,148
DESIGN FOR A HAND MIRROR OR SIMILAR ARTICLE
Joseph A. Despres, Scarsdale, N. Y., assignor to Bernard Rice's Sons Incorporated, New York, N. Y., a corporation of New York
Application March 30, 1935, Serial No. 56,135
Term of patent 3½ years

The ornamental design for a hand mirror or similar article as shown and described.

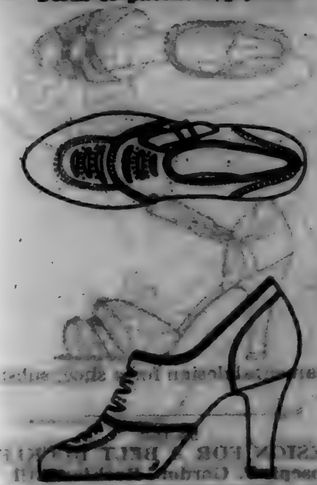


96,149
DESIGN FOR A BLOUSE
Marion Frances De Witt, New York, N. Y.
Application December 5, 1935, Serial No. 58,911
Term of patent 3½ years

The ornamental design for a blouse, substantially as shown, and described.



96,150
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Stanley T. Drake, Abington, Mass.
Application November 7, 1935, Serial No. 59,422
Term of patent 14 years

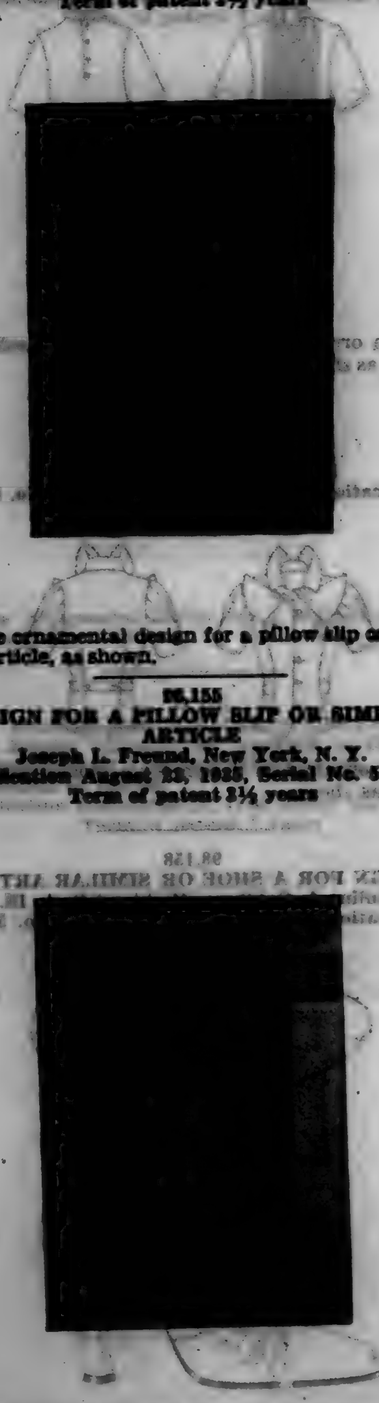


The ornamental design for a shoe or similar article, substantially as shown and described.

96,151
DESIGN FOR AN AUTOMOBILE TOP
Edward E. Dunn, Mount Carmel, Pa.
Application February 22, 1934, Serial No. 50,894
Term of patent 7 years

The ornamental design for an automobile top as shown.

96,152
DESIGN FOR A SHOE
Samuel Epstein, New York, N. Y.
Application November 26, 1935, Serial No. 59,703
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown.

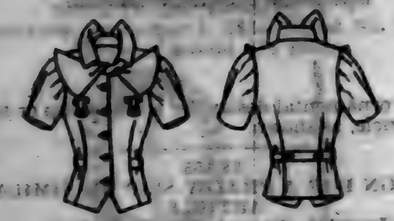
96,153
DESIGN FOR A PILLOW SLIP OR SIMILAR ARTICLE
Joseph L. Freund, New York, N. Y.
Application August 22, 1935, Serial No. 58,267
Term of patent 3½ years

The ornamental design for a pillow slip or similar article, as shown.

96,154
DESIGN FOR A PILLOW SLIP OR SIMILAR ARTICLE
Joseph L. Freund, New York, N. Y.
Application August 22, 1935, Serial No. 58,268
Term of patent 3½ years

The ornamental design for a pillow slip or similar article, as shown.

96,155
DESIGN FOR A PILLOW SLIP OR SIMILAR ARTICLE
Joseph L. Freund, New York, N. Y.
Application August 22, 1935, Serial No. 58,269
Term of patent 3½ years



The ornamental design for a pillow slip, or similar article, as shown.

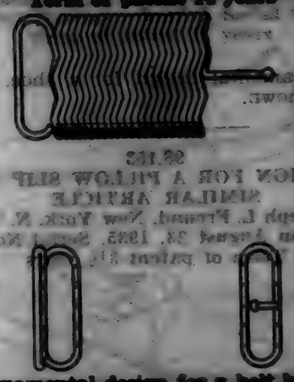
98,156
DESIGN FOR A BLOUSE
Irving Goist, New York, N. Y.
Application November 23, 1935, Serial No. 59,743
Term of patent 3½ years

The ornamental design for a blouse, substantially as shown, and described.

98,157
DESIGN FOR A BLOUSE
Irving Goist, New York, N. Y.
Application December 16, 1935, Serial No. 60,197
Term of patent 3½ years

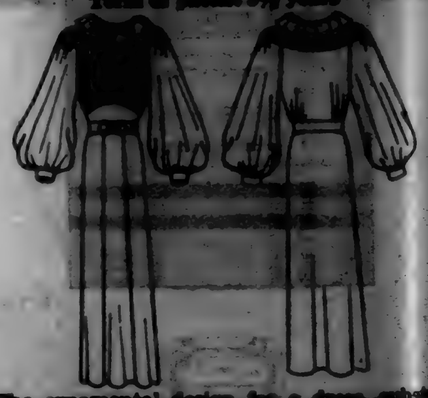
The ornamental design for a blouse, substantially as shown.

98,158
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Julius A. Goldberg, Highland Park, Ill.
Application December 3, 1935, Serial No. 59,943
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

98,159
DESIGN FOR A SHOE
Anne Gordon, New York, N. Y.
Application November 14, 1935, Serial No. 59,521
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown.

98,160
DESIGN FOR A BELT BUCKLE
Joseph P. Gordon, Rockford, Ill.
Application May 27, 1935, Serial No. 57,946
Term of patent 14 years

The ornamental design for a belt buckle, substantially as shown and described.

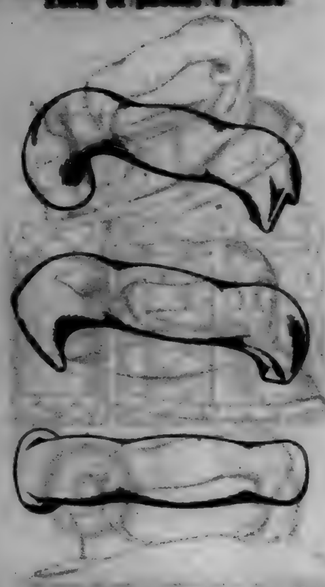
98,161
DESIGN FOR A DRESS
Abraham Gutkowski, New York, N. Y.
Application December 12, 1935, Serial No. 60,091
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

98,162
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Charles G. Hindman, New York, N. Y.
Application December 6, 1935, Serial No. 59,905
Term of patent 3½ years

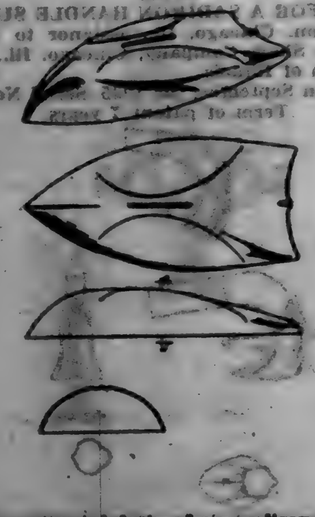
The ornamental design for a shoe or similar article, substantially as shown.

98,163
DESIGN FOR A CIRCULATION HEATER
David J. Howard, Chicago, Ill., assignor to Quaker Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application September 16, 1935, Serial No. 58,568
Term of patent 3½ years



The ornamental design for a circulation heater substantially as shown and described.

98,164
DESIGN FOR A BLOUSE
[illegible], New York, N. Y.
Application [illegible], Serial No. 60,194
Term of patent [illegible]



The ornamental design for a blouse, substantially as shown.

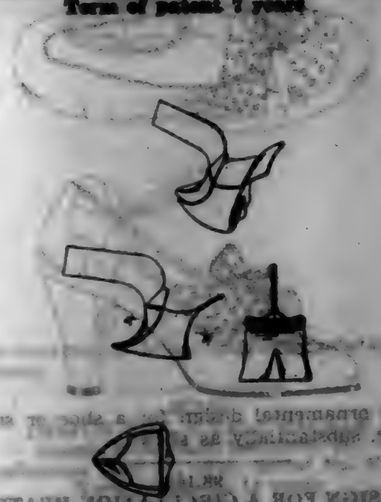
98,165
DESIGN FOR A SADIRON HANDLE
Ivar Jepsen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 30, 1935, Serial No. 58,764
Term of patent 7 years

The ornamental design for a sadiron handle substantially as shown.

98,166
DESIGN FOR A SADIRON COVER
Ivar Jepsen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 30, 1935, Serial No. 58,765
Term of patent 7 years

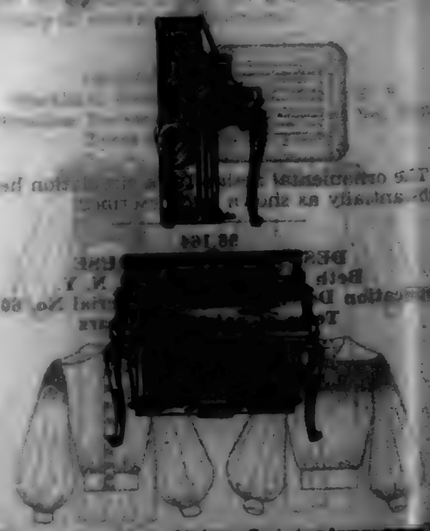
The ornamental design for a sadiron cover substantially as shown.

98,167
DESIGN FOR A SADIRON
Ivar Jepsen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 30, 1935, Serial No. 58,766
Term of patent 7 years



The ornamental design for a sadiron substantially as shown.

98,168
DESIGN FOR A SADIRON HANDLE SUPPORT
Ivar Jepsen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 30, 1935, Serial No. 58,767
Term of patent 7 years

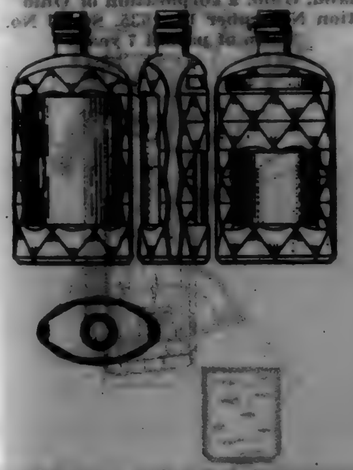


The ornamental design for a sadiron handle support substantially as shown and described.

98,169
DESIGN FOR A SADIRON HANDLE SUPPORT
Ivar Jepsen, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 30, 1935, Serial No. 58,768
Term of patent 7 years

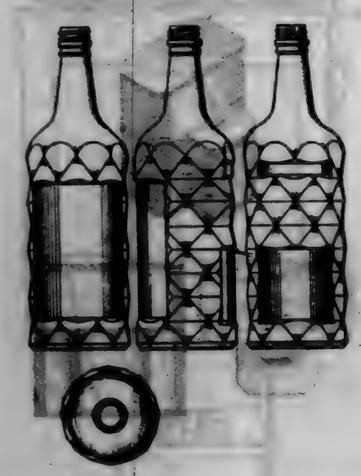
The ornamental design for a sadiron handle support substantially as shown and described.

98,170
DESIGN FOR A PIANO CASE
Gardner C. Kavanagh, Rochester, N. Y., assignor to Aeolian American Corporation, East Rochester, N. Y., a corporation of New York
Application October 28, 1935, Serial No. 59,211
Term of patent 14 years



The ornamental design for a piano case as shown.

98,171
DESIGN FOR A HAND BAG
Milore Lending, New Bedford, Mass., assignor to Sol Mutterperl, Incorporated, New York, N. Y.
Application November 20, 1935, Serial No. 59,886
Term of patent 3½ years

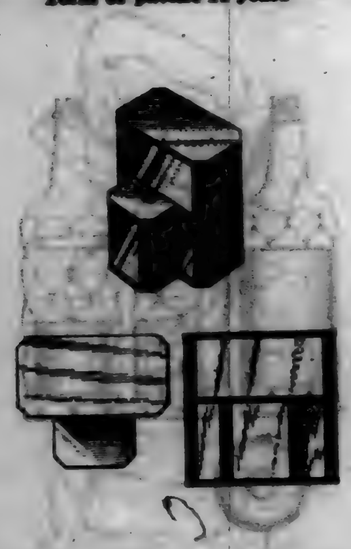


The ornamental design for a hand bag, as shown and described.

98,172
DESIGN FOR A BOTTLE
Calman Lewine, New York, N. Y., assignor to Julius Kessler Distilling Co., Inc., Lawrenceburg, Ind., a corporation of Indiana
Application September 11, 1935, Serial No. 58,515
Term of patent 14 years

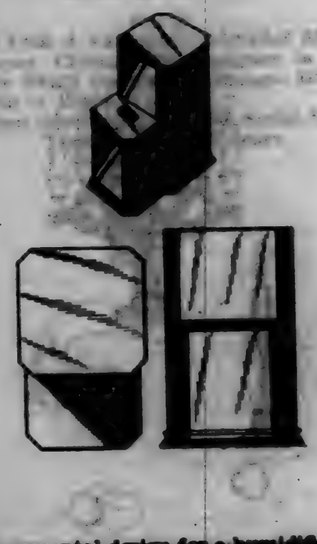
The ornamental design for a bottle, as shown.

98,173
DESIGN FOR A BOTTLE
Calman Levine, New York, N. Y., assignor to Julius Kessler Distilling Co., Inc., Dearborn, Ind., a corporation of Indiana
Application September 11, 1935, Serial No. 58,519
Term of patent 14 years



The ornamental design for a bottle, as shown.

98,174
DESIGN FOR A CANDLESTICK
William F. Lietz, Chicago, Ill., assignor to Holland Brass Works, Incorporated, Chicago, Ill., a corporation of Illinois
Application April 4, 1935, Serial No. 56,201
Term of patent 3½ years

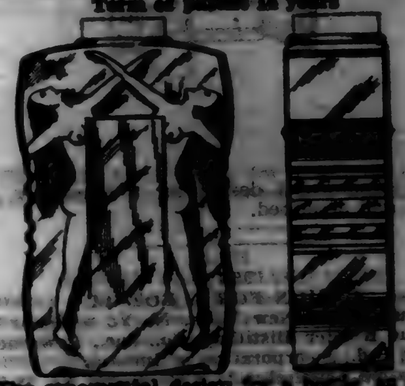


The ornamental design for a candlestick, as shown.

98,175
DESIGN FOR A HUMIDIFIER CASING
Fowler Manning, Bronxville, N. Y., assignor to American Radiator Company, New York, N. Y., a corporation of New Jersey
Application November 2, 1935, Serial No. 49,236
Term of patent 14 years

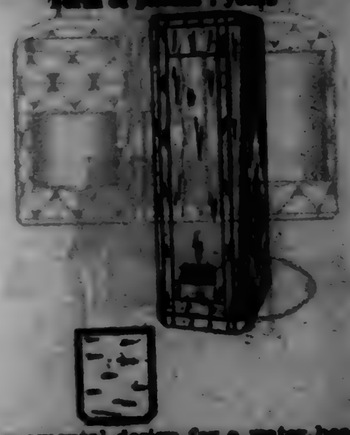
The ornamental design for a humidifier casing, as shown.

98,176
DESIGN FOR A HUMIDIFIER CASING
Fowler Manning, Bronxville, N. Y., assignor to American Radiator Company, New York, N. Y., a corporation of New Jersey
Application November 2, 1935, Serial No. 49,235
Term of patent 14 years



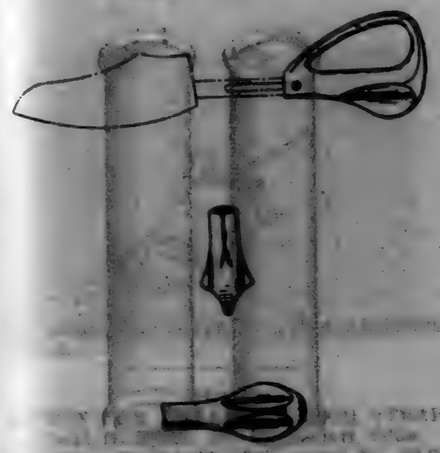
The ornamental design for a humidifier casing, as shown.

98,177
DESIGN FOR A FINGER RING OR SIMILAR ARTICLE
Benjamin H. Marvin, New York, and Benjamin Stolkowsky, Brooklyn, N. Y.
Application May 20, 1935, Serial No. 47,870
Term of patent 7 years



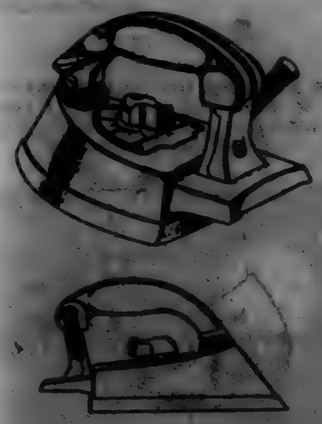
The ornamental design for a finger ring or similar article, as shown and described.

98,178
DESIGN FOR A BOTTLE
Frank McLaughlin, Chicago, Ill., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application November 6, 1935, Serial No. 50,411
Term of patent 14 years



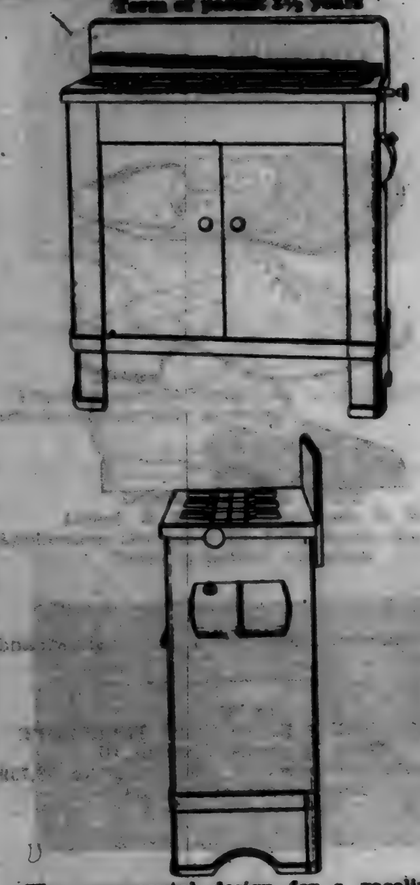
The ornamental design for a bottle, as shown and described.

98,179
DESIGN FOR A WATER HEATER
Clarence E. Morrow, Shaker Heights, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a corporation of Ohio
Application November 13, 1935, Serial No. 50,504
Term of patent 7 years



The ornamental design for a water heater, as shown.

98,180
DESIGN FOR A SHOE TREE
James B. Melnik, Rochester, N. Y., assignor to Scholler Last Co., Inc., Rochester, N. Y., a corporation of New York
Application November 14, 1935, Serial No. 50,573
Term of patent 14 years

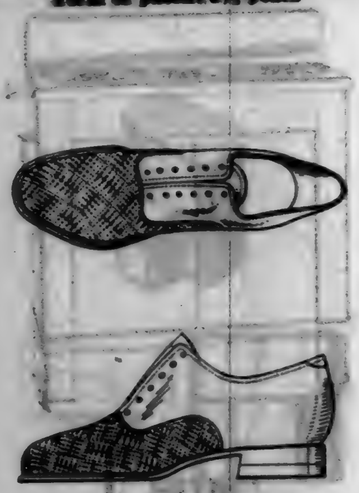


The ornamental design for a shoe tree, as shown and described.

98,181
DESIGN FOR AN ELECTRIC FLATIRON
Raymond E. Patton, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application October 31, 1935, Serial No. 50,162
Term of patent 14 years

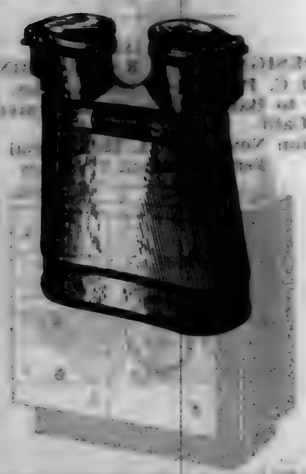
The ornamental design for an electric flatiron substantially as shown, and described.

98,182
DESIGN FOR A GASOLINE COOK STOVE
George E. Fisher, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a corporation of Ohio
Application November 18, 1935, Serial No. 50,438
Term of patent 3½ years



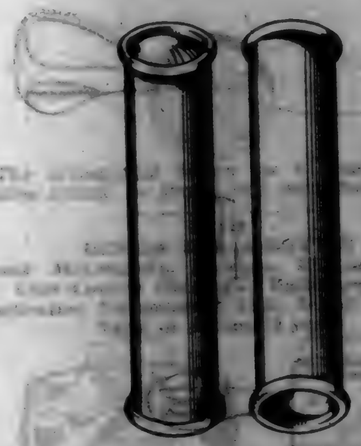
The ornamental design for a gasoline cook stove, substantially as shown and described.

98,183
DESIGN FOR A RADIOCABINET
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Earl-ar Bros. Incorporated, Los Angeles, Calif.
Application November 11, 1935, Serial No. 50,509
Term of patent 3½ years



The ornamental design for a radiocabinet as shown and described.

98,184
DESIGN FOR A SHOE
Ernest A. Rainey, Manchester, N. H., assignor to Diamond Shoe Corporation, Brockton, Mass., a corporation of Massachusetts
Application September 30, 1935, Serial No. 58,837
Term of patent 3½ years



The ornamental design for a shoe, as shown and described.

98,185
DESIGN FOR A BINOCULAR TELESCOPE
Milton Reynolds, Chicago, Ill.
Application September 27, 1935, Serial No. 58,739
Term of patent 14 years

The ornamental design for a binocular telescope substantially as shown and described.

98,186
DESIGN FOR A RANGE BOILER
Richard S. Bloom, Oakland, Calif., assignor to Bloom Manufacturing Company, Richmond, Calif., a corporation of California
Application May 2, 1935, Serial No. 50,714
Term of patent 3½ years

The ornamental design for a range boiler substantially as shown.

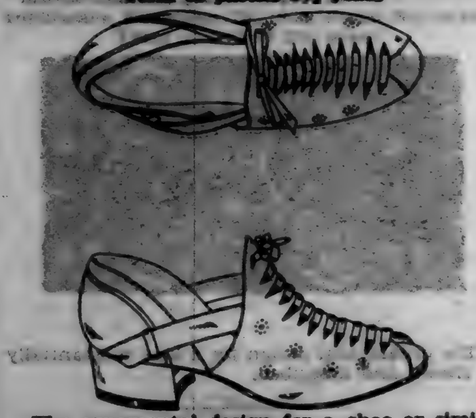
98,187
DESIGN FOR A BRASSIERE
William Rosenthal, New York, N. Y., assignor to Maiden Form Brassiere Company, Inc., New York, N. Y., a corporation of New York
Application October 11, 1935, Serial No. 53,949
Term of patent 14 years

The ornamental design for a brassiere, as shown.

98,188
DESIGN FOR A SHOE
Justin J. Rosenthal, Baltimore, Md.
Application December 5, 1935, Serial No. 59,214
Term of patent 3½ years

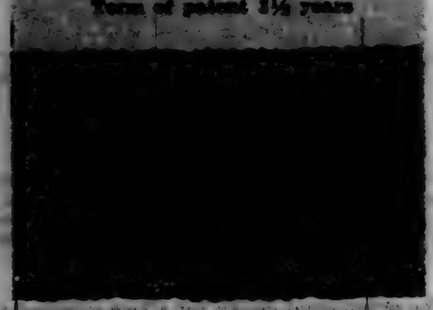
The ornamental design for a shoe substantially as shown.

98,189
DESIGN FOR A WRIST WATCH STRAP
Albert H. Sauer, Jr., Cincinnati, Ohio
Application August 22, 1935, Serial No. 56,235
Term of patent 7 years



The ornamental design for a wrist watch strap, substantially as shown.

98,190
DESIGN FOR A FLAG OR SIMILAR ARTICLE
Ethel A. Steinhaus, New York, N. Y.
Application October 5, 1935, Serial No. 55,895
Term of patent 7 years

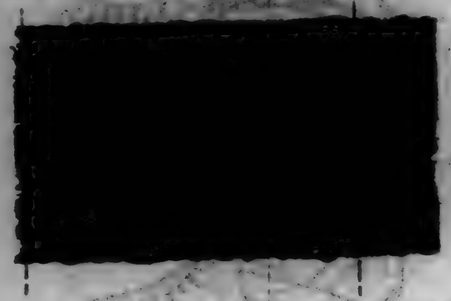


The ornamental design for a flag or similar article as shown and described.

98,191
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Seymour Troy, New York, N. Y.
Application December 2, 1935, Serial No. 59,367
Term of patent 3½ years

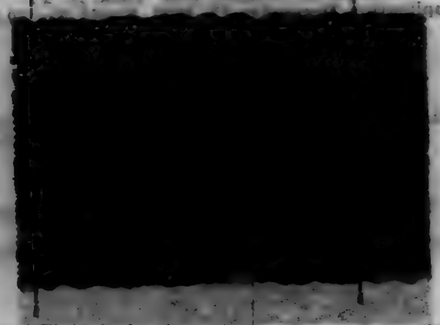
The ornamental design for a shoe or similar article substantially as shown.

98,192
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 19, 1935, Serial No. 60,240
Term of patent 3½ years



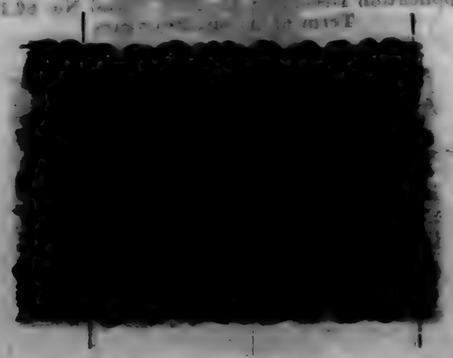
The ornamental design for a lace substantially as shown and described.

98,193
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 17, 1935, Serial No. 60,124
Term of patent 3½ years



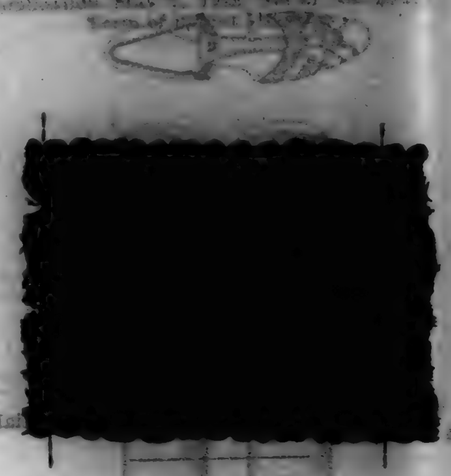
The ornamental design for a lace substantially as shown and described.

96,194
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 12, 1935, Serial No. 60,125
Term of patent 3½ years



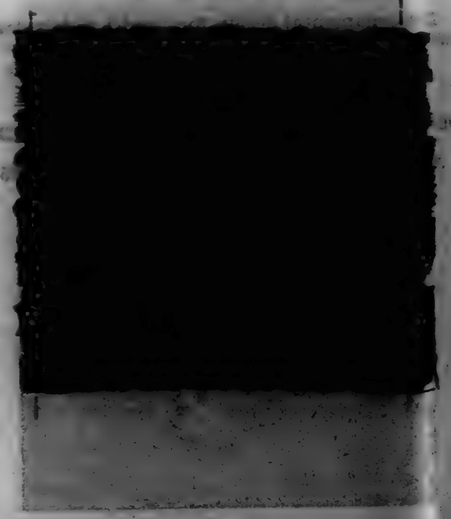
The ornamental design for a lace substantially as shown and described.

96,195
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 12, 1935, Serial No. 60,126
Term of patent 3½ years



The ornamental design for a lace substantially as shown and described.

96,196
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 12, 1935, Serial No. 60,127
Term of patent 3½ years

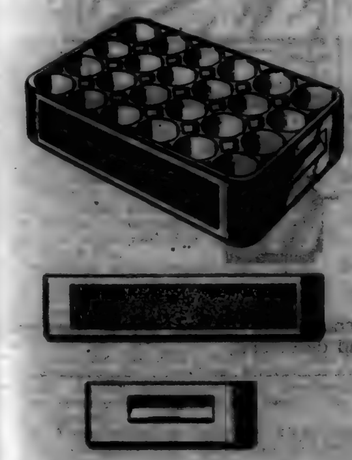


The ornamental design for a lace substantially as shown and described.

96,197
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 12, 1935, Serial No. 60,128
Term of patent 3½ years

The ornamental design for a lace substantially as shown and described.

96,198
DESIGN FOR A LACE
Joseph D. Wiener, New York, N. Y.
Application December 12, 1935, Serial No. 60,129
Term of patent 3½ years

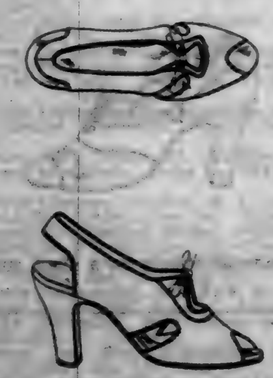


The ornamental design for a lace substantially as shown and described.

96,199
DESIGN FOR A SHOE
Otri Wolfolt, New York, N. Y.
Application December 2, 1935, Serial No. 59,996
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

96,200
DESIGN FOR A BOTTLE CRATE
Everett Werthington, Chicago, Ill., assignor to Coca-Cola Company, Atlanta, Ga., a corporation of Delaware
Application August 31, 1935, Serial No. 53,396
Term of patent 14 years



The ornamental design for a bottle crate, as shown.

96,201
DESIGN FOR A SHOE
Myron Cohen, Brighton, Mass., assignor to Stetson Shoe Co., Lynn, Mass., a corporation of Massachusetts
Application November 19, 1935, Serial No. 59,648
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown and described.

96,202
DESIGN FOR A SHOE
Myron S. Goldman, St. Louis, Mo., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application November 25, 1935, Serial No. 59,751
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

88,900
DESIGN FOR A SHOE
Myron S. Goldman, St. Louis, Mo., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application November 25, 1935, Serial No. 59,752
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

88,904
DESIGN FOR A SHOE
Myron S. Goldman, St. Louis, Mo., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application November 25, 1935, Serial No. 59,753
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

88,905
DESIGN FOR A SHOE
Herman Goldberg, Haverhill, Mass.
Application November 18, 1935, Serial No. 59,615
Term of patent 3½ years

The ornamental design for a shoe as shown.

88,906
DESIGN FOR A SHOW CASE
Frank L. Pollard, Oakland, Calif.
Application February 20, 1935, Serial No. 55,610
Term of patent 3½ years

The ornamental design for a show-case, as shown and described.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

(Act of Feb. 20, 1905, Sec. 9, as amended Mar. 2, 1907)

Affiliated Enterprises, Inc., Denver, Colo. Films for theatrical use. Serial No. 368,673; Jan. 14. Class 26.

Aktiengesellschaft Johannes Jaenrich, Berlin-Charlottenburg, Germany. Condensing products of phenols or of aldehyds, resins, and artificial resins. Serial No. 369,280; Jan. 14. Class 6.

Alkine Laboratories. (See Tobin, Meyer.)

American-London Shrinker Corp., New York, N. Y. Piece goods. Serial No. 366,601; Jan. 14. Class 42.

American Safety Razor Corporation, Brooklyn, N. Y. Razor blades and razors. Serial No. 371,340; Jan. 14. Class 28.

Amerita Grocers Association, Inc., New York, N. Y. Canned tuna fish, spaghetti, baked beans, etc. Serial No. 371,195; Jan. 14. Class 46.

Aromatic Flavor Company. (See Singer, Jacob.)

Atkin, William, Company, Inc., New York, N. Y. Shirts and pajamas. Serial No. 370,169; Jan. 14. Class 39.

Atlantic Calcamine Co., inc., Brooklyn, N. Y. Cold water calsomine and hot water calsomine. Serial No. 371,130; Jan. 14. Class 16.

Atlantic Refining Company, The, Philadelphia, Pa. Petroleum products. Serial Nos. 370,753-7; Jan. 14. Class 16.

Atlas Canning Company, Inc., doing business as Speedy Sales Co., Glendale, Long Island, N. Y. Canned food for dogs, cats, etc. Serial No. 371,345; Jan. 14. Class 46.

Atwood, Harry E., doing business as H. E. Atwood and Co., San Lorenzo, Calif. Salve for cuts, burns, etc. Serial No. 371,412; Jan. 14. Class 6.

Ault-Williamson Shoe Co., Auburn, Me. Shoes. Serial Nos. 370,885-1; Jan. 14. Class 39.

Bandoni, L., & Sons, Merced, Calif. Fresh vegetables. Serial No. 371,519; Jan. 14. Class 46.

Chemical paste for liquid level indicators. C. L. Ricklefs. 331,587; Jan. 14; Serial No. 368,383; published Nov. 5, 1935.
Chemical preparation adapted to be applied to steel. Industrial Chemical Products Co. 331,558; Jan. 14; Serial No. 361,804; published Nov. 5, 1935.
Chocolate bars containing a concentrate of cod liver oil and vitamins thereof. Candy-Cod Laboratories, Inc. 331,669; Jan. 14.
Cream and powder, Dental. Colgate-Palmolive-Peet Company. 331,580; Jan. 14; Serial No. 368,130; published Nov. 5, 1935.
Creams, face powders, cold creams, etc. Tayton Company. 331,582; Jan. 14; Serial No. 368,200; published Nov. 5, 1935.
Creams, Toilet. Daggett & Ramsdell. 331,535; Jan. 14; Serial No. 368,976; published Nov. 5, 1935.
Dichlorodifluoromethane. Kinetic Chemicals, Inc. 331,525; Jan. 14; Serial No. 369,020; published Nov. 5, 1935.
Dichlorodifluoromethane. Kinetic Chemicals, Inc. 331,530; Jan. 14; Serial No. 369,015; published Nov. 5, 1935.
Dichloromonofluoromethane. Kinetic Chemicals, Inc. 331,524; Jan. 14; Serial No. 369,021; published Nov. 5, 1935.
Dichloromonofluoromethane. Kinetic Chemicals, Inc. 331,529; Jan. 14; Serial No. 369,016; published Nov. 5, 1935.
Dichlorotetrafluoroethane. Kinetic Chemicals, Inc. 331,522; Jan. 14; Serial No. 369,023; published Nov. 5, 1935.
Dichlorotetrafluoroethane. Kinetic Chemicals, Inc. 331,527; Jan. 14; Serial No. 369,018; published Nov. 5, 1935.
Fluids for dustproofing coal. P. W. Manufacturing Company. 331,618; Jan. 14; Serial No. 366,872; published Nov. 5, 1935.
Hair dye and tonic. Ton-Di Products, Inc. 331,581; Jan. 14; Serial No. 368,158; published Nov. 5, 1935.
Hair lotions. Foreign Specialties, Inc. 331,541; Jan. 14; Serial No. 368,882; published Nov. 5, 1935.
Hair rinse. William F. Myles, Inc. 331,606; Jan. 14; Serial No. 365,260; published Nov. 5, 1935.
Hygienic vaginal jelly. J. C. Smith. 331,646; Jan. 14; Serial No. 360,084; published Nov. 5, 1935.
Insecticides. Roxor Corporation. 331,579; Jan. 14; Serial No. 368,963; published Oct. 29, 1935.
Insecticides, fly spray, and stock dip. Southern Independent Oil and Refining Company. 331,515; Jan. 14; Serial No. 369,111; published Oct. 29, 1935.
Insecticides for poultry and veterinary purposes. Tobacco By-Products and Chemical Corporation. 331,606; Jan. 14; Serial No. 365,535; published Nov. 5, 1935.
Licorice for use as a flavoring. Tannin Corporation. 331,536–7; Jan. 14; Serial Nos. 368,968–9; published Nov. 5, 1935.
Liniment, a preparation for treating the hair and scalp, eyewash, etc. Polk Miller Products Corporation. 331,624; Jan. 14; Serial No. 368,707; published Nov. 5, 1935.
Liniment, preparation for treating the hair and scalp, eyewash, etc. Polk Miller Products Corporation. 331,641; Jan. 14; Serial No. 368,706; published Nov. 5, 1935.
Medicinal preparation for rheumatism. Joseph Walter Adams & Son. 331,551; Jan. 14; Serial No. 368,129; published Nov. 5, 1935.
Medicine, Mange. Polk Miller Products Corporation. 331,632; Jan. 14; Serial No. 368,639; published Nov. 5, 1935.
Moth proofing compound. Merck & Co. Inc. 331,519; Jan. 14; Serial No. 369,061; published Nov. 5, 1935.
Perfumes. John Frederics Perfumes Corporation. 331,683–4; Jan. 14; Serial Nos. 369,270–1; published Oct. 29, 1935.
Pharmaceutical preparation, Liquid. G. F. Harvey Company. 331,514; Jan. 14; Serial No. 369,130; published Nov. 5, 1935.
Powder Puff. Polk Miller Products Corporation. 331,533; Jan. 14; Serial No. 368,705; published Nov. 5, 1935.
Preparation to prevent rust and corrosion, etc. Bird-Archer Company. 331,670; Jan. 14; Serial No. 369,856; published Nov. 5, 1935.
Preparations for the skin, complexion, etc.; herbal, floral, vegetable, and botanical extracts for toilet use, etc.; Herbal, medicated, and chemical. R. Blank. 331,667; Jan. 14; Serial No. 359,774; published Nov. 5, 1935.
Sedatives, analgesics, diuretics, etc. Methusa Co. 331,667; Jan. 14; Serial No. 369,650; published Oct. 29, 1935.
Solutions of calcium gluconate for veterinary use. Warden Laboratories. 331,637; Jan. 14; Serial No. 369,794; published Oct. 29, 1935.

Tonic, General. Central Laboratories, Inc. 331,560; Jan. 14; Serial No. 368,442; published Oct. 29, 1935.
Tooth paste, dentifrices, face powder, etc. Ignacio López y Compañía. 331,564; Jan. 14; Serial No. 363,001; published Oct. 29, 1935.
Tooth powder. I. P. Baughman. 331,621; Jan. 14; Serial No. 366,899; published Nov. 5, 1935.
Trichloromonofluoromethane. Kinetic Chemicals, Inc. 331,526; Jan. 14; Serial No. 369,019; published Nov. 5, 1935.
Trichloromonofluoromethane. Kinetic Chemicals, Inc. 331,642; Jan. 14; Serial No. 369,014; published Nov. 5, 1935.
Trichlorotrifluoroethane. Kinetic Chemicals, Inc. 331,523; Jan. 14; Serial No. 369,022; published Nov. 5, 1935.
Trichlorotrifluoroethane. Kinetic Chemicals, Inc. 331,528; Jan. 14; Serial No. 369,017; published Nov. 5, 1935.
Vitaminic preparations. E. R. Squibb & Sons. 331,584; Jan. 14; Serial No. 368,273; published Nov. 5, 1935.

CLASS 12

Calking, glazing, and roofing compounds, and roofing cement. Macklanburg-Duncan Company. 331,577–8; Jan. 14; Serial Nos. 366,954–5; published Oct. 29, 1935.
Cement, High early strength Portland. Missouri Portland Cement Company. 331,614; Jan. 14; Serial No. 366,570; published Oct. 29, 1935.
Cement, High early strength Portland. Missouri Portland Cement Company. 331,615; Jan. 14; Serial No. 366,572; published Oct. 29, 1935.
Door step and stringers. William C. Meredith Co. 331,631; Jan. 14; Serial No. 368,620; published Oct. 29, 1935.
Refractory materials, Bodies of heat resisting highly. Quigley Company. 331,544; Jan. 14; Serial No. 368,864; published Oct. 22, 1935.

CLASS 13

Strapping, Box. Stanley Works. 331,506; Jan. 14; Serial No. 368,540; published Nov. 5, 1935.
Strapping, Box. Stanley Works. 331,507; Jan. 14; Serial No. 368,542; published Nov. 5, 1935.
Tacks and nails. Turner & Seymour Manufacturing Company. 331,688; Jan. 14.

CLASS 15

Oil, Lubricating. Paragon Oil Company. 331,601; Jan. 14; Serial No. 367,036; published Oct. 22, 1935.

CLASS 16

Paint, Water color. Ace Color Corporation. 331,677; Jan. 14; Serial No. 369,391; published Nov. 5, 1935.
Polish, Furniture. R. B. Quattrocchio. 331,669; Jan. 14; Serial No. 369,627; published Nov. 5, 1935.
Priming coat material, Protective. Flood Company. 331,671; Jan. 14; Serial No. 369,468; published Nov. 5, 1935.
Wax for polishing automobiles, etc., Prepared. L. R. Van Allen & Company. 331,574; Jan. 14; Serial No. 355,598; published Nov. 5, 1935.

CLASS 19

Radiators, Water cooling. Star Radiator Mfg. Company. 331,583; Jan. 14; Serial No. 368,242; published Nov. 5, 1935.

CLASS 21

Electrical conductors. United States Rubber Products, Inc. 331,675; Jan. 14; Serial No. 369,424; published Nov. 5, 1935.
Exterminator for insects, Electrically operated. National Electric Screen Co. 331,665; Jan. 14; Serial No. 367,426; published Nov. 5, 1935.
Radio broadcast receiving sets. Freed Manufacturing Company. 331,629; Jan. 14; Serial No. 368,610; published Nov. 5, 1935.
Radio receiving sets and parts. Homer L. Kitt Co. 331,623; Jan. 14; Serial No. 368,074; published Nov. 5, 1935.
Spark plugs. Noah's Ark Auto Accessories, Inc. 331,626; Jan. 14; Serial No. 368,768; published Nov. 5, 1935.

CLASS 22

Billiard chalk. Brunswick-Balke-Collender Company. 331,651; Jan. 14; Serial No. 369,945; published Nov. 5, 1935.
Game played with pieces, Table board. G. Saxmann. 331,547; Jan. 14; Serial No. 368,780; published Nov. 5, 1935.
Shuttlecocks, nets and rackets, Badminton. Badminton Manufacturing Company. 331,607; Jan. 14; Serial No. 365,717; published Nov. 5, 1935.

CLASS 23

Brushes, used as attachments for tire dressing machinery, Wire. Pittsburgh Plate Glass Company. 331,550; Jan. 14; Serial No. 361,950; published Nov. 5, 1935.
Bushings, gears, pinions, etc. Acme Machine Products Company. 331,600; Jan. 14; Serial No. 366,971; published Nov. 5, 1935.
Cards containing complete sets of typewriter key characters. E. M. Glueck. 331,630; Jan. 14; Serial No. 368,612; published Nov. 5, 1935.
Engines, Internal combustion. White Motor Company. 331,567; Jan. 14; Serial No. 364,842; published Nov. 5, 1935.
Furnace charging forks, furnace unloaders, graining boards, and marble graining slabs. Ferro Enamel Corporation. 331,560; Jan. 14; Serial No. 362,410; published Nov. 5, 1935.
Harvester reels, sickle and cutter bars, and parts thereof. Hume-Love Company. 331,628; Jan. 14; Serial No. 368,570; published Nov. 5, 1935.
Pumps, hydraulic presses, machine tools and parts therefor, etc. Vickers, Incorporated. 331,573; Jan. 14; Serial No. 352,804; published Nov. 5, 1935.
Razor blades. R. Brewer. 331,640; Jan. 14; Serial No. 368,680; published Nov. 5, 1935.
Razors. Union Cutlery Co. 331,553; Jan. 14; Serial No. 368,086; published Nov. 5, 1935.

CLASS 24

Washboards. Carolina Washboard Company. 331,653; Jan. 14; Serial No. 369,803; published Nov. 5, 1935.

CLASS 26

Brake testing machines or apparatus. Thermoid Company. 331,598; Jan. 14; Serial No. 368,548; published Nov. 5, 1935.
Optical frames and mountings. New Jersey Optical Company. 331,699–700; Jan. 14.
Scales, Weighing. Exact Weight Scale Company. 331,511; Jan. 14; Serial No. 369,185; published Nov. 5, 1935.
Spectacles, eye glasses, and parts thereof, and ophthalmic lenses and blanks thereof. Nomar Optical Company. 331,673; Jan. 14; Serial No. 369,433; published Nov. 5, 1935.

CLASS 32

Tables, candy cases, sales tables, etc., Pedestal. Piggly Wiggly Corporation. 331,591; Jan. 14; Serial No. 368,452; published Nov. 5, 1935.

CLASS 34

Heater in which solid fuel is used, Water. G. E. Spangenberger. 331,513; Jan. 14; Serial No. 369,143; published Nov. 5, 1935.
Lamp shades, Decorative and novelty. Sall-Me Company. 331,611; Jan. 14; Serial No. 366,487; published Nov. 5, 1935.
Ranges, furnaces, and boilers. Armstrong Stove and Manufacturing Company. 331,608; Jan. 14; Serial No. 366,222; published Nov. 5, 1935.

CLASS 35

Tire vulcanizing kits, plastic tire patches, etc. Atlas Supply Company. 331,672; Jan. 14; Serial No. 369,473; published Nov. 5, 1935.
Tires, Automobile. American Auto Supply Co. Inc. 331,557; Jan. 14; Serial No. 361,794; published Nov. 5, 1935.

CLASS 36

Cornets with registers, bugles, musical trumpets, etc. Société Anonyme Couesnon. 331,620; Jan. 14; Serial No. 366,881; published Nov. 5, 1935.
Pianos. C. F. Brey. 331,676; Jan. 14; Serial No. 369,396; published Nov. 5, 1935.

CLASS 37

Books having permanently bound leaves, Blank. White and Wyckoff Mfg. Company. 331,696; Jan. 14.
Paper, Writing. F. T. Burkhardt. 331,697; Jan. 14.

CLASS 38

Photographs. I. O. Blaukenberg. 331,694; Jan. 14.

CLASS 39

Clothing. S. Weits & Company. 331,592; Jan. 14; Serial No. 368,492; published Nov. 5, 1935.
Dresses and sweaters, Ladies' knitted. Burney Epstein, Inc. 331,599; Jan. 14; Serial No. 368,558; published Oct. 29, 1935.

PATENTS WERE ISSUED ON THE 14TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrahams, Samuel A., Redwood City, assignor to Plant Rubber & Asbestos Works, San Francisco, Calif. Manufacturing basic magnesium carbonate. 2,027,714; Jan. 14.
"Acidia." (See Boecker, Gustav, assignee.)
Adlake Company, The. (See Hamm, William S., assignor.)
Agfa Ansco Corporation. (See Hagedorn, Max, assignor.)
Ajax Manufacturing Company, The. (See Binkenise, John R., assignee.)
Aktiebolaget Rimo. (See Lindeberg, Stig, assignor.)
Alcorn, Walter, and L. Hamiter, Columbia, S. C. Roasting and drying machine. 2,027,894; Jan. 14.
Alden, Carroll E., assignor to Air-Cell-O Aircraft & Tool Corporation, Detroit, Mich. Fuel injection system. 2,027,360; Jan. 14.
Alden, Gardner R. (See Kallander, S. L., and Alden.)
Alexander, Johan W., Eindhoven, Netherlands, assignor to Radio Corporation of America. Radio receiving apparatus. 2,027,951; Jan. 14.
Allan, Alexander M., Sapulpa, Okla. Trailer hitch connection. 2,027,852; Jan. 14.
Allan, Charles C., Pietermaritzburg, Natal, Union of South Africa. Means for use in making angular adjustments and measurements. 2,028,034; Jan. 14.
Allen, Carl M. (See Gallagher, C. A., and Allen.)
Allen, Earl M., Edgewood, and H. S. Young, Wilkinsburg, assignors to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 2,027,715; Jan. 14.
All Metal Card Table Corporation et al. (See Klein, Henry O., assignor.)
Allyn, William N., Auburn, N. Y. Ophthalmoscope. 2,027,663; Jan. 14.
Alt, Arthur, assignor to Monsanto Chemical Company, St. Louis, Mo. Food flavoring composition. 2,027,361; Jan. 14.
Altenkirch, Edmund. (See Nesselmann, K. V., and Altenkirch.)
Altenkirch, Edmund, Nesenhagen, near Berlin, and K. Nesselmann, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. Transformation of heat. 2,027,571; Jan. 14.
American Bemberg Corporation. (See Baurriedel and Knehe, assignors.)
American Bemberg Corporation. (See Hofmann, Hugo, assignor.)
American Brass Company, The. (See Munson, Elmer L., assignor.)
American Buckle Company, The. (See Hodge, Robert J., assignor.)
American Chain Company. (See La Mont, Walter D., assignor.)
American Cyanamid & Chemical Corporation. (See Jaeger, Alphons O., assignor.)
American Hardware Corporation, The. (See Holpfer, Marcus, assignor.)
American Steel Foundries. (See Lamont, John A., assignor.)
American Steel Foundries. (See Oelbers, Alfred H., assignor.)
American Telephone and Telegraph Company. (See Bascom, H. M., and Friend, assignors.)
American Telephone and Telegraph Company. (See Brandon, Roy M., assignor.)
Andersen, Nils P. E., Elm Grove, assignor to Harnischfeger Corporation, Milwaukee, Wis. Handling apparatus. 2,027,506; Jan. 14.
Anderson, Company, The. (See Anderson, J. W., and Smulski, assignors.)
Anderson, Donald E., Wausau, Wis. Wiper for adhesive-applying implements. 2,027,461; Jan. 14.
Anderson, Frohman, Detroit, Mich. Figure toy. 2,027,759; Jan. 14.
Anderson, John F., Chicago, Ill., assignor to Continental-Diamond Fibre Company, Newark, Del. Radio tube socket. 2,028,035; Jan. 14.
Anderson, John W., Gary, Ind., and T. J. Smulski, Lake Zurich, Ill., said Smulski, assignor to The Anderson Company, Gary, Ind. Windshield wiper. 2,027,362; Jan. 14.
Anderson, Virgil V. (See Hutchens, C. T., and Anderson.)
Anderson, Walter A., Rockford, Ill., assignor, by mesne assignment, to Underwood Elliott Fisher Company, New York, N. Y. Paper feed mechanism. 2,027,572; Jan. 14.
Andres, Paul O., assignor to P. R. Mallory & Co., Incorporated, Indianapolis, Ind. Making electrical resistance elements. 2,027,413; Jan. 14.
Andrew, William E., Wauwatosa, and R. I. Drake, Appleton, assignor to Marathon Paper Mills Company, Rothschild, Wis. Apparatus and method for setting up containers. 2,027,064; Jan. 14.
Apex Electrical Manufacturing Company. (See De Luis, Edward E., assignor.)
Apex Electrical Manufacturing Company, The. (See Frantz, Walter A., assignee.)
Armour, James W., assignor to Riley Stoker Corporation, Worcester, Mass. Steam boiler. 2,028,036; Jan. 14.
Armstrong Cork Company. (See Hawker, Clifford F., assignor.)
Armstrong Cork Company. (See Hawker, C. F., Herr, and Rottmund, assignors.)
Arnold, Albert W., Miami, Fla. Dispensing container. 2,027,760; Jan. 14.
Aron, Simon, et al. (See Hirst, Edwin P., assignor.)
Arthur, James L., Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Ignition apparatus. 2,027,507; Jan. 14.
Askin, Joseph, assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Beverage cooling device. 2,027,065; Jan. 14.
Associated Electric Laboratories, Inc. (See Obergfell, Herbert F., assignor.)
Atchinson, Walter B., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass. Valve operating mechanism. 2,027,363; Jan. 14.
Atlantic Refining Company, The. (See Weir, Horace M., assignor.)
Atmospheric Nitrogen Corporation. (See Brown, Ralph L., assignor.)
Austin, Walter M., Pittsburgh, Pa. Friction shock absorbing mechanism. 2,027,628; Jan. 14.
Auto Research Corporation. (See Bijur, Joseph, assignor.)
Avery, Henry A., Groton, assignor to L. C. Smith & Corona Typewriters Inc., New York, N. Y. Typewriting machine. 2,027,508; Jan. 14.
Avery, Henry A., Groton, assignor to L. C. Smith & Corona Typewriters Inc., Syracuse, N. Y. Typewriting machine. 2,027,509; Jan. 14.
Ayres, Eugene, Swarthmore, and M. L. Hill, Yeadon, assignors to Gulf Refining Company, Pittsburgh, Pa. Stabilizing gum forming petroleum product. 2,027,462; Jan. 14.
Babcock, Oliver M., Evanston, Ill. Shipping container. 2,027,804; Jan. 14.
Babson, Roger W., Wellesley, Mass. Parking register. 2,028,037; Jan. 14.
Bach, Adolph D., Newton, Mass. Bending shoe shanks. 2,027,716; Jan. 14.
Bäckström, Sigurd M., Stockholm, Sweden, assignor, by mesne assignments, to Servel, Inc., Dover, Del. Refrigeration. 2,027,761; Jan. 14.
Bacon, William I. (See Haselton, G., James, and Bacon.)
Bailey, Bruce L. (See Ridgway, R. R., and Bailey.)
Baird, Ronald J., Milwaukee, Wis. Manufacture of mercury sulphate. 2,027,264; Jan. 14.
Ball, Harvey W. (See Buck, H., and Ball.)
Ball, Harvey W., assignor to The Morgan Engineering Company, Alliance, Ohio. Machine for charging annealing furnaces and the like. 2,028,038; Jan. 14.
Ballou, Richard P., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electron tube apparatus. 2,027,510; Jan. 14.
Bamberger, Arnold, et al. (See Marotte, Maurice L., assignor.)
Bandoly, Erich, assignor to Taylor Instrument Companies, Rochester, N. Y. Magnetic compass. 2,027,952; Jan. 14.
Banner, Beatrice A., executrix. (See Banner, Frank H.)
Banner, Frank H., deceased, late of Rochester, N. Y., by B. A. Banner, Rochester, N. Y., executrix, assignor to General Railway Signal Company, Rochester, N. Y. Making wrist pins. 2,027,573; Jan. 14.
Barbey, Jean W., St. Davids, and A. Bartschi, Oakmont, assignors to J. Edwards & Co., Philadelphia, Pa. Shoe. 2,027,953; Jan. 14.
Barclay, Sidney F., Manchester, England, assignor to General Fire Extinguisher Company, Providence, R. I. Nozzle. 2,027,954; Jan. 14.
Barker, George A., Rochester, N. Y. Windshield cleaning device. 2,027,365; Jan. 14.
Barrows, Donald S., Rochester, assignor to The Symington Company, New York, N. Y. Journal box. 2,028,039; Jan. 14.
Bartschi, Arnold. (See Barbey, J. W., and Bartschi.)
Bascom, Henry M., Brooklyn, and O. A. Friend, New York, N. Y., assignors to American Telephone and Telegraph Company. Telephone system. 2,027,463; Jan. 14.
Bastow, Lloyd W., South Portland, Maine. Combined label and can-opener holder. 2,027,624; Jan. 14.

Bates, Sidney E., assignor to Maintenance Equipment Company, Chicago, Ill. Ball and flange lubricator. 2,027,414; Jan. 14.

Bauer, John, Chicago, Ill. Sheet holder. 2,027,623; Jan. 14.

Bauriedel, Gotthard, and E. Knoke, Barmen, Germany, assignors to American Bemberg Corporation, New York, N. Y. Production of artificial silk by the viscose spinning process. 2,027,895; Jan. 14.

Beal, Walter H., trustee et al. (See Stanley, William C., assignor.)

Beard, Earl R., South Milwaukee, and W. L. Rietzmann, Carrollville, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of titanous compounds. 2,028,118; Jan. 14.

Beatty Bros. Limited. (See Smith, Victor M. M., assignor.)

Beauchamp, Wilfred A., Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,027,574; Jan. 14.

Becker, Frank N., assignor to Jenkins-Highland Coal Company, Jeddo, Pa. Valve. 2,027,762; Jan. 14.

Becker, Hasen K. (See Jurgens, R. G., and Becker.)

Beckett, Ernest O., Grangemouth, Scotland, assignor to Imperial Chemical Industries Limited. Intermediates for dyes. 2,027,955; Jan. 14.

Bedford, Alda V., Collingswood, N. J., assignor to Radio Corporation of America. Power transmission device. 2,027,886; Jan. 14.

Benander, George B., Yalesville, Conn., assignor to The Monowatt Electric Corporation. Plug connecter. 2,027,853; Jan. 14.

Bendix Aviation Corporation. (See Klitzrath, Victor W., assignor.)

Bendix-Cowdrey Brake Tester, Inc. (See Dodge, A. Y., and Statz, assignors.)

Benge, Frank H., Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del. Spinning bucket. 2,028,040; Jan. 14.

Bergamini, Herbert M. (See Stephenson, Albert, assignor.)

Bergamini, Herbert M., assignor of one-half to A. Stephenson, New York, N. Y. Fracture and orthopedic operating machine. 2,027,805; Jan. 14.

Bernhard, Harry J., Pasadena, Calif. Attachment for tire changing machines. 2,027,628; Jan. 14.

Bersworth, Frederick C., Hopkinton, assignor to F. Kottek, Ashland, Mass., doing business as F. C. Bersworth Laboratories. Production of ethylene diamine. 2,028,041; Jan. 14.

Bersworth, F. C., Laboratories. (See Bersworth, Frederick C.)

Bertran, Benjamin E., assignor of one-half to J. A. Bertran, Los Angeles, Calif. Casting bell-bottom piles piling in soft sandy material. 2,027,511; Jan. 14.

Bertran, Josie A. (See Bertran, Benjamin E., assignor.)

Bertsch, Heinrich, assignor to the firm H. Th. Böhme, Aktiengesellschaft, Chemnitz, Germany. Production of alkyl sulphates of high molecular weight. 2,027,896; Jan. 14.

Beuther, Annemarie. (See Hackhofer, M., and Beuther.)

Bickel, Clifford A. (See Whipp, W. E., and Bickel.)

Bijur, George, executor. (See Bijur, Joseph.)

Bijur, Joseph, deceased, New York, N. Y., by G. Bijur, executor, New York, N. Y., assignor to Auto Research Corporation. Central lubrication. 2,027,966; Jan. 14.

Billig, Kurt, Frankfort-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft. Preparing substituted aldols. 2,027,556; Jan. 14.

Bird, Whitworth F., Drexel Hill, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Loom. 2,027,806; Jan. 14.

Blackburn, Jasper, Webster Groves, Mo. Unitary wire connecter. 2,027,415; Jan. 14.

Blair, William R., Fort Monmouth, Oceanport, N. J. System of determining meteorological conditions by radio. 2,027,367; Jan. 14.

Blakeslee, John B., Wellesley, assignor to The Ajax Manufacturing Company, Euclid, Ohio. Electric heating apparatus. 2,027,416; Jan. 14.

Bliss, Albert, Providence, R. I., assignor, by mesne assignments, to C. Manshel, Newark, N. J. Fuel oil burner. 2,027,717; Jan. 14.

Blomfield Engineering Company. (See Durant, H. T., and Stubbings, assignors.)

Blood, Harold L., and A. P. Burns, assignors to The Heald Machine Company, Worcester, Mass. Grinding machine. 2,027,627; Jan. 14.

Blott, John F. T. (See Gabriel, L. G., Blott, Pearl, Firmin, Meunier, and van der Minne.)

Blume, Margaret C. (See Hanke, Milton T., assignor.)

Blunt, Carleton, et al. (See Cunningham, Alexander, assignor.)

Board of Regents of University of Minnesota. (See Diehl, Harold S., assignor.)

Board of Trustees of the University of Illinois. (See Johnstone, Henry F., assignor.)

Bockius, Robert W., United States Navy. Navigational instrument. 2,027,326; Jan. 14.

Bodor, Andrew. (See Koch, L. E., and Bodor.)

Boecker, Gustav, Essen, Germany, assignor to "Acilia," Thionville, France. Making hard metered metals. 2,027,752; Jan. 14.

Boehler, Joseph. (See Brown, Stephen A., assignor.)

Böhme, H. Th., Aktiengesellschaft. (See Bertsch, Heinrich, assignor.)

Bommer, Max. (See Hauser, H., and Bommer.)

Bone, Herbert L., Pittsburgh, assignor to The Union Switch & Signal company, Swissvale, Pa. Railway switch-operating apparatus. 2,027,512; Jan. 14.

Bonhôte, Gérald, Basel, assignor to firm Society of Chemical Industry in Basle, Basel, Switzerland. Blue anthraquinone dyestuff. 2,027,764; Jan. 14.

Bonhôte, Gérald, Basel, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Anthraquinone dyestuff. 2,027,927; Jan. 14.

Borden Company, The. (See Magee, Leslie A., assignor.)

Borg-Warner Corporation. (See Nutt, Harold, assignor.)

Bosch, Robert, Aktiengesellschaft. (See Kleinhor, Erich, assignor.)

Boshkoff, George J., Buffalo, assignor to The Linde Air Products Company, New York, N. Y. Method and apparatus for dispensing gas material. 2,028,116; Jan. 14.

Boulanger, Louis, Brussels, and F. Emsens, Lommel, Belgium. Cracking tar and bituminous extract oils with recovery of by-products. 2,027,464; Jan. 14.

Bourgès, Fernand A., New York, N. Y. Phonographic apparatus. 2,027,826; Jan. 14.

Bowen, Martin D., Savanna, Ill. Roadway machine. 2,027,628; Jan. 14.

Bowen, Martin D., Savanna, Ill. Roadway machine. 2,027,629; Jan. 14.

Bowen, Martin D., Savanna, Ill. Roadway machine. 2,027,630; Jan. 14.

Bower, Frank A. (See de Jahn, Fredrik W., assignor.)

Bowser, Harley O., South Bend, Ind. Air hose coupling for tires. 2,027,956; Jan. 14.

Bradford Motor Works. (See Martin, John M., assignor.)

Braunstein, Schulim, Berlin, Germany, assignor of one-half to H. Stavenow, New York, N. Y. Toothbrush. 2,028,043; Jan. 14.

Braselton, Ray M., Chicago, Ill., assignor to American Telephone and Telegraph Company. Telephone system. 2,027,485; Jan. 14.

Breth, Walter J., and M. Hegler, assignors to The General Tire & Rubber Company, Akron, Ohio. Tube splicer. 2,027,854; Jan. 14.

Brinkman, Carl A., Euclid, assignor to Speyer-Brinkman-Gerstenberger, Inc., Cleveland, Ohio. Holding device. 2,027,667; Jan. 14.

Britton, Edgar C., Midland, Mich., and L. F. Martin, New Orleans, La., assignors to The Dow Chemical Company, Midland, Mich. Cumyl phenol. 2,028,048; Jan. 14.

Broadwater, Charles C. (See Cornell, M., and Curtis, assignors.)

Broadwell, William C., Mill Valley, Calif. Button element. 2,027,513; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Paper dispenser. 2,027,668; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Paper dispenser. 2,027,669; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Paper dispenser. 2,027,670; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Paper dispenser. 2,027,671; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Portable dispenser for sheets. 2,027,672; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Paper dispenser. 2,027,673; Jan. 14.

Broeren, Frank L., Menasha, assignor to Marathon Paper Mills Company, Rothschild, Wis. Dispenser for folded sheets. 2,027,674; Jan. 14.

Brouillet, Georges, Paris, France. Rigid motor car frame. 2,027,898; Jan. 14.

Brousseau, George F., Braintree, and H. D. Perrin, Newton Center, assignors to Hood Rubber Company, Inc., Watertown, Mass. Apparatus for stretching plastic material. 2,028,044; Jan. 14.

Brown, Edwin P. (See Smith, Myron H., assignor.)

Brown, Ralph L., Syracuse, assignor to Atmospheric Nitrogen Corporation, New York, N. Y. Regeneration of catalysts. 2,027,955; Jan. 14.

Brown, Stephen A., assignor to J. Boshkoff, Chicago, Ill. Glue container and spreader. 2,028,084; Jan. 14.

Brubaker, Merlin M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Composition containing castor oil derivatives. 2,027,464; Jan. 14.

Brubaker, Merlin M., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Oil derivative. 2,027,467; Jan. 14.

Bruce, Homer L., Houston, Tex. Cover for receptacles for safety razors. 2,027,860; Jan. 14.

Brunmer, Forrest R., et al. (See McCreary, Harold J., assignor.)

Brunt & Company. (See Brunt, John P., assignor.)

Brunt, John P., assignor to Brunt & Company, Chicago, Ill. Carton handle. 2,028,085; Jan. 14.

Buck, Homer, and H. W. Buck, assignors to The Master Engineering Company, Alliance, Ohio. Annealing or charging annealing furnaces and the like. 2,028,050; Jan. 14.

Buck, John, Chicago, Ill. Extension light supporting device. 2,027,515; Jan. 14.

Budd, Edward G., Manufacturing Company. (See Ledwinka, Joseph, assignor.)

Buehner, Christian, Milwaukee, Wis. Pencil stand. 2,027,857; Jan. 14.

Bumb, Charles F., Indianapolis, Ind. Window sash fastener. 2,027,516; Jan. 14.

Burcky, Charles W., assignor to Teletype Corporation, Chicago, Ill. Two-color ribbon mechanism. 2,027,515; Jan. 14.

Burghoff, Henry E., Yalesville, and D. E. Lawson, Waterbury, assignors to The Chase Companies, Incorporated, Waterbury, Conn. Copper base alloy. 2,027,907; Jan. 14.

Burns, Alfred P. (See Wood, H. L., and Burns.)

Burrell, William C., Kankakee, assignor to W. C. Fischer, Chicago, Ill. Center strip and support. 2,027,512; Jan. 14.

Burroughs Adding Machine Company. (See Race, Ernest, assignor.)

Burt Machine Company. (See Wild, Charles H., assignor.)

Bushnell, Charles E., assignor to General Railway Signal Company, Rochester, N. Y. Recorder for centralized traffic controlling systems. 2,027,713; Jan. 14.

Bushnell, Charles E., assignor to General Railway Signal Company, Rochester, N. Y. Indicating means for railway signaling system. 2,027,719; Jan. 14.

Calatroni, Edison, Paris, France. Door constituting a removable and changeable refrigerating unit for refrigerating plants. 2,028,045; Jan. 14.

Caldwell, Paul. (See Minotis, W. P., and Caldwell.)

Callier, André, Gand, and F. Henry, Brussels, Belgium. Motion picture projector. 2,027,815; Jan. 14.

Calvert, William E., and H. I. Cramer, Cuyahoga Falls, Ohio, assignors to Wingfoot Corporation, Wilmington, Del. Vulcanization of rubber. 2,028,066; Jan. 14.

Cameron, Merle E., Caldwell, N. J., assignor to The Celastic Corporation, Wilmington, Del. Stiffening material. 2,027,957; Jan. 14.

Campbell, Betty, New York, N. Y. Doll and costume. 2,028,120; Jan. 14.

Campbell, Charles A., Watertown, N. Y., assignor to The New York Air Brake Company. Air brake. 2,027,463; Jan. 14.

Campbell, Charles A., Watertown, N. Y., and P. Dodge, Chevy Chase, Md., assignors to The New York Air Brake Company. Air brake. 2,027,460; Jan. 14.

Campbell, Frank G. (See Fortier, Francis E., assignor.)

Capehart Corporation, The. (See Erbe, Ralph R., assignor.)

Carbide and Carbon Chemicals Corporation. (See Perkins, Granville A., assignor.)

Carbide and Carbon Chemicals Corporation. (See Ray, Arthur B., assignor.)

Carbide and Carbon Chemicals Corporation. (See Warren, Richard F., assignor.)

Carbo-Norit-Union Verwaltungs Gesellschaft m. b. H. (See McCulloch, A., and Hargraves, assignors.)

Carborundum Company, The. (See Geiger, C. F., and Kempf, assignors.)

Carlotti, Charles F., Brussels, Belgium. Wind screen. 2,027,720; Jan. 14.

Carlson, Bert G., Queens Village, assignor to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Artificial horizon for aircraft. 2,027,908; Jan. 14.

Carter, George E., Company, The. (See Crosmer, Edgar R., assignor.)

Carter, Haskell C., assignor to Iron Fireman Manufacturing Company, Portland, Oreg., Elia conveyer. 2,027,958; Jan. 14.

Carthage Mills Incorporated. (See Grosser, Melvin R., assignor.)

Caruso, Santi T., Ardmore, Pa. Dentist's tooth extracting implement. 2,027,470; Jan. 14.

Cason, Arthur C., Norfolk, Va. Nonpervious sweat band construction for hats. 2,027,471; Jan. 14.

Catok, Victor M. (See Pendleton, R. N., and Hodge, assignors.)

Cavanagh, John, Norwalk, assignor to Hat Corporation of America, South Norwalk, Conn. Reinforced edge for hat brims. 2,027,856; Jan. 14.

Celanese Corporation of America. (See Roberts, E. P., and Johnson, assignors.)

Celanese Corporation of America. (See Rooney, J. H., and Ward, assignors.)

Celanese Corporation of America. (See Vendon, Robert, assignor.)

Celastic Corporation, The. (See Cameron, Merle H., assignor.)

Celastic Corporation, The. (See Fanger, Joseph, assignor.)

Celastic Corporation, The. (See Hamilton, Russell, assignor.)

Chadwick, Lee E., Shaker Heights, assignor to Perfection Stove Company, Cleveland, Ohio. Refrigeration apparatus. 2,027,681; Jan. 14.

Chadwick, Lee E., Shaker Heights Village, M. Ranek, Cleveland Heights, and J. A. Dahlstrom, Bay Village, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio. Oil burning apparatus. 2,027,682; Jan. 14.

Chafee, Karl W. (See Myers, S. C., and Chafee.)

Chain Belt Company. (See Shafer, Samuel, Jr., assignee.)

Chamberlain, Leonard C., and G. W. Hooker, Midland, assignors to The Dow Chemical Company, Midland, Mich. Extracting tedium. 2,028,099; Jan. 14.

Chandler, Homer F., assignor to The Ohio Brass Company, Mansfield, Ohio. Circuit controller. 2,027,576; Jan. 14.

Chapman Valve Manufacturing Company, The. (See Atchinson, Walter E., assignor.)

Chappel Bros. Inc. (See Meyer, Arthur R., assignor.)

Chase Companies, The. (See Burghoff, H. L., and Lawson, assignors.)

Christian, George J., Hartsfield, Minn. Root cutter for sewer pipes. 2,027,623; Jan. 14.

Chuchla, John, Dunbar, Pa. Motor vehicle driver's permit and registration card holder. 2,027,979; Jan. 14.

Cincinnati Electrical Tool Company, The. (See Schauer, L. L., and McKeown, assignors.)

Cincinnati Coffin Company. (See Kempen, Gilbert L., assignor.)

Clark, Emily. (See Steigerwald, August, assignor.)

Clark Equipment Company. (See Lapsley, Robert, assignor.)

Clark Equipment Company. (See Spatts, George, assignor.)

Clawson, Albert E., Springfield, Pa., assignor to Taylor Instrument Companies, Rochester, N. Y. Hygrometric apparatus. 2,027,959; Jan. 14.

Clayton, Lewis P., Toronto, Ontario, assignor to Viceroy Manufacturing Company Limited, Toronto, Ontario, Canada. Machine for molding hollow rubber articles. 2,027,634; Jan. 14.

Cleveland Pneumatic Tool Company, The. (See De Mooy, John, assignor.)

Clifford, Albert M., Stow, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Production of hydrogen halides. 2,028,067; Jan. 14.

Cline, Vera L. (See Godown, Lee R., assignor.)

Clurman, Will N., Philadelphia, Pa. Indicating the fluid content of a container. 2,027,417; Jan. 14.

Cobbs, Anselem G., Des Moines, Iowa. Certificate holder. 2,027,517; Jan. 14.

Cohen, Harry, Montreal, Quebec, Canada. Tap washer. 2,027,452; Jan. 14.

Colbert, Arthur, Santa Monica, Calif. Sewing machine material guide. 2,027,472; Jan. 14.

Cole, Arthur B., Grosse Pointe, Mich. Refrigeration ice tray. 2,028,047; Jan. 14.

Collins & Aikman Corporation. (See Bird, Whitworth F., assignor.)

Columbia Mills, Inc., The. (See Elngg, William W., assignor.)

Columbia Phonograph Company. (See Davis, J. B., and Simpson, assignors.)

Commercial Filters Corporation. (See Goldman, Maurice A., assignor.)

Consolidated Car-Heating Company. (See Parsons, Robert J., assignor.)

Continental-Diamond Fibre Company. (See Anderson, John F., assignor.)

Continental-Diamond Fibre Company. (See d'Aubigne, Emile M., assignor.)

Continental-Diamond Fibre Company. (See Benge, Frank H., assignor.)

Continental-Diamond Fibre Company. (See Landt, Gustave E., assignor.)

Continental-Diamond Fibre Company. (See Ploger, Alfred, assignor.)

Cooper, Simon, assignor to Cooper Tea Packet Company, Brooklyn, N. Y. Perforated cellophane and the like, and making the same. 2,027,816; Jan. 14.

Cooper Tea Packet Company. (See Cooper, Simon, assignor.)

Cosse, James C., Wilmar, Ark. Antivibrator attachment for road machinery. 2,027,677; Jan. 14.

Cornell, Fritz G., Jr., Mountain Lakes, N. J. Heat exchange device. 2,027,809; Jan. 14.

Cornell, Mead, San Francisco, Calif., and C. C. Curtis, San Leandro, assignors to C. C. Broadwater, Oakland, Calif. Lubricating oil testing apparatus. 2,027,518; Jan. 14.

Cottrell, Osceola P., Scarsdale, N. Y., assignor to Edeleanu Gesellschaft m. b. H. High octane number gasoline and method of manufacture. 2,028,121; Jan. 14.

Crabbs, Herbert J., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit interrupter. 2,027,900; Jan. 14.

Cramer, Howard I. (See Calvert, W. C., and Cramer.)

Cranz Company. (See Frederickson, Edward A., assignor.)

Crane, Henry M., assignor to General Motors Corporation, New York, N. Y. Automobile suspension system. 2,027,877; Jan. 14.

Cranger, Frederick L., Merchantville, and M. Lee McMurtry, Camden, N. J., assignors to Radio Corporation of America. Loud speaker. 2,027,478; Jan. 14.

Creamer, Edgar E., assignor to The George B. Carter Company, Detroit, Mich. Lining for window guides and applying the same. 2,027,811; Jan. 14.

Croft, Hiram D. (See Forstner, J. L., and Croft.)

Crossley, William A., Philadelphia, Pa. Landing gear for aeroplanes. 2,027,850; Jan. 14.

Crundall, Sydney F. W., assignor to Peter Spence & Sons, Limited, Manchester, England. Preparing basic titanic oxalate. 2,027,812; Jan. 14.

Cuneo, John R., San Francisco, Calif. Fence post. 2,027,765; Jan. 14.

Cunningham, Alexander, Evanston, assignor of two-fifths to W. Hutchison, one-fifth to J. F. Hutchison and one-fifth to C. Blust, Evanston, Ill. Golf club. 2,027,635; Jan. 14.

Cunnius, Calvin, New Brunswick, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y. Engine starter. 2,027,860; Jan. 14.

Currie, Frank S., San Bernardino, Calif. Apparatus for treating sewage. 2,027,370; Jan. 14.

Currie, Lauchlin M., Lakewood, assignor to National Carbon Company, Inc., Cleveland, Ohio. Article comprising plastic compositions and making the same. 2,027,961; Jan. 14.

Currie, Lauchlin M., Lakewood, Ohio, assignor to National Carbon Company, Inc., Cleveland, Ohio. Production of articles from plastic compositions. 2,027,962; Jan. 14.

Curtis, Charles C. (See Cornell, M., and Curtis.)

Curtis, Myron S., assignor to W. W. Potter, Pawtucket, R. I. Supplementary tool support for turret lathes. 2,027,901; Jan. 14.

Cutler-Hammer, Inc. (See Krieger, Alvin W., assignor.)

Cutler-Hammer, Inc. (See Lightfoot, Edwin N., assignor.)

Dahlen, Miles A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of N-substituted aminophenols. 2,027,902; Jan. 14.

Dahlstrom, John A. (See Chadwick, L. S., Resek, and Dahlstrom.)

D'Aubigne, Emile M., Neuilly-Sur-Seine, France, assignor to Continental-Diamond Fibre Company, Newark, Del. Apparatus for making composite gear rims. 2,028,048; Jan. 14.

Davis, John D., Keyport, N. J., and J. L. Simpson, New York, N. Y., assignors to Columbia Phonograph Company, Inc., Bridgeport, Conn. Cold light source. 2,027,519; Jan. 14.

Davis, Robert M., Longmeadow, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit interrupter. 2,027,721; Jan. 14.

Davis, Royall, O. E., and W. Scholl, Washington, D. C., dedicated to the free use of the public. Ammoniating organic materials. 2,027,766; Jan. 14.

Davison, Robert L., assignor to J. B. Pierce Foundation, New York, N. Y. Factory fabricated rough plumbing unit. 2,027,371; Jan. 14.

Davison, Robert L., New York, and E. V. Ludwig, Buffalo, assignors to John B. Pierce Foundation, New York, N. Y. Fireplace stove and heaters. 2,028,088; Jan. 14.

Davison, Sidney M., Annisquam, Mass. Apparatus for freezing materials. 2,027,372; Jan. 14.

Dawn Mfg. Corp., The. (See Welter, Herman C., assignor.)

Day, Percy C. (See Schmitter, W. P., and Day.)

Dayton Steel Foundry Company, The. (See Walther, George, assignor.)

Dean, Elmer C., Frankfort, Ind. Diving apparatus. 2,027,474; Jan. 14.

Dearborn, Richard J., Summit, N. J., and W. M. Stratford, assignors to The Texas Company, New York, N. Y. Treatment of hydrocarbon oils. 2,028,100; Jan. 14.

Dearing, Alfred E., and W. B. Parker, Manchester, Tenn. Device for admitting air and water to the cylinders of an internal combustion engine. 2,027,813; Jan. 14.

De Bats, Jean H. L., East Orange, N. J. Apparatus for preparing synthetic carbonado diamonds. 2,027,963; Jan. 14.

De Boit, Robert E., Spokane, Wash. Air cleaner. 8,027,636; Jan. 14.

Debrie, André L. V. C., Paris, France. Cinematographic film driving device. 2,027,678; Jan. 14.

Debrie André L. V. C., Paris, France. Cinematographic projector. 2,027,679; Jan. 14.

Debrie, André L. V. C., Paris, France. Projecting machine for sound cinematographs. 2,027,680; Jan. 14.

Decuis, Donald A., assignor to E. F. Pohl, St. Louis, Mo. Electric iron and dampener. 2,027,767; Jan. 14.

De Jahn, Fredrik W., New York, assignor to F. A. Bower, Bayside, N. Y. System for manufacture of nitric acid. 2,027,578; Jan. 14.

De Lanty, Lorez J., Spring Valley, assignor to Sperry Products, Inc., Brooklyn, N. Y. Rail flaw detector car. 2,027,814; Jan. 14.

Delbon, Ange C., New York, N. Y. Furrier's cutting tool. 2,027,964; Jan. 14.

Dellmann, Hans, Mainz, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Nuremberg, Germany. Demoisidfying the sealing oils of waterless gasholders. 2,027,965; Jan. 14.

Deltox Rug Company. (See Schmiedel, William F., assignor.)

De Luis, Edward R., Chicago, Ill., assignor, by mesne assignments, to Apex Electrical Manufacturing Company, Cleveland, Ohio. Seal. 2,027,815; Jan. 14.

De Moor, John, Shaker Heights, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Exhaust deflector. 2,027,579; Jan. 14.

Dennis, Edwin L., Reserve, La. Fluid pressure control apparatus. 2,028,040; Jan. 14.

Dennison Manufacturing Company. (See Kallander, E. L., and Allen, assignors.)

De Witt, William J., Auburn, assignor to Shoe Form Co., Inc., Auburn, N. Y. Fish lure. 2,028,050; Jan. 14.

Diamond Power Specialty Corporation. (See Turner, Charles S., assignor.)

Diebel, Israel, Minneapolis, Minn. Shutter mechanism for motion picture projectors. 2,027,520; Jan. 14.

Diehl, Harold S., assignor to Board of Regents of University of Minnesota, Minneapolis, Minn. Therapeutic agent. 2,027,723; Jan. 14.

Dilley, Edward R., Pine Bluff, Ark. Grate-bar. 2,027,769; Jan. 14.

Dintilhac, Jean G., assignor to Society "L'Huile Des Recordes Du Monde S. A. F.," Paris, France. Apparatus for testing liquids, and especially lubricants. 2,027,885; Jan. 14.

Dobeckmun Company, The. (See Schmidt, David, assignor.)

Dobranz, John. (See Zafuta, Carl, assignor.)

Dodge, Adiel Y., and R. J. Seats, South Bend, Ind., assignors, by mesne assignments, to Bendix-Cowdrey Brake Tester, Inc., New York, N. Y. Testing apparatus. 2,027,880; Jan. 14.

Dodge, Parker. (See Campbell, C. A., and Dodge.)

Dopyera, Rudolph, Los Angeles, Calif. Stringed musical instrument. 2,027,726; Jan. 14.

Dow Chemical Company, The. (See Chamberlain, L. C., and Hooker, assignors.)

Dow Chemical Company, The. (See Britton, E. C., and Martin, assignors.)

Dow Chemical Company, The. (See Grether, E. F., and Du Vall, assignors.)

Dow Chemical Company, The. (See Stoesser, Wesley C., assignor.)

Dow Chemical Company, The. (See Hale, William J., assignor.)

Dowell, James P. (See Geraline, Samuel G., assignor.)

Drake, Frederick H., Boonton Township, Morris County, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Oscillation generator. 2,027,521; Jan. 14.

Drake, Ronald L. (See Andrew, W. K., and Drake.)

Dreyfus, Henry, London, England. Production of artificial threads, filaments, ribbons, and the like. 2,027,413; Jan. 14.

Dreyfus, Henry, London, England. Removing water from vaporous mixtures containing aliphatic anhydrides. 2,027,420; Jan. 14.

Drucker, Albert, Chicago, Ill. Comperator. 2,027,930; Jan. 14.

Dubonnet, André, Neuilly, France. Suspended device. 2,027,906; Jan. 14.

Du Pont, E. I., de Nemours & Company. (See Reed, R. H., and Hintelmann, assignors.)

Du Pont, E. I., de Nemours & Company. (See Brubaker, Merlin M., assignor.)

Du Pont, E. I., de Nemours & Company. (See Dahlen, Miles A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Graham, Donald P., assignor.)

Du Pont, E. I., de Nemours & Company. (See Lazier, Wilbur A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Lazier, W. A., and Woods, assignors.)

Du Pont, E. I., de Nemours & Company. (See Reichert, Joseph S., assignor.)

Du Pont, E. I., de Nemours & Company. (See Reid, Ebenezer R., assignor.)

Du Pont, E. I., de Nemours & Company. (See Wurth, Alexander J., assignor.)

Du Pont, E. I., de Nemours & Company. (See Woods, A. J., and Whelen, assignors.)

Durand & Huguenin, S. A. (See Hog, R., and Miller, assignors.)

Durant, Henry T., Crawley, and R. O. Stubbings, Carshalton, England, assignors to Bloomfield Engineering Company, Limited, London, England. Filter. 2,027,931; Jan. 14.

Durham, Hobart N., Munsey Park, N. Y., and C. E. Finnegan, Jr., Mountain Lake, N. J., assignors to Eureka, Ltd., New York, N. Y. Permanent waving. 2,028,031; Jan. 14.

Duro Metal Products Company. (See McNaught, Morris F., assignor.)

Du Vall, Russell B. (See Grether, E. F., and Du Vall.)

Easterly, John L., Healdsburg, Calif. Combination square and slide rule. 2,028,052; Jan. 14.

Eaton, Charles F., West Newbury, assignor, by mesne assignments, of one-half to North American Holding Corporation, and one-half to Parshad Holding Corporation, Syracuse, N. Y. Method of and apparatus for marking shoe uppers. 2,027,637; Jan. 14.

Eck, Joseph B., Sheboygan, Wis. Coaster wagon. 2,027,962; Jan. 14.

Eclipse Aviation Corporation. (See Gregg, David, assignor.)

Eclipse Aviation Corporation. (See Lansing, Raymond F., assignor.)

Eclipse Machine Company. (See Cunnius, Calvin, assignor.

Edelmann Gesellschaft m. b. H. (See Cottrell, Oscoda P., assignor.)

Eden, Edward H., St. Louis, Mo. Dental appliance. 2,027,873; Jan. 14.

Edwards, J. & Co. (See Barber, J. W., and Barnett, assignors.)

Egli, Eduard, and H. Schoch, Rutl, assignors to Maschinenfabrik Rutl vormals Caspar Honegger, Rutl, Switzerland. Weft holding for automatic weft supply. 2,027,799; Jan. 14.

Egry Register Company, The. (See Pfeiffer, William C., assignor.)

Eichmann, Friedrich, and H. Nerad, Aussig-on-the-Elbe, Czechoslovakia. Making transparent films, foils, or skins. 2,027,682; Jan. 14.

Einslie, Wallace P., and P. Caldwell, assignors to Monsan Manufacturing Company, Quincy, Mass. Anthelmintic. 2,027,967; Jan. 14.

Eisenberg, Charles G., Jr., Warwatosa, assignor to The Heil Co., Milwaukee, Wis. Vehicle body and hoist structure. 2,027,421; Jan. 14.

Electric Storage Battery Co., The. (See Woodbridge, Joseph L., assignor.)

Electrical & Musical Industries, Ltd. (See Elstrom, Rupert I., assignor.)

Electroblacks, Incorporated. (See Jakosky, John J., assignor.)

Electrolux Corporation. (See Lofgren, Gustaf E., assignor.)

Electro Metallurgical Company. (See Elmore, Augustus E., assignor.)

Electro Metallurgical Company. (See Reed, William C., assignor.)

Elliott, Fern B., and E. I. Pollard, Meadon, Me. All metal collapsible egg case. 2,027,683; Jan. 14.

Ellis, George H., St. Paul, assignor to The Insulite Company, Minneapolis, Minn. Fibrous product and making the same. 2,027,581; Jan. 14.

Einslie, Wallace P., and P. Caldwell, assignors to Monsan Manufacturing Company, Quincy, Ill. Anthelmintic. 2,027,967; Jan. 14.

Elwell, George H. (See Finkle, T., and Elwell.)

Emens, Ferdinand. (See Boslanger, L., and Emens.)

Endicott Johnson Corporation. (See Smith, Edward L., assignor.)

Endowment Foundation. (See Hendee, Thomas J., assignor.)

Englehardt, Henry H., et al. (See McCreary, Harold J., assignor.)

Engler, Max. (See Breth, W. J., and Engler.)

Erbe, Ralph E., assignor to The Capehart Corporation, Fort Wayne, Ind. Cloning machine. 2,027,533; Jan. 14.

Erling, Ralph, Alexandria, Va. Control for hydraulic steering gears. 2,028,060; Jan. 14.

Errig, William F., Philadelphia, and G. M. Pfandt, Churchville, assignors to Pece Manufacturing Corporation, Philadelphia, Pa. Cross grooving for tires. 2,028,053; Jan. 14.

Etsel, Paul, Buffalo, N. Y. Concealed hinge for automobile and other doors. 2,027,724; Jan. 14.

Eugene, Ltd. (See Durham, H. N., and Finnegan, assignors.)

Evans Case Company. (See Reilly, Alfred F., assignor.)

Ever Klean Seat Pad Co. (See Wittcoff, Edward, assignor.)

Ex-Cell-O Aircraft & Tool Corporation. (See Alden, Carroll R., assignor.)

Fageol, William R., assignor to Twin Coach Company, Kent, Ohio. Pneumatic tire combination rail and lightway unit. 2,027,684; Jan. 14.

Fain, Jacob M., Brooklyn, assignor, by mesne assignments to The Patent and Licensing Corporation, New York, N. Y. Aqueous dispersion. 2,027,583; Jan. 14.

Falk Corporation, The. (See Schmitter, W. P., and Day, assignors.)

Fankboner, Harland, assignor to The Goss Printing Press Company, Chicago, Ill. Method and apparatus for preparing stereotype matrices. 2,027,524; Jan. 14.

Färber, Eduard, Frankfort-Hoechst, Germany, assignor, by mesne assignments, to N. V. Internationale Rederij en Alcohol Compagnie International Sugar and Alcohol Company "Isaco", The Hague, Netherlands. Polymerizing monosaccharides. 2,027,966; Jan. 14.

Fauser, Joseph, Melrose Highlands, Mass., assignor to The Celastic Corporation, Wilmington, Del. Stiffening material. 2,027,968; Jan. 14.

Feddern Manufacturing Company. (See Askin, Joseph, assignor.)

Ferris, Harvey D. (See Brousseau, G. P., and Ferris.)

Field and Flint Co. (See Flint, Perley G., assignor.)

Fields, John D., Los Angeles, Calif. Treating lubricating oil stock. 2,027,779; Jan. 14.

Filmer, Reginald H., Cheltenham, assignor to E. H. Filmer Limited, London, England. Cardboard box. 2,027,525; Jan. 14.

Filmer, R. H., Limited. (See Filmer, Reginald H., assignor.)

Finkle, Tomas, and G. H. Elwell, assignors to The Geist Manufacturing Company, New Haven, Conn. Electric switch for electric lamp sockets. 2,027,868; Jan. 14.

Finnegan, George E., Jr. (See Durham, H. N., and Finnegan.)

Firmin, Lawrence W. G. (See Gabriel, L. G., Blott, Peard, Firmin, Meunier, and van der Minne.)

Fischer, Hermann, assignor to Wurlitzer Grand Piano Company, De Kalb, Ill. Piano sounding board. 2,027,969; Jan. 14.

Fischer, Wallace C. (See Burrell, William C., assignor.)

Fischer, Wallace C., Chicago, Ill. Expansion joint installing means. 2,027,726; Jan. 14.

Fleetwings, Inc. (See Sutton, Wilson L., assignor.)

Fletcher, Henry G., Manchester, N. H. Milling machine. 2,027,726; Jan. 14.

Flint, Perley G., assignor to Field and Flint Co., Brockton, Mass. Shoe. 2,028,054 Jan. 14.

Flintkote Company, The. (See Gabriel, L. G. Blott, Peard, Firmin, Meunier, and van der Minne, assignors.)

Floreth, Alvin H., assignor to Gardner Wire Co., Chicago, Ill. Terminal end for coiled springs. 2,028,122; Jan. 14.

Flynn, Benjamin H., Alexandria, La. Road reconditioning machine. 2,027,685; Jan. 14.

Forsberg, Casper C. (See Forsberg, Frederick, R. A., and C. C.)

Forsberg, Frederick, R. A., and C. C., Rural Municipality of Dauphin, Manitoba, Canada. Power take-off. 2,027,038; Jan. 14.

Forsberg, Robert A. (See Forsberg, Frederick, R. A., and C. C.)

Forsting, Oscar E., Kimball, Nebr. Full view rifle front sight. 2,028,055; Jan. 14.

Fortier, Francis R., Jeanerette, La., assignor of one-fifth to F. G. Campbell, Arlington County, Va. Clarifying sugar cane juices. 2,027,422; Jan. 14.

Fowler, Ora S., Denver, Colo. Mouth treating composition. 2,027,374; Jan. 14.

Franck, Ernest W., Paterson, N. J. Sound reproducer. 2,027,727; Jan. 14.

Franklin, Haddon A., Cordoba, Ala. Ware motor. 2,028,056; Jan. 14.

Franklin, Ralph E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Piezo-electric crystal apparatus. 2,027,526; Jan. 14.

Frantz, Walter A., Cleveland Heights, assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio. Suction cleaner. 2,028,060; Jan. 14.

Frapide Spielwarenfabrik Alfred Kranz. (See Schwarzbach, Oscar, assignor.)

Fraser, George H., Brooklyn, N. Y. Screen separator. 2,027,275; Jan. 14.

Fredrickson, Edward A., assignor to Crane Company, Chicago, Ill. Vacuum breaker valve. 2,028,101; Jan. 14.

Freed, Joseph, San Francisco, Calif. Silencer for flush valves. 2,028,128; Jan. 14.

Friedrich, Paul, Cologne, Germany, assignor to Trustkantoor Amstelland N. V., Amsterdam, Netherlands. Coating compositions and their production. 2,027,686; Jan. 14.

Friend, Otto A. (See Bascom, H. M., and Friend.)

Fruehauf Trailer Company, et al. (See Lubbers, Lubbert H., assignor.)

Fugatt, Earl L., Flatsville, Texas. Picker's sack carrier. 2,028,057; Jan. 14.

Fuller, Hugh H. C., London, England. Electric fan. 2,027,687; Jan. 14.

Fyler, George W., Schenectady, N. Y., assignor to General Electric Company. Coupling. 2,027,861; Jan. 14.

Gabriel, Leonard G., J. P. T. Blott, W. L. Peard, and L. W. G. Firmin, London, England, Louis Meunier, Lyon, France, and J. L. van der Minne, Amsterdam, Netherlands, assignors, by mesne assignments, to The Flintkote Company, New York, N. Y. Treating materials capable of undergoing dispersion in water and for obtaining aqueous dispersions therefrom. 2,027,584; Jan. 14.

Gallagher, Charles A., and C. M. Allen, California, Pa., assignors to General Chemical Company, New York, N. Y. Furnace. 2,027,817; Jan. 14.

Gallimore, Keith F. (See Kraut, H. E., and Gallimore.)

Gardiner, George W., Los Angeles, Calif. Doorcheck. 2,027,422; Jan. 14.

Gardiner Wire Co. (See Floreth, Alvin H., assignor.)

Gardner, Charles E. (See State, W. C., Lammertse, and Gardner.)

Garrison, Edward N., Brooklyn, N. Y. Paintbrush bridle. 2,027,771; Jan. 14.

Gasoline Antioxidant Company. (See McMullan, Edward W., assignor.)

Geiger, Charles F., Metuchen, and W. C. Kempf, Raritan Township, Middlesex County, N. J., assignors to The Carborundum Company, Niagara Falls, N. Y. Kiln setter for rearing of table wear. 2,027,585; Jan. 14.

General American Tank Car Corporation. (See Pierce, Raymond C., assignor.)

General Aniline Works, Inc. (See Weinand, K., and Klackbreasse, assignors.)

General Chemical Company. (See Gallagher, C. A., and Allen, assignors.)

General Chemical Company. (See Wollner, H. J., and Stine, assignors.)

General Electric Company. (See Fyler, George W., assignor.)

General Electric Company. (See Hand, Arthur R., assignor.)

General Electric Company. (See Hermle, Hermann, assignor.)

General Electric Company. (See Jefferson, Harold F., assignor.)

General Electric Company. (See Otis, Albert N., assignor.)

General Electric Company. (See Rankin, W. K., and Hayward, assignors.)

General Electric Company. (See Stolfield, William K., assignor.)

General Electric Company. (See Speicher, William P. J., assignor.)

General Electric Company. (See Suits, Chauncey G., assignor.)

General Electric Company. (See Warner, Donald F., assignor.)

General Electric Vapor Lamp Company. (See Keesty, Carl E., assignor.)
General Fire Extinguisher Company. (See Barclay, Sidney F, assignor.)
General Motors Corporation. (See Arthur, James L., assignor.)
General Motors Corporation. (See Crane, Henry M., assignor.)
General Motors Corporation. (See Geyer, Harvey D., assignor.)
General Motors Corporation. (See Hartzell, Herman L., assignor.)

General Motors Corporation. (See Randolph, Donald W., assignor.)
General Motors Corporation. (See Shippy, Leo C., assignor.)
General Railway Signal Company. (See Hauser, Frank H., assignor.)
General Railway Signal Company. (See Rushnell, Charles E., assignor.)
General Railway Signal Company. (See Merkel, Joseph F., assignor.)
General Railway Signal Company. (See Rees, Frank X., assignor.)
General Railway Signal Company. (See Renshaw, Paul, assignor.)
General Railway Signal Company. (See Wight, Sedgwick N., assignor.)
General Tire & Rubber Company, The. (See Broth, W. J., and Engler, assignors.)
George, Fred, assignor to The Hinde and Dauch Paper Company, Sandusky, Ohio. Decorative material and articles. 2,027,586; Jan. 14.
Georgia, Frank. (See Whitfield, C., and Georgia.)
Geyer, Harvey D., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Quick-assembled sectional cabinet. 2,028,066; Jan. 14.
Geyer, Harvey D., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Flexible metal freezing tray. 2,028,069; Jan. 14.
Gibson, Robert assignor of thirty-seven and one-half per cent to J. Kathbourn, New Waterford, Nova Scotia, and thirty-seven and one-half per cent to Peacock Brothers Limited, Montreal, Quebec, Canada. Automatic shaker shovel. 2,027,639; Jan. 14.
Giddings & Lewis Machine Tool Co. (See Kraut, H. B., and Gallimore, assignors.)
Gilbert, Estell, Jasper, Ala. Protector. 2,028,060; Jan. 14.
Gillette Safety Razor Company. (See Knobel, M., and Young, assignors.)
Gillies, Alfred J., Toronto, Ontario, Canada. Centrifugal clutch. 2,027,570; Jan. 14.
Giraud, Pierre E., assignor to Société d'Etude pour l'Epuration des Eaux "Procédés G. et B.", Paris, France. Apparatus for the purification of water. 2,027,476; Jan. 14.
Giddens Company, The. (See Small, James E., assignor.)
Godown, Lee E., Kingman, assignor of one-fifth to V. L. Kline, Kingman, Tex. Windshield wiping blade. 2,027,971; Jan. 14.
Golber, Hyman E., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill. Drive mechanism. 2,027,518; Jan. 14.
Goldman, Maurice A., Milford, N. H., assignor, by mesne assignments, to Commercial Filters Corporation, Boston, Mass. Filter. 2,028,061; Jan. 14.
Goldman, Maurice A., Milford, N. H., assignor to Commercial Filters Corporation, Boston, Mass. Filter apparatus. 2,028,062; Jan. 14.
Goodman Manufacturing Company. (See Sharpe, William W., assignor.)
Goodrich, B. F., Company, The. (See Schippel, Henry F., assignor.)
Goodwin, Norris, Los Angeles, and R. W. Poindexter, Long Beach, assignors to Industrial Process Company, Los Angeles, Calif. Converting hydrocarbons. 2,027,862; Jan. 14.
Gorsline, Samuel G., River Forest, Ill., assignor to James P. Dowell, McKinney, Tex. Can sealing machine. 2,027,476; Jan. 14.
Goss, Harry T., Rutherford, N. J., and B. Johnson, Brooklyn, N. Y., assignors to L. N. S. Corporation, New York, N. Y. Liquid dispensing device. 2,028,102; Jan. 14.
Goss Printing Press Company, The. (See Frankhuser, Harland, assignor.)
Goth, Erich, Wuppertal-Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Rectal narcotic. 2,027,966; Jan. 14.
Graham, Donald P., South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Anthrimide carbazole vat dyestuffs and preparing the same. 2,028,103; Jan. 14.
Graham, Donald P., South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Intermediates and dyestuffs of the anthraquinone series. 2,028,104; Jan. 14.
Gran, Herbert E., assignor to Byron Jackson Co., Los Angeles, Calif. Safety hook. 2,027,578; Jan. 14.
Gray, James H., Long Beach, Calif. Vehicle wheel and tire lock. 2,027,725; Jan. 14.
Gray Tool Company. (See Berry, Richard E., assignor.)
Green, Burton M., Brooklyn, N. Y. Antitooth compass. 2,028,063; Jan. 14.
Gregg, David, Caldwell, assignor to Eclipse Aviation Corporation, East Orange, N. J. Internal combustion engine. 2,027,819; Jan. 14.
Greiser, Melvin E., Cincinnati, assignor to Carthage Mills Incorporated, Carthage, Ohio. Printing of sheets materials by impregnation. 2,027,830; Jan. 14.
Grist Manufacturing Company, The. (See Fiskin, T., and Elwell, assignors.)
Groethen, Ernest F., and R. B. Du Vall, assignors to The Dow Chemical Company, Midland, Mich. Manufacture of glycollic acid. 2,028,064; Jan. 14.
Gulf Refining Company. (See Ayres, R., and Hill, assignors.
Gunderman, Lester S., Pittsburgh, Pa., assignor to Wagner Electric Corporation, St. Louis, Mo. Brake release control mechanism for vehicles. 2,027,424; Jan. 14.
Hackhofer, Ernst, and A. Benther, Knapsack-Uerdingen, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Manufacture of alkali dichromate. 2,027,477; Jan. 14.
Hagedorn, Max, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Manufacture of folic. 2,027,685; Jan. 14.
Hahr, Otto R., Milwaukee, Wis. Fishing pole holder. 2,027,771; Jan. 14.
Hale, William J., Midland, Mich. Converting aldehyde to acids. 2,027,977; Jan. 14.
Hale, William J., Midland, Mich. Converting alcohols to acids. 2,027,978; Jan. 14.
Hale, William J., assignor to The Dow Chemical Company, Midland, Mich. Simultaneous hydrolysis and ammonolysis of aryl halides. 2,028,065; Jan. 14.
Hall, Elisha W., Setauket, Mass. Bunting wheel. 2,027,425; Jan. 14.
Hall, Elisha W., Setauket, Mass. Ventilated bunting wheel. 2,027,963; Jan. 14.
Haller, John, and L. A. Low, Detroit, Mich. Internal combustion engine. 2,027,972; Jan. 14.
Halpin, James. (See Raymond, John D., assignor.)
Hamer, Beverly E., Austin, Tex. Hub lamp. 2,027,618; Jan. 14.
Hamilton, Russell, Bloomfield, N. J., assignor to The Celastic Corporation, Wilmington, Del. Stiffening material. 2,027,573; Jan. 14.
Hamiter, Lloyd. (See Alcorn, W., and Hamiter.)
Hamm, William R., Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill. Curtain fixture. 2,027,587; Jan. 14.
Hammond Clock Company, The. (See Hammond, Laurens, assignor.)
Hammond, John H., Jr. (See Hammond, J. H., Jr., and Tremor, assignors.)
Hammond, John H., Jr., Gloucester, Mass. Repeating phonograph. 2,027,427; Jan. 14.
Hammond, John H., Jr., Gloucester, Mass. Navigational guide system. 2,027,527; Jan. 14.
Hammond, John H., Jr., Gloucester, Mass. Navigational guide system. 2,027,528; Jan. 14.
Hammond, John H., Jr., Gloucester, Mass. Navigational guide system. 2,027,529; Jan. 14.
Hammond, John H., Jr., Gloucester, Mass., assignor to Radio Corporation of America. Navigational guide system. 2,027,530; Jan. 14.
Hammond, John H., Jr., and A. D. Tremor, Gloucester, Mass., assignors, by mesne assignments, to J. H. Hammond, Jr. Phonograph control by sound record. 2,027,426; Jan. 14.
Hammond, Laurens, Evanston, assignor to The Hammond Clock Company, Chicago, Ill. Electric alarm clock. 2,027,531; Jan. 14.
Hand, Arthur R., Schenectady, N. Y., assignor to General Electric Company. Phase-sequence indicator. 2,027,994; Jan. 14.
Hand, Lee, St. Louis, Mo. Air filter. 2,027,945; Jan. 14.
Hanks, Milton T., assignor to M. C. Bloom, Chicago, Ill. Sterilizing toothbrush receptacle. 2,027,628; Jan. 14.
Hanlon, Herbert J., and J. J. Hanlon, Cleveland, Ohio. Air circulating mechanism for refrigerated cars. 2,027,974; Jan. 14.
Hanlon, James J. (See Hanlon, Herbert J., and J. J.)
Hanson, Edward P., Tulsa, Okla. Apparatus for treating the large intestine. 2,027,688; Jan. 14.
Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Frequency modulation. 2,027,975; Jan. 14.
Hansen, Carl H., Oakland, Calif. Container. 2,027,469; Jan. 14.
Hansen, Carl H., assignor to J. Hansen, Oakland, Calif. Packing process. 2,027,470; Jan. 14.
Hansen, John. (See Hansen, Carl H., assignor.)
Hardy, Charles, Pelham, assignor to Hardy Metallurgical Company, New York, N. Y. Powder metallurgy. 2,027,580; Jan. 14.
Hardy, Karl T., Portland, Oreg. Weed puller. 2,027,775; Jan. 14.
Hardy Metallurgical Company. (See Hardy, Charles, assignor.)
Hargraves, Robert B. (See McCulloch, A., and Hargraves.)

Hargraves, Winifred E., administratrix. (See McCulloch, A., and Hargraves.)
Harnischfeger Corporation. (See Anderson, Mile P. E., assignor.)
Hartl, John J., Cedar Rapids, Iowa. Power device. 2,027,840; Jan. 14.
Hartzell, Herman L., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Ignition system. 2,028,066; Jan. 14.
Harvey, Jacquelin E., Jr., Valdosta, Ga., assignor to C. Kehr, Washington, D. C. Concrete road building machine. 2,027,907; Jan. 14.
Haskelite Manufacturing Corporation. (See Norris, Charles B., assignor.)
Hasse, John R., St. Peters, South Australia, Australia. Change of direction indicator for motor vehicles. 2,027,821; Jan. 14.
Hat Corporation of America. (See Carnemark, John, assignor.)
Hauser, Hermann, Basel, and M. Bommer, Riehen, near Basel, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Carbazole derivatives and making same. 2,027,905; Jan. 14.
Hauser, Hermann, Basel, and M. Bommer, Riehen, near Basel, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland. Carbazole derivatives. 2,027,906; Jan. 14.
Hawker, Clibord E., assignor to Armstrong Cork Company, Lancaster, Pa. Roll package. 2,027,560; Jan. 14.
Hawker, Clibord F., assignor to Armstrong Cork Company, Lancaster, Pa. Packaging rolled articles. 2,027,561; Jan. 14.
Hawker, Clifford F., E. F. Herr, and F. G. Bottomley, assignors to Armstrong Cork Company, Lancaster, Pa. Apparatus for packaging rugs. 2,027,510; Jan. 14.
Hayward, Claude D. (See Hankin, W. E., and Hayward.)
Hazard & Miller. (See Johnson, Arthur H., assignor.)
Hazelton, George, C. H. James, and W. I. Bacon, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J. Heel and foot-rest fitting. 2,027,431; Jan. 14.
Head, Casimir J., Montreal, Quebec, Canada. Producing sponge iron. 2,028,105; Jan. 14.
Headley, Thomas J., assignor to Endowment Foundation, New Brunswick, N. J. Treating materials electrostatically. 2,027,570; Jan. 14.
Heald Machine Company, The. (See Blood, H. L., and Burns, assignors.)
Hebley, Henry F., and K. Prins, Chicago, Ill. Drier. 2,027,977; Jan. 14.
Heftye, Birger, Tampico, Mex. Vertical double action pump. 2,028,067; Jan. 14.
Heger, Fernand. (See Chiffoz, A., and Heger.)
Heil Co., The. (See Blomberg, Charles G., Jr., assignor.)
Heinze, William A. (See Vicker, J. H., and Heinze.)
Helgeby, Ralph O., Flint, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Pointer type speedometer. 2,027,980; Jan. 14.
Hendel, Georg, Baden, Ontario, Canada. Boot harvesting machine. 2,027,479; Jan. 14.
Henharen, John P., Durban, Union of South Africa. Dissolving rubber for the manufacture of paints, varnishes, and like products, and for insulating purposes. 2,028,068; Jan. 14.
Henkel & Cie, G. m. b. H. (See Lüdkert, W., and Müller, assignors.)
Henning, Malcolm B., assignor to Penn Electric Switch Co., Des Moines, Iowa. Hygroscopic control switch. 2,027,689; Jan. 14.
Hercules Powder Company. (See Stern, Raphael L., assignor.)
Herlihy, John J., et al. (See Thurston, Charles A., assignor.)
Herlihy, John W., et al. (See Thurston, Charles A., assignor.)
Herlihy, William W., et al. (See Thurston, Charles A., assignor.)
Hermle, Hermann, Berlin-Lankwitz, Germany, assignor to General Electric Company. Regenerative braking system. 2,027,905; Jan. 14.
Herr, Benjamin F. (See Hawker, C. F., Herr, and Bottmund.)
Herring, Felix R., Mount Airy, N. C. Revolving disk plow. 2,027,970; Jan. 14.
Hewel, Frank E., Pittsburgh, Pa. Striping tool. 2,027,774; Jan. 14.
Hewitt, John C., Jr., and V. H. Kuster, Long Beach, Calif., assignors to Hewitt-Kuster Company, Long Beach, Calif. Photographic plate and apparatus for loading the same. 2,027,642; Jan. 14.
Hewitt-Kuster Company. (See Hewitt, J. C., Jr., and Kuster, assignors.)
Heymann, Estelle. (See Heymann, Sidney, assignor.)
Heymann, Sidney, assignor to E. Heymann, Brooklyn, N. Y. Shirt. 2,027,661; Jan. 14.
Higley, Frank R., Cleveland Heights, Ohio. Manifold. 2,027,480; Jan. 14.
Hildenbrand, Glenn. (See Porter, R. D., and Hildenbrand.)
Hill, Mark L. (See Aitken, R., and Hill.)
Hill, William H., Riverside Heights, N. C. Stop motion for looms. 2,027,775; Jan. 14.
Hinchliffe, Edward H., Lambeth, assignor of one-half to A. H. Hurd, Malverne, Long Island, N. Y. Method and apparatus for removing fluidness from fowl. 2,027,729; Jan. 14.
Hinde and Dauch Paper Company, The. (See George, Fred, assignor.)
Hinde and Dauch Paper Company, The. (See Morton, Lawrence D., assignor.)
Hirsmann, Julius, Hillside, N. J., assignor to Radio Corporation of America. Tube base and socket. 2,027,730; Jan. 14.
Hirsch, Henry, Jersey City, N. J. Feather cleaning and sterilizing machine. 2,027,590; Jan. 14.
Hirst, Edwin P., Merchantville, N. J., assignor to G. Marks and S. Aress, trading as Novelty Sales Company, Philadelphia, Pa. Vending device. 2,027,422; Jan. 14.
Hodge, Robert J., assignor to The American Buckle Company, West Haven, Conn. Loop-buckle. 2,027,533; Jan. 14.
Hodge, Roland H. (See Pendleton, R. N., and Hodge.)
Hoe, R., & Co. (See Zuckerman, Adolph M., assignor.)
Hoff, Joseph B., Philadelphia, Pa. Valve. 2,027,978; Jan. 14.
Hoffman, Allan C., Englewood, N. J., assignor to Hoffman Brakes, Inc., New York, N. Y. Brake lining device. 2,027,822; Jan. 14.
Hoffman, Allan C., Englewood, N. J., assignor to Hoffman Brakes, Inc., New York, N. Y. Brake lining device. 2,027,823; Jan. 14.
Hoffman Brakes, Inc. (See Hoffman, Allan C., assignor.)
Hoffman Combustion Engineering Company. (See Hoffman, Jerome A., assignor.)
Hoffman, Jerome A., assignor to Hoffman Combustion Engineering Company, Detroit, Mich. Mechanical stoker. 2,027,591; Jan. 14.
Hoffman, Samuel K., and C. H. Wiegman, assignors to Lycoming Manufacturing Company, Williamsport, Pa. Driving mechanism for propellers. 2,027,392; Jan. 14.
Hofmann, Hugo, Johnson City, Texas, assignor to American Bemberg Corporation, New York, N. Y. Conditioning artificial thread. 2,027,911; Jan. 14.
Holpter, Marcus, Pittsburgh, Pa., assignor, by means assignments, to The American Hardware Corporation, New Britain, Conn. Lock construction. 2,027,731; Jan. 14.
Holtzapple, John H., York, Pa., assignor to New York Wire Cloth Company, New York, N. Y. Woven wire screen cloth. 2,027,776; Jan. 14.
Hood Rubber Company. (See Breazeale, G. F., and Ferris, assignors.)
Hood Rubber Company. (See Sheldon, Charles L., assignor.)
Hooker, George W. (See Chamberlain, L. C., and Hooker.)
Hookless Fastener Company. (See Seaver, Elliot O., assignor.)
Hoover Company, The. (See Nelson, Rudolph E., assignor.)
Hoover Company, The. (See Taylor, Charles H., assignor.)
Hopkins, Robert E., assignor to M. W. Kellogg Company, New York, N. Y. Boot pump. 2,027,979; Jan. 14.
Horgan, Timothy J., Westminster, London, England. Vehicle headlight. 2,027,660; Jan. 14.
Horton, Erwin C., Hamburg, assignor to Trico Products Corporation, Buffalo, N. Y. Motor vehicle heating and cooling system. 2,028,069; Jan. 14.
Horton, William M., Beverley, Pa., assignor to Pittsburgh Screw & Bolt Corporation. Manufacture of screws and bolts. 2,027,592; Jan. 14.
Howard, Charles H., and C. D. Miller, Detroit, Mich. Electric transformer. 2,027,982; Jan. 14.
Howard, William R., assignor to U. C. T. Corporation, Washington, D. C. Manufacture of cellophane bags. 2,027,443; Jan. 14.
Hrdlan, Rudolf, Czernay Kostelec, Czechoslovakia. Weaving loom. 2,027,776; Jan. 14.
Huff, Leslie R., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Rotary compressor. 2,027,594; Jan. 14.
Hug, Bruno, New Allschwil, near Basel, and M. Müller, Basel, assignors to Durand & Huguenin S. A., Basel, Switzerland. Mordant disazo dyestuffs and their manufacture. 2,027,777; Jan. 14.
Huggins, Ben, Greenville, S. C. Stabilizing device for picker sticks. 2,027,631; Jan. 14.
Hunt, Martin A., Chicago, Ill. Coupling. 2,027,624; Jan. 14.
Hurd, Albert R. (See Hinchliffe, Edward H., assignor.)
Hutchens, Charles T., and V. V. Anderson, Springfield, Mo. Trussed trailer axle. 2,028,127; Jan. 14.
Hutchison, John F., et al. (See Cunningham, Alexander, assignor.)
Hutchison, William, et al. (See Cunningham, Alexander, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Billig, Kurt, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Hackhofer, E., and Benther, assignors.)
Imperial Chemical Industries Limited. (See Beckett, Ernest G., assignor.)
Industrial Process Company. (See Goodwin, N., and Poindexter, assignors.)
Ingersoll, Charles R., Cleveland, Ohio. Stud bolt wrench. 2,021,514; Jan. 14.
Ingersoll-Rand Company. (See Huff, Leslie R., assignor.)
Ingersoll-Rand Company. (See Smith, William A., Sr., assignor.)
Insulite Company, The. (See Ellis, George H., assignor.)

Ireland, Samuel W., Atlantic City, N. J. Percolator. 2,027,481; Jan. 14.

Iron Fireman Manufacturing Company. (See Carter, Haskell C., assignor.)

Irving Trust Company, Permanent Trustee. (See Buckerman, Adolph M.)

Isbell, John A., Plainfield, and C. Ricards, South Plainfield, N. J., assignors to Wood Newspaper Machinery Corporation, New York, N. Y. Web roll tensioning device. 2,027,866; Jan. 14.

Jackson, Byron, Co. (See Gray, Herbert E., assignor.)

Jackson, Robert B. (See Tully, T. J., and Jackson.)

Jacobs, George H., Kings Mills, Ohio, assignor, by mesne assignments, to The Peters Cartridge Company. Primer for ammunition. 2,027,825; Jan. 14.

Jacobs, Rex C., Detroit, Mich. Glare shield. 2,027,435; Jan. 14.

Jacobson, Bernard H., Charleston, W. Va., assignor to Klipstein Chemical Processes, Inc., New York, N. Y. Cleaning and polishing composition. 2,027,536; Jan. 14.

Jaeger, Alphons O., Greentree, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, New York, N. Y. Esters of sulphodicarboxylic acids. 2,028,091; Jan. 14.

Jahosky, John J., Los Angeles, assignor to Electrobiastic, Incorporated, Culver City, Calif. Electrode for use in electrothermal processes for the production of carbon black. 2,027,735; Jan. 14.

James, Cyril H. (See Hazeltine, G., James, and Bacon.)

Jeddo-Highland Coal Company. (See Becker, Frank N., assignor.)

Jefferson, Harold P., Rugby, England, assignor to General Electric Company. Electric motor. 2,027,867; Jan. 14.

Jeffrey Manufacturing Company, The. (See Levin, N. D., and Muller, assignors.)

Jeffrey Manufacturing Company, The. (See Montgomery, William J., assignor.)

Jenner, Ralph L., Le Roy, N. Y., assignor to Lapp Insulator Company, Inc. Vertical mast wave antenna. 2,027,723; Jan. 14.

Jensen, Fred H., Grand Rapids, Mich. Advertising mechanism. 2,027,961; Jan. 14.

Johnsen, Bjornulf. (See Goss, H. T. and Johnsen.)

Johnson, Arthur E., Taft, assignor of one-half to Hazard & Miller, Los Angeles, Calif. Rotary well drilling apparatus. 2,027,734; Jan. 14.

Johnson, Charles B., De Graff, Ohio. Detachable heel. 2,027,482; Jan. 14.

Johnson, Edgar B. (See Roberts, E. P., and Johnson.)

Johnson, Herbert A. (See Settle, S. B., and Johnson.)

Johnson, James H., Washington, D. C., assignor to The Rochester Company, Inc., San Antonio, Tex. Handkerchief. 2,028,070; Jan. 14.

Johnstone, Henry F., assignor to Board of Trustees of the University of Illinois, Urbana, Ill. Removing catalysis inhibitors from aqueous solutions. 2,027,982; Jan. 14.

Jones & Laughlin Steel Corporation. (See Wellman, Alexander E., assignor.)

Joralemon, Alexander M., Newark, N. J., and A. W. Vaughan, Cleveland, Ohio, assignors to National Carbon Company, Inc. Articulated display. 2,027,536; Jan. 14.

Jorgens, Emil G., and H. K. Becker, assignors to Peters Machinery Co., Chicago, Ill. Box making and filling machine. 2,027,434; Jan. 14.

Justheim, Clarence L., Salt Lake City, Utah. Portable dry ice refrigeration. 2,027,552; Jan. 14.

Kalbhenn, Joseph, et al. (See Gibson, Robert, assignor.)

Kalckbrenner, Ernst. (See Weinand, K., and Kalckbrenner.)

Kallander, Ernest L., and G. R. Alden, assignors to Dennison Manufacturing Company, Framingham, Mass. Sticking bodies. 2,027,425; Jan. 14.

Kallander, Ernest L., and G. R. Alden, assignors to Dennison Manufacturing Company, Framingham, Mass. Adhesive tape. 2,027,426; Jan. 14.

Kalisz, Frederick, Hoboken, N. J. Electric lamp bulb. 2,027,963; Jan. 14.

Kantor, James, assignor to The Liquid Carbonic Corporation, Chicago, Ill. Bottle filling valve. 2,028,002; Jan. 14.

Kapp, Stanley R., New York, N. Y. Collapsible shade teat. 2,027,864; Jan. 14.

Karl, Heinrich, Jersey City, N. J. Preserving can. 2,027,437; Jan. 14.

Karl, Heinrich, Jersey City, N. J. Sanitary preserving can. 2,027,496; Jan. 14.

Kastar Specialty Mfg. Co. (See Lampert, Herbert H., assignor.)

Katadyn, Inc. (See Krause, Georg A., assignor.)

Kavanaugh, James C., et al. (See Parks, R. D., and Hildenbrand, assignors.)

Kavanaugh, John P., et al. (See Parks, R. D., and Hildenbrand, assignors.)

Keaton, Clyde D., assignor of two-thirds to S. S. Tumbridge, New York, N. Y. Coffee maker and filter. 2,027,526; Jan. 14.

Kehr, Cyrus. (See Harvey, Jacquelin B., Jr., assignor.)

Keller, Charles L., Cincinnati, assignor to The Richardson Company, Lockland, Ohio. Making composite molded products. 2,027,483; Jan. 14.

Kellogg Company. (See Wilder, Harold K., assignor.)

Kellogg, M. W., Company. (See Hopkins, Robert E., assignor.)

Kemper, Gilbert L., assignor to Cincinnati Coffee Company, Cincinnati, Ohio. Handle escutcheon. 2,028,071; Jan. 14.

Kempf, William C. (See Geiger, C. F., and Kempf.)

Kenty, Carl B., Chatham, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Electric discharge device. 2,027,268; Jan. 14.

Kenty, Carl B., Chatham, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Apparatus for controlled electric discharge devices. 2,027,284; Jan. 14.

Kimball, A., Company. (See Lauscher, Frederick W., assignor.)

King, Frank A., Los Angeles, Calif. Propelling mounting mechanism. 2,027,439; Jan. 14.

King, John A. C., Lansdowne, Pa. Signal indicator for railroad vehicles. 2,027,905; Jan. 14.

Kingsbury, Harry T., assignor to Kingsbury Mfg. Company, Keene, N. H. Battery light. 2,027,912; Jan. 14.

Kingsbury Mfg. Company. (See Kingsbury, Harry T., assignor.)

Kinrose, Rupert L., London, assignor to Electric & Musical Industries, Ltd., Hayes, Middlesex, England. Superheterodyne receiver. 2,027,906; Jan. 14.

Kinsel, Augustus E., Douglaston, N. Y., assignor to Electro Metallurgical Company. Treating steel making slags. 2,027,925; Jan. 14.

Kircher, Ralph R., assignor to West Bend Aluminum Co., West Bend, Wis. Electric teakettle. 2,027,537; Jan. 14.

Klaiber, Erich, Stuttgart, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Obtaining advanced and retarded ignition. 2,027,009; Jan. 14.

Klee, Henry O., Jackson, Mich., assignor of one-half to A. W. Morf, Niles Center, and J. A. Lyons, Chicago, Ill., a co-partnership, and one-half to All Metal Cloth Tube Corporation, Chicago, Ill. Upholstering of metal surfaces. 2,027,044; Jan. 14.

Kliesrath, Victor W., assignor to Bendix Aviation Corporation, South Bend, Ind. Clutch control mechanism. 2,027,527; Jan. 14.

Klingelnberg, W. Ford, Rhine. (See Schicht, Heinrich, assignor.)

Klipstein Chemical Processes, Inc. (See Jacobson, Bernard H., assignor.)

Klocke, William, Woodhaven, N. Y. Press. 2,027,785; Jan. 14.

Klutz, Walter A. (See Stewart, Walter C., assignor.)

Kneale, Robert D., Atlanta, Ga. Spring-supported vehicle. 2,027,913; Jan. 14.

Knehe, Ewald. (See Baurichter, O., and Knehe.)

Knight, Arthur E., Delaware, Ohio. Radio apparatus. 2,027,828; Jan. 14.

Knobel, Max, Arlington, and L. H. Young, Auburndale, assignors to Gillette Safety Razor Company, Boston, Mass. Method and machine for testing blades. 2,027,886; Jan. 14.

Koch, Lydia B., New York, N. Y., and A. Bodor, Newark, N. J., assignors to Reinforced Paper Bottle Corporation, New York, N. Y. Manufacturing paper bottles. 2,027,484; Jan. 14.

Kögel, Wilhelm G., and N. Widell, Stockholm, Sweden, assignors, by mesne assignment, to Servel, Inc., Dover, Del. Refrigeration. 2,027,779; Jan. 14.

Keppers Company of Delaware, The. (See Shaw, Joseph, assignor.)

Körter Werner, Krefeld, assignor to Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Treating of bolt-tungsten-chromium alloys. 2,027,750; Jan. 14.

Kortek, Frank. (See Farnsworth, Fredrick C., assignor.)

Kreeft, Herman L., assignor to Murray-Ohio Manufacturing Company, Cleveland, Ohio. Stoking furnaces. 2,027,485; Jan. 14.

Kratz, Edouard M., Gary, Ind., assignor, by mesne assignments, to Marbo Products Corporation, Chicago, Ill. Casting transparent films. 2,027,829; Jan. 14.

Krause, Karl, Basel, assignor to the firm Chemical Industry in Basle, Basel, Switzerland. Manufacture of bromination products of vat dyestuffs. 2,027,814; Jan. 14.

Krause, Georg A., Munich, Germany, assignor to Katadyn, Inc., Dover, Del. Preserving milk. 2,028,072; Jan. 14.

Kraut, Hans B. and K. F. Gaillmann, assignors to Gilding & Lewis Machine Tool Co., Fond du Lac, Wis. Matrix stock for punching tools. 2,027,550; Jan. 14.

Kreis, Frederick T., Park Ridge, assignor to Vortex City Company, Chicago, Ill. Slab filler. 2,027,580; Jan. 14.

Kremers, Samuel, New York, N. Y. Manufacture of zinc sulphide. 2,027,440; Jan. 14.

Krieger, Alvin W., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric switch. 2,027,538; Jan. 14.

Krimmer, Adolf, Berlin, Germany. System for moving bodies towards and away from each other. 2,027,851; Jan. 14.

Krupp, Fried., A. G. (See Schafmeister, F., and Spenrath, assignors.)

Kunz, Jacob, Hillside, N. J. Device for preventing the ringing of garage doors. 2,027,881; Jan. 14.

Kurz, Arthur L., Chicago, Ill. Fuel producer and means for the same. 2,027,899; Jan. 14.

Kuzmier, Vivian B. (See Hewitt, J. C., Jr., and Kuzmier.)

Kuz, Albert E., Chicago, Ill. Compressor muffler. 2,027,815; Jan. 14.

Kyrides, Lazar P., Webster Groves, and H. H. Rotsellaar, St. Louis, Mo., assignors, by mesne assignments, to Monsanto Chemical Company. Flavoring of foodstuffs. 2,027,887; Jan. 14.

L. N. S. Corporation. (See Goss, H. T., and Johnsen, assignors.)

Laencher, Frederick W., Flushing, assignor to A. Kimball Company, New York, N. Y. Power driven tag marking machine. 2,027,736; Jan. 14.

Labbe, Charles L., Fort Thomas, Ky. Shoe. 2,027,737; Jan. 14.

La Londe, Frederick J., assignor to C. R. Thomas and R. R. Thomas, Virginia, Minn. Drum pedal. 2,027,969; Jan. 14.

Lammertse, Meindert. (See State, W. C., Lammertse, and Gardner.)

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Truck. 2,027,539; Jan. 14.

La Mont, Walter D., North Colebrook, Conn., assignor, by mesne assignments, to American Chain Company, Inc. Valve. 2,028,096; Jan. 14.

Lampert, Herbert H., Brooklyn, assignor to Kastar Specialty Mfg. Co., Inc., New York, N. Y. Pedal pad. 2,028,073; Jan. 14.

Landis, Aaron, New York, N. Y. Ornamentation for bags. 2,027,441; Jan. 14.

Landis Machine Company. (See Neil, Frederic, assignor.)

Landt, Gustave H., Norristown, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del. Preparing odorless synthetic resinous products. 2,027,966; Jan. 14.

Langenberg, Frederick C. (See Russell, H. F. S., and Langenberg.)

Lansing, Raymond P., Montclair, assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J. Clutch operating means. 2,027,332; Jan. 14.

Lapointe, Francis J., Ann Arbor, Mich. Clutch. 2,027,486; Jan. 14.

Lapp Insulator Company. (See Jenner, Ralph L., assignor.)

Lapsley, Robert, Berrien Springs, assignor to Clark Equipment Company, Buchanan, Mich. Transmission. 2,027,442; Jan. 14.

Larkin, William E., Flushing, N. Y. Scooter. 2,027,888; Jan. 14.

Larson, Eric, Washington, D. C. Metal partition. 2,027,870; Jan. 14.

Lasker, William W., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Addressing machine. 2,027,916; Jan. 14.

Lasker, William W., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Card punch. 2,027,917; Jan. 14.

Lauter, Werner M., Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Preparing secondary aromatic amines. 2,028,074; Jan. 14.

Lavino, E. J., and Company. (See Bell, Gilbert B., assignor.)

Lawson, David E. (See Burghoff, H. L., and Lawson.)

Lazier, Wilbur A., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company. Packing fluid seals. 2,027,889; Jan. 14.

Lazier, Wilbur A., Marshallton, and J. E. Wernts, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Oil- and water-proof product. 2,027,890; Jan. 14.

Lederer, Edwin R., Fort Worth, Tex. Lubricating oil and producing same. 2,027,739; Jan. 14.

Ledwinka, Joseph, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Railway vehicle wheel and tire. 2,027,739; Jan. 14.

Lee Metal Products Company. (See Tay, George H., assignor.)

Lee Rubber & Tire Corporation. (See Nelles, Arthur H., assignor.)

Leeuwin, Max, Eindhoven, Netherlands, assignor to Radio Corporation of America. Device indicating the position of adjustable parts of radio sets and the like. 2,027,913; Jan. 14.

Lefevre, Emil R. G., Detroit, Mich. Automobile door hinge. 2,027,883; Jan. 14.

Levin, Nils D., and H. F. Muller, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company. Tamping apparatus. 2,027,901; Jan. 14.

Lewin, Charles M., New York, N. Y. Hand bag. 2,027,740; Jan. 14.

Lewis, Paul M., Denver, Colo. Pneumatic railway wheel. 2,027,540; Jan. 14.

Liberty Share Corporation. (See Morgan, Porter H., assignor.)

Lide, Martin J., Birmingham, Ala. Pulmting jig. 2,027,597; Jan. 14.

Lieberherr, Arthur, assignor to Sulzer Frères Société Anonyme, Winterthur, Switzerland. Steam generator of the water tube type. 2,027,413; Jan. 14.

Lieberknecht, Paul, Einsiedel-Chemnitz, Germany. Making hosiery. 2,027,781; Jan. 14.

Light, Sidney D., Royal Oak, Mich. Scoring and punching device for loose leaf covers. 2,027,444; Jan. 14.

Lightfoot, Edwin N., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric circuit controlling device of the thermal overload type. 2,027,542; Jan. 14.

Linde Air Products Company, The. (See Bonikoff, George J., assignor.)

Lindeberg, Stig, assignor of one-half to Aktiebolaget Rimo, Stockholm, Sweden. Discontinuous absorption or adsorption cold machine. 2,027,693; Jan. 14.

Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Short wave signaling. 2,027,910; Jan. 14.

Lindquist, David L., Hartsdale, assignor to Otis Elevator Company, New York, N. Y. Door guiding equipment. 2,027,920; Jan. 14.

Linn, Holman H., assignor to The Linn Manufacturing Corporation, Morris, N. Y. Dump body for vehicles. 2,027,968; Jan. 14.

Linn Manufacturing Corporation, The. (See Linn, Holman H., assignor.)

Liquid Carbonic Corporation, The. (See Kantor, James, assignor.)

Lissauer, Adolph W., assignor to Louisville Drying Machinery Co. Inc., Louisville, Ky. Filter belt for roller presses. 2,027,542; Jan. 14.

List, Andrew, and C. S. Stuart, Regina, Saskatchewan, Canada. Hair drier. 2,027,694; Jan. 14.

Lofgren, Gustaf E., Rye, N. Y., assignor to Electrolux Corporation, Dover, Del. Suction nozzle. 2,027,643; Jan. 14.

Lofgren, Gustaf E., Rye, N. Y., assignor to Electrolux Corporation, Dover, Del. Suction nozzle. 2,027,644; Jan. 14.

Louisville Drying Machinery Co., Inc. (See Lissauer, Adolph W., assignor.)

Low, Leslie A. (See Haller, J., and Low.)

Lowell Counter Company. (See Thurston, Charles A.)

Lubbers, Lubbert E., assignor of one-half to The New Stoughton Company, Stoughton, Wis., and one-half to Fruehauf Trailer Company, Detroit, Mich. Flexible and resilient vehicle coupling. 2,027,990; Jan. 14.

Lübbert, Wolfgang, and E. L. Müller, assignors to Henkel & Cie, G. m. b. H., Duesseldorf, Germany. Esters of etherified glycollic acids. 2,027,991; Jan. 14.

Ludwig, Edgar V. (See Davison, R. L., and Ludwig.)

Lundgren, Eric, Linganore Hills, Md. Pulverising mill. 2,027,783; Jan. 14.

Lute, Carl, Hammond, Ind., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,027,598; Jan. 14.

Lycoming Manufacturing Company. (See Hoffman, S. K., and Wiegman, assignors.)

Lyons, J. Arthur, et al. (See Klee, Henry O., assignor.)

MacDonald, Ian, Modesto, Calif. Ball retriever. 2,027,546; Jan. 14.

MacDonald, Lester E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating upon sheet material. 2,027,445; Jan. 14.

Madland, Thorvald, Chicago, Ill., assignor, by mesne assignor.)

Mackrell, Goya D., Brooklyn, N. Y. Paper manufacture. 2,027,741; Jan. 14.

Madland, Thorvald. (See Tobin, K. J., and Madland.)

Madland, Thorvald, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,027,509; Jan. 14.

Maintenance Equipment Company. (See Bates, Sidney E., assignor.)

Makres, George, Ecorse, Mich. Advertising display. 2,027,600; Jan. 14.

Mallory, P. R., & Co. (See Andres, Paul G., assignor.)

Mann, Frank E., Preston, Ontario, Canada. Insole. 2,027,601; Jan. 14.

Marshall, Charles. (See Bliss, Albert, assignor.)

Manson, Frank G., Dayton, Ohio. Face mask. 2,027,392; Jan. 14.

Mapes, Leslie A., Palisades, N. J., assignor to The Borden Company, New York, N. Y. Apparatus for forming and wrapping bricks of ice cream and the like. 2,027,045; Jan. 14.

Marathon Paper Mills Company. (See Andrew, W. K., and Drake, assignors.)

Marathon Paper Mills Company. (See Brocren, Frank L., assignor.)

Marbo Products Corporation. (See Kratz, Edouard M., assignor.)

Marcus, Charles L., Mamaroneck, assignor to Parfums Corday, Inc., New York, N. Y. Cosmetic. 2,027,921; Jan. 14.

Marku, Gus, et al. (See Hirst, Edwin P., assignor.)

Marotte, Maurice L., assignor of one-fourth to A. Bamberger, and one-fourth to F. L. Woods, Carlisle, Pa. Vacuum sweeper. 2,027,602; Jan. 14.

Martin Brothers Electric Company, The. (See Martin, Wendell L., assignor.)

Martin, John N., Tulsa, Okla., assignor to Bradford Motor Works, Bradford, Pa. Pump anchor. 2,027,783; Jan. 14.

Martin, Lawrence F. (See Britton, R. C., and Martin.)

Martin, Wendell L., assignor to The Martin Brothers Electric Company, Cleveland, Ohio. Drying apparatus. 2,027,603; Jan. 14.

Marx, Frank A., assignor to The Richardson Taylor-Globe Corporation, Cincinnati, Ohio. Dispensing and advertising container. 2,027,645; Jan. 14.

Maschinenfabrik Augsburg-Nuernberg A. G. (See Dellmann, Hans; assignor.)

Maschinenfabrik Rüti vormals Caspar Honegger. (See Egli, E., and Schoch, assignors.)

Matthes, Samuel S., assignor to The Ohio Brass Company, Mansfield, Ohio. Trolley ear. 2,027,694; Jan. 14.

Maurer, Herman W., Cleveland Heights, Ohio. Collapsible partition. 2,027,922; Jan. 14.

McCamish, James W., Winchester, Ind. Burial slipper. 2,027,547; Jan. 14.

McCann, Michael, 3d, Albany, N. Y., assignor, by mesne assignments, to The Singer Manufacturing Company, Elizabethport, N. J. Sewing machine. 2,027,742; Jan. 14.

McCord, Alvin C., Chicago, Ill., and G. L. Tinkham, assignors, by mesne assignments, to McCord Radiator & Mfg. Co., Detroit, Mich. Portable electric drier. 2,027,606; Jan. 14.

McCord Radiator & Mfg. Co. (See McCord, A. C., and Tinkham, assignors.)

McCreary, Harold J., assignor of one-fourth to R. G. Richardson, one-fourth to H. H. Englehardt, and one-fourth to F. B. Brunner, Chicago, Ill. Cathode ray device. 2,027,393; Jan. 14.

McCulloch, Andrew, Stalybridge, and R. R. Hargreaves, deceased, Davyhulme, England, W. R. Hargreaves, Barbank, Davyhulme, England, administratrix, assignors to Carbo-Norit-Union Verwaltungs Gesellschaft m. b. H., Frankfort-on-the-Main, Germany. Preparation of activated or absorbent carbon or decolorizing carbon. 2,027,596; Jan. 14.

McFall, Thurlow E., Sparta, Mich. Trailer brake construction. 2,027,606; Jan. 14.

McGrath, Thomas H., Detroit, Mich. Battery terminal. 2,027,645; Jan. 14.

McGuire, Daniel C., Flint, assignor to General Motors Corporation, Detroit, Mich. Tube welding machine. 2,027,607; Jan. 14.

McIntire, Charles V., Short Hills, assignor to Semet-Solvay Engineering Corporation, New York, N. Y. Collector main valve assembly. 2,027,548; Jan. 14.

McKeown, John H. (See Schauer, L. L. and McKeown.)

McKnight, Stephen, Russell, Ky. Angle cock. 2,027,871; Jan. 14.

McMullan, Edward W., Philadelphia, Pa., assignor, by mesne assignments, to Gasoline Antioxidant Company, Wilmington, Del. Treatment of hydrocarbons. 2,027,264; Jan. 14.

McMurtrey, M. Lee. (See Creager, F. L., and McMurtrey.)

McNaught, Harris F., assignor to Duro Metal Products Company, Chicago, Ill. Making wrench sockets. 2,027,823; Jan. 14.

McVoy, Vincent P., Mobile, Ala. Water reclaimer. 2,027,396; Jan. 14.

Means, Walter H., Atlanta, Ga. Brake. 2,027,487; Jan. 14.

Merkel, Joseph F., assignor to General Railway Signal Company, Rochester, N. Y. Detachable relay. 2,027,749; Jan. 14.

Methven, John R., Middletown, Ohio. Device for cutting ice cubes. 2,027,998; Jan. 14.

Meunier, Louis. (See Gabriel, L. G., Blott, Peard, Firmin, Meunier and van der Minne.)

Meyer, Arthur R., assignor to Chapped Bros. Inc., Rockford, Ill. Preparing gonad stimulating hormone. 2,027,446; Jan. 14.

Meyer, Henry A., assignor of one-half to Wolf Machine Company, Cincinnati, Ohio. Carcass-cleaving machine. 2,027,396; Jan. 14.

Meyer, Henry A., assignor of one-half to The Wolf Machine Company, Cincinnati, Ohio. Carcass cleaving machine. 2,027,397; Jan. 14.

Michel, Johann. (See Ostermeier, J., and Michel.)

Mihlin Printing Press and Manufacturing Company. (See Golber, Hyman B., assignor.)

Miller, Abraham B., Berkeley, assignor to The Paraffine Companies, Inc., San Francisco, Calif. Making covering material. 2,027,744; Jan. 14.

Miller, Carl D. (See Howard, C. H., and Miller.)

Minneapolis-Honeywell Regulator Company. (See Taylor, Daniel G., assignor.)

Mishima, Tokushichi, Ochiai-machi, Toyotama-gori, Tokyo, Japan. Magnet steel containing nickel and aluminum. 2,027,904; Jan. 14.

Mishima, Tokushichi, Ochiai-machi, Toyotama-gori, Tokyo, Japan. Strong permanent magnet with tungsten, molybdenum, or chromium. 2,027,905; Jan. 14.

Mishima, Tokushichi, Ochiai-machi, Toyotama-gori, Tokyo, Japan. Strong permanent magnet with cobalt. 2,027,906; Jan. 14.

Mishima, Tokushichi, Yodobashi-ku, Tokyo, Japan. Permanent magnet containing copper. 2,027,907; Jan. 14.

Mishima, Tokushichi, Yodobashi-ku, Tokyo, Japan. Permanent magnet containing nickel, aluminum, cobalt, and chromium. 2,027,908; Jan. 14.

Mishima, Tokushichi, Yodobashi-ku, Tokyo, Japan. Permanent magnet containing nickel, aluminum, and manganese. 2,027,909; Jan. 14.

Mishima, Tokushichi, Yodobashi-ku, Tokyo, Japan. Permanent magnet containing nickel, aluminum, and vanadium. 2,028,000; Jan. 14.

Mizer, Harold P., Floral Park, assignor to Remington Rand Inc., Buffalo, N. Y. Supporting and locking means for printing interpreters. 2,027,929; Jan. 14.

Moeller, George J., assignor to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo. Piston skirt expander. 2,027,972; Jan. 14.

Moller, Edward A., Baltimore, Md. Knob core and mounting means. 2,027,606; Jan. 14.

Monarch Machine Tool Company, The. (See Whipp, W. E., and Bichel, assignors.)

Monogram Corporation, The. (See Tyler, Tracy B., assignor.)

Monowatt Electric Corporation, The. (See Smeaton, George B., assignor.)

Monsanto Chemical Company. (See Alt, Arthur, assignor.)

Monsanto Chemical Company. (See Syrkin, Y. F., and Retsillina, assignors.)

Montgomery, William J., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Ventilator. 2,027,641; Jan. 14.

Montgomery, William J., Upper Arlington, Ohio, assignor to The Jeffrey Manufacturing Company, Ventilator. 2,027,745; Jan. 14.

Moore, Thomas F., Morris Plains, N. J. Well-point. 2,027,998; Jan. 14.

Moorman Manufacturing Company. (See Hamlin, W. P., and Caldwell, assignors.)

Moran, John, Long Island, N. Y. Cultivating tool. 2,028,001; Jan. 14.

Moreau, Pierre, Neuilly, France. Freewheel device. 2,027,926; Jan. 14.

Morf, Arnold W., et al. (See Klee, Henry O., assignor.)

Morgan Engineering Company, The. (See Bank, Harvey W., assignor.)

Morgan Engineering Company, The. (See Bank, H., and Ball, assignors.)

Morgan, Porter H., New York, assignor to Liberty Shoe Corporation, Buffalo, N. Y. Eight glass. 2,027,696; Jan. 14.

Morrell, Jacques C., assignor to Universal Oil Products Company, Chicago, Ill. Refining of petroleum oil. 2,027,648; Jan. 14.

Morris, Harold W., Waltham, Mass., assignor, by mesne assignments, to The Singer Manufacturing Company, Elizabethport, N. J. Binding wire or the like. 2,027,748; Jan. 14.

Morton, Lawrence D., Sandusky, Ohio, assignor to The Hinde and Dauch Paper Company. Joined structure. 2,027,747; Jan. 14.

Mossberg, Frank, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation. Beam with adjustable head. 2,027,746; Jan. 14.

Mossberg, Frank, and E. V. Olson, Attleboro, Mass., assignors to Mossberg Pressed Steel Corporation. Beam. 2,027,749; Jan. 14.

Mossberg Pressed Steel Corporation. (See Mossberg, Frank, assignor.)

Mossberg Pressed Steel Corporation. (See Mossberg, F., and Olson, assignors.)

Muldoon, Anthony M., Hightstown, N. J. Loom. 2,028,002; Jan. 14.

Müller, Ernest L. (See Lambert, W., and Müller.)

Muller, Ernst F. (See Levin, N. D., and Muller.)

Müller, Max. (See Hug, E., and Müller.)

Multiposter Advertising Corporation. (See Roberts, Charles, assignor.)

Municipal Sanitary Service Corporation. (See Rabell, William, assignor.)

Munson, Elmer L., Naugatuck, assignor to The American Brass Company, Waterbury, Conn. Copper base alloy. 2,027,750; Jan. 14.

Murray, Ernest H., Jackson, Mich., assignor of one-fourth to J. W. Myers, Philadelphia, Pa., and one-half to L. W. MacFarland, Long Island City, N. Y. Method and apparatus for cutting fabric blanks. 2,027,925; Jan. 14.

Murray-Ohio Manufacturing Company. (See Russell, Herman L., assignor.)

Myers, Joseph W., et al. (See Murray, Ernest H., assignor.)

Myers, Chesterfield G., Prospect, and E. W. Clarke, assignor to Sperry Gyroscopic Company, Inc., Brooklyn, N. Y. Gyrodire director system. 2,027,926; Jan. 14.

N. V. Internationale Buiker en Alcohol Compagnie Internationale Kempy and Alcohol Company, "Inca". (See Förber, Edward, assignor.)

Nail, John L., Danville, Va. Brake equalizing mechanism for motor vehicles. 2,027,873; Jan. 14.

Nail, John L., Danville, Va. Brake shoe equalizing device. 2,027,874; Jan. 14.

National Carbon Company. (See Currie, Lauchlin M., assignor.)

National Carbon Company. (See Jacobsson, A. M., and Vaughan, assignors.)

National Paper Box Co. (See Newton, Edwin H., assignor.)

Neff, Frederic, assignor to Landis Machine Company, Waynesboro, Pa. Collapsible tap. 2,028,079; Jan. 14.

Neffen, Arthur H., Merion, assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa. Vehicle tire. 2,028,003; Jan. 14.

Nelson, Herbert, Bear Orange, N. J., assignor to Radio Corporation of America. Photoelectrostatic relay. 2,027,791; Jan. 14.

Nelson, Maxwell R., Minto, Mont. Folding sack. 2,027,930; Jan. 14.

Nelson, Rudolph E., Rockford, Ill., assignor to The Heaver Company, North Canton, Ohio. Absorption refrigeration. 2,027,527; Jan. 14.

Nerad, Herbert. (See Birkmann, F., and Nerad.)

Neu, Edward P., Toledo, Ohio. Cutter. 2,027,659; Jan. 14.

Nesselmann, Kurt. (See Altenkirch, E., and Nesselmann.)

Nesselmann, Kurt V., Berlin-Siemensstadt, and E. Altenkirch, Nonnendamm, near Berlin, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. System for the conversion of heat. 2,027,810; Jan. 14.

New Haven Clock Co., The. (See Whitehead, R. H., and Porter, assignors.)

New Stoughton Company, The, et al. (See Lambert, Lambert E., assignor.)

Newton, Edwin H., assignor to National Paper Box Co., Kansas City, Mo. Machine for shaping cardboard articles. 2,027,940; Jan. 14.

New York Air Brake Company, The. (See Campbell, Charles A., assignor.)

New York Air Brake Company, The. (See Campbell, C. A., and Dodge, assignors.)

New York Wire Cloth Company. (See Hollingsworth, John H., assignor.)

Nichols, Harry W., Bridgeport, Conn. Roof covering. 2,028,004; Jan. 14.

Nielsen, Niels, Frederiksberg, near Copenhagen, Denmark, assignor to P. L. Smidth & Co., New York, N. Y. Homogenizing pulverulent materials. 2,027,697; Jan. 14.

Nilz, Nickolas J., Munising, Mich. Paper making machine. 2,027,611; Jan. 14.

Nissen, Henry C., Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing machine. 2,028,006; Jan. 14.

Noble, Arnold, Halifax, and T. P. Wolfland, Morecambe, England. Hat peg or the like. 2,027,857; Jan. 14.

Norris, Charles B., Grand Rapids, Mich., assignor to Haskelite Manufacturing Corporation. Making plywood trays or the like. 2,028,076; Jan. 14.

North American Holding Corporation, et al. (See Bates, Charles F., assignor.)

Norton Company. (See Ridgway, R. R., and Bailey, assignors.)

Norwood, Elias R., Fairfax, Calif. Rack. 2,027,918; Jan. 14.

Nova, Herman, assignor to Shambow Shuttle Company, Woonsocket, R. I. Loom shuttle structure. 2,027,758; Jan. 14.

Novelty Sales Company. (See Hirst, Edgar F.)

Nutt, Harold, assignor to Borg-Warner Corporation, Chicago, Ill. Clutch plate. 2,027,850; Jan. 14.

O. & S. Bearing Company. (See Skillman, Newton, assignor.)

Obergfell, Herbert F., River Forest, assignor to Associated Electric Laboratories, Inc., Chicago, Ill. Telephone set. 2,027,549; Jan. 14.

Odend'Hal, Charles J., Washington, D. C. Pressure gauge. 2,027,875; Jan. 14.

Oelhers, Alfred H., assignor to American Steel Foundries, Chicago, Ill. Draft gear. 2,027,416; Jan. 14.

Ohio Brass Company, The. (See Chandler, Homer P., assignor.)

Ohio Brass Company, The. (See Matthes, Samuel S., assignor.)

Ohio Brass Company, The. (See Piper, Pliny F., assignor.)

Olson, Raymond E., assignor to Taylor Instrument Companies, Rochester, N. Y. Heat exchange system. 2,027,929; Jan. 14.

Olson, Robert V. (See Mossberg, F., and Olson.)

One Minute Washer Company. (See Weinbrod, Carl C., assignor.)

Ostermeier, Johannes Moritz, and Johann Michel, Augsburg, Germany. Electric control apparatus. 2,027,558; Jan. 14.

Otis, Albert M., Schenectady, N. Y., assignor to General Electric Company. Roll type annealing furnace. 2,028,108; Jan. 14.

Otis Elevator Company. (See Lindquist, David L., assignor.)

Owens, Freeman H., New York, N. Y. Photographic sound recording apparatus. 2,028,006; Jan. 14.

Oxford Varnish Corporation. (See van Weberen, Guido, assignor.)

Packard Motor Car Company. (See Vincent, Jesse G., assignor.)

Padelford, Lester R., assignor to The Republic Metalware Company, Buffalo, N. Y. Gas heated toasting device. 2,027,990; Jan. 14.

Page, John, Bronxville, Ill. Partition structure. 2,027,784; Jan. 14.

Panther-Panco Rubber Co. Inc. (See Pennoni, Dominic, assignor.)

Paraffine Companies, The. (See Miller, Abraham B., assignor.)

Paraffine Companies, The. (See Seaman, Leland S., assignor.)

Parfums Corday, Inc. (See Morson, Charles L., assignor.)

Parker, William B. (See Dearing, A. E., and Parker.)

Parkersburg Rig & Reel Company, The. (See Bettis, E. E., and Johnson, assignors.)

Parks, Robert D., and G. Hildenbrand, Lebrville, Iowa, assignor of one-fourth to J. P. Kavanaugh and J. C. Kavanaugh, Waterbury, Nebr., and one-fifth to H. S. Snyder, Sioux City, Iowa. Automatic corn popping machine. 2,027,606; Jan. 14.

Parshad Holding Corporation, et al. (See Eaton, Charles F., assignor.)

Parsons, Robert J., Schenectady, assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y. Thermostatic circuit controller. 2,028,077; Jan. 14.

Patent and Licensing Corporation, The. (See Fala, Jacob M., assignor.)

Patrol Valve Company, The. (See Te Pas, Edmund J., assignor.)

Peacock Brothers Limited, et al. (See Gibson, Robert, assignor.)

Peard, William L. (See Gabriel, L. G., Blott, Peard, Firmin, Meunier and van der Minne.)

Pecknold, Cecil E., Vancouver, British Columbia, Canada. Sanitary girdle. 2,028,007; Jan. 14.

Pece Manufacturing Corporation. (See Ehrig, W. F., and Prandt, assignors.)

Pellow, Charles E., et al. (See Solomon, Thomas N., assignor.)

Penardi, Dominic, Stoughton, assignor to Panther-Panco Rubber Co. Inc., Chelsea, Mass. Mold for the production of rubber heels. 2,027,651; Jan. 14.

Pendleton, Ralph N., and B. H. Hodge, Worcester, Mass., assignors, by mesne assignments, to V. M. Cator, New York, N. Y. Tire grooving machine. 2,027,490; Jan. 14.

Penn Electric Switch Co. (See Henning, Malcolm E., assignor.)

Pennebaker, Robert H., Baton Rouge, La. Oil filter. 2,027,576; Jan. 14.

Pennebaker, Robert H., New Orleans, La. Oil filter. 2,027,490; Jan. 14.

Percy, Paul, New Rochelle, N. Y. Electric plug. 2,027,447; Jan. 14.

Percy, Walter J., Ferndown, Dorset, England. Service hatch. 2,027,491; Jan. 14.

Perdriaat, Charles, Geneva, Switzerland. Burner for liquid fuels. 2,027,699; Jan. 14.

Perfection Stove Company. (See Chadwick, Lee S., Rosa, and Dahlstrom, assignors.)

Perfection Stove Company. (See Chadwick, Lee S., assignor.)

Perkins, Granville A., South Charleston, W. Va., assignors to Carbide and Carbon Chemicals Corporation. Chlorobutadiene. 2,027,580; Jan. 14.

Perkins, Julian L., and H. D. Croft, assignors to Perkins Machine & Gear Company, Springfield, Mass. Broaching machine. 2,027,401; Jan. 14.

Perkins Machine & Gear Company. (See Perkins, J. L., and Croft, assignors.)

Pescara, Raul P., Paris, France. Motor compressor. 2,027,877; Jan. 14.

Peters Cartridge Company, The. (See Jacobs, George H., assignor.)

Peters Machinery Co. (See Jurgens, B. G., and Becker, assignors.)

Peterson, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Crystal controlled oscillator. 2,027,443; Jan. 14.

Petroleum Iron Works Co. of Ohio, The. (See Shaner, Edgar E., assignor.)

Peyinghaus, Walter, Egge, near Volmarstein-in-the-Ruhr, Germany. Apparatus for continuous machining of work-pieces and particularly in housings for axial bearings of rear vehicles. 2,028,004; Jan. 14.

Pfeiffer, William C., assignor to The Hoyt Register Company, Dayton, Ohio. Method and apparatus for handling multiple paper sheets. 2,027,612; Jan. 14.

Pfundt, George M. (See Ehrig, W. F., and Pfundt.)

Philadelphia Metal Drying Form Company. (See Weber, Rudolph, assignor.)

Phillips Petroleum Company. (See Begatz, Henry, assignor.)

Phillips Petroleum Company. (See Youker, Malcolm P., assignor.)

Phillips Refrigeration Products, Inc. (See Phillips, Walter C., assignor.)

Phillips, Walter C., assignor to Phillips Refrigeration Products, Inc., San Francisco, Calif. Car cooling device. 2,027,824; Jan. 14.

Pierce, Albert E., Jr., New Bedford, Mass. Wind angle indicator. 2,027,613; Jan. 14.

Pierce, John R., Foundation. (See Davison, Robert L., assignor.)

Pierce, John R., Foundation. (See Davison, R. L., and Ludwig, assignors.)

Pierce, Raymond C., Chicago, Ill., assignor to General American Tank Car Corporation. Refrigerator structure. 2,027,275; Jan. 14.

Piper, Pliny F., assignor to The Ohio Brass Company, Mansfield, Ohio. Apparatus for bonding rails. 2,027,614; Jan. 14.

Pisciotero, Nicholas F. A., Weymouth, Mass. Pumping device. 2,027,879; Jan. 14.

Pittsburgh Screw & Bolt Corporation. (See Horton, William M., assignor.)

Plant Rubber & Asbestos Works. (See Abrahams, Samuel A., assignor.)

Plante, Oliver F., Worcester, Mass. Electric outlet. 2,028,009; Jan. 14.

Flager, Alfred, Oak Park, Ill., assignor to Continental-Diamond Fibre Company, Newark, Del. Socket device. 2,028,010; Jan. 14.

Pohl, Ernest F. (See Deems, Donald A., assignor.)

Poindexter, Robert W. (See Goodwin, N., and Poindexter.)

Pollard, Earl I. (See Elliott, F. B., and Pollard.)

Porter, Wilson B. (See Whitehead, R. H., and Porter.)

Potter, William W. (See Curtis, Myron E., assignor.)

Prins, Klaas. (See Hebley, H. F., and Prins.)

Pruitt, Raymond S., Trustees et al. (See Starkey, William C., assignor.)

Prutzman, Paul W., Los Angeles, Calif., assignor to Secony-Vacuum Corporation, New York, N. Y. Method and apparatus for electrical dehydration. 2,027,615; Jan. 14.

Prutzman, Paul W., Los Angeles, Calif., assignor to Secony-Vacuum Corporation, New York, N. Y. Method and apparatus for electrical dehydration. 2,027,616; Jan. 14.

Public, Free use of the. (See Davis, R. O. E., and Scholl.)

Race, Ernest, assignor to Burroughs Adding Machine Company, Detroit, Mich. Calculating machine and cash drawer. 2,027,449; Jan. 14.

Radio Corporation of America. (See Alexander, Johan W., assignor.)

Radio Corporation of America. (See Bedford, Alda V., assignor.)

Radio Corporation of America. (See Croneer, F. L., and McEachron, assignors.)

Radio Corporation of America. (See Drake, Frederick H., assignor.)

Radio Corporation of America. (See Franklin, Ralph E., assignor.)

Radio Corporation of America. (See Hammond, John H., Jr., assignor.)

Radio Corporation of America. (See Hansell, Clarence W., assignor.)

Radio Corporation of America. (See Hitzmann, Julius, assignor.)

Radio Corporation of America. (See Loewuin, Max, assignor.)

Radio Corporation of America. (See Lindenblad, Nils E., assignor.)

Radio Corporation of America. (See Nelson, Herbert, assignor.)

Radio Corporation of America. (See Peterson, Harold O., assignor.)

Radio Corporation of America. (See Roberts, Walter van B., assignor.)

Radio Corporation of America. (See Yollen, Jacob, assignor.)

Raisch, William, Forest Hills, assignor to Municipal Sanitary Service Corporation, New York, N. Y. Filter. 2,027,652; Jan. 14.

Ramsey Accessories Manufacturing Corporation. (See Moeller, George J., assignor.)

Randolph, Donald W., Flint, assignor to General Motors Corporation, Detroit, Mich. Ignition circuit. 2,027,617; Jan. 14.

Rankin, William K., and C. D. Hayward, Lansdowne, Pa., assignors to General Electric Company. Vacuum switch and fabricating the same. 2,027,835; Jan. 14.

Rankin, William K., and C. D. Hayward, Lansdowne, Pa., assignors to General Electric Company. Vacuum switch. 2,027,836; Jan. 14.

Raub, Frederic H., South Orange, assignor to J. Wise & Sons Co., Newark, N. J. Bottle cap remover. 2,027,785; Jan. 14.

Ray, Arthur B., Bayside, N. Y., assignor to Carbide and Carbon Chemicals Corporation. Depositing silica on material. 2,027,831; Jan. 14.

Ray, Arthur B., Bayside, N. Y., assignor to Carbide and Carbon Chemicals Corporation. Mold and method for its production. 2,027,832; Jan. 14.

Raymond, Fred L., River Forest, Ill. Supplying steam to the radiators of steam heating systems. 2,027,880; Jan. 14.

Raymond, Fred L., River Forest, Ill. Steam heating system. 2,027,881; Jan. 14.

Raymond, John D., assignor of one-third to J. Halpin, Detroit, Mich. Safety razor handle. 2,028,011; Jan. 14.

Read, William C., New Rochelle, N. Y., assignor to Electro Metallurgical Company. Making alloys. 2,027,437; Jan. 14.

Rees, Frank X., Albany, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Electrical circuit and relay therefor. 2,027,701; Jan. 14.

Reichert, Joseph S., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del. Stabilizing hydrogen peroxide solutions with pyrophosphoric acid. 2,027,858; Jan. 14.

Reichert, Joseph S., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del. Purification of hydrogen peroxide solutions. 2,027,859; Jan. 14.

Reid, Ebenezer E., Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of esters of unsaturated acids. 2,028,012; Jan. 14.

Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Ornamentation. 2,028,013; Jan. 14.

Reinecke, Henry, Toronto, Ontario, Canada. Treating hydrocarbon fuels. 2,028,014; Jan. 14.

Reinforced Paper Bottle Corporation. (See Koch, L. B., and Bodor, assignors.)

Reis, Arthur M., New York, N. Y. Undergarment. 2,027,987; Jan. 14.

Remington Arms Company. (See Wharton, Thomas H., assignor.)

Remington Rand Inc. (See Lasker, William W., assignee.)

Remington Rand Inc. (See Mixer, Harold P., assignee.)

Renshaw, Paul, New York, assignor to General Railway Signal Company, Rochester, N. Y. Lock for railway spring switches. 2,027,702; Jan. 14.

Republic Metalware Company, The. (See Puddiford, Lester E., assignor.)

Republic Steel Corporation. (See Walker, George G., assignor.)

Resch, Marc. (See Chadwick, L. S., Resch, and Ballstrom.)

Retallilius, Henry H. (See Kyridon, L. P., and Retallilius.)

Ribar, Peter, Pueblo, Colo. Shoe jack. 2,027,792; Jan. 14.

Ricards, Charles L. (See Isbell, J. A., and Ricards.)

Richardson Company, The. (See Kohler, Charles L., assignor.)

Richardson, James A. (See Tasbie, William O., assignor.)

Richardson, Rodney G., et al. (See McCreary, Harold J., assignor.)

Richardson Taylor-Globe Corporation, The. (See Marx, Frank A., assignor.)

Rideout, Raymond V., Highland Park, Mich. Automobile dressing bench tool. 2,027,551; Jan. 14.

Ridgway, Raymond B., and B. L. Bailey, Niagara Falls, N. Y., assignors to Norton Company, Worcester, Mass. Making boron carbide articles. 2,027,796; Jan. 14.

Ridgway, Raymond B., and B. L. Bailey, Niagara Falls, N. Y., assignors to Norton Company, Worcester, Mass. Wire drawing die. 2,027,797; Jan. 14.

Ridgway, Raymond B., and B. L. Bailey, Niagara Falls, N. Y., assignors to Norton Company, Worcester, Mass. Bearing. 2,027,798; Jan. 14.

Riley Stoker Corporation. (See Armour, James W., assignor.)

Rinkelman, William L. (See Beard, E. H., and Rinkelman.)

Roach, Claud M., San Saba, Tex. Electric generator. 2,027,402; Jan. 14.

Roberts, Charles, assignor to Multiposter Advertising Corporation, New York, N. Y. Display device. 2,027,789; Jan. 14.

Roberts, Ovid E., Jr., New Rochelle, N. Y. Controlled pyrogenic decomposition of hydrocarbons. 2,027,802; Jan. 14.

Roberts, Robert P., and E. B. Johnson, Spondon, near Derby, assignors to Celanese Corporation of America. Production of artificial silk and like products. 2,027,450; Jan. 14.

Roberts, Walter van B., Princeton, N. J., assignor to Radio Corporation of America. Superheterodyne circuit. 2,027,933; Jan. 14.

Robertson, Robert H., assignor to The Truscon Joint Company, Chicago, Ill. Road joint mechanism with void forming unit. 2,027,553; Jan. 14.

Robin, Leo. (See van Regteren, M., and Robin.)

Rochester Company, The. (See Johnson, James H., assignor.)

Rodin, Fritz J., Chatham Center, N. Y. Potato harvester machine. 2,027,840; Jan. 14.

Rogats, Henry, Sayre, assignor to Phillips Petroleum Company, Bartlesville, Okla. Drill cutter. 2,027,709; Jan. 14.

Rensing, Adolph, Minneapolis, Minn. Power transmission. 2,027,818; Jan. 14.

Rooney, James H., and E. J. Ward, Scunthorpe, near Doncaster, England, assignors to Colebrook Corporation of America. Conveying materials in the form of long webs or sheets. 2,027,451; Jan. 14.

Rosener, Leonard E., assignor to The Paraffine Companies, Inc., San Francisco, Calif. Pipe wrapping machine. 2,027,704; Jan. 14.

Ross, David E., assignor to Rostone, Incorporated, La Fayette, Ind. Building construction. 2,027,832; Jan. 14.

Ross, David E., assignor to Rostone, Incorporated, La Fayette, Ind. Building construction. 2,027,833; Jan. 14.

Rostone, Incorporated. (See Ross, David E., assignor.)

Roth, Frank, San Francisco, Calif. Steam-boiler. 2,027,541; Jan. 14.

Rottmund, Fred G. (See Hawker, C. F., Horr, and Rottmund.)

Roye, Richard T., Houston, Tex., assignor to Gray Tool Company. Wash pipe packing. 2,027,553; Jan. 14.

Royle, Vernon, Paterson, N. J. Lining and paveling machine. 2,027,584; Jan. 14.

Ruding, Gunner, Chicago, Ill. Golf club. 2,027,662; Jan. 14.

Russell, Norman F. S., and F. C. Langenberg, Edgewater Park, N. J., assignors to United States Pipe and Foundry Company, Burlington, N. J. Centrifugal pipe casting apparatus. 2,027,485; Jan. 14.

Rutherford, Charles E., West Hartford, assignor to The Wiremold Company, Hartford, Conn. Conduit for electric wiring. 2,027,619; Jan. 14.

Saar, Franz, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Metallic elements for electron tube amplifiers. 2,027,887; Jan. 14.

Sawyer, Frank McM., Houston, Tex. Sealless sliding window. 2,027,751; Jan. 14.

Schaad, Elbert E., Berkeley, Calif. Scooter. 2,027,620; Jan. 14.

Schafmeister, Paul, and E. A. Spaeth, assignors to Fried. Krupp A. G., Essen, Germany. Chrome nickel steel alloy product and method of making the same. 2,027,554; Jan. 14.

Schauer, Lawrence L., Wyoming, and J. H. McKewen, Cincinnati, assignors to The Cincinnati Bickford Tool Company, Cincinnati, Ohio. Double dial control for hydraulic radial drills. 2,027,705; Jan. 14.

Schauer, Lawrence L., Wyoming, and J. H. McKewen, Cincinnati, assignors to The Cincinnati Bickford Tool Company, Cincinnati, Ohio. Counterbalance valve. 2,027,706; Jan. 14.

Schlicht, Heinrich, Huckeswagen, Germany, assignor to the firm W. Ferd. Klingelnberg Söhne, Remscheid-Berghausen, Germany. Method of and machine for producing hob cutters. 2,027,621; Jan. 14.

Schippel, Henry F., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Resilient wheel and making the same. 2,028,015; Jan. 14.

Schmidt, David, assignor to The Dobeckmun Company, Cleveland, Ohio. Bag forming machine. 2,027,654; Jan. 14.

Schmiedeknecht, Victor E., Louisville, Ky., assignor to Standard Sanitary Manufacturing Company. Shelf-back sink. 2,027,707; Jan. 14.

Schmiedel, William F., assignor to Deltox Rug Company, Oshkosh, Wis. Tufting attachment for sewing machines. 2,027,454; Jan. 14.

Schmitter, Walter P., and P. C. Day, assignors to The Falk Corporation, Milwaukee, Wis. Coupling. 2,027,542; Jan. 14.

Schneider, Louis J., Chicago, Ill. Sign display frame. 2,027,790; Jan. 14.

Schoch, Edwin. (See Egli, E., and Schoch.)

Scholl Mfg. Co. Inc., The. (See Scholl, William M., assignor.)

Scholl, Walter. (See Davis, R. O. E., and Scholl.)

Scholl, William M., assignor to The Scholl Mfg. Co. Inc., Chicago, Ill. Corn pad package. 2,027,555; Jan. 14.

Schrager, Joseph, Brooklyn, N. Y. Confection cover. 2,027,791; Jan. 14.

Schrauth, Walther, Berlin-Dahlem, Germany, assignor, by mesne assignments, to "Unichem" Chemikalien Handels, A.-G., Zurich, Switzerland. Manufacturing soaps. 2,027,936; Jan. 14.

Schrickel, Carl T., Mount Healthy, Ohio. Tone bar. 2,027,937; Jan. 14.

Schwab, Walford A., Chicago, Ill. Brush. 2,027,884; Jan. 14.

Schwarzbach, Oscar, Bautzen, assignor to the firm Fragoso Spielwarenfabrik Alfred Kraus, Cologne-Ehrenfeld, Germany. Building element for constructional games. 2,027,885; Jan. 14.

Schweiger, Curt W., Munich, Germany. Sewing machine. 2,028,016; Jan. 14.

Schwitzer-Cummins Company. (See Winkler, Carl J., assignor.)

Seaver-Brinkman-Gerstenberger, Inc. (See Brinkman, Carl A., assignor.)

Seaver, Elliot C., Meadville, Pa., assignor to Hookless Fastener Company. Separable fastener. 2,027,708; Jan. 14.

Seibt, Max, Dresden, Germany. Check valve. 2,027,455; Jan. 14.

Sell, Gilbert E., Conshohocken, assignor to E. J. Lavino and Company, Philadelphia, Pa. Chromite material and making the same. 2,028,017; Jan. 14.

Sell, Gilbert E., Conshohocken, assignor to E. J. Lavino and Company, Philadelphia, Pa. Chromite refractory materials. 2,028,018; Jan. 14.

Seligman, David A., New York, N. Y. Window. 2,027,856; Jan. 14.

Semet-Solvay Engineering Corporation. (See McIntire, Charles V., assignor.)

Servel, Inc. (See Bäckström, Sigurd M., assignor.)

Servel, Inc. (See Kögel, W. G., and Wikell.)

Servel, Inc. (See Smith, Albert C., assignor.)

Settle, Samuel E., and E. A. Johnson, assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va. Substructure for oil well derricks. 2,028,019; Jan. 14.

Shafer, Samuel, Jr., assignor to Chain Belt Company, Milwaukee, Wis. Sludge removing apparatus. 2,028,094; Jan. 14.

Shambow Shuttle Company. (See Nous, Herman, assignor.)

Shanor, Edgar R., assignor to The Petroleum Iron Works Co. of Ohio, Sharon, Pa. Sealing containers against leakage and tampering. 2,028,107; Jan. 14.

Shaw, Joseph A., Pittsburgh, Pa., assignor to The Koppers Company of Delaware. Separation and purification of gaseous mixtures. 2,028,134; Jan. 14.

Shaw, Joseph A., Pittsburgh, Pa., assignor to The Koppers Company of Delaware. Obtaining hydrogen sulphide. 2,028,135; Jan. 14.

Sheldon, Charles L., assignor to Hood Rubber Company, Inc., Watertown, Mass. Hook fastener. 2,028,020; Jan. 14.

Shepherd, Charles H., Bronx, N. Y. Cloth and making the same. 2,027,696; Jan. 14.

Sherwood, Charles L., Twin Falls, Idaho. Attachment for fruit cleaning apparatus. 2,027,580; Jan. 14.

Shimer, John M., Dallas, Tex., assignor to Wilson-Snyder Manufacturing Corporation, Braddock, Pa. Twin cylinder steam engine. 2,027,843; Jan. 14.

Shinn, John V. (See Wollner, H. J., and Shinn.)

Shippy, Leo C., Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Molding device. 2,028,021; Jan. 14.

Shoe Form Co. (See De Witt, William J., assignor.)

Shull, Elbert W., Lawton, Okla. Water cooling apparatus for engines. 2,027,886; Jan. 14.

Shultz, Edward L., Endicott, assignor to Endicott Johnson Corporation, Endicott, N. Y. Shoe. 2,027,557; Jan. 14.

Siemens-Schuckertwerke Aktiengesellschaft. (See Altenkirch, E., and Nesselmann, assignors.)

Siemens-Schuckertwerke Aktiengesellschaft. (See Nesselmann, K. V., and Altenkirch, assignors.)

Sieminski, Henry, Jersey City, N. J. Cutting and shaving device. 2,028,022; Jan. 14.

Silex Company, The. (See Wolcott, Frank E., assignor.)

Simpson, James L. (See Davis, J. E., and Simpson.)

Singer Manufacturing Company, The. (See McCann, Michael, assignor.)

Singer Manufacturing Company, The. (See Morris, Harold W., assignor.)

Singer Manufacturing Company, The. (See Nissen, Henry C., assignor.)

Skillman, Newton, assignor to O. & S. Bearing Company, Detroit, Mich. Bushing. 2,027,559; Jan. 14.

Skillman, Newton, assignor to O. & S. Bearing Company, Detroit, Mich. Self-lubricating, self-aligning bearing and forming same. 2,027,560; Jan. 14.

Skiar, Harry, New York, N. Y. Wicket. 2,028,108; Jan. 14.

Skolfield, William K., Bridgeport, Conn., assignor to General Electric Company. Fan. 2,027,844; Jan. 14.

Sleboe, Dirk, The Hague, Netherlands. Safety device for protecting motor cars against fire after collision. 2,027,760; Jan. 14.

Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Mining machine. 2,027,458; Jan. 14.

Small, James B., East Cleveland, assignor to The Glidden Company, Cleveland, Ohio. Bituminous emulsion. 2,027,406; Jan. 14.

Smede, Lloyd, Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Temperature control apparatus. 2,027,408; Jan. 14.

Smidth, F. L., & Co. (See Kleiner, Niels, assignor.)

Smith, Albert C., Larchmont, N. Y., assignor, by mesne assignments, to Servel, Inc., Dover, Del. Ice tray. 2,027,754; Jan. 14.

Smith, Charles A., Wellsville, Kans. Ice handling truck. 2,028,023; Jan. 14.

Smith, Charles A., Wellsville, Kans. Ice scoring device. 2,028,024; Jan. 14.

Smith, Clarence C., assignor to Union Special Machine Company, Chicago, Ill. Zigzag stitching mechanism. 2,027,397; Jan. 14.

Smith, L. C., & Corona Typewriters Inc. (See Avery, Henry A., assignor.)

Smith, Myron H., Dundee, N. Y., assignor to E. P. Brown, Murfreesboro, N. C. Shipping container. 2,027,561; Jan. 14.

Smith, Robert L., Little Falls, N. J. Book construction. 2,027,497; Jan. 14.

Smith, Robert T., Freeport, N. Y. Mop wringer attachment. 2,028,025; Jan. 14.

Smith, Victor N. M., Fergus, Ontario, assignor to Beatty Bros. Limited, Fergus, Wellington, Canada. Nozzle for vacuum cleaners. 2,027,798; Jan. 14.

Smith, William A., Sr., Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Feeding device. 2,027,562; Jan. 14.

Smulski, Theodore J. (See Anderson, J. W., and Smulski.)

Snodgrass, Harrison V., Los Angeles, Calif. Gas mixer. 2,027,402; Jan. 14.

Snyder, Harry S., et al. (See Parks, R. D., and Hildebrand, assignors.)

Société d'Etude pour l'Exploration des Eaux "Procédés G. et B." (See Giraud, Pierre R., assignor.)

Society "L'Etoile Des Records Du Monde S. A. F." (See Dintilhac, Jean G., assignor.)

Society of Chemical Industry in Basle. (See Bonhôte, Gérald, assignor.)

Society of Chemical Industry in Basle. (See Hauser, H., and Bommer, assignors.)

Society of Chemical Industry in Basle. (See Krauer, Karl, assignor.)

"Society of Chemical Industry in Basle." (See Stöckhin, Ernst, assignor.)

Secony-Vacuum Corporation. (See Prutzman, Paul W., assignor.)

Solomon, Thomas N., assignor of one-fourth to C. S. Pellow and one-fourth to C. S. Pellow, Detroit, Mich. Adjustable hinge structure for automobile bodies. 2,027,529; Jan. 14.

Spatta, Gustav, assignor to Clark Equipment Company, Buchanan, Mich. Forging means. 2,027,405; Jan. 14.

Speicher, William P. J., North East Township, Erie County, Pa., assignor to General Electric Company. Refrigerating cabinet. 2,027,845; Jan. 14.

Spence, Peter, & Sons, Limited. (See Crundall, Sydney P. W., assignor.)

Spruit, Erwin A. (See Schafmeister, P., and Spruit.)
Sperlich, Herman A., Detroit, Mich. Cabinet. 2,027,466; Jan. 14.
Sperry Gyroscope Company. (See Carlson, Bert G., assignor.)
Sperry Gyroscope Company. (See Myers, S. G., and Chafee, assignors.)
Sperry Products, Inc. (See De Lamty, Loren J., assignor.)
Spinner, Isidore, Chicago, and F. V. Spinner, Wilmette, Ill. Bookbinder. 2,027,548; Jan. 14.
Spinner, Philip V. (See Spinner, Isidore and P. V.)
Stam, Orville, Los Angeles, Calif. Shirt suspensory. 2,027,622; Jan. 14.
Standard Sanitary Manufacturing Company. (See Schmiedeknecht, Victor E., assignor.)
Starkey, William C., Indianapolis, Ind., assignor, by mesne assignments, to W. C. Starkey, R. G. Pruitt, and W. H. Beal, trustees. Spring clutch. 2,027,794; Jan. 14.
Stata, Will C., and M. Lammertse, Akron, and C. R. Gardner, Cuyahoga Falls, Ohio, assignor, by mesne assignments, to Wingfoot Corporation, Wilmington, Del. Tire building apparatus. 2,028,078; Jan. 14.
Stata, Robert J. (See Dodge, A. Y., and Stata.)
Staveren, Herbert. (See Braunstein, Schalim, assignee.)
Steigerwald, August, assignor to Emily Clark, New York, N. Y. Floor oiler or waxer. 2,028,079; Jan. 14.
Steimel, Karl. (See Urtel, E., and Steimel.)
Stein, George. (See Stein, Jacob and G.)
Stein, Jacob, College Point, and G. Stein, Astoria, N. Y. Rolling machine. 2,027,564; Jan. 14.
Stephenson, Albert. (See Bergamini, Herbert M., assignor.)
Stephenson, Albert, assignor of one-half to H. M. Bergamini, New York, N. Y. Fracture and orthopedic operating frame. 2,027,765; Jan. 14.
Stern, Raphael L., New Brunswick, N. J., assignor to Hercules Powder Company, Wilmington, Del. Wood pulp adapted for chemical use. 2,028,080; Jan. 14.
Streuterman, Edwin J. (See Struts, R. M., and Streuterman.)
Stewart, Charles G., New York, N. Y. Combination book and attaching device. 2,027,569; Jan. 14.
Stewart, Walter C., assignor to W. A. Klutz, Gastonia, N. C. Compound differential for roving frames. 2,027,710; Jan. 14.
Stickney, Burnham C., Hillside, N. J., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y. Tabulating device. 2,027,568; Jan. 14.
Stöcklin, Ernst, Binningen, near Basel, assignor to "Society of Chemical Industry in Basle," Basel, Switzerland. Indigoid dyestuffs and making same. 2,027,890; Jan. 14.
Stoeckicht, Wilhelm, Munich-Solln, Germany. Planet gearing. 2,027,655; Jan. 14.
Stoesser, Wesley C., assignor to The Dow Chemical Company, Midland, Mich. Halogenated phenyl-diphenyl oxide. 2,028,061; Jan. 14.
Stokes, Francis J., assignor to F. J. Stokes Machine Company, Philadelphia, Pa. Automatic tube closing and clip attaching machine. 2,027,792; Jan. 14.
Stokes, F. J., Machine Company. (See Stokes, Francis J., assignor.)
Stokes, F. J., Machine Company. (See Westin, Charles J., assignor.)
Stone, Irwin, New York, N. Y. Insecticidal spray. 2,028,100; Jan. 14.
Storch, Otto P., Ossos Park, assignor to The United States Printing & Lithograph Company, New York, N. Y. Flash-light display rack. 2,028,036; Jan. 14.
Stratford, William M. (See Dearborn, R. J., and Stratford.)
Struts, Roy M., and R. J. Streuterman, Beaverlie, Mo. Corn cob pipe and making same. 2,027,487; Jan. 14.
Stuart, Charles S. (See List, A., and Stuart.)
Stubbings, Eric O. (See Durrant, H. T., and Stubbings.)
Suits, Chauncey G., Schenectady, N. Y., assignor to General Electric Company. Reversible shaded pole motor. 2,027,846; Jan. 14.
Sulzer Frères Société Anonyme. (See Lichenberr, Arthur, assignor.)
Sutton, Wilson L., assignor to Fleetwings, Inc., Garden City, Long Island, N. Y. Spar structure. 2,027,711; Jan. 14.
Swift, George W., Jr., Bordentown, assignor to G. W. Swift, Jr., Inc., Bordentown, N. J. Mechanism for unwinding mill rolls. 2,027,796; Jan. 14.
Swift, George W., Jr., Inc. (See Swift, George W., Jr., assignor.)
Symington Company, The. (See Barrows, Donald S., assignor.)
Szal, Jan, Warsaw, Poland. Synchronizing device for machine guns on aircraft. 2,027,766; Jan. 14.
Tassie, William O., St. Boniface, Manitoba, assignor of one-half to J. A. Richardson, Winnipeg, Manitoba, Canada. Fountain pen. 2,027,886; Jan. 14.
Tay, George H., Philipsburg, assignor to Lee Metal Products Company, Inc. Center line scraper agitator. 2,027,756; Jan. 14.
Taylor, Charles H., assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,027,936; Jan. 14.
Taylor, Daniel G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Remote control system. 2,028,110; Jan. 14.
Taylor Instrument Companies. (See Beckley, Elvin, assignor.)
Taylor Instrument Companies. (See Clawson, Albert R., assignor.)
Taylor Instrument Companies. (See Glenn, Raymond R., assignor.)
Taylor Instrument Companies. (See Widmer, John A., assignor.)
Teahen, James M., Detroit, Mich. Water closet. 2,028,021; Jan. 14.
Technicolor Motion Picture Corporation. (See Whittaker, Lloyd E., assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Saar, Franz, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Urtel, E., and Steimel, assignors.)
Teletype Corporation. (See Burcky, Charles W., assignor.)
Te Pas, Edmund J., Rocky River, assignor to The Pittsburgh Valve Company, Cleveland, Ohio. Thermostatic valve. 2,027,458; Jan. 14.
Teppema, Jan, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Preparing thiuryl monosulphides. 2,028,082; Jan. 14.
Texas Company, The. (See Dearborn, R. J., and Stratford, assignors.)
Thilberger, William J., New Orleans, La. Wall structure. 2,027,493; Jan. 14.
Thomas, Ernest R., et al. (See La Londe, Frederick J., assignor.)
Thomas, Gordon H., et al. (See La Londe, Frederick J., assignor.)
Thurston, Charles A., Haverhill, assignor to J. W., W. W. and J. J. Hartley, Haverhill, doing business as Lowell Counter Company, Lowell, Mass. Shoe counter. 2,028,111; Jan. 14.
Tinkham, Guy L. (See McCord, A. C., and Tinkham.)
Tobin, Kenneth J., and T. Maitland, Chicago, Ill., assignors, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,027,805; Jan. 14.
Toledo Scale Manufacturing Company. (See Williams, Lawrence S., assignor.)
Toppin, Francis V., Lyndhurst, N. J. Printing press and printing. 2,027,797; Jan. 14.
Trabold, Frank W., Detroit, Mich. Mixing gage. 2,027,494; Jan. 14.
Translode Joint Company, The. (See Robertson, Robert R., assignor.)
Traser, Albert D. (See Hammond, J. H., and Traser.)
Trico Products Corporation. (See Horton, Erwin C., assignor.)
Trustbanteer Amsteland M. V. (See Friedrich, Paul, assignor.)
Tulcran, Inc. (See Tully, T. J., and Jackson, assignors.)
Tully, John S., Modesto, Calif. Flexible coupling. 2,027,489; Jan. 14.
Tully, Thomas J., and R. B. Jackson, assignors to Tulcran, Inc., Columbus, Ohio. Air heating device. 2,028,035; Jan. 14.
Tumbridge, Stanley S. (See Keeton, Clyde D., assignor.)
Turner, Charles H., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich. Boiler tube cleaning construction. 2,027,495; Jan. 14.
Twin Coach Company. (See Pageol, William B., assignor.)
Tyler, Tracy E., assignor to The Messenger Corporation, Detroit, Mich. Clutch mechanism for transmissions. 2,028,026; Jan. 14.
U. C. T. Corporation. (See Howard, William R., assignor.)
Underwood Elliott Fisher Company. (See Anderson, Walter J., assignor.)
Underwood Elliott Fisher Company. (See Stickney, Burnham C., assignor.)
"Unichem" Chemikalien Handels, A.-G. (See Schrauth, Walther, assignor.)
Union Special Machine Company. (See Smith, Clarence C., assignor.)
Union Switch & Signal Company, The. (See Allen, R. M., and Young, assignors.)
Union Switch & Signal Company, The. (See Baker, Richard P., assignor.)
Union Switch & Signal Company, The. (See Rose, Herbert L., assignor.)
United Shoe Machinery Corporation. (See Hamilton, G. James, and Bacon, assignors.)
United Shoe Machinery Corporation. (See Macdonald, Lester S., assignor.)
United States Pipe and Foundry Company. (See Russell, N. F. S., and Lampenberg, assignors.)
United States Printing & Lithograph Company, The. (See Storch, Otto P., assignor.)
Universal Oil Products Company. (See Merrell, Jacque C., assignor.)
Urtel, Rudolf, and K. Steimel, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Automatic demodulator sensitivity control. 2,027,930; Jan. 14.
Vandergrift, Lewis C., Hilliard, Ind. Garment guard. 2,027,898; Jan. 14.
Van der Minne, Peter E. (See Gilliard, H. G., Hall-Pearl, Hirsch, Meunier, and van der Minne.)
Van Rogeyn, Mathieu, Spermont, and D. Robin, Brussels, Belgium. Press for dehydrating colloid material. 2,027,667; Jan. 14.
Van Royen, Hermann J., Horde in Westfalia, Germany. Wheel rim. 2,028,026; Jan. 14.
Vaughan, Aubrey W. (See Joralemon, A. M., and Vaughan.)
Vereinigte Stahlwerke Aktiengesellschaft. (See Kloder, Werner, assignor.)
Viceroy Manufacturing Company Limited. (See Clayton, Lewis J., assignor.)
Victor, John H., Evanston, and W. A. Helmer, assignors to Victor Manufacturing & Gasket Company, Chicago, Ill. Reenforce for gaskets. 2,027,847; Jan. 14.
Victor Manufacturing & Gasket Company. (See Victor, J. H., and Helmer, assignors.)
Vincent, James G., assignor to Packard Motor Car Company, Detroit, Mich. Internal combustion engine. 2,027,940; Jan. 14.
Von Webern, Guido, Dayton, Ohio, assignor to Oxford Varnish Corporation, Detroit, Mich. Apparatus for cleaning rolls. 2,027,407; Jan. 14.
Vortex Cup Company. (See Krein, Frederick T., assignor.)
Vortex Cup Company. (See Wood, Andrew C., assignor.)
Wagner Electric Corporation. (See Gundermann, Lester S., assignor.)
Walker, George G., Poland, assignor to Republic Steel Corporation, Youngstown, Ohio. Welded metal pipe and making same. 2,028,096; Jan. 14.
Walker, James R., Dallas, Tex. Waterproof cigarette case. 2,028,030; Jan. 14.
Walkland, Thomas F. (See Noble, A., and Walkland.)
Wallace, John G., St. Paul, Minn. Water purifying mechanism. 2,027,501; Jan. 14.
Walters, Gustav, Middletown, Conn. Clutch-facing. 2,028,031; Jan. 14.
Walther, George, near Dayton, assignor to The Dayton Steel Foundry Company, Dayton, Ohio. Metal wheel. 2,027,408; Jan. 14.
Ward, Robert J. (See Rooney, J. H., and Ward.)
Warner, Donald F., Lynn, Mass., assignor to General Electric Company. Emergency tripping device. 2,027,848; Jan. 14.
Warren, Richard F., Stratford, Conn., assignor to Carbide and Carbon Chemicals Corporation. Phonograph record. 2,028,120; Jan. 14.
Waterhouse, Harold D., Rochester, N. Y. Clutch mechanism. 2,027,941; Jan. 14.
Watt, James G. (See Watt, Sern P., assignor.)
Watt, Sern P., assignor to J. G. Watt, Seattle, Wash. Torque transmitting mechanism. 2,027,796; Jan. 14.
Webb, Holstein W., Columbus, Ohio. Lawn sprinkler. 2,027,567; Jan. 14.
Weber, Rudolph, assignor to Philadelphia Metal Drying Form Company, Philadelphia, Pa. Hosiery drying form. 2,027,712; Jan. 14.
Weeks, Francis H. and R. B., New York, N. Y. Clam shell bucket. 2,027,402; Jan. 14.
Weeks, Shirley S., Providence, R. I. Combustion control means. 2,027,923; Jan. 14.
Weeks, Richard B. (See Weeks, Francis H. and R. B.)
Weibel, Alexander R., Allegheny, assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Doubler. 2,027,718; Jan. 14.
Weinand, Klaus, and H. Kalckbrenner, Leverkusen I. G.-Werk, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Dyestuffs of the anthraquinone series. 2,027,888; Jan. 14.
Weir, Horace M., assignor to The Atlantic Refining Company, Philadelphia, Pa. Field contacting apparatus. 2,027,410; Jan. 14.
Weisbrod, Carl C., assignor to One Minute Washer Company, Newton, Iowa. Clutch structure. 2,027,659; Jan. 14.
Weismüller, Friedrich, Saarbrucken, Germany. Sylvicultural machine. 2,027,502; Jan. 14.
Weitzel, Edward L., Duluth, Minn. Internal combustion engine. 2,027,891; Jan. 14.
Wells, Harold D., Glens Falls, N. Y. Freeman detector. 2,027,660; Jan. 14.
Wells, Loren S., Great Neck, N. Y. Protective heating means for third rail electric railways. 2,027,942; Jan. 14.
Welter, Herman C., assignor to The Dawn Mfg. Corp., Rochester, N. Y. Copyholder. 2,027,949; Jan. 14.
Wernts, James H. (See Lauter, W. A., and Wernts.)
West Bend Aluminum Co. (See Kircher, Ralph W., assignor.)
Westin, Charles J., assignor to F. J. Stokes Machine Company, Philadelphia, Pa. Hermetic closure for collapsible tubes. 2,028,112; Jan. 14.
Westinghouse Electric & Manufacturing Company. (See Crabbe, Herbert J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Davis, Robert M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Suede, Lloyd, assignor.)
Wharton, Thomas B., Bridgeport, Conn., assignor to Remington Arms Company, Inc. Article storage and display stand. 2,027,790; Jan. 14.
Whelen, Myron S. (See Wuertz, A. J., and Whelen.)
Whipp, Wendell H. and C. A. Bickel, assignors to The Monarch Machine Tool Company, Sidney, Ohio. Lathe. 2,027,568; Jan. 14.
White, Charles F., Detroit, Mich. Automatic lighter and gas saver. 2,028,023; Jan. 14.
Whitehead, Richard H., New Haven, Conn. Closure cap. 2,027,509; Jan. 14.
Whitehead, Richard H., and W. H. Porter, assignors to The New Haven Clock Co., New Haven, Conn. Automatic starting device for synchronous motors. 2,027,944; Jan. 14.
Whitehouse, John N., New York, N. Y. Making coated rod-like articles. 2,028,063; Jan. 14.
Whitfield, Cleveland, and F. Georges, Albuquerque, N. Mex., Arch supporter. 2,027,757; Jan. 14.
Whitlock, Dana T., Lakewood, Ohio. Marine fender. 2,027,509; Jan. 14.
Whittaker, Lloyd E., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Lens mount. 2,027,412; Jan. 14.
Widell, Nils. (See Kiepl, W. G., and Widell.)
Widmer, Jules A., assignor to Taylor Instrument Companies, Rochester, N. Y. Recording device. 2,027,945; Jan. 14.
Wiegman, Clarence H. (See Hoffman, S. K., and Wiegman.)
Wight, Sedgwick N., assignor to General Railway Signal Company, Rochester, N. Y. Interlocking system for railroads. 2,027,568; Jan. 14.
Wild, Charles H., assignor to Burt Machine Company, Incorporated, Baltimore, Md. Carton filling machine. 2,027,946; Jan. 14.
Wilder, Harold K., assignor to Kellogg Company, Battle Creek, Mich. Treating coffee. 2,027,801; Jan. 14.
Williams, David M., Godwin, N. C. Gun. 2,027,893; Jan. 14.
Williams, David M., Godwin, N. C. Belt feeding means for guns. 2,027,896; Jan. 14.
Williams, Lawrence S., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,027,504; Jan. 14.
Wilson-Snyder Manufacturing Corporation. (See Shimer, John M., assignor.)
Wingfoot Corporation. (See Calvert, W. C., and Cramer, assignors.)
Wingfoot Corporation. (See Clifford, Albert M., assignor.)
Wingfoot Corporation. (See Lauter, Werner M., assignor.)
Wingfoot Corporation. (See Stata, W. C., Lammertse, and Gardner, assignors.)
Wingfoot Corporation. (See Teppema, Jan, assignor.)
Winkler, Carl J., assignor to Schwitzer-Cummins Company, Indianapolis, Ind. Bearing seal for rotary shafts. 2,027,508; Jan. 14.
Winthrop Chemical Company. (See Goth, Erich, assignor.)
Wiremold Company, The. (See Rutherford, Charles E., assignor.)
Wise, J. & Sons Co. (See Raub, Frederic H., assignor.)
Wittcoff, Edward, University City, assignor to Evr Klean Seat Pad Co., St. Louis, Mo. Seat cover. 2,027,947; Jan. 14.
Witter, Leon A., Cleveland, Ohio. Piston expander. 2,027,496; Jan. 14.
Wolcott, Frank E., West Hartford, Conn., assignor to The Silex Company. Coffee maker. 2,028,033; Jan. 14.
Wolf Machine Company. (See Meyer, Henry A., assignor.)
Wollner, Herbert J., Brooklyn, and J. V. Shim, Flushing, assignors to General Chemical Company, New York, N. Y. Adsorbent. 2,027,948; Jan. 14.
Wood, Andrew C., assignor to Vortex Cup Company, Chicago, Ill. Paper ice cream cup. 2,027,802; Jan. 14.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Ink fountain back. 2,027,950; Jan. 14.
Wood Newspaper Machinery Corporation. (See Isbell, J. A., and Ricards, assignors.)
Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)
Woodbridge, Joseph L., assignor to The Electric Storage Battery Co., Philadelphia, Pa. Nonspill vent plug. 2,028,112; Jan. 14.
Woods, F. Lourene, et al. (See Marotte, Maurice L., assignor.
Woodward, Raymond D., Summit, N. J. Drain cleaner. 2,027,661; Jan. 14.
Worcester, Stanley R., Phoenix, Ariz. Saddle tree. 2,027,551; Jan. 14.
Wuertz, Alexander J., Carrollville, and M. S. Whelen, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Benzanthrone thiabole and preparing the same. 2,028,114; Jan. 14.
Wuertz, Alexander J., Carrollville, and M. S. Whelen, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Dibenzanthrone-azole and preparing the same. 2,028,115; Jan. 14.
Wuertz, Alexander J., Carrollville, and M. S. Whelen, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Benzanthrone selenazole and preparing the same. 2,028,116; Jan. 14.
Wuertz, Alexander J., Carrollville, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of dyestuffs and intermediates of the dibenzanthrone series. 2,028,117; Jan. 14.
Wurlitzer Grand Piano Company. (See Fischer, Hermann, assignor.)
Yeadon, Robert, Spondon, near Derby, England, assignor to Celanese Corporation of America. Circular loom. 2,027,459; Jan. 14.

Yellin, Joseph, Brooklyn, N. Y., assignor to Radio Corporation of America. Image suppression arrangement. 2,027,940; Jan. 14.
Yonker, Malcolm F., assignor to Phillips Petroleum Company, Bartlesville, Okla. Natural gas conversion process. 2,027,460; Jan. 14.
Young, Charles A., Springfield, Ohio. Gun. 2,027,660; Jan. 14.
Young, Emil O., Cleveland, Ohio. Cap and lock device for tanks. 2,027,503; Jan. 14.
Young, Henry S. (See Allen, R. M., and Young.)
Young, Louis H. (See Knobel, M., and Young.)
Young, William M., Harrisburg, Pa. Electric fan. 2,027,662; Jan. 14.
Youngstown Steel Door Company, The. (See Beauchamp, Wilfred A., assignor.)
Youngstown Steel Door Company, The. (See Lute, Carl, assignor.)
Youngstown Steel Door Company, The. (See MacHaut, Thorvald, assignor.)
Youngstown Steel Door Company, The. (See Tobin, E. J., and MacHaut, assignors.)
Zahren, Carl, Arma, Kans. Bottle filling equipment. 2,028,067; Jan. 14.
Zahrta, Carl, Arma, assignor of one-half to J. Dobson, Franklin, Kans. Beverage dispensing device. 2,028,068; Jan. 14.
Zinser, William W., Chicago, Ill., assignor to The Columbia Mills, Inc., New York, N. Y. Venetian blind bottom rail bracket. 2,027,970; Jan. 14.
Zogler, Philipp, Zurich, Switzerland. Cycle. 2,027,733; Jan. 14.
Zuckerman, Adolph M., assignor to R. Hoe & Co., Inc., New York, N. Y., Irving Trust Company, permanent trustee. Web cutting mechanism for printing machines. 2,027,412; Jan. 14.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Antenna coupling system. L. A. Hazeltine. 19,823; Jan. 14.
Engler distillation apparatus, Automatic. J. R. Moore and G. W. Chenicek. 19,824; Jan. 14.
Fertiliser. E. Ober and E. H. Wright. 19,825; Jan. 14.
Molded container. P. L. Barber. 19,819; Jan. 14.
Paper, Multiple-ply. H. B. Fish. 19,821; Jan. 14.
Treated articles, Apparatus for handling. G. L. Cherry and L. F. Lamplough. 19,820; Jan. 14.
Wall structure, Metallic. R. F. Zimmerman, L. D. Mowery, and J. A. Bohannck. 19,822; Jan. 14.

LIST OF DESIGN INVENTIONS

Automobile top. H. R. Dunn. 98,151; Jan. 14.
Bag, Hand. I. Leading. 98,171; Jan. 14.
Blouse. M. F. De Witt. 98,149; Jan. 14.
Blouse. I. Geist. 98,156–7; Jan. 14.
Blouse. B. Hyman. 98,164; Jan. 14.
Boiler, Range. R. S. Rheem. 98,196; Jan. 14.
Bottle. C. Levine. 98,172–3; Jan. 14.
Bottle. F. McLaughlin. 98,178; Jan. 14.
Brassière. W. Rosenthal. 98,187; Jan. 14.
Buckle, Belt. J. P. Gordon. 98,160; Jan. 14.
Buckle or similar article. D. Cooper. 98,147; Jan. 14.
Candlestick. W. F. Liska. 98,174; Jan. 14.
Carpet underliner. A. L. Clements. 98,146; Jan. 14.
Casing, Humidifier. F. Manning. 98,175–6; Jan. 14.
Cruet, Bottle. E. Worthington. 98,200; Jan. 14.
Dress. A. Greenspan. 98,161; Jan. 14.
Flag or similar article. E. A. Stenham. 98,190; Jan. 14.
Flatiron, Electric. R. R. Patten. 98,181; Jan. 14.
Heater, Circulating. D. J. Howard. 98,163; Jan. 14.
Heater, Water. C. H. Morrow. 98,179; Jan. 14.
Lace. J. D. Wismer. 98,192–3; Jan. 14.
Lighter, Cigarette. E. M. Berthold. 98,136; Jan. 14.
Mirror or similar article, Hand. J. A. Despres. 98,148; Jan. 14.
Piano case. G. C. Kavanagh. 98,170; Jan. 14.
Pillow slip or similar article. J. L. Freund. 98,158–9; Jan. 14.
Plate or similar article. Y. Bama. 98,140–4; Jan. 14.
Radiocabinet. M. C. Pumpaery. 98,185; Jan. 14.
Ring or similar article, Finger. E. H. Marcus and B. Strikowsky. 98,177; Jan. 14.
Sadiron. I. Jepson. 98,167; Jan. 14.
Sadiron cover. I. Jepson. 98,166; Jan. 14.
Sadiron handle. I. Jepson. 98,165; Jan. 14.
Sadiron handle support. I. Jepson. 98,168–9; Jan. 14.
Set of playing cards. E. Busch. 98,145; Jan. 14.
Settee. S. Bevelacqua. 98,137; Jan. 14.
Shoe. J. Abowitz. 98,134; Jan. 14.
Shoe. M. Cohen. 98,201; Jan. 14.
Shoe. S. Epstein. 98,152; Jan. 14.
Shoe. H. Goldberg. 98,205; Jan. 14.
Shoe. M. S. Goldman. 98,202–4; Jan. 14.
Shoe. A. Gordon. 98,159; Jan. 14.
Shoe. E. A. Rainey. 98,184; Jan. 14.
Shoe. J. F. Rosenthal. 98,183; Jan. 14.
Shoe. C. Wolfelt. 98,199; Jan. 14.
Shoe or similar article. S. T. Drake. 98,150; Jan. 14.
Shoe or similar article. J. A. Goldberg. 98,155; Jan. 14.
Shoe or similar article. C. C. Hirshman. 98,162; Jan. 14.
Shoe or similar article. S. Troy. 98,191; Jan. 14.
Shoe tree. J. B. Mutch. 98,180; Jan. 14.
Show case. F. L. Pollard. 98,206; Jan. 14.
Spoon or similar article. H. M. Ballou and C. A. Joslin. 98,135; Jan. 14.
Stove, Gasoline cook. G. E. Pickup. 98,182; Jan. 14.
Strap, Wrist watch. A. H. Bauer, Jr. 98,130; Jan. 14.
Table. S. Bevelacqua. 98,138; Jan. 14.
Telescope, Binocular. M. Reynolds. 98,125; Jan. 14.
Watch bracelet. M. J. Bruner. 98,139; Jan. 14.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorption or adsorption cold machine, Discontinuous. S. Lindeberg. 2,027,693; Jan. 14.
Acid, Manufacture of glycollic. E. F. Grether and R. R. DuVall. 2,028,064; Jan. 14.
Acid, System for manufacture of nitric. F. W. de Jahn. 2,027,578; Jan. 14.
Addressing machine. W. W. Laster. 2,027,916; Jan. 14.
Adhesive tape. E. L. Kallander and G. R. Alden. 2,027,426; Jan. 14.
Adsorbent. H. J. Wollner and J. V. Shinn. 2,027,948; Jan. 14.
Advertising display. G. Mabrey. 2,027,690; Jan. 14.
Advertising mechanism. F. H. Jensen. 2,027,961; Jan. 14.
Air and water to the cylinders of an internal combustion engine, Device for admitting. A. E. Dearing and W. B. Parker. 2,027,813; Jan. 14.
Air brake. C. A. Campbell. 2,027,468; Jan. 14.
Air brake. C. A. Campbell and P. Dodge. 2,027,469; Jan. 14.
Air circulating mechanism for refrigerated cases. H. J. and J. J. Hanlon. 2,027,974; Jan. 14.
Air cleaner. R. E. DeBolt. 2,027,896; Jan. 14.
Air filter. L. Hand. 2,027,906; Jan. 14.
Air heating device. P. J. Tully and E. B. Jackson. 2,028,095; Jan. 14.
Alcohols to acids, Converting. W. J. Hale. 2,027,378; Jan. 14.
Aldehydes to acids, Converting. W. J. Hale. 2,027,377; Jan. 14.
Aldols, Preparing substituted. K. Billig. 2,027,856; Jan. 14.
Alkali dichromate, Manufacture of. B. Harbester and A. Benther. 2,027,477; Jan. 14.
Alloys, Making. W. C. Read. 2,027,837; Jan. 14.
Amines, Preparing secondary aromatic. W. M. Lauter. 2,028,074; Jan. 14.
Aminophenols, Production of N-substituted. M. A. Dahlen. 2,027,802; Jan. 14.
Anchor, Pump. J. N. Martin. 2,027,783; Jan. 14.
Angular adjustments and measurements, Means for use in making. C. C. Allan. 2,028,034; Jan. 14.
Annealing furnace, Bell type. A. N. Otis. 2,028,100; Jan. 14.
Antenna, Vertical mast wave. R. L. Jenner. 2,027,725; Jan. 14.
Antivibrator attachment for road machinery. J. C. Coose. 2,027,677; Jan. 14.
Apparatus for continuous machining of work-pieces and particularly in housings for axial bearings of rear vehicles. W. Peyinghaus. 2,028,008; Jan. 14.
Aqueous dispersion. J. M. Fain. 2,027,582; Jan. 14.
Arch supporter. C. Whitfield and F. Georges. 2,027,757; Jan. 14.
Article comprising plastic compositions and making the same. L. M. Currie. 2,027,961; Jan. 14.
Article storage and display stand. T. E. Wharton. 2,027,790; Jan. 14.
Articles from plastic compositions, Production of. L. M. Currie. 2,027,962; Jan. 14.
Articulated display. A. M. Joralemon and A. W. Vaughan. 2,027,586; Jan. 14.
Anthelmintic. W. P. Kinsella and P. Caldwell. 2,027,967; Jan. 14.
Azo-dyestuff, Blue. G. Bonbôte. 2,027,764; Jan. 14.
Azo-dyestuff. G. Bonbôte. 2,027,897; Jan. 14.
Axle, Trussed trailer. C. T. Hutchens and V. V. Anderson. 2,028,127; Jan. 14.
Bag: *See*—
Hand bag.
Bag forming machine. D. Schmidt. 2,027,654; Jan. 14.
Bag making and filling machine. E. G. Jurgens and H. K. Becker. 2,027,434; Jan. 14.
Bags, Manufacture of cellophane. W. R. Howard. 2,027,643; Jan. 14.
Ball retriever. I. MacDonald. 2,027,546; Jan. 14.
Band construction for hats, Nonpervious sweat. A. C. Cason. 2,027,471; Jan. 14.
Bar: *See*—
Grate-bar. Tone bar.
Battery light. H. T. Kingsbury. 2,027,912; Jan. 14.
Battery terminal. T. H. McGrath. 2,027,646; Jan. 14.
Beam. F. Mossberg and E. V. Olson. 2,027,749; Jan. 14.
Beam with adjustable head. F. Mossberg. 2,027,748; Jan. 14.
Bearing. R. R. Ridgway and B. L. Bailey. 2,027,788; Jan. 14.
Bearing and forming same, Self-lubricating, self-aligning. N. Skillman. 2,027,560; Jan. 14.
Belt for roller presses, Filter. A. W. Lissauer. 2,027,542; Jan. 14.

Benzanthrone, Manufacture and preparing the same. A. J. Weerts and M. S. Whelan. 2,028,114; Jan. 14.
Benzathrone thiazole and preparing the same. A. J. Weerts and M. S. Whelan. 2,028,114; Jan. 14.
Beverage cooling device. J. Aslin. 2,027,665; Jan. 14.
Beverage dispensing device. C. Zafuta. 2,028,090; Jan. 14.
Bin conveyor. H. G. Carter. 2,027,059; Jan. 14.
Binder, Method and machine for twine. M. Kimbel and L. H. Young. 2,027,595; Jan. 14.
Blind bottom rail bracket, Venetian. W. W. Higgs. 2,027,670; Jan. 14.
Board: *See*—
Piano sounding board.
Bobbin for automatic weft supply, Weft. R. Egli and E. Schoch. 2,027,769; Jan. 14.
Bodies, Sticking. E. L. Kallander and G. R. Alden. 2,027,425; Jan. 14.
Bodies toward and away from each other, System for moving. A. Krämmer. 2,027,236; Jan. 14.
Body for vehicles, Demountable. H. H. Linn. 2,027,269; Jan. 14.
Boiler: *See*—
Ham-boiler. Steam boiler.
Boiler tube cleaning construction. C. S. Turner. 2,027,495; Jan. 14.

Flash-light display rack.
Rack. E. B. Norwood. 2,027,928; Jan. 14.
Radio apparatus. A. R. Knight. 2,027,529; Jan. 14.
Radio receiving apparatus. J. W. Alexander. 2,027,981; Jan. 14.
Rail and flange fabrication, H. E. Hotz. 2,027,414; Jan. 14.
Rails, Apparatus for bending. F. P. Piper. 2,027,815; Jan. 14.
Recorder for centralized traffic controlling systems. C. E. Bushnell. 2,027,712; Jan. 14.
Recording device. J. A. Widmer. 2,027,843; Jan. 14.
Reenforce for gaskets. J. R. Icke and W. A. Helm. 2,027,847; Jan. 14.
Refrigeration. E. M. Blickstrom. 2,027,761; Jan. 14.
Refrigeration. W. G. Kligl and N. Widell. 2,027,779; Jan. 14.
Refrigeration, Absorption. R. S. Nelson. 2,027,927; Jan. 14.
Refrigeration apparatus. L. S. Chadwick. 2,027,631; Jan. 14.
Refrigerator structure. E. C. Pierce. 2,027,875; Jan. 14.
Relay, Detachable. J. F. Martel. 2,027,743; Jan. 14.
Remote control system. D. G. Taylor. 2,028,110; Jan. 14.
Resinous products, Preparing odorless synthetic. G. F. Landt. 2,027,960; Jan. 14.
Roasting and drying machine. W. Abcarn and L. Hamlen. 2,027,894; Jan. 14.
Reversible shaded pole motor. C. H. Suits. 2,027,849; Jan. 14.
Ride front sight, Full view. O. R. Fowling. 2,028,065; Jan. 14.
Road joint mechanism with void forming unit. R. E. Robertson. 2,027,553; Jan. 14.
Road reconditioning machine. B. H. Flynn. 2,027,865; Jan. 14.
Roadway machine. M. D. Bowen. 2,027,628–30; Jan. 14.
Rod-like articles, Making coated. J. M. Whitehead. 2,028,063; Jan. 14.
Roll packager. C. F. Hawker. 2,027,890; Jan. 14.
Rolled articles, Packaging. C. F. Hawker. 2,027,891; Jan. 14.
Rolling machine. J. and G. Stein. 2,027,564; Jan. 14.
Rolls, Apparatus for cleaning. G. von Wobern. 2,027,497; Jan. 14.
Rolls, Mechanism for unwinding web. G. W. Swift, Jr. 2,027,790; Jan. 14.
Roof covering. H. T. Nichols. 2,028,004; Jan. 14.
Root cutter for sewer pipes. G. J. Christian. 2,027,683; Jan. 14.
Root harvesting machine. O. Hendel. 2,027,479; Jan. 14.
Rubber for the manufacture of paints, varnishes, and the like, and for insulating purposes, Dissolving. J. E. Hemhaven. 2,028,066; Jan. 14.
Rubber, Vulcanization of. W. C. Calvert and E. L. Cramer. 2,028,096; Jan. 14.
Rugs, Apparatus for fashioning. C. F. Bowker, R. E. Herr, and F. G. Rottmund. 2,027,379; Jan. 14.
Saddle tree. S. E. Worcester. 2,027,951; Jan. 14.
Safety device for protecting motor car against fire after collision. D. Stokes. 2,027,108; Jan. 14.
Safety hook. H. B. Gray. 2,027,876; Jan. 14.
Safety razor handle. J. D. Raymond. 2,028,011; Jan. 14.
Sagging of garage doors, Device for preventing the. J. Kunz. 2,027,531; Jan. 14.
Scale, Weighing. L. S. Williams. 2,027,864; Jan. 14.
Scooter. W. H. Larkin. 2,027,535; Jan. 14.
Scooter. E. E. Schaad. 2,027,629; Jan. 14.
Scoring and punching device for loose leaf covers. E. D. Lisle. 2,027,444; Jan. 14.
Scraper agitator, Center bin. G. H. Tay. 2,027,795; Jan. 14.
Screen: *See*—
Wind screen.
Screen separator. G. H. Fraser. 2,027,875; Jan. 14.
Screws and bolts, Manufacture of. W. M. Phelps. 2,027,909; Jan. 14.
Seal. H. R. De Lain. 2,027,815; Jan. 14.
Seal for rotary shafts, Rotating. C. J. Wiskus. 2,027,995; Jan. 14.
Seals, Packing. Sold. W. A. Lesley. 2,027,826; Jan. 14.
Seat cover. M. Witteck. 2,027,847; Jan. 14.
Separable fastener. E. O. Seaver. 2,027,708; Jan. 14.
Separator: *See*—
Screen separator.
Sewage, Apparatus for treating. F. S. Currie. 2,027,579; Jan. 14.
Sewing machine. M. McCann. 2,027,742; Jan. 14.
Sewing machine. H. C. Spence. 2,028,005; Jan. 14.
Sewing machine. C. W. Schweigert. 2,028,015; Jan. 14.
Sewing machine material guide. A. Colbert. 2,027,472; Jan. 14.
Sewing machines, Tufting attachment for. W. E. Schandel. 2,027,434; Jan. 14.
Sheet holder. J. Bayer. 2,027,625; Jan. 14.
Shield, Glare. R. C. Jacobs. 2,027,532; Jan. 14.
Shipping container. O. M. Babcock. 2,027,804; Jan. 14.
Shipping container. W. H. Smith. 2,027,861; Jan. 14.
Shirt. S. Heymann. 2,027,641; Jan. 14.
Shirt suspensory. O. Stam. 2,027,622; Jan. 14.
Shock absorbing mechanism, Friction. W. M. Asseta. 2,027,623; Jan. 14.
Shoe. J. W. Barney and A. Bartoshi. 2,027,953; Jan. 14.
Shoe. P. G. Flint. 2,028,084; Jan. 14.
Shoe. C. L. Kalbe. 2,027,727; Jan. 14.
Shoe counter. C. A. Thurston. 2,028,111; Jan. 14.
Shoe. E. L. Shultz. 2,027,557; Jan. 14.
Shoe jack. P. Ribar. 2,027,709; Jan. 14.
Shoe shanks, Bending. A. D. Bach. 2,027,716; Jan. 14.
Shoe uppers, Method of and apparatus for marking. C. F. Eaton. 2,027,697; Jan. 14.
Shovel, Automatic shaker. R. Gibson. 2,027,825; Jan. 14.
Shutter mechanism for motion picture projectors. I. Diebel. 2,027,529; Jan. 14.
Sign display frame. L. J. Schneider. 2,027,790; Jan. 14.
Signal indicator for railroad vehicles. J. A. C. King. 2,027,985; Jan. 14.
Signaling, Sheet wave. H. E. Lindenblad. 2,027,919; Jan. 14.
Silencer for flush valves. J. Fried. 2,028,126; Jan. 14.
Silica on material, Depositing. A. B. Ray. 2,027,961; Jan. 14.
Silk and like products, Production of artificial. R. P. Roberts and R. B. Johnson. 2,027,450; Jan. 14.
Silk by the stretch spinning process, Production of artificial. G. Baumidel and H. Knobe. 2,027,895; Jan. 14.
Sink, Shelf-back. V. H. Schmiedeknecht. 2,027,707; Jan. 14.
Slab filler. F. T. Kreis. 2,027,830; Jan. 14.
Slipper, Burial. J. W. McCamish. 2,027,647; Jan. 14.
Sludge removing apparatus. S. Shafer, Jr. 2,028,064; Jan. 14.
Soaps, Manufacturing. W. Schrauth. 2,027,986; Jan. 14.
Socket device. A. Ploger. 2,028,010; Jan. 14.
Socket, Radio tube. J. F. Anderson. 2,028,035; Jan. 14.
Sockets, Making wrench. M. F. McNaught. 2,027,923; Jan. 14.
Sound reproducer. E. W. Franck. 2,027,737; Jan. 14.
Spar structure. W. L. Sutton. 2,027,711; Jan. 14.
Speedometer, Pointer type. R. C. Holgsby. 2,027,589; Jan. 14.
Spray, Insecticidal. I. Stone. 2,028,100; Jan. 14.
Spring clutch. W. C. Starkey. 2,027,794; Jan. 14.
Sprinkler, Loom. H. W. Webb. 2,027,567; Jan. 14.
Square and slide rule, Combination. J. I. Easterly. 2,028,052; Jan. 14.
Stabilizing device for picker sticks. E. Huggins. 2,027,601; Jan. 14.
Stand: *See*—
Article storage and display stand. Pencil stand.
Starter, Engine. C. Cunnius. 2,027,860; Jan. 14.
Starting device for synchronous motors, Automatic. E. H. Whitehead and W. E. Porter. 2,027,944; Jan. 14.
Steam boiler. J. W. Armour. 2,028,036; Jan. 14.
Steam engine, Twin cylinder. J. M. Shimer. 2,027,843; Jan. 14.
Steam generator of the water tube type. A. Lieberherr. 2,027,443; Jan. 14.
Steam heating system. F. I. Raymond. 2,027,881; Jan. 14.
Steam to the radiators of steam heating systems, Supplying. F. I. Raymond. 2,027,880; Jan. 14.
Steel making slags, Treating. A. E. Kinzel. 2,027,848; Jan. 14.
Stereotype matrices, Method and apparatus for preparing. H. Fankboner. 2,027,524; Jan. 14.
Stiffening material. E. H. Cameron. 2,027,967; Jan. 14.
Stiffening material. J. Fauste. 2,027,968; Jan. 14.
Stiffening material. E. Hamilton. 2,027,978; Jan. 14.
Stitching mechanism, Zigzag. C. C. Smith. 2,027,887; Jan. 14.
Stoker, Mechanical. J. A. Hoffman. 2,027,801; Jan. 14.
Stove and heater, Fireplace. E. L. Davison and E. V. Ludwig. 2,028,069; Jan. 14.
Strip and support, Center. W. C. Burrell. 2,027,816; Jan. 14.
Striping tool. F. E. Howel. 2,027,774; Jan. 14.
Stud bolt wrench. C. E. Ingersoll. 2,027,534; Jan. 14.
Substructure for oil well derricks. S. H. Bottle and H. A. Johnson. 2,028,019; Jan. 14.
Suction cleaner. W. A. Frantz. 2,028,090; Jan. 14.
Suction cleaner. C. H. Taylor. 2,027,988; Jan. 14.
Sugar cane juices, Clarifying. F. E. Fortier. 2,027,422; Jan. 14.
Sulphates of high molecular weight, Production of alkyl. H. Bertsch. 2,027,896; Jan. 14.
Superheterodyne receiver. R. I. Kinzer. 2,027,868; Jan. 14.
Supporter: *See*—
Arch supporter.
Supporting and locking means for printing interpreters, H. P. Miner. 2,027,923; Jan. 14.
Suspension device. A. Dubonnet. 2,027,966; Jan. 14.
Suspension system, Automatic. H. M. Crane. 2,027,577; Jan. 14.
Sweeper, Vacuum. M. L. Marotte. 2,027,602; Jan. 14.
Switch: *See*—
Electric switch. Vacuum switch.
Hygroscopic control switch
Switch and fabricating the same, Vacuum. W. K. Rankin and C. D. Hayward. 2,027,838; Jan. 14.
Switch for electric lamp sockets, Electric. T. Finizie and G. H. Mivoll. 2,027,583; Jan. 14.
Switch operating apparatus, Railway. H. L. Bone. 2,027,512; Jan. 14.
Sylviculture machine. F. Welsmüller. 2,027,502; Jan. 14.
Synchronizing device for machine guns on aircraft. J. Neal. 2,027,755; Jan. 14.
Table: *See*—
Collapsible bridge table. Folding table.
Tabulating device. E. C. Stickney. 2,027,565; Jan. 14.
Tag marking machine, Power driven. F. W. Laescher. 2,027,736; Jan. 14.
Tamping apparatus. N. D. Levin and E. F. Muller. 2,027,991; Jan. 14.
Tap, Collapsible. F. Nell. 2,028,075; Jan. 14.
Tap washer. H. Cohen. 2,027,869; Jan. 14.
Tar and bituminous schist oils with recovery of by-products, Cracking. L. Boulanger and F. Emsens. 2,027,464; Jan. 14.
Teakettle, Electric. E. H. Kircher. 2,027,537; Jan. 14.
Telephone set. H. F. Obergfell. 2,027,549; Jan. 14.
Telephone system. H. M. Bascom and O. A. Friend. 2,027,483; Jan. 14.
Telephone system. E. M. Braselton. 2,027,465; Jan. 14.
Temperature control apparatus. L. Smede. 2,027,405; Jan. 14.
Tent, Automobile dressing beach. R. V. Rideout. 2,027,561; Jan. 14.
Tent, Collapsible shade. B. E. Kapp. 2,027,964; Jan. 14.
Terminal end for coiled springs. A. H. Floreth. 2,028,122; Jan. 14.
Testing apparatus. A. Y. Dodge and R. J. Stair. 2,027,580; Jan. 14.
Therapeutic agent. H. S. Diehl. 2,027,722; Jan. 14.
Thermostatic valve. E. J. TePas. 2,027,458; Jan. 14.
Thiazole compounds, Preparation of. E. E. Beard and W. L. Rintelman. 2,028,118; Jan. 14.
Thread, Conditioning artificial. H. Hofmann. 2,027,911; Jan. 14.
Threads, filaments, ribbons, and the like, Production of artificial. H. Drayfus. 2,027,419; Jan. 14.
Tire, Vehicle. A. H. Nellen. 2,028,006; Jan. 14.
Tire building apparatus. W. C. State, M. Lammertse, and C. R. Gardner. 2,028,078; Jan. 14.
Tire changing machines, Attachment for. H. J. Bernhard. 2,027,626; Jan. 14.
Tire combination rail and highway unit, Pneumatic. W. B. Fageol. 2,027,684; Jan. 14.
Tire grooving machine. R. N. Pendleton and R. H. Hodge. 2,027,490; Jan. 14.
Titanium oxalate, Preparing basic. B. F. W. Crundall. 2,027,812; Jan. 14.
Tone bar. C. T. Schrickel. 2,027,987; Jan. 14.
Tool: *See*—
Cultivating tool. Striping tool.
Furrier's cutting tool.
Tool support for turret lathes, Supplementary. M. S. Curtis. 2,027,901; Jan. 14.
Toothbrush. S. Braunstein. 2,028,042; Jan. 14.
Tooth brush receptacle, Sterilizing. M. T. Hanke. 2,027,428; Jan. 14.
Tooth extracting implement, Dentist's. S. T. Caruso. 2,027,476; Jan. 14.
Torque transmitting mechanism. S. P. Watt. 2,027,798; Jan. 14.
Toy, Figure. F. Anderson. 2,027,759; Jan. 14.
Traffic controlling apparatus, Railway. E. M. Allen and H. S. Young. 2,027,715; Jan. 14.
Trailer hitch connection. A. M. Allan. 2,027,852; Jan. 14.
Transformer, Electric. C. H. Howard and C. D. Miller. 2,027,503; Jan. 14.
Transmission. E. Lapsley. 2,027,442; Jan. 14.
Tray, Flexible metal freezing. H. D. Geyer. 2,028,059; Jan. 14.
Tray, Ice. A. C. Smith. 2,027,754; Jan. 14.
Tray, Refrigeration ice. A. B. Cole. 2,028,047; Jan. 14.
Trays or the like, Making plywood. C. B. Norris. 2,028,076; Jan. 14.
Tripping device, Emergency. D. F. Warner. 2,027,848; Jan. 14.
Trolley car. S. S. Matthes. 2,027,604; Jan. 14.
Truck, Ice handling. C. A. Smith. 2,028,023; Jan. 14.

Truck. J. A. Lamont. 2,027,539; Jan. 14.
Tube base and socket. J. Hirmann. 2,027,790; Jan. 14.
Tube closing and clip attaching machine, Automatic. F. J. Stokes. 2,027,792; Jan. 14.
Tube splicer. W. J. Broth and M. Hagler. 2,027,554; Jan. 14.
Tube welding machine. D. C. McGuire. 2,027,607; Jan. 14.
Two-color ribbon machine. C. W. Burtty. 2,027,515; Jan. 14.
Typewriting machine. H. A. Avery. 2,027,508-9; Jan. 14.
Undergarment. A. M. Reis. 2,027,987; Jan. 14.
Unitary wire connector. J. Blackburn. 2,027,415; Jan. 14.
Vacuum breaker valve. K. A. Fredrickson. 2,028,101; Jan. 14.
Vacuum switch. W. K. Rankin and C. D. Hayward. 2,027,826; Jan. 14.
Valve: *See*—
Automatic release valve. Countertalancing valve.
Bottle filling valve. Thermostatic valve.
Breather valve. Vacuum breaker valve.
Check valve.
Valve. F. N. Becker. 2,027,762; Jan. 14.
Valve. J. B. Hoff. 2,027,978; Jan. 14.
Valve. W. D. La Mont. 2,028,096; Jan. 14.
Valve assembly, Collector main. C. V. McIntire. 2,027,548; Jan. 14.
Valve operating mechanism. W. B. Atchisson. 2,027,363; Jan. 14.
Vehicle body and hoist structure. C. G. Eisenberg, Jr. 2,027,421; Jan. 14.
Vehicle coupling, Flexible and resilient. L. B. Lobbers. 2,027,990; Jan. 14.
Vehicle driver's permit and registration card holder, Motor. J. Chachie. 2,027,676; Jan. 14.
Vehicle heating and cooling system, Motor. B. C. Horton. 2,028,089; Jan. 14.
Vehicle, Spring-supported. R. D. Kneale. 2,027,918; Jan. 14.
Vending device. E. P. Hirst. 2,027,432; Jan. 14.
Vent plug, Nonspill. J. L. Woodbridge. 2,028,113; Jan. 14.
Ventilated buffing wheel. B. W. Hall. 2,027,868; Jan. 14.
Ventilator. W. J. Montgomery. 2,027,647; Jan. 14.
Ventilator. W. J. Montgomery. 2,027,745; Jan. 14.
Vertical double action pump. D. Heftye. 2,028,007; Jan. 14.
Wagon, Coaster. J. B. Eck. 2,027,522; Jan. 14.
Wall structure. W. J. Thilborger. 2,027,493; Jan. 14.
Washer: *See*—
Tap washer.
Water, Apparatus for the purification of. P. R. Giraud. 2,027,476; Jan. 14.
Water cooling apparatus for engines. E. W. Shull. 2,027,880; Jan. 14.
Water closet. J. M. Trahan. 2,028,027; Jan. 14.
Water from vaporous mixtures containing aliphatic anhydrides, Removing. H. Dreyfus. 2,027,439; Jan. 14.
Water purifying mechanism. J. B. Wallace. 2,027,561; Jan. 14.
Water reclaimer. V. P. McVoy. 2,027,895; Jan. 14.
Wave motor. H. A. Franklin. 2,028,056; Jan. 14.
Web cutting mechanism for printing machines. A. M. Zuckerman. 2,027,412; Jan. 14.
Web roll tensioning device. J. A. Isbell and C. L. Ricata. 2,027,600; Jan. 14.
Weed puller. E. T. Hardy. 2,027,778; Jan. 14.
Well drilling apparatus, Rotary. A. E. Johnson. 2,027,724; Jan. 14.
Well-point. T. P. Moore. 2,027,896; Jan. 14.
Wheel: *See*—
Buffing wheel. Vehicle wheel.
Metal wheel. Ventilated buffing wheel.
Pneumatic railway wheel.
Wheel and making the same, Resilient. H. F. Schippel. 2,028,015; Jan. 14.
Wheel and tire lock, Vehicle. J. H. Gray. 2,027,723; Jan. 14.
Wheel and tire, Railway vehicle. J. Ledwinka. 2,027,759; Jan. 14.
Wheel rim. H. J. van Rooyen. 2,028,020; Jan. 14.
Wicket. H. Sklar. 2,028,106; Jan. 14.
Wind angle indicator. A. E. Pierce, Jr. 2,027,613; Jan. 14.
Wind screen. C. P. Carletti. 2,027,730; Jan. 14.
Window. D. A. Boligman. 2,027,556; Jan. 14.
Window sash fastener. C. V. Bumb. 2,027,514; Jan. 14.
Window, Sashless sliding. F. McM. Sawyer. 2,027,718; Jan. 14.
Windshield cleaning device. G. A. Barker. 2,027,505; Jan. 14.
Wiper for adhesive-applying implements. D. E. Anderson. 2,027,461; Jan. 14.
Wiper, Windshield. J. W. Andersen and T. J. Sawhill. 2,027,582; Jan. 14.
Wiping blade, Windshield. L. R. Godown. 2,027,572; Jan. 14.
Wire drawing die. H. R. Ridgway and R. L. Doby. 2,027,787; Jan. 14.
Wire or the like, Means for binding. H. W. Morris. 2,027,746; Jan. 14.
Wire screen cloth, Woven. J. H. Holtzapple. 2,027,775; Jan. 14.
Wood pulp adapted for chemical use. E. L. Stern. 2,028,060; Jan. 14.
Wrench: *See*—
Stud bolt wrench.
Zinc sulphide, Manufacture of. S. Kremen. 2,027,440; Jan. 14.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 14, 1936

NOTE.—First number—class, second number—subclass, third number—patent number

1— 47: 2,027,514
2— 109: 2,027,641
178: 2,027,898
181: 2,027,471
224: 2,027,982
4— 13: 2,028,027
70: 2,028,101
187: 2,027,707
211: 2,027,371
266: 2,027,661
10— 27: 2,027,989
145: 2,028,075
12— 42: 2,027,716
62: 2,027,445
123: 2,027,722
142: 2,027,727
146: 2,027,957
2,027,958
2,027,973
13— 23: 2,027,736
26: 2,027,905
15— 4: 2,027,407
8: 2,028,000
14: 2,027,908
15: 2,027,692
104.30: 2,027,533
119: 2,028,035
129: 2,028,042
155: 2,027,544
2,027,702
157: 2,027,543

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 462—No. 3 TUESDAY, JANUARY 21, 1936 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $10.00 per annum, including annual index, $12.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(C. C. A. N. Y.) Kettering patent, No. 1,272,058, for ignition system, claims 5, 11, 12, and 28 to 30 *Held* not contributorily infringed. *General Motors Corporation* v. *Preferred Electric & Wire Corporation*, 79 F.(2d) 621.

(C. C. A. N. Y.) Ratcliff patent, No. 1,808,165, for circuit-breaker, claims 3, 6 to 9, and 12 *Held* not contributorily infringed and claims 6, 9, and 12 *Held* invalid. *Id.*

(C. C. A. N. Y.) De Forest patent, No. 1,507,016, for radiosignaling system, claims 24 to 28 *Held* not infringed. *Radio Corporation of America* v. *Andrea*, 79 F.(2d) 626.

(C. C. A. N. Y.) De Forest patent, No. 1,507,017, for wireless telegraph and telephone system, claims 15 and 17 to 21 *Held* not infringed. *Id.*

(C. C. A. N. Y.) Berkdoll patent, No. 1,556,901, for ignition device, claims 1 to 4 *Held* invalid. *General Motors Corporation* v. *Preferred Electric & Wire Corporation*, 79 F.(2d) 621.

(C. C. A. N. Y.) Kroeger patent, No. 1,567,207, for ignition apparatus, claim 3 *Held* invalid. *Id.*

(C. C. A. N. Y.) Kroeger patent, No. 1,593,329, for ignition apparatus, claim 1 *Held* invalid and not contributorily infringed. *Id.*

(C. C. A. Del.) Miller patent, No. 1,756,000, for piezo-electric oscillation generator, *Held* invalid. *Miller* v. *National Broadcasting Co.*, 79 F.(2d) 637.

(C. C. A. Wis.) Woolery patent, No. 1,807,367, for railway belt tightener, claims 1, 2, 8, 10, 14, 16, and 22 *Held* valid and infringed. *Nordberg Mfg. Co.* v. *Woolery Mach. Co.*, 79 F.(2d) 635.

(C. C. A. N. Y.) Pollak and Ostersetzer patent, No. 1,854,600, for condensation product and method of making same, claims 1 to 3, and 5 *Held* valid and infringed. *Catalin Corporation of America* v. *Catalinault Mfg. Co.*, 79 F.(2d) 583.

(C. C. A. N. Y.) Kindl reissue patent, No. 18,276, for ignition timer, claims 1 to 4 *Held* not contributorily infringed. *General Motors Corporation* v. *Preferred Electric & Wire Corporation*, 79 F.(2d) 621.

Trade-Mark Registrations Canceled

96,822. Beer. Conrad Seipp Brewing Company, Chicago, Ill. Registered August 4, 1914. Canceled December 28, 1935.

208,018. Canned corn. The Witman-Schwarz Corp., Harrisburg, Pa. Registered September 8, 1925. Canceled December 20, 1935.

218,001. Stomach or indigestion tablets. Harry Le Roy Miller, Washington, Pa. Registered September 14, 1926. Canceled December 20, 1935.

230,190. Sugar-cane food syrup. Meeker Sugar Refining Company, Chicago, Ill., and Meeker, La. Registered December 4, 1928. Canceled December 20, 1935.

232,191. Fresh citrus fruits. San Dimas Foothill Association, Ltd., San Dimas, Calif. Registered April 12, 1932. Canceled December 28, 1935.

232,192. Fresh citrus fruits. San Dimas Foothill Association, Ltd., San Dimas, Calif. Registered April 12, 1932. Canceled December 28, 1935.

307,721. Ice cream cones and frozen confections sold in cups. Hydrox Corporation, Chicago, Ill. Registered October 31, 1933. Canceled December 20, 1935.

Communications to the Patent Office

RULE 8. A separate letter should in every case be written in relation to each distinct subject of inquiry or application. Assignments for record, final fees, and orders for copies or abstracts must be sent to the Office in separate letters.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE CARLSON AND STITT

No. 1,822. Decided November 21, 1938

1. AFFIDAVIT UNDER RULE 75 BY ONE OF JOINT APPLICANTS.
   The fact that an affidavit under Rule 75 is signed by only one of two joint applicants, *Held* not to prevent its use under this rule where a suitable excuse has been given for the failure of the other applicant to sign.

2. SAME—REDUCTION TO PRACTICE NOT ESTABLISHED BY MAKING OF PARTS WITHOUT ASSEMBLAGE HERE.
   Affidavit under rule 75 to the effect that one of the joint applicants for patent on a design made one part thereof and the other joint applicant made the remainder thereof *Held* insufficient to establish reduction to practice of the design, where there is nothing in the affidavit which states or even suggests that they combined their conceptions before the date of filing their application.

3. DESIGN—CLOCK CASE.
   Claim for design for a clock case *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Clarence M. Fisher and *Mr. W. B. Morton* for Carlson and Stitt.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

The appellants applied to the United States Patent Office for a patent on a design for a clock case, on March 14, 1933. The drawing discloses a unitary design of a base and round bodied clock case, the case being surmounted by a small knob-shaped projection. The novel features particularly relied on are the elongated rectangular base, and a clock face consisting of a convex projecting glass, surrounded by a band conforming with the general curve of the glass, and which front band or support for the glass extends slightly beyond the sides of the clock.

The Primary Examiner rejected the claim and cited several references, as follows: Item 46-F-1119, page 271, catalog No. 112, Montgomery Ward & Company, year 1930. (Design) Sessions, 75,078, May 1, 1928. (Design) Whitehead, 77,848, Dec. 25, 1928. (Design) Morgan, 19,869, June 3, 1890. Also (Design) Carlson 80,169, Feb. 7, 1933, is cited under the authority of *Ex parte Mosey*, 1931, C. D. 115.

Following the decision of the Examiner, and an appeal to the Board, an affidavit under rule 75, Rules of Practice, United States Patent Office, was filed with the purpose of overcoming the Montgomery Ward & Company catalog reference. This affidavit is as follows:

STATE OF CONNECTICUT,
County of Hartford, Bristol, ss:

Elof L. Carlson, being duly sworn, deposes and says that he is one of the applicants who filed the above-entitled application and that he is the same Elof L. Carlson who, on August 21, 1930, filed a design application for a Clock Case, which application was given Serial No. D-56723;

That the clock case forming the subject matter of his sole application, Serial No. D-56723, and which is the case shown in the present application, was reduced to practice in this country prior to January 15, 1930, the date on which the Montgomery Ward Catalog No. 112 was issued;

That the clock case attached hereto and identified as "Exhibit A" was one of the clock cases produced in accordance with his invention prior to January 15, 1930;

That he does not know and does not believe that the clock case shown in this application and in his prior application, Serial No. D-56723, has been in public use or on sale in this country or patented or described in a printed publication in this or any foreign country for more than two years prior to the filing of his aforesaid application, Serial No. D-56723, and that he has never abandoned the invention;

That when the design for the clock case attached hereto was invented and at the present time he was and is in the employ of The E. Ingraham Company;

That prior to September 25, 1930, Charles P. Stitt, his co-applicant in this application, was in the employ of The E. Ingraham Company;

That the aforesaid Charles P. Stitt is not now and has not for some time past been in the employ of The E. Ingraham Company and that he does not know the present whereabouts of the said Charles P. Stitt and is informed and believes that the officials of The E. Ingraham Company, his assignee, do not know his present whereabouts;

That a design such as is disclosed by the clock base attached hereto and marked "Exhibit B" was shown to him by the aforesaid Charles P. Stitt prior to January 15, 1930, the date on which the Montgomery Ward Catalog No. 112 was issued;

That he is informed and believes that the clock base attached hereto and marked "Exhibit B" was produced in accordance with the invention of the aforesaid Charles P. Stitt prior to January 15, 1930;

And that he does not know and does not believe that the design of the clock base attached hereto and which formed the subject matter of an application filed by the aforesaid Charles P. Stitt on September 25, 1930, Serial No. D-57069, has been in public use or on sale in this country or patented or described in a printed publication in this or any foreign country for more than two years prior to the filing of the aforesaid Stitt application, Serial No. D-57069.

ELOF L. CARLSON.

The application was then remanded to the Primary Examiner, under the provisions of rule 138, for further report.

[1] The Examiner held that the affidavit was not sufficient, giving as one of his grounds therefor, that one of the joint inventors had neither signed the affidavit, nor furnished a statement of the reason why he failed to sign it. He then considered the Montgomery Ward & Company reference, and rejected the claim on all the references cited. On appeal on the merits to the Board of Appeals, the Board held that said affidavit should have been considered, that a suitable excuse had been given for the failure of Stitt to sign, and that the fact that it was signed by one inventor only did not prevent its being used under rule 75.

In this particular holding, we conclude that the Board of Appeals was not in error. It is in conformity with the apparent intent of said rule 75. To rule otherwise would prevent one joint inventor, when the other is deceased or cannot be found, from having the benefit of this salutary provision of the rules of the Patent Office.

It appears from the record that the design for the body of the clock was the invention of the appellant, Carlson, and was the subject of a design application of Carlson, filed in the Patent Office August 21, 1930. The design for the base was the invention of the appellant Stitt, and was the subject of a design application, filed in the Patent Office on September 25, 1930. These applications were, respectively, rejected by the Examiner, and were afterwards abandoned upon the filing of the joint application.

The models which are referred to in the affidavit were models of these respective inventions.

After the Board of Appeals had held that the absence of the signature of Stitt to the affidavit under rule 75 did not prevent the use of the affidavit under that rule, the Board went further and held that the affidavit, in connection with the models of the respective inventions of Carlson and Stitt which had been produced, did not show a complete reduction to practice of the invention in issue here, "(as contemplated by the rule) since the parts which it is alleged constitute the prior applications do not make the design of the instant application when they are assembled because they do not fit together properly."

Having found this to be true, the Board considered the Montgomery Ward & Company catalog design as a proper reference.

The Montgomery Ward reference shows a page of a catalog on which appears the reference, Item 46-F-1119. The Board of Appeals also referred to another item on the same page, known as Item 46-F-1151, which was considered by it to be a proper reference.

The present application was rejected on these Montgomery Ward & Company catalog references, together with the other references cited, except the Carlson patent, No. 89,103, which was held by the Board not to be a proper reference.

[2] Rule 75 of the United States Patent Office provides that when an original application for patent is rejected on a printed publication, "the applicant shall make oath to facts showing a completion of the invention * * *." From this statutory language it is necessary, in an affidavit under this rule, to show that the applicants, Carlson and Stitt, had completed their invention, namely, the design in question here, before the publication in the catalog of Montgomery Ward & Company. This being a joint application, it follows that the invention or design must have been the joint product of the applicants, and not the individual product of one or the other. There is nothing in this affidavit which states, or even suggests, that Carlson and Stitt, working jointly, combined their conceptions of a design for a base and a clock case before the date of filing of their joint application. All they did, according to this record, was the production of a design for a base by Stitt, and the design for a case by Carlson. In attempting to swear back of the reference, under rule 75, Carlson presents certain exhibits which he contends show the unitary design. However, when these physical exhibits are placed together, they do not show the unitary design which is disclosed in their joint application. It seems quite obvious, therefore, that they have failed to comply with the conditions of the rule which requires the proof of the completion of the invention before the date of the reference publication.

We come now to a consideration of the references, and as to whether the design of the appellants finds anticipation in the prior art, as shown by the references.

[3] The designs in the reference Montgomery Ward & Company catalog are designs of clocks, constructed with bases, round bodies, and small knobs upon the top thereof, and resemble, in a very noticeable degree, the design here shown by appellants. In some small details, on close examination, differences appear. However, the general impression upon the mind of one who looks at the illustrations is the same. The only feature which it seems is distinctive in the present application over the Montgomery Ward references, is the bulging, or convex glass front. This is an old feature, and has been many times used in clock faces, as is shown by the Whitehead reference. It is not every small change in construction which entitles an applicant to a design patent. There must be invention, and we are unable to perceive wherein the present design shows invention over the references cited.

We, therefore, affirm the decision of the Board of Appeals.

Affirmed.

U. S. Court of Customs and Patent Appeals

PENNSYLVANIA PETROLEUM COMPANY

v.

THE PENNZOIL COMPANY

No. 3,492. Decided November 25, 1935

1. TRADE-MARKS—SIMILARITY—"PENCOIL" AND "PENNOIL".

The mark "Pencoil" *Held* confusingly similar to previously registered mark "Pennoil".

2. SAME—CANCELLATION PROCEEDING—REGISTRANT'S RIGHT TO USE MARK, NOT INVOLVED.

Statutory proceeding to cancel a trade-mark registration, on ground that same was improperly granted and that petitioner is a person injured by said registration, *Held* to go no further than a determination of that matter and not to be determinative of registrant's right to use the mark.

3. SAME—SAME—SAME.

In the strictly statutory proceeding brought by petitioner for cancellation of a trade-mark registration, equities arising under the common law rights of the parties or under other facts showing laches or establishing estoppel which would move a court of equity to prevent entrance of petitioner into registrant's chosen field, *Held* not important.

4. SAME—SAME—LACHES.

Alleged laches on the part of petitioner for cancellation of a trade-mark registration, in delaying assertion of its rights, while knowingly permitting registrant to use its mark in its restricted area for a long period of time without objection, *Held* unavailable to registrant as a defense in cancellation proceedings.

APPEAL from the Patent Office. Affirmed.

Messrs. Parkinson & Lane, Mr. Wallace R. Lane, Mr. William S. Hodges, and *Mr. George Mentz* for Pennsylvania Petroleum Co.

Mr. John S. Powers and *Mr. Joseph W. Millers* for The Pennzoil Co.

GRAHAM, *P. J.*:

On October 15, 1929, The Pennzoil Company, a corporation organized under the laws of the State of California, and having its principal place of business at Los Angeles, filed its petition in the United States Patent Office for cancellation of the appellant's trade-mark, under section 13 of the Trade-Mark Act of February 20, 1905, as amended, U. S. Code, title 15, section 122. The mark sought to be

cancelled was the word "Pencoil," which was duly registered by the appellant, Pennsylvania Petroleum Company, of Kansas City, Missouri, on August 21, 1923, No. 172,050, on an application filed August 19, 1921.

The said registration application recited that the appellant had adopted and used the said trade-mark for motor lubricating oil continuously since about May 15, 1921. The petitioner alleged, as grounds for cancellation, that it had been originally incorporated under the laws of the State of California, in October, 1918, as Panamint Lubricants Company, and that its name had been changed in September, 1921, to The Pennzoil Company; that it had been engaged, from its inception, in the manufacture and sale of motor lubricating oils and other hydrocarbon products; that on or about December 28, 1915, it had adopted the word "Pennzoil" as a trade-mark for lubricants, since which time the said trade-mark has been continuously used upon motor lubricating oils and greases, and other hydrocarbon products sold in interstate commerce; that, on the first day of August, 1916, certificate of registration No. 111,750 was issued by the United States Patent Office to appellee's predecessor in title for its said trade-mark "Pennzoil," as used for and upon motor lubricants; that the petitioner is now the owner of said registration and trade-mark, and has been continuously engaged in the sale of motor lubricants under said mark since said registration, and has not abandoned the said mark; that great sums of money have been expended by the petitioner for advertising its said mark and oil; that it has been, and is being, greatly damaged by the said registration No. 172,050, hereinbefore mentioned, to wit, the registration to the appellant, on August 21, 1923, of the alleged trade-mark "Pencoil."

In connection with its proof, the petitioner has caused to be inserted in the record two trade-mark registrations, one to the Panama Lubricants Company, consisting of the word "Pennzoil," registered August 1, 1916, on an application filed January 12, 1916, for use on lubricants in class No. 15, Oils and greases, and a registration issued to The Pennzoil Company on October 23, 1928, consisting of the word "Pennzoil" superimposed upon a representation of a bell, alluded to in the record as a Liberty Bell, which said trade-mark was used upon motor fuel oils and lubricating oils and greases, and which it was alleged had been used continuously since December 28, 1915.

In its answer to the petition for cancellation, the respondent denied damage generally, denied identity or confusing similarity of the marks "Pencoil" and "Pennzoil" and denied confusion as to origin caused by the use of said marks. It also denied any knowledge of the use by the petitioner of the trade-mark "Pennzoil" at the time respondent adopted its mark "Pencoil," alleged that both the marks "Pencoil" and "Pennzoil" included words of geographic and descriptive significance which all dealers might use alike, and further alleged that the petitioner had known, for many years, of the respondent's use of its trade-mark "Pencoil" and permitted it to use large sums of money in advertising, was informed of its registration of its mark, and made no protest against the same, and by its acquiescence had lost any right it had, because of laches, to maintain this action for cancellation. As to the prior use by petitioner of its mark "Pennoil," the respondent prayed proof and denied knowledge.

It seems fully established by the record that the petitioner and its predecessor in title, Panama Lubricants Company, has been using the name "Pennoil" upon motor lubricants since shortly after the date of its first registration on August 1, 1916, in interstate commerce, and was using the same at the time of said registration, and that it was, at that time, and has continued to be, the owner of said mark.

On the part of the appellant, it is claimed that use of its mark "Pencoil" upon the same class of materials began in Kansas City and the surrounding territory in 1918, and that since that time the use of its mark has been gradually extended through the territory comprising the States of Wisconsin, Illinois, Iowa, Arkansas, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Wyoming, Colorado, Utah, and New Mexico. We find no testimony in the record to conflict with the claim made by the petitioner for cancellation that it was using its mark "Pennoil" on motor lubricants prior to any date on which the appellant was using its mark "Pencoil" upon similar products.

The Examiner of Interferences held that the respondent had failed to establish any use of its mark earlier than the date alleged in its registration, namely, May 15, 1921; that the words "Pennoil" and "Pencoil" are confusingly similar; that the registration of the Liberty Bell in connection with this mark does not substantially lessen the likelihood of confusion; that registrations alleged by the respondent of marks issued to third persons, said to contain certain of the features common to the involved marks, could not be considered; that the rights of an earlier user of a registered trade-mark, under the Trade-mark Act of February 20, 1905, are not adversely affected by a later use of a similar mark by another in an entirely different section of the country; and that the petitioner was not barred from asserting his rights by reason of laches or delay. Accordingly, the Examiner of Interferences sustained the petition for cancellation.

The Commissioner, on appeal, followed the reasoning of the Examiner, in the main, and affirmed the same. In addition to the suggestions made by the Examiner, the Commissioner passed upon one contention, namely, that inasmuch as this petition was filed in the Patent Office on the same day that an equity suit was initiated in the United States District Court, in the Western District of the Western Division of Missouri, proceedings in the Patent Office should be suspended until the equity proceeding might be heard. The Commissioner was of opinion that this claim was not properly made, and that the Patent Office might and should proceed to a con-

clusion of the cancellation proceeding. The Commissioner also held, in answer to the argument of the respondent, that any person who deems himself injured has the right to file a petition for cancellation. This point is not pressed by appellant here.

The respondent appeals, and here urges some of the questions which have been determined below. We understand, from the record and briefs of counsel, that it is practically conceded that the appellee, The Pennzoil Company, was first in the field, and that its name "Pennzoil" had been registered as a trade-mark, and had been used in interstate commerce upon motor lubricants long prior to the entrance of the appellant into the field, with its mark "Pencoil." Neither is it denied that the goods are of the same descriptive properties. Therefore, the first question for determination is, are the marks "Pencoil" and "Pennzoil" confusingly similar, when applied to the same products?

[1] Of this we can have no doubt. While the words are spelled somewhat differently, one using a "c" and the other a "z", they may be, and doubtless are, often pronounced the same. They must be considered to be confusingly similar in appearance. As we have said in a recent case, *Derby Oil Co. v. White Star Refining Co.*, 20 C. C. P. A. (Patents) 816, 62 F.(2d) 264, 429 O. G. 75:

> * * * We may take judicial knowledge that, in our day the goods of appellant and appellee are retailed, almost exclusively, at service and filling stations. Modern traffic moves rapidly. The customer desiring to purchase these goods is attracted to symbols or signs on service stations and pumps, which he has associated with the goods he ordinarily buys. A white star upon the target of a pump, or upon a service station, will attract his attention, and, in our judgment, a lettered monogram upon its face, or the nature of its background, will not distinguish it sufficiently to prevent mistakes and confusion. * * *

The presence of a representation of a bell upon one of the marks does not alter this conclusion. The word is the dominant feature of the mark.

We agree, therefore, with the tribunals of the Patent Office that the marks were and are confusingly similar.

At the time the predecessor in title of the appellee presented its mark "Pennzoil," on January 12, 1916, and at the time it obtained registration on August 1, 1916, it was using said mark as a mark for motor lubricants, and was the undoubted owner of that mark. The appellant had not then entered the field with its mark. The appellee was, therefore, entitled to registration, under the law, and its trade-mark carried with it a monopoly, so far as it goes, no less complete than does a patent. *United Shoe Mach. Corp. v. Compo Shoe Mach. Corp. et al.*, 19 C. C. P. A. (Patents) 1009, 56 F.(2d) 292, 421 O. G. 4. The mark not having been abandoned, and having been in continuous use, was still valid and in full effect when the appellant entered the field. Therefore, if the marks of appellant and the appellee are confusingly similar, and applied to goods of the same descriptive properties, the appellant was not entitled to registration of its mark "Pencoil" under the provision of section 5 of said Trade-mark Act of February 20, 1905, as amended.

[2] The proceeding which is now before us is not a proceeding seeking to deprive the appellant of the right to use his trade-mark. It is a statutory proceeding to cancel a trade-mark registration which carried with it the *prima facie* presumption of the exclusive right to use the trade-mark which had been registered. Our decision, and the decision of the Patent Office, goes no further than to determine that matter. Such common law rights as the appellant has to use its mark in the limited territory which it now claims, is a matter for another forum and is not within our jurisdiction here. The statute, section 18, *supra*, permits the cancellation of a registration when the same was improperly granted, and when it appears that the petitioner is a person injured by the said registration.

[3] If it be conceded that this record shows that the appellant, not knowing of appellee's registration, registered its mark and built up a trade for itself of goods bearing this mark, in a limited territory prior to the entrance of the appellee thereinto, we are unable to discern wherein such fact is of importance in this proceeding. There may be equities arising under the common law rights of the parties, or under other facts showing laches, or establishing estoppel, which would move a court of equity to prevent the entrance of the appellee into appellant's chosen field. If so, these equities are not important in this strictly statutory proceeding. It is sufficiently apparent that the registration of appellant's mark "Pencoil" ought to be cancelled, because of the matters suggested above. The appellee calls attention to the cases of *Hanover Star Milling Co. v. Metcalf*, 240 U. S. 403, 224 O. G. 1407, and *United Drug Co. v. Theodore Rectanus Co.*, 248 U. S. 90, 257 O. G. 1062, as authority for its contention that appellant should be permitted to continue its use of its mark in a limited area, and as a reason why its registered mark should not be cancelled. In both these cases cited, the questions decided were under the common law, and in both cases it was noted that there were no registrations under the Trade-mark Act of February 20, 1905, as amended, which could be considered as elements in the case.

That such authorities are not ruling in proceedings such as the one now before us, is well pointed out by the Court of Appeals of the District of Columbia in two cases, *Bell & Gunning Milling Co. v. Monmouth Springs Milling Co.*, 46 App. D. C. 243, 259 O. G. 153, and in *H. Kuhn & Sons v. Lotte*, 52 App. D. C. 296, 307 O. G. 785. It seems unnecessary to further comment on these two cases, as they fully answer the contentions made by appellant here, in this respect. This distinction between proceedings under the statute in trade-mark registration and cancellation proceedings, and those under the common law, should be constantly had in mind. *Shoe-man Packers Assn. v. Pacific Northwest Canning Co.*, 18 C. C. P. A. (Patents) 702, 45 F.(2d) 912, 425 O. G. 515; *Hoyer Products Co. v. Polk Miller Prod. Corp.*, 18 C. C. P. A. (Patents) 1106, 47 F.(2d) 903, 409 O. G. 942; *California Packing Corp. v. Tillman & Bendel, Inc.*, 17 C. C. P. A. (Patents) 1046, 1056, 40 F.(2d) 168, 396 O. G. 788.

[4] The delay of the appellee in asserting its alleged rights is said to constitute laches and to create a perfect defense against this petition. It is argued that the appellee knowingly permitted the appellant to use its mark in its restricted area for a long period of time, without objection. Such claimed laches has been held by us in several cases to be unavailable as a defense in cancellation proceedings in the Patent Office. *Olmsti, Peabody & Co. (Inc.) v. Samuel Hariogenais*, 17 C. C. P. A. (Patents) 1160, 41 F.(2d) 94, 393 O. G. 707; *Olmsti, Peabody & Co. (Inc.) v. Denver M. Wright*, 18 C. C. P. A. (Patents) 937, 43 F.(2d) 711, 402 O. G. 851; *The Procter & Gamble Co. v. J. L. Prescott Co.*, 22 C. C. P. A. (Patents) 1173, 77 F.(2d) 93, 459 O. G. 673; *Heyer Products Co. v. Polk Miller Prod. Corp.*, *supra*.

It is well settled that prior registrations by other parties will not be considered as a defense in such proceedings. *Federal Mill & Elevator Co., Inc., v. Pillsbury Flour Mills Co.*, 18 C. C. P. A. (Patents) 1253, 49 F.(2d) 1042, 412 O. G. 4; *Weyenberg Shoe Mfg. Co. v. Hood Rubber Co.*, 18 C. C. P. A. (Patents) 1449, 49 F.(2d) 1046, 412 O. G. 334; *The Celotex Co. v. Millington*, 18 C. C. P. A. (Patents) 1494, 49 F.(2d) 1068, 413 O. G. 279; *Sharp & Dohme v. Parke, Davis & Co.*, 17 C. C. P. A. (Patents) 842, 37 F.(2d) 980, 394 O. G. 545.

We are of opinion that the decision of the Commissioner of Patents is without error, and it is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,297,188, I. Langmuir, System for amplifying variable currents; 1,573,574, P. A. Chamberlain, Radio condenser; 1,618,017, F. Lowenstein, Wireless telegraph apparatus; 1,702,833, W. S. Lemmon, Electrical condenser; 1,811,095, H. J. Round, Thermionic amplifier and detector, filed Nov. 25, 1935, D. C., S. D. N. Y., Doc. E 81/268, *Radio Corp. of America et al. v. E. Dene et al.*

1,307,734, A. V. Gullborg, Lubricating means; 1,475,980, O. Zerk, Lubricating apparatus, appeal filed Nov. 29, 1935, C. C. A., 9th Cir., Doc. 10,524, *H. Dysthe et al. v. Alemite Corp.*

1,329,283, 1,336,695, H. D. Arnold, Thermionic amplifier; 1,349,252, same, Method of and means for utilizing thermionic currents; 1,403,475, same, Vacuum tube circuit; 1,465,332, same, Vacuum tube amplifier; 1,468,550, same, Thermionic amplifier circuit; 1,520,994, same, Electron discharge amplifier; 1,453,962, D. W. Kendall, Electrical receiving or repeating apparatus and the method of operating same; 1,492,695, D. G. Bartlett, Amplifying with vacuum tubes; 1,544,921, R. C. Mathes, Amplifier circuit, C. C. A., 8th Cir. (St. Louis), Doc. 10,345, *Western Electric Co., Inc., et al. v. Cinema Supplies, Inc., et al.* Decree reversed Nov. 21, 1935.

1,333,017, 1,453,286, 1,540,691, 1,871,510, W. A. Gibbs, Animal trap, filed Nov. 27, 1935, D. C., E. D. Pa., Doc. 9173, *W. A. Gibbs & Son, Inc., v. Animal Trap Co. of America.*

1,349,252. (See 1,329,283.)

1,350,752, H. J. van der Bijl, High frequency signaling; 1,403,475, H. D. Arnold, Vacuum tube circuit; 1,468,550, same, Thermionic amplifier circuit; 1,507,016, L. de Forest, Radio signaling system; 1,507,017, same, Wireless telegraph and telephone system; 1,531,906, R. C. Mathes, Oscillation generator; 1,562,994, E. V. Hartley, Means for modulating high frequency oscillations; 1,596,196, S. Loewe, System for generating oscillations; 1,622,322, E. A. Heising, Wave transmitting and amplifying; 1,966,065, R. Gunn, Modulation system; Re. 17,245, Re. 17,247, W. G. Cady, Method of maintaining electric currents of constant frequency; Re. 17,255, same, Piezoelectric resonator, filed Oct. 31, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 3046–L, *Radio Corp. of America et al. v. Heintz & Kaufman, Ltd.*

1,356,763, R. V. Hartley, Oscillation generator; 1,403,932, E. H. Wilson, Electron discharge device; 1,447,778, Espenschied & Brown, Radio transmission control system; 1,465,332, H. D. Arnold, Vacuum tube amplifier; 1,520,994, same, Electron discharge; 1,507,016, L. de Forest, Radio signaling system; 1,507,017, same, Wireless telegraph and telephone system; 1,544,061, F. K. Vreeland, Transmitting intelligence by radiant energy; 1,309,322, P. H. Evans, Communication system; 1,390,302, W. Bunge, Arrangement for oscillation circuits; 1,396,760, F. B. Llewellyn, Modulating device; 1,906,162, E. A. Heising, Transmission system; Re. 18,579, Ballantine & Hull, Demodulater and method of demodulation; Re. 18,916, J. G. Acevs, Supply circuit for radio sets, filed Oct. 31, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 3045–L, *Radio Corp. of America et al. v. Heintz & Kaufman, Ltd.*

1,396,685. (See 1,329,283.)

1,403,475. (See 1,329,283 and 1,350,752.)

1,403,932. (See 1,356,763.)

1,420,682, A. Pollak, Initialed buckle, plate and the like; Des. 97,261, M. Chernow, Alphabet for forming monograms, filed Nov. 22, 1935, D. C., E. D. N. Y., Doc. E 7828, *Service Patents Corp. et al. v. F. W. Woolworth Co.*

1,437,122, G. F. Wells, Electrical cooking utensil; 1,470,899, 1,534,431, same, Electrical waffle iron, filed Oct. 31, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 3044–E, *Wells Mfg. Co. v. Montgomery Ward & Co.*

1,447,773. (See 1,356,763.)

1,448,550. (See 1,329,283 and 1,350,752.)

1,453,962. (See 1,329,283.) 1,468,286. (See 1,333,017.)

1,465,332. (See 1,329,283 and 1,356,763.)

1,470,899. (See 1,437,122.) 1,437,960. (See 1,307,734.)

1,491,709, C. W. Cowles, Electrical connection; 1,976,706, S. W. Borden, Electrical connecting device for electrical conductors, filed Nov. 20, 1935, D. C., S. D. N. Y., Doc. E 81/254, *S. W. Borden v. Arroyo Conduit & Fitting Corp.* Same, filed Nov. 25, 1935, D. C. Conn. (New Haven), Doc. E 2500, *S. W. Borden v. H. A. Rowback.*

1,493,595. (See 1,329,232.)

1,507,016. (See 1,350,752 and 1,356,763.)

1,507,017. (See 1,350,752 and 1,356,763.)

1,520,994. (See 1,329,283 and 1,356,763.)

1,531,906. (See 1,350,752.) 1,534,431. (See 1,437,122.)

1,540,691. (See 1,333,017.) 1,544,061. (See 1,356,763.)

1,544,921. (See 1,329,283.)

1,560,957, R. E. Wemp, Clutch; 1,571,747, same, Clutch disc, filed Oct. 26, 1935, D. C., N. D. Ill., E. Div., Doc. 14,582, *Borg-Warner Corp. et al. v. Illinois Iron & Bolt Co.*

1,571,747. (See 1,560,957.) 1,573,574. (See 1,297,188.)

1,592,934. (See 1,350,752.) 1,596,196. (See 1,350,752.)

1,618,017. (See 1,297,188.)

1,658,574, 1,858,249, T. W. Ainlay, Ore separator, D. C., S. D. Calif. (Los Angeles), Doc. E 770–Y, *Ainlay Centrifugal Gold Separator Co. v. Soloded Placer Co. et al.* Injunction granted as to S. D. Harrison Engineering Co. Nov. 25, 1935.

1,667,573, J. E. Turner, Fish smoking apparatus; 1,667,574, same, Art of smoking fish fillets, filed Nov. 23, 1935, D. C., S. D. N. Y., Doc. E 81/373, *A. J. Turner et al. v. The Meyer & Thompson Co., Inc.* Doc. E 81/374, *A. J. Turner et al v. The Thompson Co., Inc.*

1,667,574. (See 1,667,573.)

1,680,394, H. G. Lykken, Pulverizer; 1,728,423, same, Fuel pulverizer; 1,753,437, same, Material reducing and means therefor; 1,760,245, same, Device for reducing and feeding reduced materials; 1,807,923, same, Material treating device; 1,838,580, same, Reducing mill, filed Nov. 20.

1935, D. C., E. D. Wis. (Milwaukee), Dec. 4790, *The Strong-Scott Mfg. Co. et al. v. Dual Combustion Corp et al.*

1,684,653, E. E. Willett, Foldable table; 1,951,884, E. B. Seward, same, appeal filed Nov. 19, 1935, C. C. A., 2d Cir., Dec. —, *Ferguson Bros. Mfg. Co. v. Lorraine Metal Mfg. Co., Inc.*

1,684,900. (See Re. 17,131.)

1,702,838. (See 1,297,188.)

1,728,422. (See 1,680,894.)

1,748,162, 1,795,028, 1,980,800, J. Gordon, Ironing machine, filed Oct. 23, 1935, D. C., N. D. Ill., E. Div., Doc. 14874, *J. Gordon v. The Maytag Chicago Co. et al.*

1,753,437. (See 1,680,894.) 1,760,248. (See 1,680,894.)

1,774,532, E. L. Smith, Hair curler; 1,849,770, same, Apparatus for use in connection with hair curling and waving device; 1,916,687, same, Apparatus for curling hair, filed Nov. 25, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 2062-S, *L. J. Marese et al. (Singlette Permanent Co.) v. E. L. Smith (Paramount Permanent Wave Co.).*

1,795,028. (See 1,745,162.) 1,807,922. (See 1,680,894.)

1,811,095. (See 1,297,188.) 1,823,822. (See 1,850,752.)

1,834,141. (See Re. 17,131.)

1,838,560. (See 1,680,894.)

1,842,126, W. J. Snow, Fluid fuel control system; 1,842,339, L. F. Dean, Fuel supply control and ignition system, filed Nov. 27, 1935, D. C., N. D. Ohio, E. Div., Doc. 5366, *The Petrol Valve Co. v. The May Co.*

1,842,339. (See 1,842,126.) 1,849,770. (See 1,774,532.)

1,852,249. (See 1,838,874.) 1,909,332. (See 1,850,763.)

1,871,510. (See 1,833,017.)

1,880,620. (See Re. 17,131.)

1,890,902. (See 1,856,763.) 1,896,780. (See 1,856,763.)

1,914,010, W. E. Eccles, Electrical connection; 1,914,011, same, Electrical fittings, filed Nov. 25, 1935, D. C. Conn. (New Haven), Doc. E 2499, *National Engineering Corp. v. H. A. Rorabeck.*

1,914,011. (See 1,914,010.)

1,915,066. (See Re. 17,237.)

1,916,687. (See 1,774,532.) 1,940,800. (See 1,745,162.)

1,936,162. (See 1,856,763.) 1,951,884. (See 1,684,653.)

1,964,998, 1,987,404, Des. 80,826, A. C. Kerte, Velocipede, Des. 80,826, same, Coaster wagon, filed Nov. 25, 1935, D. C., E. D. Ill. (East St. Louis), Doc. E 4678, *Metalcraft Corp. v. Montgomery Ward & Co., Inc.*

1,968,665. (See 1,850,752.) 1,976,789. (See 1,491,789.)

1,983,498, Des. 83,652, P. H. Gans, Sachet powder container, filed Nov. 20, 1935, D. C., E. D. N. Y., Doc. E 81/359, *D. Lisner & Co., Inc., et al. v. I. Perlmutter.*

1,987,404. (See 1,964,998.)

1,994,984, E. De Orlew, Vehicle jacking structure; 2,013,918, T. J. Kelleher, Lifting jack, filed Nov. 30, 1935, D. C., N. D. Ohio, E. Div., Doc. E 5367, *T. J. Kelleher et al. v. Buckeye Jack Mfg., Inc.*

2,013,918. (See 1,994,984.)

Re. 17,131, O. S. Caesar, Heating apparatus for automotive vehicles; 1,684,900, C. B. Waters, Automobile circulation and heating system; 1,684,141, W. J. Butterfield, Fitting for automotive vehicle heater; 1,880,620, C. H. Will, Automobile heater and defroster therefor, D. C., N. D. Ohio, W. Div., Doc. E 1816, *Trepte-Aire, Inc., v. Lucas Mfg. Co. et al.* Dismissed without prejudice Nov. 29, 1935. Doc. E 1811, *Trepte-Aire, Inc., v. Lucas Mfg. Co. et al.* Decree as above.

Re. 17,245. (See 1,850,752.)

Re. 17,247. (See 1,850,752.)

Re. 17,337, F. Milliken, Lubricated valve; 1,915,661, same, Valve adapted to be lubricated, D. C., S. D. N. Y., Doc. E 76/313, *Milliken Valve Corp. v. American Car & Foundry Co.* Consent and order of discontinuance (ratio Nov. 20, 1935).

Re. 17,355. (See 1,850,752.)

Re. 18,579. (See 1,856,763.)

Re. 18,916. (See 1,856,763.)

Des. 80,826. (See 1,964,998.)

Des. 80,895. (See 1,964,998.)

Des. 98,652. (See 1,983,498.)

Des. 97,261. (See 1,436,062.)

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,905,850, J. J. Grebe and S. M. Stoessner, Synthetic lubricant and method of making same, decided January 2, 1936, claim 1.

Pat. 1,949,485, S. D. Livingston, Stroboscope, decided January 2, 1936, claim 1.

Reissue Pat. 18,673, Samuel Ruben, Electrostatic condenser, decided January 4, 1936, claims 1, 2, and 3.

Disclaimers

1,987,490.—*Albert S. Mathewson*, Bloomfield, N. J. ELECTRIC CONDENSER. Patent dated November 22, 1932. Disclaimer filed December 27, 1935, by the assignee, *Mallory Corporation.*

Hereby enters this disclaimer to chlorinated phenyl ether from the scope of claims 1 to 7, inclusive, of said patent.

1,918,095.—*Rudolph C. Garmeroon* and *Frederick Leonhold*, Appleton, Wis. PROCESS AND APPARATUS FOR MAKING PAPER. Patent dated July 11, 1933. Disclaimer filed December 26, 1935, by the assignee, *Paper Patents Company.*

Hereby enters the following disclaimers:

1. Disclaims from the scope of claim 1 of said patent any process in which the pressure between the rolls is insufficient to produce the result set forth in the specification.

2. Disclaims from the scope of claim 8 any apparatus which is not adapted to apply pressure sufficient to produce the result set forth in the specification.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 21, 1936

[VOL. 462. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 371,096. GREAT LAKES COAL & COKE CO., Chicago, Ill. Filed Nov. 2, 1935.

CARBO-COKE

★ PETROLEUM CARBON ★

LESS THAN A SHOVEL OF ASH TO A TON

The words "Coke", "Petroleum", "Carbon", "Less Than a Shovel of Ash to a Ton" are disclaimed apart from the mark. The drawing is lined for red.

For Fuel in Solid Form, Somewhat Resembling Coke Made from Coal, but Actually Prepared from a Petroleum By-Product.

Claims use since December, 1932.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 371,158. KARIS BROTHERS INCORPORATED, New York, N. Y. Filed Nov. 4, 1935.

THREE FEATHERS

For Ladies' Leather Bags and Purses.

Claims use since October, 1934.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 370,981. E. A. MEYER, doing business as Green Bay Soap Company, Green Bay, Wis. Filed Oct. 4, 1935.

WHITE QUEEN

For Soap, Soap Powders, and Household Cleanser, and Water Softener.

Claims use since 1898, on soap; since 1934, on soap powders; and since July 25, 1935, on cleansers.

Ser. No. 371,524. CARBIDE AND CARBON CHEMICALS CORPORATION, New York, N. Y. Filed Nov. 14, 1935.

TERGITOL

For Cleaning Compositions Used in the Textile, Leather, Cosmetic, and Other Industries Other Than for Laundries and Dry Cleaning Concerns, and Not Intended for Sale or Distribution to Supply Houses Dealing with These Industries.

Claims use since Dec. 18, 1934.

Ser. No. 371,613. WESTOCO PRODUCTS, INC., Kansas City, Mo. Filed Nov. 15, 1935.

YEAR CLEAR

The word "Clear" is disclaimed apart from the mark.

For Glass Cleaning Solutions.

Claims use since May 1, 1935.

Ser. No. 371,929. NORTON COMPANY, Worcester, Mass. Filed Nov. 23, 1935.

NORTON ABRASIVES

No claim is made to the word "Abrasives" apart from the mark.

For Oilstones, Abrasive Stones, Cleaning Stones, Sharpening Stones, Hones, Whetstones, Tool and Knife Sharpeners, Scythe Stones, Bench Stones, Axe Stones, Pocket Stones, Breaker Point Stones, Abrasive Engraving Points, Pencils and Stones, Razor Strops, Razor Strop Dressings, Abrading, Lapping, and Polishing Grains and Powders, Oilstone Wheels, Grinding Wheels, and Abrading, Lapping, and Polishing Stones and Wheels.

Claims use since Oct. 1, 1935.

Ser. No. 372,101. STEWART W. HUGHES, Chicago, Ill. Filed Nov. 29, 1935.

Rol-on

For Shaving Cream.

Claims use since June, 1935.

Ser. No. 372,109. LEVER BROTHERS COMPANY, Cambridge, Mass. Filed Nov. 29, 1935.

Gayla

For Detergent Compound for General Washing and Cleansing.

Claims use since Nov. 22, 1935.

Ser. No. 372,110. LEVER BROTHERS COMPANY, Cambridge, Mass. Filed Nov. 29, 1935.

Reward

For Detergent Compound for General Washing and Cleansing.

Claims use since Nov. 22, 1935.

CLASS 5

Adhesives

Ser. No. 371,270. THE PERFECT MFG. CO., doing business as So-Lo Works, Cincinnati, Ohio. Filed Nov. 6, 1935.

CAN-O WOOD

The words "Can" and "Wood" are disclaimed apart from the mark.

For Plastic Repair Material.

Claims use since Mar. 29, 1935.

Ser. No. 371,895. THE CASCO MANUFACTURING COMPANY OF ARKANSAS, INC., New York, N. Y. Filed Nov. 15, 1935.

CASCOTINE

For Glues.

Claims use since Aug. 15, 1935.

Ser. No. 371,925. HARRIMAN KORER COMPANY, Rochester, N. Y. Filed Nov. 16, 1935.

For Pasta.

Claims use since 1925.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 366,082. DERMA HERBAL COMPANY, Omaha, Nebr. Filed June 1, 1935.

The words "Derma" and "Ointment for the Skin" are not claimed apart from the mark. The drawing is lined for blue and orange.

For Skin Ointment.

Claims use since Feb. 1, 1935.

Ser. No. 366,790. ENGLAR M. FORD, Albany, N. Y. Filed June 5, 1935.

B.M.F.

For Hair Grower, Tetter Oil, Pressing Oil, Cold Cream, Lemon Cream, Hairdressing, and Waving Fluid.

15,560.—*Title:* DELICIOUS MELLOW OLD TANKARD ALE IN NON-REFILLABLE KEGLINED TAPACAN, AD. NO. 2407. For Ale. PREMIER-PABST CORPORATION, Peoria Heights, Ill. Published November 21, 1935.

15,561.—*Title:* DELICIOUS OLD TANKARD ALE FROM BREWERY TO YOU SEALED IN THE NON-REFILLABLE KEGLINED TAPACAN, AD. NO. 2408. For Ale. PREMIER-PABST CORPORATION, Peoria Heights, Ill. Published November 25, 1935.

15,562.—*Title:* MELLOW, DELICIOUS OLD TANKARD ALE BREWERY FLAVOR SEALED IN YOUR PERSONAL NON-REFILLABLE KEGLINED TAPACAN, AD. NO. 2409. For Ale. PREMIER-PABST CORPORATION, Peoria Heights, Ill. Published December 4, 1935.

15,563.—*Title:* OLD TANKARD ALE IN YOUR OWN PERSONAL, NON-REFILLABLE KEGLINED TAPACAN, AD. NO. 4402. For Ale. PREMIER-PABST CORPORATION, Peoria Heights, Ill. Published November 7, 1935.

15,564.—*Title:* THE WILTSHIRE CASE. For Suit Cases. WILT TRUNK COMPANY, Chicago, Ill. Published December 3, 1935.

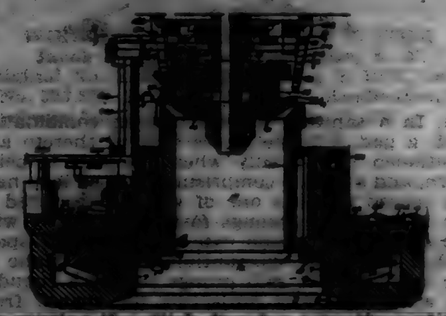
REISSUES

JANUARY 21, 1936

19,826
PRINT

Michael D. Mesrobian, Berkeley, Calif., assignor to United Iron Works, Oakland, Calif., a cooperation of California.
Original No. 1,940,814, dated March 14, 1933, Serial No. 418,624, January 4, 1930. Application for reissue September 10, 1932, Serial No. 632,143

8 Claims. (Cl. 103—108)



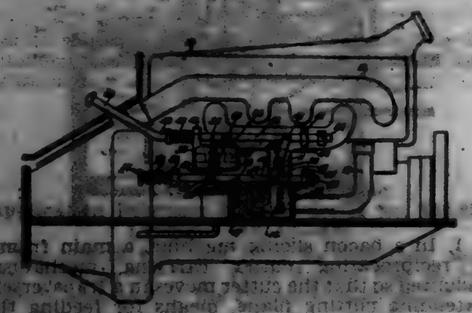
8. A multi-stage fluid pressure pump including an impeller shaft, an inner casing mounted about the same, an outer casing surrounding the inner casing, said inner and outer casings having cooperating inlet and discharge openings, said casings having cooperating shoulders and flanges defining chambers spaced radially and longitudinally of the shaft and arranged to receive fluids under different pressures, one of said chambers having means for conducting fluids from the first stage of the pump to said chamber, the last chamber being in direct communication with the discharge opening of said pump, resilient compressible gaskets located at the ends of the chambers and between the shoulders and flanges, positive means passing through one flange and its cooperating gasket and threaded for engaging the adjacent shoulder to draw all of said flanges, shoulders and gaskets into sealing condition and thereby simultaneously finally secure said inner and outer casings against angular displacement, the other gaskets forming means to retard the longitudinal expansion of the inner casing relative to the outer casing when the former casing is heated in advance of the outer casing.

19,827
PRINTING MACHINE

Walter Larkin, Westbrook, Me., assignor to Addressing Machine Company, Portland, Me., a corporation of Delaware.
Original application Serial No. 131,567, filed September 2, 1926, Serial No. 625,979. Patent No. 1,667,413, dated November 6, 1928. Divisional application for reissue November 6, 1934, Serial No. 751,704

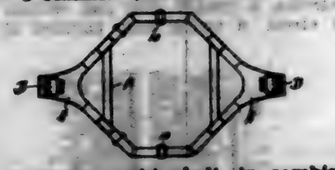
16 Claims. (Cl. 95—64)

8. In a circular rib knitting machine comprising a stationary circular cylinder bodies, a rotary cylinder cam ring operating said cylinder needles, stationary cams, fingers circularly arranged above the cylinder needles in predetermined lateral relation to each other, according to a predetermined design, stationary dial needles arranged in a circle at right angles to the axis of the cylinder needles and wrap finger circles with portions of said dial needles extending inside said circles, a rotary dial cap within the wrap finger circle, a swing cam carried by said cap



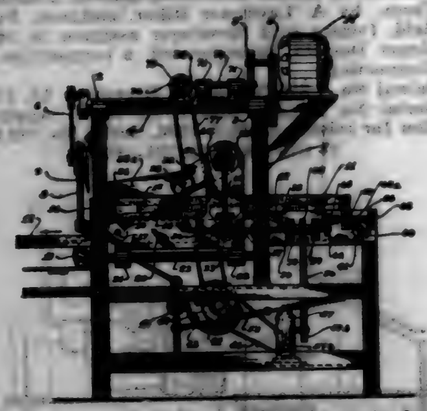
for varying the stitch-forming actuation of the dial needles, and stationary means for actuating the swing cam.

19,828
ATTACHMENT FOR INTERNAL COMBUSTION ENGINES



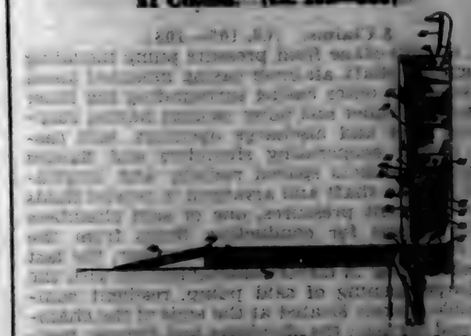
Lester H. Messinger, Jr., Trumbull, Conn., and Andrew L. Riker, deceased, late of Fairfield, Conn., by A. Lawrence Riker, assignee, Fairfield, Conn.; said Messinger assignee to Messinger Devices, Incorporated, a corporation of Connecticut.
Original No. 1,906,791, dated December 13, 1932, Serial No. 175,604, March 15, 1927. Application for reissue April 1, 1934, Serial No. 718,159

27 Claims. (Cl. 123—97)



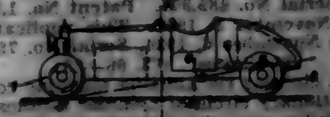
1. In an internal combustion engine, a carburetor including a fuel supply line and an air inlet, a cylinder, an intake manifold between said carburetor and cylinder, a fuel control valve in said fuel supply line, a throttle valve in said intake manifold between said carburetor and cylinder, means for holding said fuel control valve to open said fuel supply line, throttle actuating means for manipulating said throttle valve when said fuel supply line is open to cause a feed of explosive mixture to said cylinder, and means for moving said fuel control valve to close said fuel supply line and for simultaneously moving said throttle valve to open position,

19,329
SANITARY NAPKIN BELT
Estella E. Statler, Sioux City, Iowa, assignor to Humphrey Statler Jr., Sioux City, Iowa
Original No. 1,782,152, dated November 18, 1930, Serial No. 345,689, March 9, 1929. Application for reissue November 18, 1932, Serial No. 642,256
5 Claims. (Cl. 128—291)



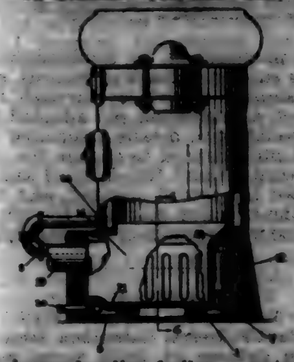
1. In a sanitary napkin belt, in combination with a pad, a hinge sleeve secured thereto and positioned horizontally when the belt is being worn, and a buckle comprising a closed loop having spaced portions one of which is received in the hinge sleeve, prongs formed integrally with the other portion and extending into the space within the loop, substantially in the plane of the loop, each of said prongs having a rounded tip and a laterally projecting lug spaced from said tip.

19,330
SLICING MACHINE
Charles T. Walter, Chicago, Ill., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Original No. 1,942,981, dated January 9, 1934, Serial No. 638,945, October 21, 1932. Application for reissue June 5, 1935, Serial No. 25,188
13 Claims. (Cl. 146—155)



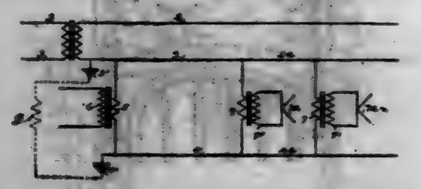
1. In a bacon slicing machine, a main frame, a reciprocating cutter carrying mechanism mounted so that the cutter moves in a transversely extending cutting plane, means for feeding the bacon slabs along a longitudinally extending path in respect to the cutter, common operating means carried by the frame, means for continuously reciprocating the cutter from and by said common operating means, said feeding means comprising a longitudinally movable frame slidably supported on the main frame, cam mechanism carried by the main frame, means for continuously operating said cam mechanism and by said common operating means, means under the control of said cam mechanism for successively positioning said longitudinally movable frame, during one period in a forward direction relative to the cutter according to a certain number of reciprocative movements of the cutter and during the next period in a reverse direction relative to the cutter for holding in retracted position in respect to the cutter the movable frame and bacon slab thereupon for a certain number of reciprocative movements of the cutter, feeding means carried by but movable relative to said longitudinally movable frame and cooperating by engaging slabs of bacon in the controlling of the feeding and positioning of the bacon in respect to the cutter, and means operated by said common operating means for imparting movement to said feeding means as and in respect to said longitudinally movable frame, said slicing machine having at the delivery end thereof a continuously moving receiving conveyor upon which the slices severed by the slicing machine are delivered to the endless conveyor in a manner whereby spaced groups are formed with the slices in each group arranged in a relatively uniform manner in respect to each other.

19,331
DROP SIDE CONTAINER CAR
Graham C. Woodruff, Brownville, N. Y., assignor to The L. C. L. Corporation, a corporation of Delaware
Original No. 1,947,302, dated March 1, 1934, Serial No. 354,526, April 13, 1929. Reissue No. 18,877, dated August 23, 1932, Serial No. 597,580, March 9, 1932. This application for reissue August 11, 1933, Serial No. 684,772
21 Claims. (Cl. 105—368)



20. The combination with a container carrier of paralleling attachments affording elevated and longitudinal movement preventing support for the container, and gravity-influenced movable means at the ends of such attachments effective to prevent lateral shifting of the container.

19,332
MOTOR VEHICLE PROVIDED WITH FOUR INDEPENDENT WHEELS
René Jean Devilliers, Paris, France, assignor, by mesne assignments, to Daimler-Benz Aktiengesellschaft, Stuttgart-Untertürkheim, Germany, a corporation of Germany
Original No. 1,911,646, dated June 30, 1933, Serial No. 335,694, January 25, 1929. Application for reissue June 22, 1935, Serial No. 27,675. In France January 27, 1928
13 Claims. (Cl. 280—124)



1. A motor vehicle comprising an underframe having front and rear pairs of wheels, the wheels independently connected to the underframe and spring-supported for individual movement, the front wheels having substantially vertical pivots providing for steering movement and each being mounted to move up and down with successive positions of its pivot substantially parallel and substantially equidistant from the central longitudinal plane of the vehicle whereby to define a swinging center for the body at the ground and the rear wheels each being mounted to permit angular swinging movement of their planes relative to such central plane whereby to define an elevated swinging center for the body, the two centers defining an inclined axis of oscillation for the body as a whole.

19,333
COMBUSTION CHAMBER-HEATING DEVICE
Mora S. Hall, Baltimore, Md., assignor to May Oil Burner Corporation, a corporation of Maryland
Original No. 2,001,731, dated May 21, 1935, Serial No. 636,542, August 24, 1932. Application for reissue June 25, 1935, Serial No. 28,261
11 Claims. (Cl. 122—318)

2. In a house heating boiler, a water compartment, a fire pot, a fluid fuel burner in said fire pot, a water lining for said fire pot comprising a vertical wall section and a separate bottom wall section, said wall sections and said water compartment being connected together for fluid circulation, and a coating of plastic refractory material attached to said wall sections, said coating being of adequate thickness to absorb heat and to radiate heat back to the flame of the burner and sufficiently thin to transfer heat therethrough to the fluid in the wall sections.

19,334
WIRELESS TRANSMISSION SYSTEM
Jacob H. Rubenstein, Syracuse, N. Y.
Original No. 1,966,769, dated May 2, 1933, Serial No. 583,819, February 18, 1932. Application for reissue April 26, 1935, Serial No. 18,423
7 Claims. (Cl. 179—2)

1. A transmission system having in combination with the grounded conductor of an electric lighting system and an auxiliary ground, an audio amplifier including an output primary coil, a low impedance secondary coil connected across said grounds and coupled with said output primary coil, a plurality of low impedance coils connected across said grounds in parallel, a plurality of loud speakers, and secondary coils coupled with the plurality of low impedance coils to transmit audible frequency currents from said grounds to the loud speakers.

PLANT PATENTS
GRANTED JANUARY 21, 1936

162
ROSE
Archibald Flint Watkins, Tyler, Tex., assignor to Dixie Rose Nursery, Tyler, Tex.
Application August 22, 1935, Serial No. 37,468
1 Claim. (Cl. 47—61)

A new and distinct hybrid tea rose plant, characterized by the red color of its flower as shown and described.

163
ROSE
Archibald Flint Watkins, Tyler, Tex., assignor of one-half to Jackson & Perkins Company, Newark, N. J., and one-half to Dixie Rose Nursery, Tyler, Tex.
Application August 22, 1935, Serial No. 37,469
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant as herein shown and described, characterized by its climbing habit and unusual hardiness for a rose of its class.

164
CHERRY VARIETY
Menno Gerber, Orrville, Ohio
Application February 5, 1934, Serial No. 710,231
1 Claim. (Cl. 47—62)

The cherry tree and fruit as described, said tree ripening its fruit from August first to fifteenth, and having the characteristics stated.

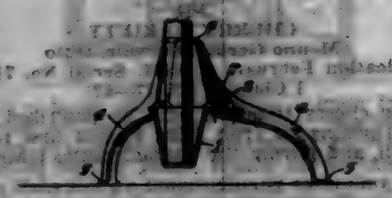
PATENTS

GRANTED JANUARY 31, 1928

2,662,125
CHAIR STRUCTURE

Frederick W. Branch, Sheboygan, Wis., assignor to Sheboygan Chair Company, Sheboygan, Wis., a corporation of Wisconsin

Application November 17, 1924, Serial No. 753,426
3 Claims. (Cl. 155—126)



1. In combination with a chair having side arms, a table adapted to rest upon said arms forwardly of the occupant of the chair and having transverse sockets therein and slots communicating with said sockets, side rods pivotally connected at one pair of ends with portions of the chair and having their other end portions extended into said table transverse sockets, there being relative sliding movement between the table and the latter rod end portions for table adjustments, studs carried by said latter rod end portions and projecting thru said slots, and latch plates pivotally mounted on the table and having means for selectively engaging projecting portions of said studs.

2,662,126
HOLDER FOR CHRISTMAS TREES OR OTHER OBJECTS

Warren E. Allerton, Benton Harbor, Mich.

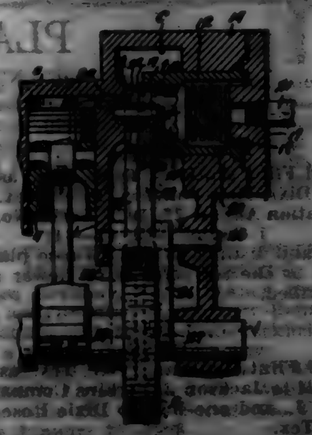
Application April 16, 1924, Serial No. 706,763
4 Claims. (Cl. 248—47)

2. A holder for an upright object, comprising a downwardly tapered cup to support said upright object, and removable legs fulcrumed on projecting rim portions of the cup, each leg having an inwardly projecting lug for engagement with the rim of the cup, to limit the movement of the lower ends of the legs away from each other, preventing the upper ends of the legs from engaging each other and collapse of the structure when said object is not in the cup, and said legs having upper end portions for engagement with said object.

2,662,129
PHONOGRAPH

Edward F. Andrews, Chicago, Ill.

Application April 12, 1921, Serial No. 521,800
46 Claims. (Cl. 274—10)



6. In a phonograph, in combination, a table adapted to support a stack of records, a depressible pin adapted to project through the openings thereof, a depressing pin adapted to engage said depressible pin, means associated with said depressing pin adapted to engage the surface of the top record to limit the entry of said depressing pin into the record opening, and means for affecting the effective length of the pin to adapt same for use with records of varying thickness.

2,662,131
VALVE CONSTRUCTION

Paul F. Berry, Columbus, Ohio

Application October 27, 1923, Serial No. 670,901
Renewed June 12, 1926
4 Claims. (Cl. 236—23)

1. In a [illegible] a pair of rotary valves arranged side by side and a seat for each of the valves, said seat having a port, means for axially supporting the valves, elastic means for urging the valves one toward the other and toward the valve seat, means for reversely rotating the valves in timed sequence, said valves having ports in register with each other and with the ports of the valve seat upon rocking movement of the valves in one direction, said ports being out of register upon movement of the valves in the opposite directions whereby flow through the ports is closed, one of said valves having a [illegible]

passageway registering with the port of the valve seat when the ports of the valves are out of register, said passageway also communicating with the port of the second valve when the ports in both of the valves are out of register, and an inlet passageway carried by said second valve registering with the port of the first valve when the ports of both valves are out of register.

2,662,132
PROCESS FOR RECOVERING PURE GERMINAL SUBSTANCE FROM SEED KERNELS

Mórits Simonstsch, Budapest, Hungary

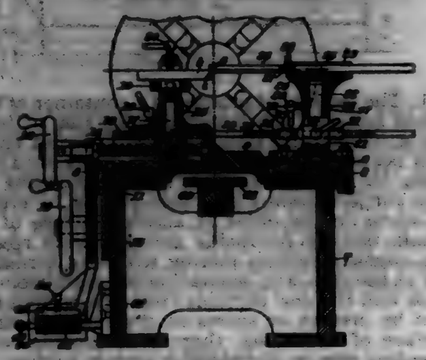
No Drawing. Application April 4, 1924, Serial No. 719,444. In Hungary May 11, 1923
8 Claims. (Cl. 99—13)

1. A process for recovering the germinal substance from a mixture obtained on mechanically degerminating seed kernels of plants of the class consisting of Cucurbita pepo and related plants of the families of the Cucurbitaceae and Solanaceae, which comprises removing the main portion of the endosperm of the said seed kernels from said mixture, incorporating the remaining mixture containing the germinal substance and other constituents of the said kernels into a liquid medium which dissolves fatty substances and has a specific gravity lying under working conditions between the specific gravities of the germinal substance and the said other constituents respectively, and which behaves indifferently in relation to the gluten-forming proteins of the said germinal substance, whereby the said remaining mixture separates into two layers, the upper layer of which contains the germinal substance, reducing the temperature of the liquid medium in accordance with the lowering of the specific gravity produced by fatty substances contained in the germinal substance and dissolved out by the liquid medium, so as to restore the required specific gravity, and finally removing separately the two layers from said liquid medium.

2,662,133
HAND TRUCK

Towner Leigh Bowers, Waco, Tex.

Application September 17, 1924, Serial No. 743,770
2 Claims. (Cl. 254—3)

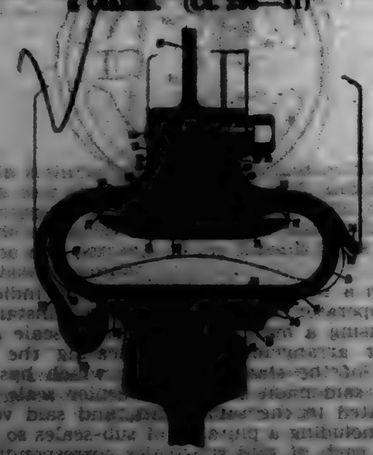


1. In a truck for moving bulky and heavy objects, a mobile frame having pairs of front and rear corner posts, a platform [illegible] to the front corner posts and rear corner posts being extended substantially thereabove the height of the front corner posts and being located in the path of travel of said platform, a rest for the platform, a combined platform extending and control lever hinged adjacent the forward end thereof to said frame and having a handle portion extending between the rear corner posts and terminating beyond the same, a rigid one-piece link connected to the forward portion of said lever and to the forward portion of said platform, the connection between said link and said platform being between the hinge mounting of said platform and the forward end of the platform.

2,662,134
MECHANISM FOR MECHANICAL MEASUREMENTS

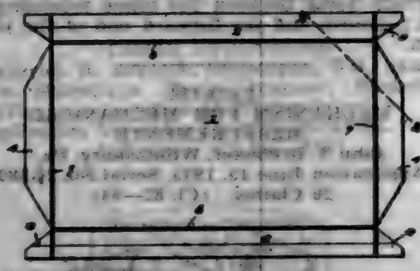
John T. Brubaker, Wilkinsburg, Pa.

Application June 15, 1915, Serial No. 34,250
20 Claims. (Cl. 82—34)



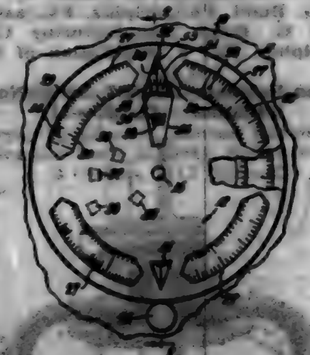
1. In a machine tool, the combination with a cutting element and means for locating it at a neutral position and a cutting position, of a slidable member having a series of selectively usable stop elements providing a limiting abutment for the locating means at both positions.

2,662,135
PNEUMATIC TIRE



Edward G. Budd, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

Application February 12, 1923, Serial No. 618,505
4 Claims. (Cl. 295—31)

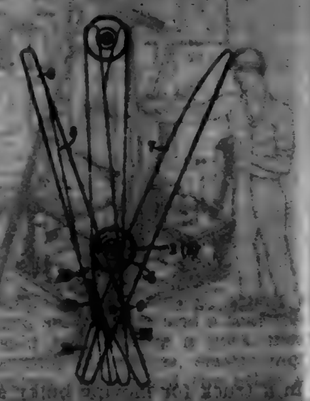


6. A pneumatic tire for railway vehicles comprising a flexible pneumatic tire shoe and a one-piece annulus of relatively high heat conducting material extending into the air space in the tire and having an axial width greater than that of the normal tread surface of the tire.

2,028,136
BOX AND METHOD OF MAKING THE SAME
Chester E. Claff, Randolph, Mass.
Application July 24, 1934, Serial No. 736,770
3 Claims. (Cl. 229—14)

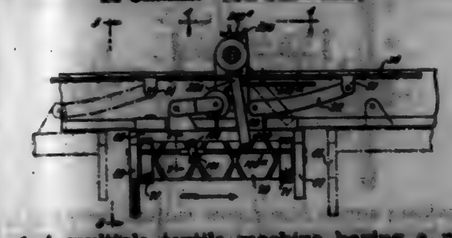
1. The method of producing a container of boxboard material which includes the step of forming a blank with side, end, bottom, and corner flap portions, said flap portions being separated from the end portions by slits, separating the side portions from the bottom portion by creases or scores in the outer or bottom surface of the blank, thereby producing corresponding ribs on the opposite surface aliining with and terminating at the slits, and separating the sides from the flaps and the end portions from the bottom portion by creases or scores in the inner or upper surface of the blank, thereby to provide corresponding ribs on the outer or bottom surface.

2,028,137
TUNING ARRANGEMENT FOR RADIO RECEIVING SETS
Virgil D. Collins, Colwick, N. J.
Application October 24, 1934, Serial No. 749,747
5 Claims. (Cl. 116—124.4)



1. In a radio receiver set, a visual indicating and operator controlling tuning installation comprising a main scale, a vernier scale and a pointer arrangement for indicating the wave length of the station to be or which has been tuned, said main scale and vernier scale being graduated in the same units, and said vernier scale including a plurality of sub-scales so graduated, each of said sub-scales corresponding to a range of wave length on the main scale and said vernier scale being connected to said main scale so that the pointer arrangement will relatively move over said vernier scale a much greater distance for each unit movement over the main scale.

2,028,138
INTERNAL COMBUSTION ENGINE VALVE MECHANISM
Harry M. Cushing, Baltimore, Md., assignor of one-fourth to Benjamin Pierpont, Baltimore, Md.
Application May 1, 1934, Serial No. 723,388
8 Claims. (Cl. 123—190)



1. A valve mechanism for an internal combustion engine comprising a cylinder head having a valve chamber of substantially rectangular shape in cross section and provided with ports in opposite walls thereof, said valve chamber opening outwardly through opposite sides of the head, a plate removably secured to one side of the head and closing one end of the valve chamber, guides integral with the head and aligning with the open end of the chamber, ribs integral with opposite walls of the chamber and extending the full length of the latter, a valve element shaped to engage all walls of the chamber and slidable therein and provided with a port, said valve element having grooves in opposite walls to receive the ribs, extensions at one end of the valve element and slidably supported by the guides, wear plates removably secured to the valve element, and means for reciprocating the valve element and connected to the extensions.

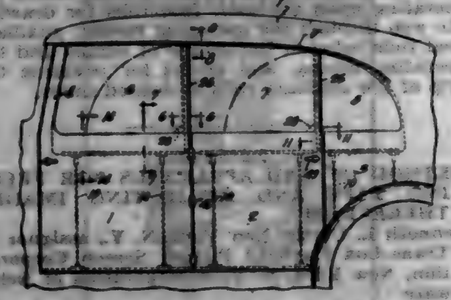
2,028,139
TOY AND GAME APPARATUS
Richard Cramp, Richard George Wightman Cramp, and Benjamin Cramp, Barkingside, Ilford, England
Application March 28, 1935, Serial No. 13,539
In Great Britain April 25, 1934
6 Claims. (Cl. 46—90)

1. Game apparatus comprising a bowling carrying an idle roller disposed substantially centrally between the ends, in combination with a pair of pivoted blades, the opposed edges of which can engage respectively with the periphery of the bowling and the roller, to grip, spin and drop the same.

2,028,140
WINDING MACHINE
Edward J. Abbott, Wilton, N. H., assignor to Abbott Machine Company, Wilton, N. H., a corporation of New Hampshire
Application November 24, 1931, Serial No. 577,055
14 Claims. (Cl. 242—35.5)

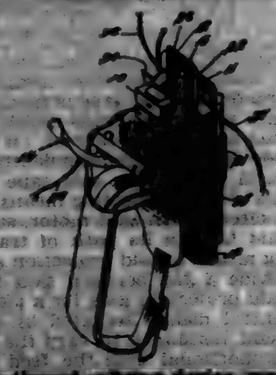
1. A multiple textile machine having a plurality of winding units, a traverse device for each winding unit, a lubricator adapted to supply lubricant to a traverse device, and means for automatically causing said lubricator to act successively on the traverse devices of the several winding units.

2,028,141
PROCESS FOR DYEING OR COLORING CELLULOSE ESTERS AND CELLULOSE ETHERS
Franz Ackermann, Muttenz, near Basel, Switzerland, assignor to the firm of Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application May 16, 1932, Serial No. 611,782. In Switzerland May 23, 1931
9 Claims. (Cl. 8—5)



1. A process for dyeing or coloring cellulose esters or cellulose ethers, consisting in dyeing or coloring the material by means of a colored product which can be obtained by condensing an aromatic para-dialkylamine-aldehyde with aliphatic compounds containing a reactive methylene group, the double linkage thus formed playing the part of the main chromophore.

2,028,142
ARMOR BLOCK FOR WATER WALLS AND THE LIKE
John Blizard, Garden City, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application April 8, 1932, Serial No. 604,318
25 Claims. (Cl. 122—4)

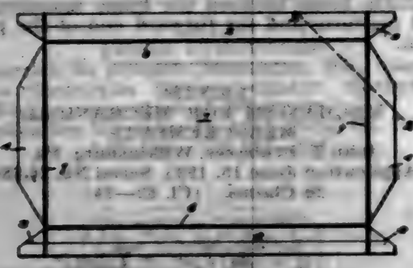


1. The combination with spaced tubes, of a block unit supported thereon and therebetween comprising two refractory members, said members having curved tube recesses and curved contacting surfaces eccentric thereto, a third member, and tensile means engaging the refractory members and the third member for clamping the block unit to the tubes.

2,028,143
VEHICLE BODY
Raymond L. Carr, Berlin, Mass.
Application May 11, 1929, Serial No. 362,483
21 Claims. (Cl. 296—45)

1. A vehicle body comprising a body wall including adjoining sections having pockets therein, panels movable upwardly out of the respective sections to a raised position thereabove, said panels in their raised positions having juxtaposed adjoining edges spaced laterally from each other, and a filler strip movable independently of the panels and irrespective of the positioning thereof into the space between the adjoining panel edges, said filler strip being movable in the plane of the body wall.

2,028,144
THREAD SPLICING DEVICE
John F. Cavanagh, Providence, R. I.
Application April 12, 1921, Serial No. 462,351
Renewed April 19, 1923
17 Claims. (Cl. 117—6)



1. In a thread splicing device, means for gripping a pair of ends at spaced points and moving the gripping points apart to break the ends to provide a frayed condition, and means for rolling the end portions of the threads to be joined one about the other.

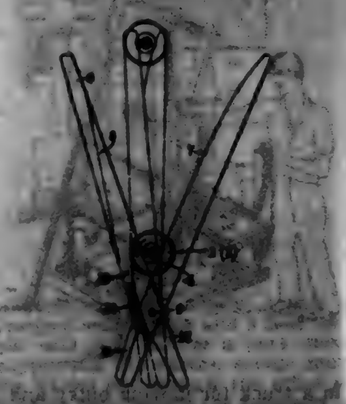
2,028,145
TUBER
Thomas Earl Coty, Watertown, N. Y.
Application June 1, 1932, Serial No. 614,528
31 Claims. (Cl. 29—12)

1. In a machine for forming a tube for multi-wall bags, means for supplying a plurality of blast means for separating the inner plies from

2,028,136
BOX AND METHOD OF MAKING THE SAME
Chester R. Claff, Randolph, Mass.
Application July 24, 1934, Serial No. 736,770
3 Claims. (Cl. 229—16)

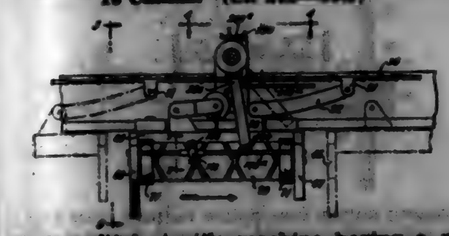
1. The method of producing a container of boxboard material which includes the step of forming a blank with side, end, bottom, and corner flap portions, said flap portions being separated from the end portions by slits, separating the side portions from the bottom portion by creases or scores in the outer or bottom surface of the blank, thereby producing corresponding ribs on the opposite surface alining with and terminating at the slits, and separating the sides from the flaps and the end portions from the bottom portion by creases or scores in the inner or upper surface of the blank, thereby to provide corresponding ribs on the outer or bottom surface.

2,028,137
TUNING ARRANGEMENT FOR RADIO RECEIVING SETS
Virgil D. Collins, Calwick, N. J.
Application October 24, 1934, Serial No. 749,747
5 Claims. (Cl. 116—124.4)



1. In a radio receiver set, a visual indicating and operator controllable tuning installation comprising a main scale, a vernier scale and a pointer arrangement for indicating the wave length of the station to be or which has been tuned, said main scale and vernier scale being graduated in the same units, and said vernier scale including a plurality of sub-scales so graduated, each of said sub-scales corresponding to a range of wave length on the main scale and said vernier scale being connected to said main scale so that the pointer arrangement will relatively move over said vernier scale a much greater distance for each unit movement over the main scale.

2,028,138
INTERNAL COMBUSTION ENGINE VALVE MECHANISM
Harry M. Cowling, Baltimore, Md., assignor of one-fourth to Benjamin Pierpont, Baltimore, Md.
Application May 1, 1934, Serial No. 723,122
3 Claims. (Cl. 123—188)



1. A valve mechanism for an internal combustion engine comprising a cylinder head having a valve chamber of substantially rectangular shape in cross section and provided with ports in opposite walls thereof, said valve chamber opening outwardly through opposite sides of the head, a plate removably secured to one side of the head and closing one end of the valve chamber, guides integral with the head and aligning with the open end of the chamber, ribs integral with opposite walls of the chamber and extending the full length of the latter, a valve element shaped to engage all walls of the chamber and slidable therein and provided with a port, said valve element having grooves in opposite walls to receive the ribs, extensions at one end of the valve element and slidably supported by the guides, wear plates removably secured to the valve element, and means for reciprocating the valve element and connected to the extensions.

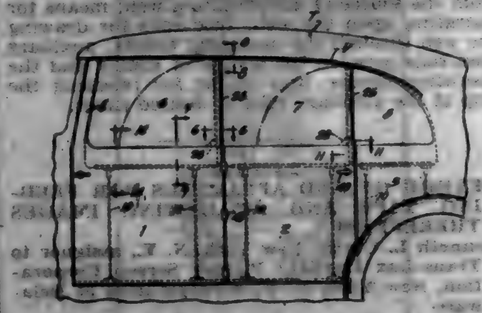
2,028,139
TOY AND GAME APPARATUS
Richard Cramp, Richard George Wightman Cramp, and Benjamin Cramp, Barkingside, Ilford, England
Application March 27, 1933, Serial No. 13,158
In Great Britain April 25, 1934
6 Claims. (Cl. 46—94)

1. Game apparatus comprising a bobbin carrying an idle roller disposed substantially centrally between the ends, in combination with a pair of pivoted blades, the opposed edges of which can engage respectively with the periphery of the bobbin and its roller, to grip, spin and eject the same.

2,028,140
WINDING MACHINE
Edward J. Abbott, Wilton, N. H., assignor to Abbott Machine Company, Wilton, N. H., a corporation of New Hampshire
Application November 24, 1931, Serial No. 577,855
16 Claims. (Cl. 242—35.5)

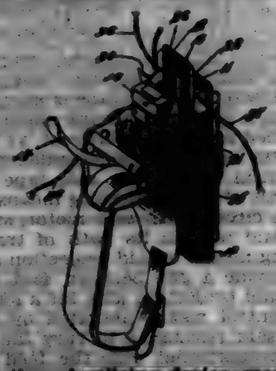
1. A multiple textile machine having a plurality of winding units, a traverse device for each winding unit, a lubricator adapted to supply lubricant to a traverse device, and means for automatically causing said lubricator to act successively on the traverse devices of the several winding units.

2,028,141
PROCESS FOR DYEING OR COLORING CELLULOSE ESTERS AND CELLULOSE ETHERS
Franz Ackermann, Binningen, near Basel, Switzerland, assignor to the firm of Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application May 16, 1932, Serial No. 611,753. In Switzerland May 22, 1931
9 Claims. (Cl. 8—5)



1. A process for dyeing or coloring cellulose esters or cellulose ethers, consisting in dyeing or coloring the material by means of a colored product which can be obtained by condensing an aromatic para-dialkylamino-aldehyde with aliphatic compounds containing a reactive methylene group, the double linkage thus formed playing the part of the main chromophore.

2,028,142
ARMOR BLOCK FOR WATER WALLS AND THE LIKE
John Blizard, Garden City, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application April 2, 1930, Serial No. 443,919
25 Claims. (Cl. 122—6)



1. The combination with spaced tubes, of a block unit, supported thereon and therebetween comprising two refractory members, said members having curved tube recesses and curved contacting surfaces eccentric thereto, a third member, and tension means securing the refractory members and the third member for clamping the block unit to the tubes.

2,028,143
VEHICLE BODY
Raymond L. Carr, Boston, Mass.
Application May 11, 1932, Serial No. 610,453
21 Claims. (Cl. 296—45)

1. A vehicle body comprising a body wall including adjoining sections having pockets therein, panels movable upwardly out of the respective sections to a raised position thereabove, said panels in their raised positions having juxtaposed adjoining edges spaced laterally from each other, and a filler strip movable independently of the panels and irrespective of the positioning thereof into the space between the adjoining panel edges, said filler strip being movable in the plane of the body wall.

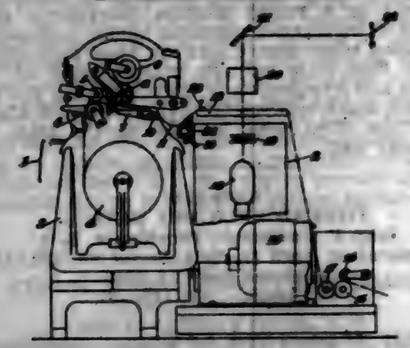
2,028,144
THREAD SPLICING DEVICE
John F. Cavanagh, Providence, R. I.
Application April 23, 1931, Serial No. 532,351
Renewed April 19, 1933
17 Claims. (Cl. 117—6)

1. In a thread splicing device, means for gripping a pair of ends at spaced points and moving the gripping points apart to break the ends to provide a frayed condition, and means for rolling the end portions of the threads to be joined one about the other.

2,028,145
TUBER
Thomas Earl Coty, Watertown, N. Y.
Application June 1, 1932, Serial No. 614,339
21 Claims. (Cl. 82—19)

1. In a machine for forming a tube for multi-wall bags, means for supplying a plurality of plies, means for separating the inner plies from

the outer ones; means for cutting out portions of the inner plies; and means for assembling the plies into a web.



7. In a tuber for paper bags, a source of supply; means for assembling the plies of paper from the source of supply into a web; means for operating upon the web; feed-rolls for drawing the web through the operating means; auxiliary feed-rolls between the source of supply and the operating means; and means for releasing the grip of the auxiliary rolls at desired times.

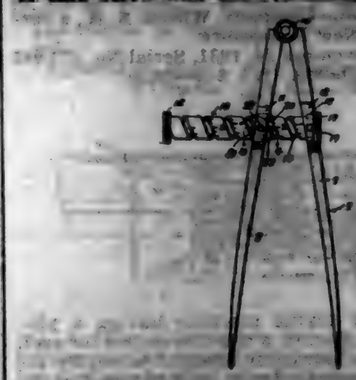
2,028,146

METHOD OF AND APPARATUS FOR FEEDING TAPE AND PROJECTING IMAGES THEREFROM

Kenneth L. Curtis, New York, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a corporation of Delaware

Application March 30, 1929, Serial No. 352,570
Renewed June 20, 1934
10 Claims. (Cl. 88—24)

1. In a device of the character described, the combination with a projection means toward which a character-bearing tape is movable after ejection from a recording means under the control of the feed mechanism thereof, an electrical take-up motor operating independently of said feed mechanism for moving said tape past the projection axis of said projecting means, variable resistance in circuit with said motor, supporting means for said tape in its path of travel from said recording means to said projection axis positioned to provide a gap between said recording means and said projection axis for a loop of said tape, and control means actuated by said loop for varying said resistance to vary the speed of said motor proportional with the feed speed of the tape whereby the speed of tape movement past said projection axis is decreased while increasing the duration of the periods during which tape is moved past said axis, said control means comprising a switch contact member having an actuating member connected thereto for moving said contact member in either of opposite directions to change the speed of said motor.



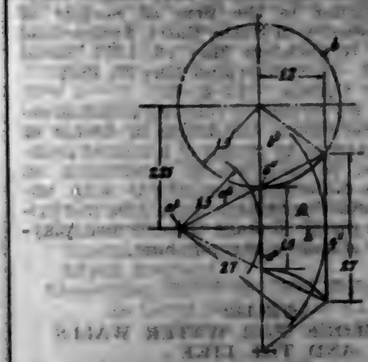
2,028,147

MICROMETRIC COMPASS

William Dunkhoff, deceased, late of Falls Creek, Pa., by Laurel C. Frey, administrator, Grafton, W. Va.

Application March 13, 1931, Serial No. 518,369
3 Claims. (Cl. 33—154)

1. A structure of the class described comprising an instrument embodying a pair of legs one of which is adjustable toward and from the other, a feed nut carried by one of said legs, an adjusting screw operatively connected with said feed nut, a swivel connection between one end of said screw and the [illegible] leg, said screw



being provided with an indicating pointer, and said feed screw being provided with graduations with which said pointer is co-operable.

2,028,148

ARCUATE PITCH CONE GEARING

Frank V. Ellwein, Lake Orion, Mich.

Application January 18, 1934, Serial No. 706,512
21 Claims. (Cl. 74—458.5)

1. In gearing assemblies wherein two or more rotating elements co-operate in drive relation through co-operative tooth or thread action, an arcuate pitch cone gear having the pitch circle of its tooth or thread zone arcuate in the direction of length of the gear, and a companion element having an annular tooth zone presenting a plurality of teeth on a radius of the element, said element tooth zone being such that when assembled with the gear, the teeth of the element tooth zone will co-operate with the gear teeth or threads to combinedly produce the characteristics of engaging teeth throughout the length of the arcuate pitch circle of the gear presented on the line of drive activity of the assembled gear and companion element.

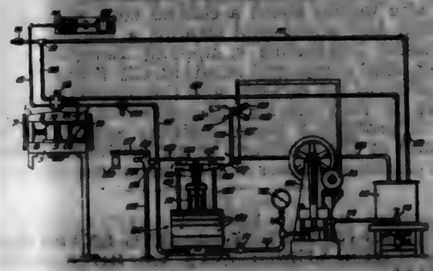
2,028,149

SAFETY DEVICE

Lester H. Goldsmith, Philadelphia, Pa.

Application May 22, 1934, Serial No. 726,369
9 Claims. (Cl. 137—168)

2. In combination, a valve casing having a valve seat, a valve head assembly normally adapted for movement as a unit with respect to said casing, which comprises a valve stem co-operating with said valve seat, a tubular member co-operating with said casing and manually movable with respect thereto, a valve stem extending from said valve head into one end of said tubular member, a spring normally under substantially its maximum compression, interposed between the tubular member and a portion of the stem contained therewithin, an abutment



on said stem against which said spring presses, a fusible member arranged adjacent the other end of the tubular member, said spring urging said stem in the direction of said fusible member, whereby upon fusion of said fusible member said spring functions to move said valve head and stem independently of said tubular member.

2,028,150

MEANS FOR CORRUGATING TUBES

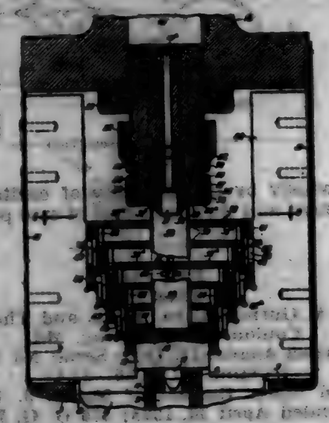
William H. Grant, Cleveland, Ohio, assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application April 19, 1933, Serial No. 666,117
Renewed October 11, 1934
17 Claims. (Cl. 153—71)

1. In a machine of the character stated, means for supporting a tubular metal blank and for subjecting it to internal pressure and to endwise pressure, slidably mounted die carriers movable into and out of operative relation to the blank, and sectional die rings mounted in the carriers and free from each other for independent relative movement toward and away from each other and disposed to be positioned about the blank in spaced relation lengthwise thereof when said carriers are in operative relation to the blank.

2,028,151

METHOD OF CORRUGATING TUBES



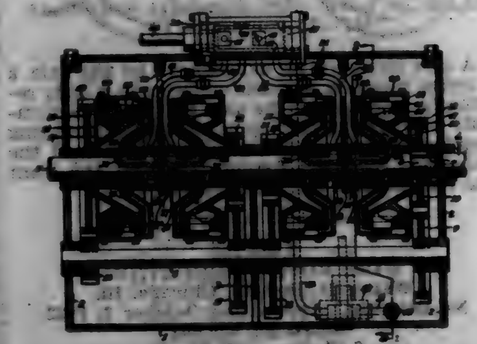
William H. Grant, Cleveland, Ohio, assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Original application April 19, 1933, Serial No. 666,117. Divided and this application January 9, 1933, Serial No. 650,297

6 Claims. (Cl. 153—71)

1. The method of producing metal bellows, which comprises first subjecting a tubular metal blank to internal pressure only while disposed within spaced die rings and of proper value to bulge the blank radially and outwardly between the rings while permitting relative movement of said rings one toward the other to accommodate shortening of the blank to compensate for the

radial extension thereof, and then compressing the blank axially and further extending it radially while positively moving the rings one toward the



other, thereby forming a corrugation in the blank, as a continuous operation.

2,028,152

HYDRAULIC TRANSMISSION

Edward Gray, Detroit, Mich.

Application May 15, 1933, Serial No. 671,160
5 Claims. (Cl. 192—57)

1. A transmission clutch comprising a drum formed with a circumferential V-shaped groove, an annular spider member, said spider being formed with a plurality of closely clustered cylinders, piston shoes slidably received in said cylinders and having their ends shaped to fit said groove, and means for supplying fluid under pressure into said cylinders to move said piston shoes into engagement with said drum.

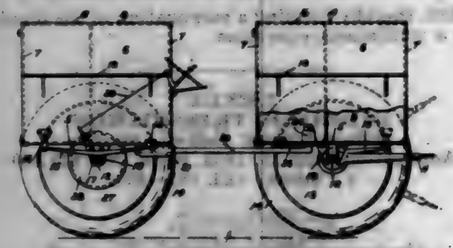
2,028,153

RADIATION DETECTOR

Ross Gunn, Washington, D. C.

Application November 12, 1931, Serial No. 574,571
17 Claims. (Cl. 250—41.5)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

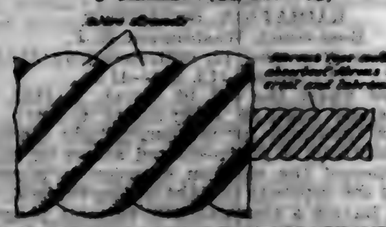


15. An apparatus for measuring light intensities, comprising a photo-excited source of electrons wherein the electron emission is proportional to the intensity of light falling thereon, an element having a characteristic variable proportionately to electron impact thereon disposed to intercept electrons from said source, means to set up a potential difference between said source and

said element and means to measure changes in such characteristic, the electron flow being con-

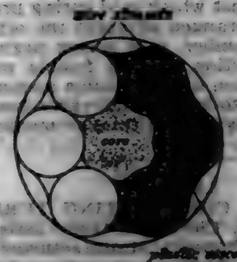
trolled wholly by the intensity of excitation of said element and the magnitude of said potential.

2,028,154
CART
Dayton A. Gurney, Caro, Mich., and Thomas A. Conlen, Silver Spring, Md.
Application August 18, 1933, Serial No. 685,768
1 Claim. (Cl. 280—33.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



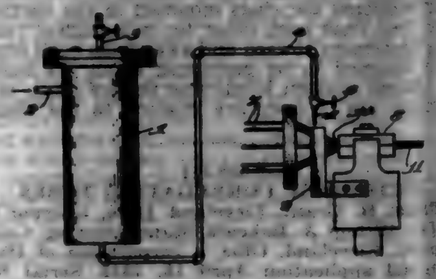
A cart including an axle, wheels on the axle, a drawbar pivotally movable on the axle, a body resiliently mounted on the axle and movable vertically with respect thereto and draft-transmitting members rigidly fixed on the under side of the body, said members slidably engaging the front and rear sides of the axle.

2,028,155
WIRE ROPE LUBRICATION
Walter D. Hedson, Chicago, Ill.
No Drawing. Application October 3, 1932, Serial No. 636,694
6 Claims. (Cl. 87—9)



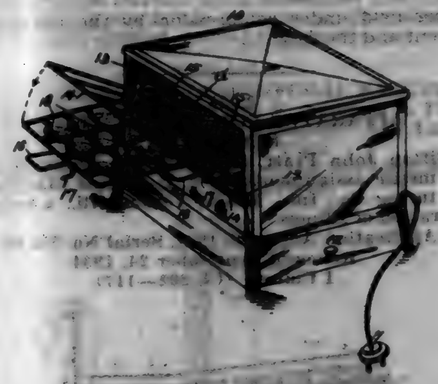
1. As a composition of matter, a plastic, jelly-like adhesive lubricant including a top drier in proportions to produce a tough, leathery surface on exposure of the lubricant to air, without affecting the body of the lubricant.

2,028,156
WIRE ROPE
Walter D. Hedson, Chicago, Ill.
Application September 14, 1934, Serial No. 744,861
5 Claims. (Cl. 117—53)



1. A wire rope comprising a plurality of strands of wire wound about and pressing upon a fibrous core, said core comprising fibrous rope strands having finely divided asbestos loosely permeated throughout the interstices of the rope strands and having a lubricant distributed throughout said core and asbestos, the amount of said lubricant being substantially less than the absorbing capacity of the asbestos, and said asbestos being composed of a major proportion of coarsely ground asbestos, and a minor proportion of extremely finely ground asbestos.

2,028,157
WIRE ROPE
Walter D. Hedson, Chicago, Ill.
Application September 17, 1934, Serial No. 744,425
5 Claims. (Cl. 117—53)



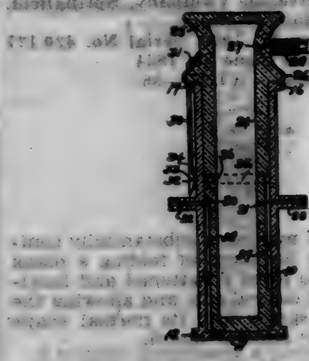
1. A wire rope comprising a plurality of strands of wire wound about a central core, and having within and about said strands a viscous plastic adhesive lubricating compound including a top drier, said compound substantially filling the interstices of the strands, and the proportion of top drier in said lubricating compound being such as to produce a tough leathery surface on exposure of the lubricant to air, without affecting the plastic character of the body of the lubricant.

2,028,158
METHOD OF INCORPORATING EXTREMELY VISCOUS LUBRICANTS IN ROPE MATERIAL
Walter D. Hedson, Beverly Hills, Ill.
Application November 2, 1934, Serial No. 751,545
2 Claims. (Cl. 117—2)

1. The method of applying a viscous, tenacious, fibre-containing adhesive lubricant unable to seek its own level by gravity to rope material, which comprises forcing the lubricant under high fluid pressure onto moving rope fibres while rapidly drawing the fibres together, and correlating the rate of flow of lubricant and the speed of the fibres to maintain a continuous body of lubricant under pressure through which the rope fibres are forced to pass.

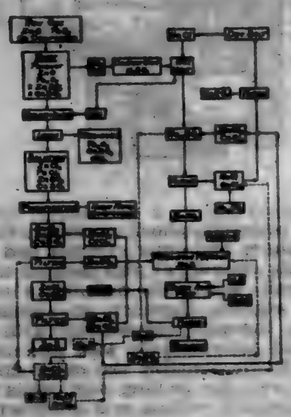
2,028,159
TOASTER FOR CANAPÉS FOR HORS D'OEUVRES
Caroline Kemp, Clayton, N. Y.
Application March 12, 1934, Serial No. 715,269
6 Claims. (Cl. 53—5)

1. A toaster having a chamber adapted to receive toasting heat from a suitable source and a removable and replaceable holder for bread to be toasted in the form of thin small pieces, said holder comprising top and bottom members adapted to exert clamping contact upon opposite sides of the pieces of bread said holder having a large number of individual cells that are open towards the heating means of the toaster to give direct access of toasting heat to the individual small pieces of bread in the cells the bread pieces contacting portions of the top and bottom members being spaced apart a distance corresponding substantially with the thickness of the pieces.



2,028,160
PROTECTIVE COVERING FOR TUBES
Howard J. Kerr, Westfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey
Application February 8, 1929, Serial No. 338,689
26 Claims. (Cl. 122—6)

13. In a furnace, a row of spaced wall cooling tubes, and preformed and separate plano-concave wall blocks cemented to the tubes with each tube independently carrying its own row of complete blocks.

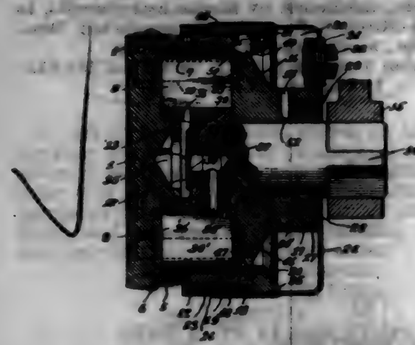


2,028,161
SYRINGE FOR BLOOD TRANSFUSIONS
Robert Mann, Memphis, Tenn.
Application February 6, 1933, Serial No. 655,225
14 Claims. (Cl. 128—214)

1. An instrument of the character described, comprising a hollow, cylindrical barrel, a piston reciprocable therein; said barrel having an inlet port and an outlet port, said piston having a circumferential groove so disposed as to communicate alternately with each of said ports in predetermined positions of said piston, and independent means maintaining communication be-

tween said groove and the exterior of said instrument.

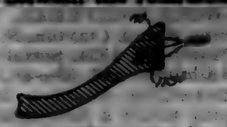
2,028,162
METHOD OF MAKING ZINC SULFHIDE
Thomas A. Mitchell and Royal L. Sessions, Denver, Colo., assignors, by mesne assignments, to Hughes-Mitchell Processes Incorporated, Denver, Colo., a corporation of Wyoming
Application January 8, 1932, Serial No. 585,633
15 Claims. (Cl. 23—135)



1. The method of making zinc sulphide characterized by the cyclic use of the elements of sodium chloride and barium sulphate and comprising the chlorine cycle of treating a zinc compound with hydrochloric acid to form zinc chloride, treating the latter in solution with sodium sulphide to precipitate the zinc as a sulphide, removing the resultant sodium chloride solution and producing said hydrochloric acid from the chloridion thereof, and the barium cycle of treating a barium compound with the sodium sulphate, which has been developed in the formation of said hydrochloric acid by the reaction of sulphuric acid and sodium chloride, to form barium sulphate and heating the latter with a reducing agent to form barium sulphide for use in the process.

2,028,163
PROCESS AND APPARATUS FOR MANUFACTURING PAPER CUPS
Abraham Novick, Flushing, N. Y., assignor to United States Envelope Company, Springfield, Mass., a corporation of Maine
Application January 11, 1930, Serial No. 420,127
Renewed June 20, 1934
52 Claims. (Cl. 93—36)

1. The process of making a substantially conical cup comprising the steps of folding a blank of sheet material to form a flattened and longitudinally uncreased conical cup, and allowing the so formed cup to spring into its normal shape with a substantially circular mouth.

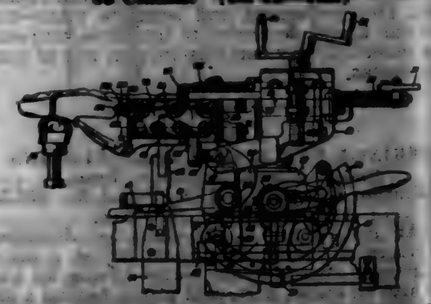


2,028,164
HYDRAULIC SHOCK ABSORBER
Ralph F. Poe, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application July 10, 1933, Serial No. 679,845
15 Claims. (Cl. 188—89)

1. In a hydraulic shock absorber, the combination of inner and outer circular end walls, an intermediate cylindrical wall secured to said inner end wall, said walls defining a cylindrical hydraulic working chamber, an annular thrust nut having threaded engagement with the outside of said intermediate wall and having an abutment flange abutting the outer side of said outer end wall for locking said walls together, a piston operable within said chamber, a sheet metal cup intimately receiving and surrounding said thrust nut and forming with said outer end wall and said nut a fluid reservoir for replenishing said working chamber, the end of said cup being deflected around the inner end of said nut, an annular locking nut threading on said intermediate wall, and packing material clamped between said nut and against the deflected end of said cup.

2,028,165
TIRE AND METHOD OF MAKING THE SAME
Robert G. Pierce, Niles, Mich., assignor to National-Standard Company, Niles, Mich., a corporation of Michigan
Application July 31, 1934, Serial No. 736,415
6 Claims. (Cl. 154—14)

2. A tire formed with a bead containing a metallic annular reinforcement and having an internal metallic ring, and having the material of the bead between the reinforcement and the



ring held under compression by the reinforcement and the ring.

2,028,166
APPARATUS FOR COKING LIQUID RESIDUUMS
Clifton John Pratt, St. Louis, Mo., assignor, by mesne assignments, to J. F. Devine Manufacturing Co., Inc., Mount Vernon, Ill., a corporation of Illinois
Application August 6, 1931, Serial No. 555,481
Renewed September 24, 1934
1 Claim. (Cl. 202—117)

Apparatus for coking relatively heavy liquid residuums comprising a distilling chamber having a stationary heated floor, means introducing said liquid residuums into said chamber so as to fall upon said floor, means within said chamber continuously scraping the residuums from said floor and pushing the residuums in a direction towards the end of said chamber, a coking chamber receiving the residuums from the end of said distilling chamber, said coking chamber having as a floor a continuously moving grate on to which the residuums fall as they enter said coking chamber, and which carries the residuums through the length of the said coking chamber, and furnaces below the residuum-receiving portion of said grate, said furnaces exteriorly heating both of said chambers, but maintaining said coking chamber at a temperature higher than that of the distilling chamber.

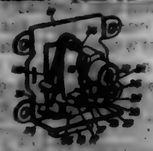
2,028,167
MACHINE FOR SHAPING SHOE UPPERS
Arthur F. Pym, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 31, 1934, Serial No. 759,858
38 Claims. (Cl. 12—14.1)

1. In a lasting machine, a support for a last, and means for pressing a shoe upper on said last into conformity to the contour thereof, said support and pressing means being relatively movable into and out of pressing relation, said pressing means comprising a plurality of pressing members arranged in series extending horizontally from one side of the last to the other about the heel end, the ends of said members being directed toward the last and being expansible into contact with one another in response to upper shaping pressure exerted thereagainst by the last.

2,028,168
GRID LINING FOR CENTRIFUGAL BASKETS
Eugene Roberts, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah, a corporation of Utah
Application April 24, 1934, Serial No. 721,616
7 Claims. (Cl. 210—76)

1. A filter supporting and spacing grid for a centrifugal basket lining comprising a metallic sheet formed with spaced rows of perforations, and intervening rows of spaced depressed dome-like hollow bosses projecting from the back of the sheet to form a multiplicity of firm supports spacing the sheet from the basket wall and providing unobstructed passages for the flow of liquid in a circumferential direction to the outlet holes in the basket wall.

2,028,169
COMPOSITE BEAM
Rolf K. O. Sahlberg, New York, N. Y.
Application July 9, 1934, Serial No. 734,876
7 Claims. (Cl. 72—61)

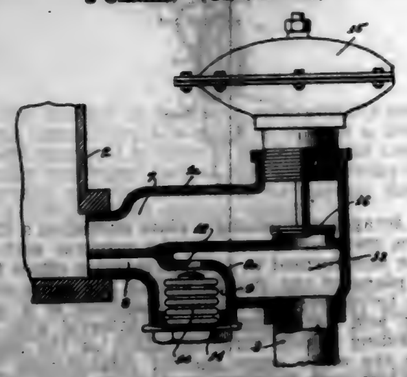


1. An improved composite beam supported at its ends and comprising a steel member with tension and compression members, an intermediate web for resisting vertical bending moments, and a slab for resisting compressive stresses, embedding the steel member in compression and anchored to the steel member by means of a series of projections integral with the steel member, with sufficient rigidity as to form, in cooperation with said compression member, the zone in compression of the composite beam.

2,028,170
SPARK PLUG SCRAPER
Walter L. Scott and Lillian H. Foster, New Orleans, La.
Application July 24, 1934, Serial No. 736,743
1 Claim. (Cl. 15—104.01)

A scraper comprising a plate providing a finger piece, parallel spaced shanks integral with the plate and formed to provide recesses offset from the plane of the shanks and in the same direction to receive a grounded electrode of a spark plug, and flat spaced prongs integral with and extending in the same direction as the shanks with the outer edges thereof substantially parallel and each tapering towards its free end and having inner and outer cutting edges, said shanks and prongs defining a space to receive an insulator of the spark plug.

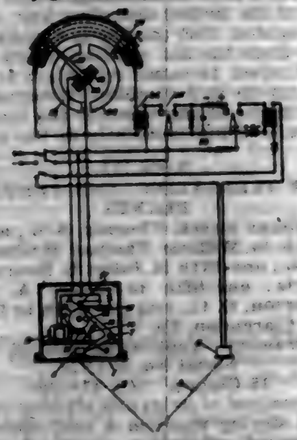
2,028,171
LOCK
Oscar A. Shamn, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 12, 1935, Serial No. 1,069
10 Claims. (Cl. 70—73)



1. A lock comprising a casing having a hole therein, a barrel having a slot therein for reception of a key, a bolt, a plurality of key operated tumblers for controlling the retraction of the bolt, one of said tumblers having a notch on its key operative face of sufficient width to receive the edge of the proper operating key, said notch being so located that the key is engaged thereby and held from further rotation before sufficient rotation thereof to cause retraction of the bolt, and an arm on said tumbler extending through said hole in the casing whereby the tumbler may be manipulated independently of the key action.

2,028,172
ART OF IRRIGATING AND FERTILIZING PLANTS
William Oscar Swook, Phoenix, Ariz., assignor of one-fifth to William Thomas McGeorge, Tucson, Ariz., one-fifth to Julius S. Bemroth, Phoenix, Ariz., one-fifth to James A. Saunders, Washington, D. C., and one-fifth to Herbert H. Porter, Clarendon, Va.
No Drawing. Application June 22, 1934, Serial No. 731,972
13 Claims. (Cl. 47—58)

1. The method of irrigating alkaline soils which comprises storing water at a level above the soil to be irrigated, employing a part of the energy of the stored water to generate electricity, em-



ploying the electricity to produce nitrogen oxides, absorbing the nitrogen oxides into a part of the water, and moving the charged water to the soil by another part of the energy thereof.

2,028,173
CONTROL FOR RADIATORS
Richard H. Thomas, Oak Park, Ill., assignor to Lurielle A. Thomas, Oak Park, Ill.
Application January 27, 1934, Serial No. 708,580
3 Claims. (Cl. 237—67)

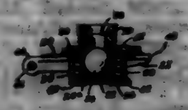
1. In a single pipe heating system, the combination with a radiator, of a steam supply pipe, a single connection between said pipe and radiator, said connection having an upper steam passage leading to the radiator and a lower condensate return passage leading from said radiator to said steam supply pipe, said condensate return passage having an intermediate chamber and a barrier between said chamber and said steam supply pipe, said barrier having a port and a thermostatically controlled valve in said chamber for controlling the flow of condensate through said port, said condensate return passage being unobstructed between said chamber and radiator to permit said condensate to continually escape from said radiator into said chamber for influencing said thermostatically controlled valve.

2,028,174
DISTANCE AND DEPTH FINDING
Edwin R. Turner, Jr., West Roxbury, Mass., assignor to Submarine Signal Company, Boston, Mass., a corporation of Maine
Application July 29, 1929, Serial No. 381,971
7 Claims. (Cl. 177—386)

1. In a system for determining depths or distances in combination a sound producer, an electrical switch, a measuring scale having an initial position, an indicator, means for moving the indicator uniformly with respect to the scale from the initial position, means operable by the electrical switch to restore and hold the indicator in its initial position, and means operable by the sound producer to operate the electrical switch whereby the closing of the switch takes place just before the sound production and the release of the indicator simultaneously with the sound production.

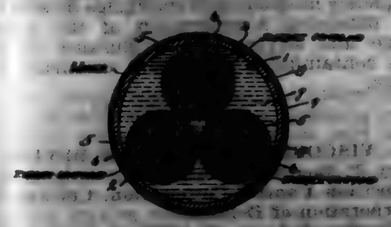
2,028,175
DISPENSING TUBE
Sheridan C. Waite, Springville, N. Y.
Application February 14, 1934, Serial No. 711,210
Renewed April 16, 1935
3 Claims. (Cl. 221—69)

1. In a dispensing tube, a discharge nozzle having a normally closed bottom wall, and a valve closure associated with the nozzle and having a cutting blade at its inner end for cutting an opening in the bottom wall of the nozzle, an external shoulder intermediate the ends of the closure member and a disk head at the outer end of the closure member having a curved bottom surface adapted to spin the outer end of the nozzle inwardly to form a flange for abutting engagement with the shoulder to prevent accidental displacement of the closure member relative to the nozzle.



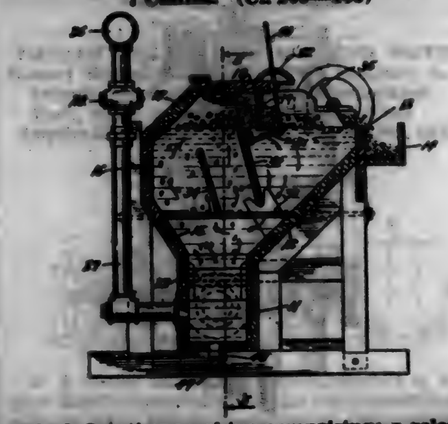
2,028,176
BRUSH RIGGING AND END CAP ASSEMBLY FOR SURGICAL MOTORS AND THE LIKE
Howard A. Whiteside, New York, N. Y.
Application July 26, 1932, Serial No. 624,121
Renewed March 13, 1935
26 Claims. (Cl. 171—234)

10. In a miniature motor, the combination with a stationary motor casing made of frangible insulating material, and a revolvable armature shaft carrying a commutator, of a combined brush rigging and end cap assembly, comprising a brush carrying disk made of frangible insulating material and having a reduced portion slidably received within the motor casing and firedly secured to the motor casing across the end thereof and in position to hold brushes carried thereby on the commutator, a cup-shaped end cap, also made of frangible insulating material and slidably received about the periphery of the disk, means to secure the end cap to the brush carrying disk with the end cap surrounding the disk and having its edge abutting the end of the casing, the inner surfaces of the end cap and casing adjacent the edges being in con-



with and reinforced by the disk, and a bearing carried by one of said parts for supporting one end of the armature shaft.

2,028,177
VALVE OR DRAIN PLUG
James Howard Williams, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a corporation of Delaware
Application October 28, 1933, Serial No. 695,618
1 Claim. (Cl. 251—56)



A device of the character described comprising a stem adapted to be connected with a drain hole of a container and having a passageway therethrough; a plate member associated with said stem having parallel depending guideways along opposite edges; a slide member movable along said guideways transversely to the axis of said passageway, having a depending socket with an inturned flange and outturned lugs at the bottom; a cup member arranged in said socket and having an outturned flange at its upper end; a spring coiled around said cup member and engaging the said flanges and tending to move the cup member toward the plate member; and a ball seated in said cup member and arranged to be seated on the edge of the passageway to close the same; the said spring yielding to permit the ball to be withdrawn from the passageway and move along said plate member as the slide member moves along said guideways; and means for moving said slide member comprising a rod having a hooked end adapted to slip by said outturned lugs and engage the depending socket of the slide; the said lugs preventing downward dislodgment of the rod from the slide during the moving thereof.

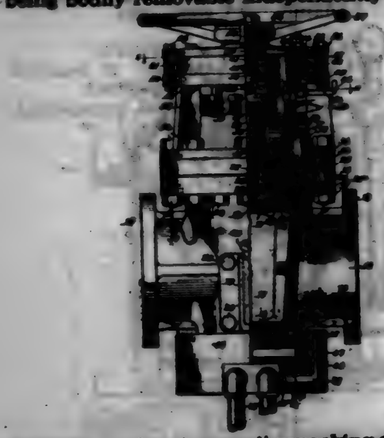
2,028,178
ELECTRIC CABLE
Robert J. Wiseman, Paterson, N. J., assignor to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application June 22, 1916, Serial No. 723,159
4 Claims. (Cl. 173—264)

1. An electric cable for the transmission of high tension electrical energy comprising in combination a flexible imperforate enclosing casing, a conductor insulated with a solid water impervious material of high dielectric strength which is capable of being improved by the application of pressure thereto loosely enclosed within the said casing, and water under super-atmospheric pressure sufficiently high materially to increase the dielectric strength of the said conductor insulation filling the space within the casing unoccupied by the conductor and its insulation and in direct contact with the surface of the conductor insulation.

2,028,179
FLOTATION MACHINE
Randall P. Akins, Denver, Colo.
Application November 7, 1933, Serial No. 696,829
7 Claims. (Cl. 209—168)

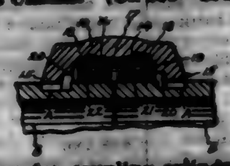
1. A flotation machine comprising: a relatively long tank; a longitudinal air channel in the bottom of said tank; a series of air partitions dividing said air channel into a series of air chambers; a perforated member covering each of said chambers; a forwardly inclined front wall in said tank above said channel terminating below the solution line in said tank; a rear wall in said tank formed to extend in a general forward direction, said rear wall terminating above the solution line in said tank; and a baffle board positioned above said perforated medium and below the solution level in said tank, said baffle board being inclined so as to direct rising material toward said rear wall, said baffle board being hingedly supported so that its angular position may be varied at will.

2,028,180
ACOUSTIC MATERIALS
Harold D. Arnold, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 13, 1930, Serial No. 482,478
2 Claims. (Cl. 154—44)



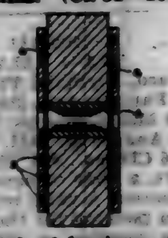
1. A partition or wall covering for the acoustic treatment of rooms comprising a thick, porous and easily compressible layer of low density material adapted to readily absorb energy from air waves of the lower frequencies, and an exposed, thin layer of high density non-porous material covering the porous material to prevent excessive absorption of energy from air waves of the higher frequencies.

2,028,181
PLUG VALVE
Francis N. Bard, Highland Park, Ill., assignor to Walworth Patents, Inc., Boston, Mass., a corporation of Massachusetts
Application August 20, 1931, Serial No. 560,266
16 Claims. (Cl. 251—91)



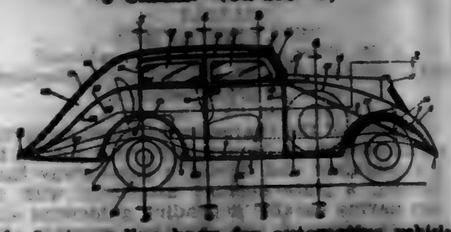
1. In a valve, a body or housing, a valve member moving therein, a valve retaining member on the housing, a packing for the valve adjacent to said retaining member, a gland engaging said packing, a bonnet for the housing overlying said

gland, common means for securing the retaining member and bonnet to said housing, means for compressing the gland and packing, said bonnet being bodily removable independently of said re-



taining member, to permit repacking of said valve, and means for securing the retaining member to the housing independently of the bonnet whereby said retaining member is adapted to hold the valve in the body during the repacking.

2,028,182
COUPLING
Ford Earnickel, Jr., Tulsa, Okla.
Application April 28, 1933, Serial No. 667,967
8 Claims. (Cl. 285—194)



1. A housing for coupling cylindrical members including, a pair of substantially semi-circular members having cavities therein extending from end to end thereof and provided with a rib and seats on each side of said rib, the ends of said members having their cavity portions flared outwardly, and ears on the ends of the members for securing them together.

2,028,183
ABRASIVE WHEEL AND METHOD OF MAKING THE SAME
Raymond Calvin Benner and William George Seley, Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Application April 18, 1930, Serial No. 445,267
In Canada June 7, 1929
16 Claims. (Cl. 51—168)

9. An abrasive wheel having a metal disk attached to each lateral face thereof by cement containing a phenolic condensation resin and granulated filler in sufficient proportion to modify the character of the resin whereby the said cement has a higher modulus of elasticity than the said abrasive wheel.

2,028,184
AUTOMOBILE
Fred B. Berghoff, Minneapolis, Minn.
Application June 7, 1934, Serial No. 729,468
5 Claims. (Cl. 296—1)

1. A streamline body for automotive vehicles having substantially smooth unbroken side walls, an elongated downwardly and rearwardly extending rear wall, and a top whose width is less than the tread of the vehicle, said rear wall forming in effect a continuation of said top and extending downwardly and rearwardly in relatively smooth unbroken lines to the lower peripheral edge of the body, said side walls being sloped inwardly from a width greater than the tread of the vehicle at the lower peripheral edge of the body to said top and rear wall, thereby to provide a body, the shape of which reduces wind resistance and increases the stability of the vehicle on the road of relatively high speeds.

2,028,185
PROCESS FOR OBTAINING VALUABLE PRODUCTS FROM ACID SLUDGE
John C. Bird, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application January 9, 1932, Serial No. 585,767
22 Claims. (Cl. 260—159)

1. A process for obtaining a separation of components of acid sludge comprising contacting the sludge with an oxygenated organic solvent not completely miscible with the sludge or with water, and obtaining a separation of the contacted sludge and solvent into a plurality of phases each containing a component originally in the sludge.

2,028,186
VISCOSITY-RESPONSIVE DEVICE
Harry T. Booth, Detroit, Mich., assignor to Lubrication Control Corporation, Chicago, Ill., a corporation of Delaware
Application February 7, 1933, Serial No. 655,576
17 Claims. (Cl. 137—155)

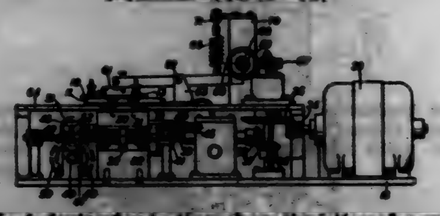
1. In a fluid system, two fluid paths, a heat exchange device in one path, a conduit with which said paths communicate, valve means for controlling flow through said paths, a chamber having in-

let and outlet passages, one of said passages comprising a friction tube and the other passage comprising an orifice, said inlet passage being in communication with said conduit, means for maintaining constant pressure differential across said inlet passage, and means for actuating said valve means in response to pressure variations at one side of said inlet passage.

2,028,187
VISCOSITY-RESPONSIVE DEVICE
Harry T. Booth, Detroit, Mich., assignor to Lubrication Control Corporation, Chicago, Ill., a corporation of Delaware
Application February 7, 1933, Serial No. 655,576
7 Claims. (Cl. 137—155)

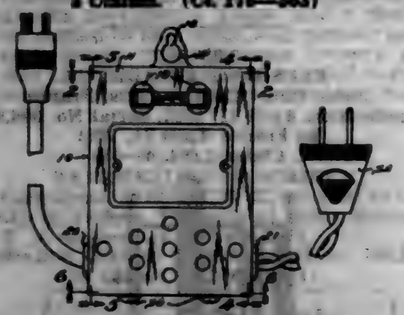
1. In a fluid system, two fluid paths, a conduit with which said paths communicate, a heat exchange device in one path, a chamber having a port comprising a friction tube and another port comprising an orifice, means for supplying fluid from said conduit to one of said ports, means for regulating the pressure of the supplied fluid to maintain constant pressure within said chamber, and valve means responsive to the pressure of the fluid supplied to the inlet port of said chamber for controlling flow through said paths.

2,028,188
VISCOSIMETER
Harry T. Booth, Detroit, Mich., assignor to Lubrication Control Corporation, Chicago, Ill., a corporation of Delaware
Application February 7, 1933, Serial No. 655,580
11 Claims. (Cl. 265—11)



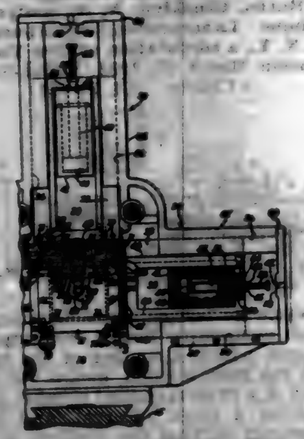
6. In a viscosimeter, a casing, a hollow piston mounted in said casing, a spring opposing movement of the piston in one direction, said casing and hollow piston having cooperating ports to control fluid flow into the piston, a friction tube extending through the end of said hollow piston, said casing having an outlet orifice, and a pressure actuated viscosity indicator connecting with the interior of said piston.

2,028,189
UNDERCOAT FOR LACQUERS AND LACQUERED MATERIAL
Walter D. Bowlby, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 12, 1931, Serial No. 577,523
9 Claims. (Cl. 91—68)



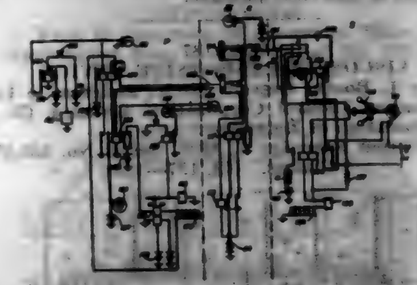
1. A waterproof, greaseproof and odorless packaging material comprising paper having a surface thereof coated with starch and having a nitrocellulose coating superimposed on said starch coating.

2,028,190
IMPACT TESTING DEVICE AND METHOD
Robert Burns, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 21, 1932, Serial No. 600,151
8 Claims. (Cl. 73—51)



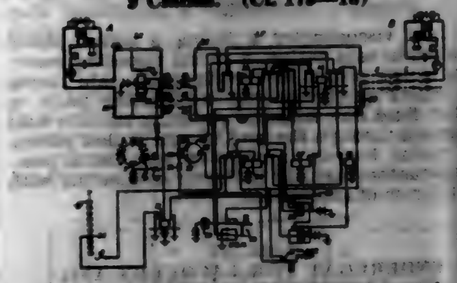
5. A device for testing characteristics of a surface finish comprising means for supporting the sample upon which a coating of the material to be tested has been applied, means for subjecting said finish to a predetermined number of uniform blows during a given interval, and means for simultaneously varying the position of the sample holder with respect to the impact means, said varying means comprising a cam arranged to vary the position of the sample holder in one direction and a second cam for varying the position of the sample holder in a direction at right angles to the direction of movement caused by said first cam.

2,028,191
ALTERNATING CURRENT TO DIRECT CURRENT CONVERTER
Avery B. Chereton, Detroit, Mich., assignor to E. S. Evans & Sons Company, a corporation of Michigan
Application October 5, 1926, Serial No. 744,557
3 Claims. (Cl. 175—363)



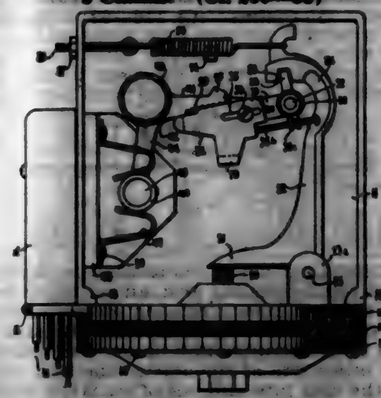
1. Current rectifying and transforming apparatus including a casing having an opening in one wall for accommodating the passage of said apparatus therein and spaced openings in an opposite wall, a combined transformer and rectifier unit having all portions fixed in assembled relationship independently of said casing and removably insertable in the latter through the opening in said first mentioned casing wall, spaced fuse coupling elements mounted on said unit, each of said elements being registerable with one of said openings of said second mentioned casing wall respectively and adapted to extend therethrough during insertion of said unit into said casing, and a fuse engaged in said casing and located externally of said casing.

2,028,193
DIE CASTING MACHINE
George L. Cherry, Western Springs, Ill., assignor to Western Electric Company, Incorporated, a corporation of New York
Application January 11, 1934, Serial No. 706,194
2 Claims. (Cl. 22—93)



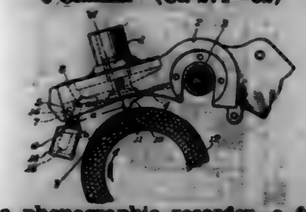
1. In a die casting machine, a die supporting plate for interchangeably supporting a plurality of different dies having variously arranged cores for movement into and out of the corresponding die cavities, and core actuating means comprising a hollow slide mounted directly on said die supporting plate for movement toward and away from the die, elongated slideways on the supporting plate extending substantially the full length of said slide for guiding the same in its movements, a motive fluid cylinder attached directly to the supporting plate within the hollow of said slide, a piston in said cylinder connected for actuating the slide, and a readily replaceable adaptor plate on the slide for connecting the slide interchangeably with variously arranged cores of the different dies.

2,028,194
PRINTING TELEGRAPH SYSTEM
Thomas L. Corwin, Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 14, 1934, Serial No. 735,172
1 Claim. (Cl. 178—4.1)



A teletypewriter system having a central teletypewriter office with a concentration board, a subscriber's teletypewriter connectable to the concentration board by only a single wire telegraph line, said line being normally closed to alternating current and normally open to direct current, a normally unoperated teletypewriter motor located at the subscriber's station, motor starting means at the subscriber's station for starting the motor, control means at the concentration board for applying alternating current to the line to operate the motor starting means for starting the motor, a normally unoperated instrumentality for varying the direct current resistance of the line, said instrumentality being operated only by the teletypewriter motor and only when the motor has attained its full operating speed, and a normally unoperated indicating device at the central office operating in response to the variation in direct current resistance of the line for giving an operator at the central office an invariably correct indication that the teletypewriter motor at the subscriber's station has attained its full operating speed.

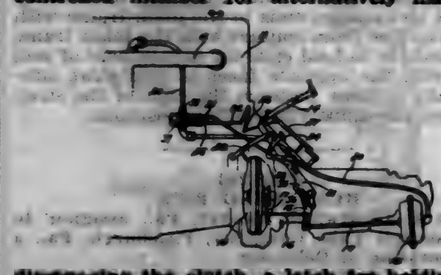
2,028,195
TELEPHONE SYSTEM
Thomas L. Dimond, Boonton, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 18, 1934, Serial No. 735,758
9 Claims. (Cl. 179—18)



6. The combination in a selective switch of a terminal bank and a set of brushes including a test brush, a magnet for stepping said brushes over said terminals, a stepping relay, an energizing circuit for said magnet extending through a normal contact of said relay, a space discharge device connected to said test brush, and a circuit through said discharge device for operating said relay.

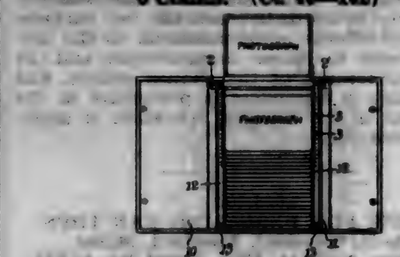
2,028,196
SWITCH
Stanley R. Du Brie, Detroit, Mich.
Application October 2, 1934, Serial No. 747,413
5 Claims. (Cl. 200—83)

1. A pressure switch means comprising an operating bell crank, means tending to rotate the same in one direction on an increase in pressure, adjustable resilient means tending to rotate the same in the opposite direction, the two means being in opposition, a contact making bell crank, and a connecter bell crank having one arm operatively connected to an arm of the operating bell crank through a positive connection and having another arm operatively connected to an arm of the contact making bell crank through an adjustable resilient connection which provides an over center snap action for the contact carrying bell crank.



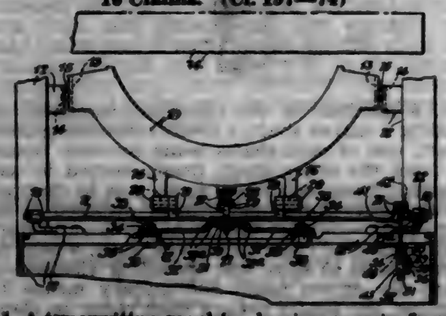
2,028,197
PHONOGRAPHIC RECORDER
Orville M. Dunning, East Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application March 6, 1933, Serial No. 659,743
6 Claims. (Cl. 274—32)

2. In a phonographic recorder, a frame substantially stationary as to vibration, a sound box comprising a casing and a vibratile element carried by said casing, said sound box being mounted for movement relatively to said frame, and sound box stabilizing means comprising a plurality of relatively movable surfaces and a viscous fluid intervening said surfaces and arranged for viscosity reaction therewith, said surfaces being provided in part on said frame and in part on said sound box casing.



2,028,198
AUTOMATIC CLUTCH CONTROL
Harold F. Elliott, Palo Alto, Calif.
Application February 23, 1933, Serial No. 657,345
6 Claims. (Cl. 192—91)

1. In a control mechanism for power transmission to an engine operated vehicle, a clutch, power means for operating the clutch including a manually controlled member which when operated causes the clutch to be released, a manually controlled member for alternatively manually



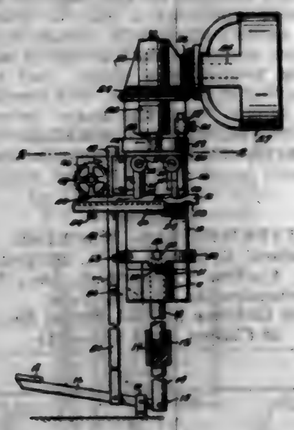
disengaging the clutch, a latch for holding the member that operates the power means, and means whereby the latch is released when the manual disengaging means is moved.

2,028,199
APPARATUS FOR DISPLAYING PHOTOGRAPHS
Herman Fabry, Evanston, Ill.
Application May 13, 1935, Serial No. 21,099
6 Claims. (Cl. 40—102)

1. In combination a support, a pair of spaced, parallel walls secured to the support and each provided with openings, a pair of photographs or similar objects adhesively joined in back-to-back relation, means at the top edge of said joined photographs providing a hinge, and a flexible member carried by said hinge, said member being of greater length than the space between said walls and the ends of which are adapted to enter the openings therein only by flexure of said member.

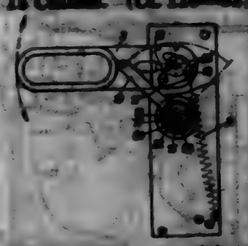
2,028,200
TYPEWRITING MACHINE
Carl Gabrielson, Syracuse, N. Y., assignor to L. C. Smith & Corona Typewriters, Inc., Syracuse, N. Y., a corporation of New York
Application October 5, 1934, Serial No. 746,949
10 Claims. (Cl. 197—74)

1. A typewriting machine having a main frame, a support mounted in the main frame for shift-



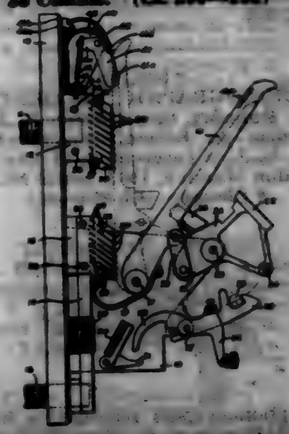
ing movement from one to the other of two positions to condition the machine for printing upper and lower case characters, two spaced stops movable with said support, and a resilient metal strap held at its opposite ends to the main frame with the strap free from contact with the main frame intermediate its held ends for engagement of said stops with the opposite faces of said strap substantially midway between the ends of the strap to arrest the support in said two positions.

2,028,281
BUTT-WELD PIPE
Robert L. Gangwisch, Beaver, Pa., assignor to Pittsburgh Tube Company, Pittsburgh, Pa., a corporation of Delaware
Application September 11, 1935, Serial No. 40,668
2 Claims. (Cl. 266—12)



2. In the production of butt-weld pipe the method of procedure herein described which consists in shaping to tubular form and welding in a welding bell a skelp with oppositely beveled and convex edges and with opposite surfaces of unequal width, the wider surface of the skelp being the outer surface of the shaped article, whereby the disparity in width between the two surfaces of the skelp affords accommodation to the disparity between the inner circumference and the outer circumference of the shaped article, and the convexity of the edges is preventive of the development in the bending operation of scale-lodging concavities.

2,028,282
MACHINE FOR UNSEALING CAN TOPS
Emile N. Gauthier, Rumford, Maine
Application April 11, 1935, Serial No. 15,923
4 Claims. (Cl. 113—1)

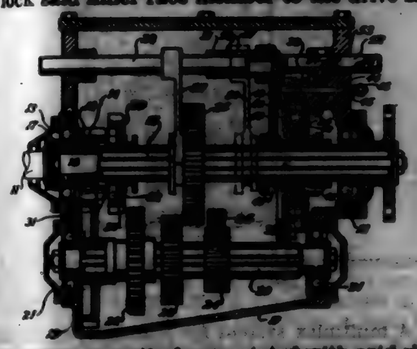


2. A machine of the character described, including a driven shaft, a freely rotatable opposed shaft, one of said shafts being movable toward or from the other shaft, heads carried by said shafts and between which a can may be clamped, a can flange-spreading element disposed in the path of movement of the rim of the can and shiftable toward or from the driven head, a cam reciprocatable to shift said spreading element toward the driven head, and unitary means for shifting the shafts toward each other to clamp a can between said heads and simultaneously shift said cam to its operative position.

2,028,283
VISUAL SIGNALING DEVICE
Ernst Görler and Henry Fruhn, Berlin, Germany
Application November 15, 1932, Serial No. 643,262
In Germany November 23, 1931
15 Claims. (Cl. 116—62)

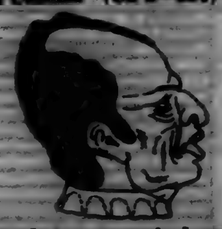
1. A signaling device comprising in combination a pivoted signaling arm, an actuating member for the arm, means causing successive movements of the actuating member in the same direction to be operative first on one side and then on the other side of the axis of the said arm to swing the arm into and out of signaling position alternately, and means causing an automatic retraction of the said actuating member after each movement thereof.

2,028,284
ELECTRIC CIRCUIT INTERRUPTER
Herbert C. Graves, Jr., East Bradford Township, Chester County, Pa., assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of New Jersey
Application May 15, 1934, Serial No. 725,731
25 Claims. (Cl. 200—166)



1. In an electric circuit interrupter, cooperating relatively movable contact structures having opposed substantially plane contact surfaces, a rigid conducting element disposed between said opposed surfaces to engage both in circuit-closing position of said interrupter, and resilient means for pressing said conducting element against both of said opposed contact surfaces when said interrupter is in circuit-closing position.

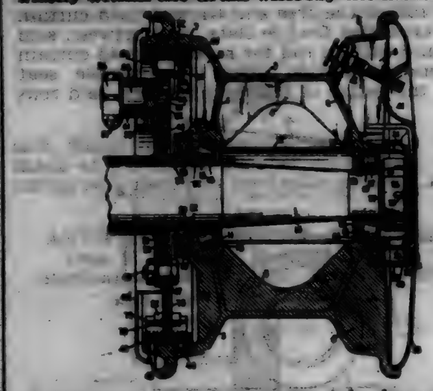
2,028,285
AUTOMATIC AUTOMOBILE BRAKE
Clair F. Hahn, Alliance, Ohio
Application March 25, 1935, Serial No. 12,455
10 Claims. (Cl. 188—4)



1. A transmission mechanism including a driv[ing] shaft, shifter rod means for causing a reverse rotation of said shaft and forward rotation of

the shaft at several speeds including a low speed and for shifting to a neutral position from each of said reverse and forward speeds, an automatic brake for preventing reverse rotation of said shaft and comprising an overrunning clutch including a normally stationary outer race member and an inner race member rotatable therein and surrounding the drive shaft, a sleeve slidably splined upon the drive shaft and adapted to lock said inner race member to the drive shaft

and means operatively associated with said sleeve and operatively associated with the shifter rod means so as to permit a certain amount of lost motion between said means and the shifter rod means for moving said sleeve to locking position when the shifter rod means is shifted to low speed and for moving said sleeve to unlocking position when the shifter rod means is shifted to reverse and for retaining the sleeve in unlocked position when the shifter rod means is shifted to neutral from reverse.



2,028,286
DISGUISE
William A. Hall, Los Angeles, Calif., assignor to Max Factor & Co., Los Angeles, Calif., a corporation of Delaware
Application May 31, 1932, Serial No. 614,455
2 Claims. (Cl. 2—224)

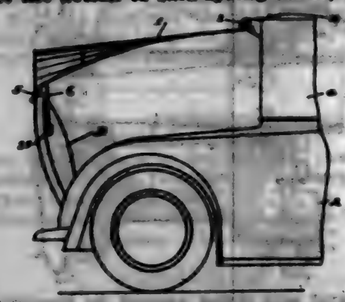
1. A disguise for a muscularly actuated part of a wearer comprising a thin resilient layer for closely contacting with the part of the wearer to be disguised, and a supplemental yielding layer joined to the resilient layer at places corresponding to little or no muscular movement.

2,028,287
WHEEL AND BRAKE THEREFOR
Alexander C. Hamilton, Pleasant Ridge, Mich., assignor, by mesne assignments, to Hayes Industries, Inc., Jackson, Mich., a corporation of Michigan
Application June 5, 1931, Serial No. 542,208
24 Claims. (Cl. 188—78)

1. In brakes, a brake drum, an anchor within the drum, a flexible band having one end secured to the anchor, and means to move the other end within a circle having its axis substantially parallel to the axis of the drum, said circle being wholly within the drum whereby the movable end

of the band and drum cannot be brought into contact.

2,028,288
HYDROCARBON ENGINE FUEL PUMP
Lewis H. Haney, Los Angeles, Calif.
Application July 28, 1930, Serial No. 471,167
Renewed April 9, 1935
1 Claim. (Cl. 103—154)



In a fuel pump, a cylinder having an inlet, a valve for controlling said inlet, said cylinder having an outlet, said cylinder including a pair of spaced openings in communication with each other, a hollow piston in said cylinder, said piston being closed at the portion adjacent to said cylinder inlet, said piston having an outlet port communicating with the interior thereof and adapted in one position of said piston to register with said outlet of said cylinder, a second port in said piston communicating with the interior thereof, said second port in one position of said piston being adapted to register with one of said spaced openings, the other of said openings being near the end of said cylinder, a plunger in said piston adapted to first reduce the volume between the top of said piston and said plunger and when said piston outlet port registers with said outlet port of said cylinder to first allow free passage through said outlet port at the time of compression and then obstruct the passage through said outlet port, and means to move said piston and said plunger.

2,028,289
REMOVABLE HOOD FOR THE RUMBLE SEAT OF AUTOMOBILES
Lawrence F. C. Hart, Ottawa, Ontario, Canada
Application July 27, 1934, Serial No. 737,289
In Canada July 29, 1933
7 Claims. (Cl. 296—63)

1. In combination with an automobile having a rumble seat, a casing adapted to be secured to

the top, a spring roller journalled in said casing, a curtain wound on said roller having a flexible rod at the free end thereof, said curtain having crosswise flexible slats, rods between said casing and curtain rod for retaining said curtain in extended position above the rumble seat against the action of said spring roller, said rods

being disposed inwardly of the side edges of said curtain, a strut between the automobile and said curtain rod disposed intermediately of the length thereof, and means on each side of said strut between the automobile and said curtain rod tension means to flex said curtain rod to thereby impart a curved or arched shape to said curtain.

2,023,210

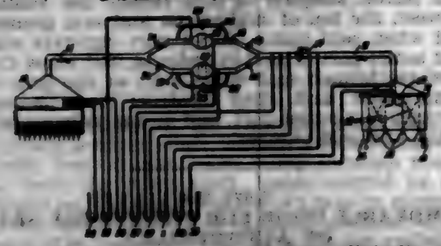
COIN COLLECTING APPARATUS

William H. Harvey, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application May 16, 1935, Serial No. 21,780

3 Claims. (Cl. 232—57.5)

1. In a coin collector, a coin trap, a pivoted vane for supporting said trap, a refund chute, a pivoted shutter in said refund chute, and a latch member for said vane controlled by said shutter.



2,023,211

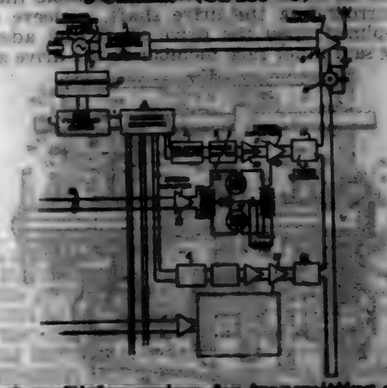
FLUID STREAM CONTROL

Mack E. Haworth, Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company, a corporation of Ohio

Application February 18, 1931, Serial No. 516,632

9 Claims. (Cl. 266—582)

1. A main duct, branched intermediate its ends to contain a plurality of blower means, a blower means in each branch, a main damper in said duct, by-pass ducts in said branches extending from the pressure to the suction side of said blower means, and valves in said by-pass ducts.



2,023,212

RADIO TRANSMITTING SYSTEM

Raymond A. Heising, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 22, 1932, Serial No. 708,314

9 Claims. (Cl. 250—9)

1. A multiplex system for transmitting signals comprising a plurality of channels, a power amplifier common thereto and means for applying to each of said channels signals of a frequency individual to the respective channel and in such phase relationship as to cause their aggregate magnitude to remain at all times much less than the sum of their individual peak magnitudes.

2,023,213

HEAT EXCHANGER OR COOLER

Arthur E. Hemphill, Egg Harbor City, N. J.

Application April 21, 1933, Serial No. 667,167

3 Claims. (Cl. 62—126)

1. A cooler for use with a compressor and with a volatile liquid refrigerant, comprising in combination vertical unobstructed headers of which one receives liquid refrigerant through an inlet provided near its base and discharges comparatively dry gas from an outlet provided near its top to the compressor and of which both provide free paths for the upward escape of gas from the liquid as it is liberated, horizontal tubes communicating at their ends with the headers and from the ends of which gas generated in any one of the tubes rises through the headers without passing through other tubes whereby said tubes are flooded with liquid, and a partition near the top of the header first above referred to for directing gas therefrom in series through tubes located above the liquid level in the other header, whereby the gas is dried in the upper tubes on its way to the compressor.

2,023,214

SOAP EJECTING SPRAY HEAD

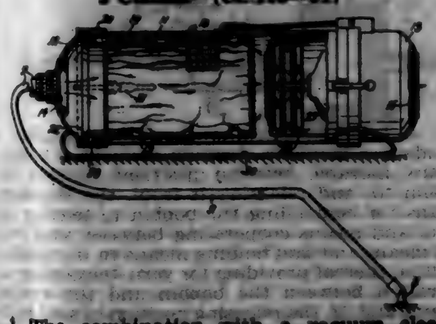
Mark M. Hennessy, Wauwatosa, Wis., assignor to Durant Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin

Application May 31, 1934, Serial No. 728,371

9 Claims. (Cl. 299—84)

1. A soap ejecting spray head comprising a casing having one end apertured, means for admitting water to the casing for discharge in the form of a spray from said apertures, a soap nozzle in the apertured end of the casing, a soap storage chamber in the casing, a conduit between the soap nozzle and the soap storage chamber, a pressure actuated valve controlling the flow of soap from said conduit to the nozzle, and a piston movable in said conduit to cause pressure upon the soap therein to open said valve and permit ejection of said soap.

2,023,215



VACUUM CLEANER

Joseph Friedrich Hemberger, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware

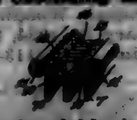
Application December 23, 1932, Serial No. 648,297

In Germany December 24, 1931

5 Claims. (Cl. 183—51)

1. The combination with a vacuum cleaner unit including a casing and air flow producing means in said casing, of an open-work bag-shaped structure in said casing, and a seamless paper dust bag adapted to fit into said open-work structure and be supported throughout substantially its entire length thereby, said dust bag having a folded wall, said open-work structure preventing complete lengthwise and crosswise expansion of the dust bag.

2,023,216



BAG FRAME

William C. Hiering, Newark, N. J., assignor to The J. E. Meyer & Company, Newark, N. J., a corporation of Delaware

Application December 15, 1934, Serial No. 757,708

2 Claims. (Cl. 150—39)

2. In combination with a handbag frame member, a clamping member for holding tops of a slide fastening device, said clamping member comprising an open cylindrical tube having a continuous flange extending the length thereof,

said flange being bendable to conform to the shape of the frame member, and means for securing said flange to the frame member.

2,023,217

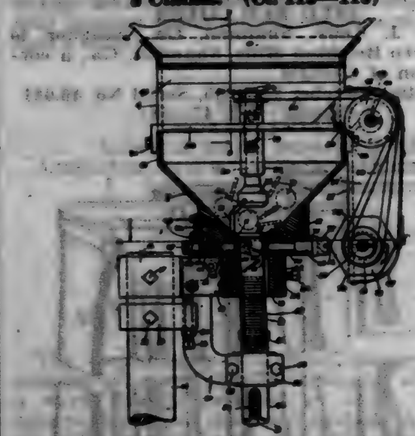
ANTIPARASITIC AGENT AND AGENCY

Otto V. Huffman, Bedford Hills, N. Y.

Application July 11, 1933, Serial No. 679,837

3 Claims. (Cl. 102—15)

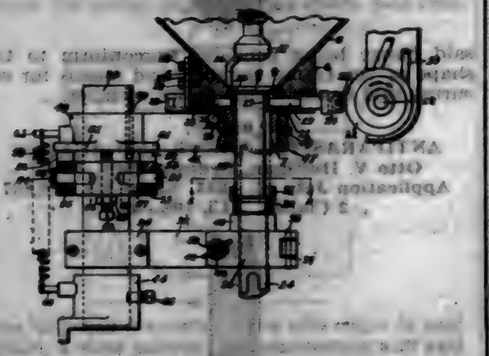
1. An anti-parasitic charge for a gun cartridge comprising an intermixture of an explosive, a non-fluid anti-parasitic agent and a binder whereby said explosive and said agent are held together in one unitary mass.



2,023,218

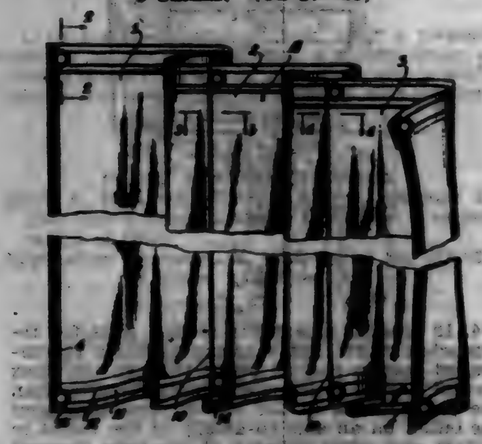
FEEDING MEANS FOR SEALING PADS FOR RECEPTACLE CLOSURE CAPS

John A. Johnson, Woodhaven, N. Y.



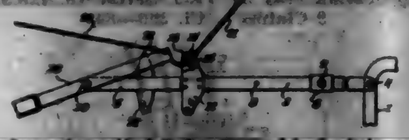
Application March 15, 1933, Serial No. 660,863

5 Claims. (Cl. 112—113)



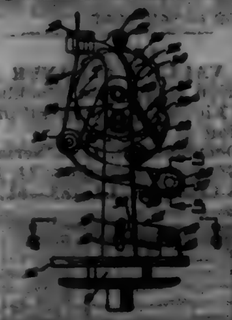
4. In feeding means for sealing pads for receptacle closure caps, a casing having a funnel-shaped bottom and an outlet through the apex thereof having a diameter slightly greater than the pads, means in the casing revolvable about the outlet on an axis co-axially of the outlet to agitate and cause delivery of the pads through the outlet, a tube supported to have movement at one end co-axially of the outlet with the opposite end juxtaposed to the casing outlet to receive the pads therefrom, means to yieldingly urge said end of the tube in a direction laterally of the outlet, and means to intermittently impart movement to the tube against said yielding means in the opposite direction laterally of the outlet to vibrate the tube and thereby effect a stacking of the pads therein.

2,028,219
FEEDING MEANS FOR SEALING PADS FOR RECEPTACLE CLOSURE CAPS
John A. Johnson, Woodhaven, N. Y.
Application February 15, 1934, Serial No. 711,268
13 Claims. (Cl. 113—115)



1. In feeding means for sealing pads for receptacle closure caps, a hopper having an outlet, a tube movably carried in the hopper outlet to have lateral movement relative to the vertical axis thereof, a second tube mounted in alinement with the hopper outlet, means to normally support the hopper with the first tube in communication with the second tube, and means adapted to move the hopper away from the supporting means and position the first tube in spaced relation with said second tube to permit removal of the second tube from its mounting.

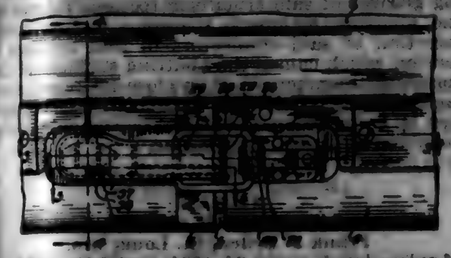
2,028,220
SEED BED COVER
Timothy J. Kelly, Shannon, Ga., assignor to Southern Brighton Mills, Shannon, Ga., a corporation of Georgia
Application October 22, 1935, Serial No. 46,061
9 Claims. (Cl. 47—33)



1. A net for covering seed and plant beds, comprising a plurality of strips of netted material, having at least one wire selvage, said strips being connected at their adjacent edges by narrow seams made up of overedged wire selvages of adjacent strips forming a single wide strip of said netted material, the seams being alternately on opposite sides of the net, and said seams being substantially only the width of the overedge stitching.

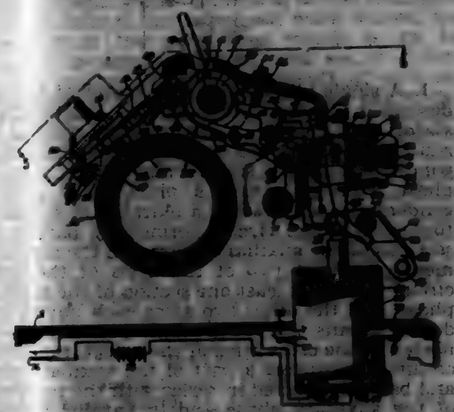
2,028,221
AUTOMATIC HITCH
Arthur L. Klenig, Manitowoc County, Wis.
Application November 14, 1935, Serial No. 49,884
10 Claims. (Cl. 280—33.5)

1. An automatic hitch adapted to be interposed between a draft device and a drawn implement, said hitch comprising a body portion, a draft link slidably guided on said body portion and normally occupying an extended forward position with reference to said body portion, a tongue member pivotally mounted adjacent the rear end of said body portion, and automatically acting means for rocking said tongue member about its pivot on said body portion when said draft link is slid backwardly with respect to said body portion.



2,028,224
BRAIDING CARRIER
Max Krieger, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application February 13, 1935, Serial No. 6,379
14 Claims. (Cl. 66—13)

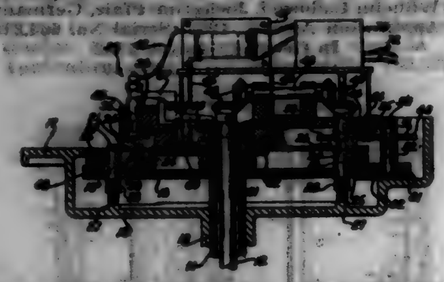
1. A braiding-machine carrier comprising a standard, a machine-stopping member, a bobbin, means movable between positions holding the bobbin to, and releasing it from, the standard, means for controlling the bobbin to tension the yarn, and means cooperating between said control means and said holding means in the holding position thereof providing for yarn-tensioning cooperation between the bobbin and the control means, and, in the releasing position of said holding means, to prevent tensioning of the yarn and to maintain the stopping member in position to prevent operation of the machine.



2,028,225
COVER LOCK
Charles F. Lambert, Grosse Pointe Farms, Mich., assignor to Clayton and Lambert Manufacturing Company, Detroit, Mich., a corporation of Delaware
Application April 17, 1933, Serial No. 666,523
4 Claims. (Cl. 70—60)

1. A lock structure for a tire cover having a cover member in the form of a split ring, comprising a toggle lever pivoted to one end of the ring, a link connecting the lever to the opposite end of the ring, a holding member secured to the first mentioned ring end, said member provided with an aperture, a key operated lock device carried by the lever, an eccentric lock member movable into

the aperture upon actuation of the lock adapted to urge the lever toward the ring member in the turning of the lock.



2,028,226
PHONOGRAPH
Sam G. Langley, Maplewood, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application February 4, 1932, Serial No. 591,511
12 Claims. (Cl. 274—21)

6. In a phonograph, a frame, a carriage supported thereon for traversing movement, a sound box mounted on the carriage and having a stylus movable relatively thereto, means for moving the carriage in its advancing direction, and means to back space the carriage comprising a gear wheel rotatively mounted thereon, a rack mounted on said frame and constantly meshing with said gear wheel, and means to lock the gear wheel against rotary motion, to simultaneously center and hold said stylus with respect to the carriage and render said carriage advancing means inoperative, and to thereafter move said gear wheel transversely of said rack and at an angle to the teeth thereof.

2,028,235
WELDING APPARATUS
Homer W. Larson, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 26, 1934, Serial No. 727,923
10 Claims. (Cl. 219—4)

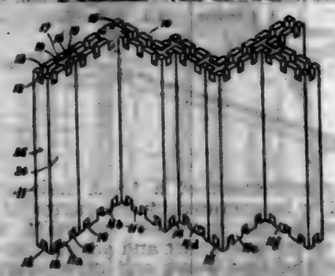
1. In an apparatus for welding, means for continuously advancing work pieces along a predetermined path, means carried by said work piece advancing means for holding the work pieces thereon, and a device for welding successive work

pieces while being advanced, said device having a to and fro movement along said path.

2,028,236
PROCESS FOR SULPHATING OLEFINES
Robert F. La Baron, New York, N. Y., assignor, by mesne assignments, to Standard Alcohol Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 4, 1933, Serial No. 441,623
7 Claims. (Cl. 260—98.15)

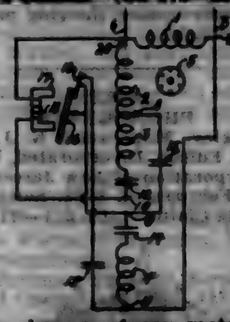
1. Process of sulphating secondary butene contained in a mixture of hydrocarbons produced by cracking petroleum oil, which comprises separating from said mixture by distillation a fraction, the olefine content of which consists predominantly of a mixture of branched and straight chain olefines having four carbon atoms to the molecule, and admixing said fraction in liquid phase with aqueous sulphuric acid of from 50–60% H_2SO_4 content, removing the aqueous acid layer and admixing the residual hydrocarbons in liquid phase with aqueous sulphuric acid of from 65 to 70%, H_2SO_4 content.

2,028,237
MOTOR TRUCK
Robert J. Lewis, Baltimore, Md.
Application June 23, 1933, Serial No. 677,293
1 Claim. (Cl. 214—83)



The combination of a truck having a shaft adapted to be operated by the engine of a truck, a worm loosely mounted on shaft, a clutch splined to the said shaft and adapted to co-operate with the said worm and drive shaft, means for operating said clutch, a shaft extending across the front of the truck and having a worm wheel rigidly fixed thereon and in mesh with the said worm and having a beveled gear wheel on one end thereof, a shaft extending along one side of the truck and having a beveled gear on its front end in mesh with the beveled gear on the shaft at the front of the truck, a number of gear wheels rigidly fixed to the shaft at the side of the truck, a conveyor adapted to be removably connected to and slidable along the shaft at the side of the truck and having a shaft rotatably mounted in one end thereof, and a gear wheel secured to the outer end of the conveyor shaft and adapted to mesh with any one of the gear wheels on the shaft at the side of the truck.

2,028,228
ROOFING TILE
Wilhelm Ludewici, Jockgrim/Pfalz, Germany
Application April 2, 1932, Serial No. 604,218
In Germany July 4, 1932
12 Claims. (Cl. 189—19)

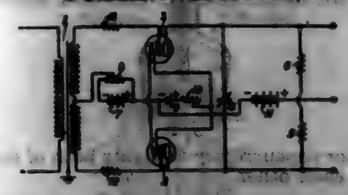


1. A roofing tile comprising a main surface and dovetailing of the top face of said main surface along two adjoining sides at right angles, corresponding dovetailing of the underneath face of the said main surface along the two opposite sides, whereby four of such tiles may be laid together in overlapping relation, and ribs across the dovetailing of each longitudinal side of the top and under faces of the said surface, the said ribs of overlapping sides co-operating to deflect the water on to the main surface through slots adjacent said ribs in the longitudinal dovetailing, said dovetailing on the top face having the inner outer portion thereof offset towards the centre of the tile, and an end piece of the diagonally opposite corner of the tile to said offset, said end piece being of such a shape as to close completely over the offset portion of the dovetailing of the tile next below.

2,028,229
MINIATURE BUILDING STRUCTURE
Hans P. Luhn, New York, N. Y.
Application January 24, 1934, Serial No. 708,027
3 Claims. (Cl. 46—26)

2. In combination, a plurality of structural members arranged in abutting relationship to form a portion of a building structure, each of said members having a longitudinal groove and a plurality of spaced cross grooves in at least one end of said member and forming substantially cruciform shaped depressions therein, the abutting members being so positioned that the adjacent cross and longitudinal grooves of each pair of abutting members cooperate to form at their junction cruciform recesses for receiving similarly shaped connecting members therein, and a plurality of resilient substantially I-shaped connecting members, the cross pieces of which are of suitable dimensions to fit in said cross and longitudinal grooves and the shanks of which are sufficiently short to necessitate longitudinal stretching of said connecting members in order to locate the cross bars of said members in the receiving grooves of said cruciform recesses formed by the abutting members, thereby creating, upon insertion of said connectors in said recesses, a tension which causes the abutting surfaces of the connected members to be in close frictional contact such that the joined members resist separation by transverse and vertical movements of the members in opposite directions.

2,028,230
CONDENSER MOTOR
Frank J. Lyden, St. Louis, Mo.
Application January 22, 1934, Serial No. 707,724
12 Claims. (Cl. 175—323)



1. A single phase condenser motor of the class described, having two members constituting a stator and a rotor, a main phase winding for connection to a power line and an auxiliary phase winding on one of said members, said auxiliary phase winding having a plurality of sections, condenser means having a plurality of sections, a four-arm bridge circuit formed by part of the sections of the auxiliary phase and the condenser means, each of two of the arms of the bridge circuit having at least one section of the auxiliary phase, and the other two arms each having condenser means therein, a single pole switch connected to the cross arms of the bridge, said bridge circuit constituting a part of the auxiliary phase and being connected in series with the remainder of the auxiliary phase and in parallel with the main phase, said switch having a closed circuit and an open circuit position, said switch in closed circuit position producing one effect of the turns of the auxiliary phase and a certain effective condenser capacity, and when in open circuit position decreasing the effect of the turns in the auxiliary phase and the effective condenser capacity.

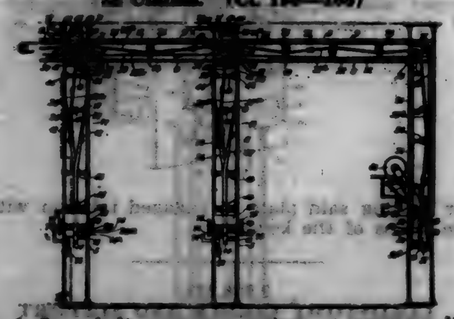
2,028,231
BELT CONVEYER
Walter Jacob Mann, Plainfield, N. J., assignor to General Conveyors Limited, Montreal, Quebec, Canada, a corporation of Canada
Application February 2, 1931, Serial No. 513,814
Renewed June 11, 1935
22 Claims. (Cl. 198—197)

1. In a drag belt conveyer system, a pair of parallel belt tracks disposed side by side; a pair of transversely spaced, companion drag belts trained to slide along said tracks and drag an interposed sheet along both tracks with the medial portion of the sheet bridging the space between the belts; and means between the belts and extending along them to engage the medial portion of the sheet and hold it flexed to prevent lateral displacement of the sheet and maintain it in frictional holding engagement with the belts for positive conveyance along the tracks.

2,028,232
SUBMULTIPLE FREQUENCY GENERATOR
Ralph L. Miller, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 5, 1934, Serial No. 733,791
4 Claims. (Cl. 250—36)

1. A frequency changer comprising, a Wheatstone bridge two legs of which are constituted by impedance controllable gas-filled electric discharge devices and the other two legs of which are constituted substantially wholly by resistances and said bridge having a condenser and a direct current source connected across conjugate pairs of corners, an impressed wave source, the frequency of the wave from which is to be changed, means connecting said source differentially to the controlling elements of said devices whereby to cyclically unbalance the bridge by relative control of the impedances of said devices to permit the source to charge the condenser and to rebalance said bridge to permit the condenser to discharge, the interval between unbalance and rebalance and therefore the frequency of charge and discharge of said condenser being determined by the relative values of the constants of said condenser and said resistances, and an output circuit for the changed frequency wave connected across said condenser.

2,028,233
WELDING
Maurice Nalder, Paris, France
Application March 14, 1935, Serial No. 11,046
In Germany March 20, 1934
1 Claim. (Cl. 113—115)



The method of butt-welding metal sheets, consisting in placing welding strips of U-shaped cross-section astride on each of the edges of the parts to be welded, moving said parts towards each other until the welding strips abut, and then performing the welding operation.

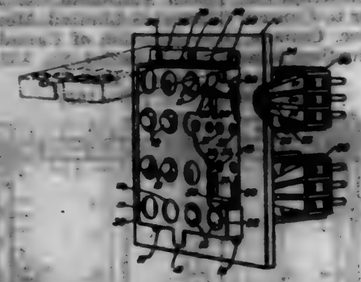
2,028,234
HAIR CURLER
Harry Nathid and Henry Engelke, New York, N. Y.
Application August 26, 1932, Serial No. 630,292
2 Claims. (Cl. 132—42)

1. A hair curler comprising a U-shaped piece of resilient material one of the legs of which is shorter than the other, said shorter leg provided with a socket adjacent the end that is joined to the longer leg, and said longer leg having a member at the end thereof adapted to be held in said socket with both of said members bent in the form of a loop.

2,028,235
BELT CONVEYER SYSTEM
John T. Needham, North Plainfield, N. J., assignor to General Conveyors Limited, Montreal, Quebec, Canada, a corporation of Canada
Application June 8, 1932, Serial No. 616,507
Renewed July 8, 1933
22 Claims. (Cl. 198—165)

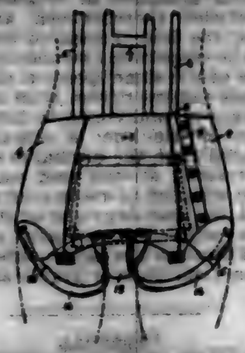
1. In a belt conveyer system, a conveyer line comprising a plurality of endless conveyer belts, and pulleys training said belts to present cooperating strands arranged in opposed relation for holding articles therebetween and conveying them along the line; means to drive said belts and move the cooperating strands in the same direction and at the same speed; a plurality of relatively small pulleys driven with the first mentioned pulleys of said conveyer belts at the discharge end of the line; a plurality of larger pulleys spaced from the discharge end; and endless belts trained around said small and large pulleys and adapted to receive articles, therebetween from the discharge end of the line, deflect them from said conveyer belts and discharge them from between the larger pulleys at a speed slower than their rate of travel along the conveyer line.

2,028,236
BELT CONVEYER
John T. Needham, North Plainfield, N. J.
Application September 2, 1933, Serial No. 687,947
12 Claims. (Cl. 198—189)



4. A drag belt sheet conveyer line comprising a track extending along the line and having longitudinal track ribs, a drag conveyer belt trained along said track and having a conveyer face directly opposed to the crests of said ribs to convey an interposed sheet along the rib crests, the crests being narrow in comparison with the width of said belt face, and the line being laterally open along and across an outer side edge thereof in the plane of the belt for access to the rib crests beneath the belt to clean the crests.

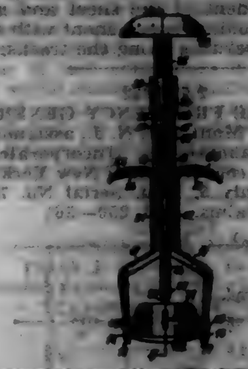
2,028,237
LOCKING DEVICE
Henry G. Goh, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 31, 1934, Serial No. 708,659
3 Claims. (Cl. 250—27)



1. In a locking device, a supporting member, a group of switch keys disposed in rows on said supporting member and having operating knobs, a plate pivotally mounted on said supporting member, means carried by said plate for engag-

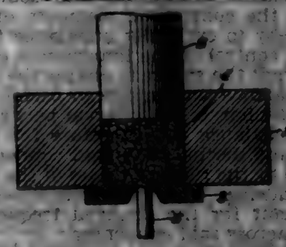
ing the knobs of the keys for holding them in any of a number of contacting positions, and means

for holding said plate in engaged relation with the knobs of the keys.



2,568,228
COLOSTOMY GIRDLE AND SUPPORT
Florence M. Olver, Youngstown, Ohio
Application September 16, 1925, Serial No. 56,711
5 Claims. (Cl. 128—282)

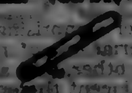
1. A colostomy girdle formed with a front and back panel and back and front side panels, fastening means for said girdle, shoulder straps secured to said girdle, leg straps attached to said girdle in order to hold said girdle firm against body and to prevent slipping, a shield secured to said front panel, and a dressing shield secured to lower edge of said front panel for holding dressings in place, said dressing shield extending below the curved lower edge of said front panel to prevent soiling of said girdle, an extended member on said back panel, a crotch strap attached to said front panel and to said extended member on back panel for the purpose of holding rectal dressings in place.



2,568,239
COVER FOR GRAPEFRUIT, ETC.
Peter J. Olin, West Haven, Conn.
Application February 17, 1922, Serial No. 582,582
5 Claims. (Cl. 146—3)

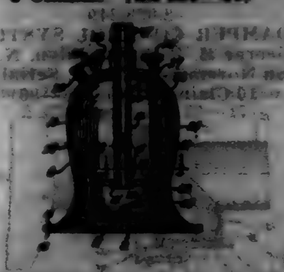
1. In a cover, the combination with a frame having a tube-like upper portion of a pair of transversely-curved cutters pivotally secured to the lower end of the said frame and adapted to swing transversely with respect thereto toward each other; a reciprocating operating-member projecting from the tube-like upper portion of the said frame with capacity for reciprocating movement therein; a downwardly-yielding compression-spring housed in the tube-like portion of the said frame; and a pair of pivotal thrust-transmitting links connecting the said reciprocating operating-member to the said pivotal

blades for concurrently swinging both of the same toward each other.



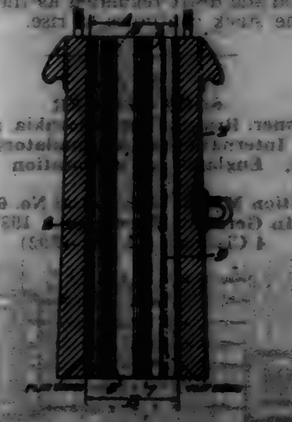
2,568,240
METALLIC PACKING AND METHOD OF PRODUCING THE SAME
Sidney L. Palmer, San Francisco, Calif., assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application July 14, 1922, Serial No. 575,041
6 Claims. (Cl. 15—88)

1. As an article of manufacture, a relatively soft, readily deformable core of metallic packing material surrounded by a more dense surface layer, both core and surface layer being formed from a common source of material.



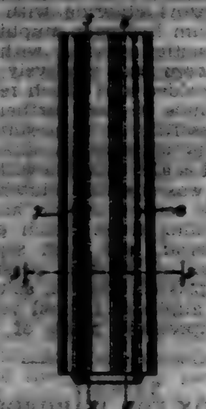
9. The method of producing metallic packing which comprises extruding a mixture of a soft metal selected from the class comprising lead, antimony and antimonial lead, and other packing materials through a rite of suitable cross section with sufficient pressure to weld the metallic constituents of the mixture and cause the walls into a form-retaining skin on the surface of the material being extruded.

2,568,241
METHOD OF MAKING SELF-LUMINOUS ELEMENT
John K. Paul, Newark, N. J., assignor to United States Radium Corporation, New York, N. Y., a corporation of Delaware
Application June 15, 1924, Serial No. 720,765
4 Claims. (Cl. 240—8.25)



1. The method of making self-luminous elements, which comprises filling an elongated glass tube with self-luminous material, said tube being closed at one end, expelling surplus air from the tube by passing the tube through a flame from the closed end to the open end, and sealing the open end by fusion in the flame without withdrawing the tube from the flame after the air expelling operation.

2,568,242
SOAP EJECTING SPRAY HEAD
Frank E. Pearl, Neenah, Wis., assignor to Durant Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 24, 1924, Serial No. 713,782
3 Claims. (Cl. 239—84)



1. A soap ejecting spray head comprising a casing having an apertured lower end, a partition within the casing spaced from said end and forming a chamber for liquid soap therebelow, means for admitting water to the space between said partition and the apertured end for discharge in the form of a spray, a conduit extending from the soap chamber to the apertured end of the casing and communicating with the exterior, and means independent of the flow of water for controlling the flow of soap thru said conduit.

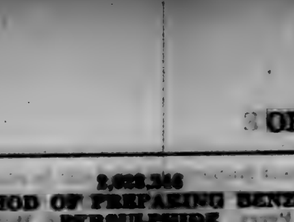
2,568,243
INGOT MOLD FOR STEEL INGOTS
John E. Perry, Youngstown, and William Haig Ramage, Girard, Ohio, assignors to Valley Mould and Iron Corporation, Hubbard, Ohio, a corporation of New York
Application July 5, 1922, Serial No. 569,230
12 Claims. (Cl. 22—120)

1. In a vertical ingot mold, a matrix having salient recesses and non-salient ribs in the side wall thereof, said recesses extending longitudinally of said matrix and being of uniform width throughout the length of the mold, and with one end of said matrix being of larger cross sectional area than the other end.

2,568,244
STEEL INGOT
John E. Perry, Youngstown, and William Haig Ramage, Girard, Ohio, assignors to Valley Mould and Iron Corporation, Hubbard, Ohio, a corporation of New York
Original application July 5, 1922, Serial No. 569,230. Divided and this application August 24, 1923, Serial No. 659,502. In Canada July 14, 1923
9 Claims. (Cl. 22—215)

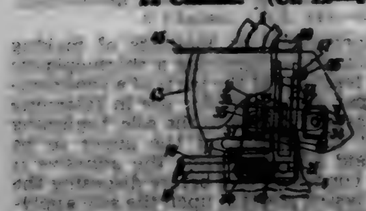
1. An article of manufacture comprising an ingot of steel tapering from one end toward the other and having salient portions on the longitudinal surfaces thereof, said salient portions on each side being parallel to salient portions on the same side and extending the full length of said ingot, said salient portions being remote from the corners of said ingot.

2,568,245
MANUFACTURE OF SHOES
Charles F. Fyan, deceased, late of Beverly, Mass., by Arthur F. Fyan, executor, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 20, 1925, Serial No. 7,431
9 Claims. (Cl. 12—146)



1. That improvement in methods of making shoes which consists in applying a thermoplastic adhesive to at least one of the parts of a shoe comprising an upper and a sole for use in fastening the upper in lasted relation to the sole, beginning the lasting of the portion of the upper to be fastened by said adhesive while the adhesive is in a nontacky condition, and before disposing the upper in final lasted position upon the sole applying a hot gaseous medium in contact with the adhesive to render it tacky.

2,028,246
METHOD OF PREPARING BENZOYL PERSULPHIDE
Theodore H. Rider and Robert Shelton, Mariemont, Ohio, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application August 1, 1934, Serial No. 738,110
8 Claims. (Cl. 260—16)

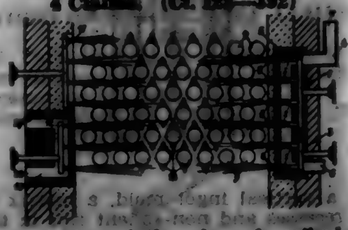


1. The method of preparing medicinally pure benzoyl persulphide which consists in the steps of reacting benzoyl chloride with an aqueous solution of sodium hydrogen sulphide, oxidizing the resultant reaction mixture with a mild oxidizing agent whereupon a relatively pure benzoyl persulphide is yielded and which relatively pure benzoyl persulphide is then further purified by the steps of dissolving it in a suitable organic solvent which is effective to dissolve benzoyl persulphide and is also miscible with alcohol but not with water, washing this solution with dilute aqueous alkali to remove benzoic acid and other impurities including those which give color to the crude material, and then separating the organic solution of benzoyl persulphide and throwing this product out of solution by the addition of an aliphatic alcohol vaporizing below the decomposition point of the benzoyl persulphide.

2,028,247
MAN'S HAT BOX FOR WARDROBE TRUNKS
Julius Ritter, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a corporation of Wisconsin
Application June 17, 1935, Serial No. 26,961
3 Claims. (Cl. 206—8)

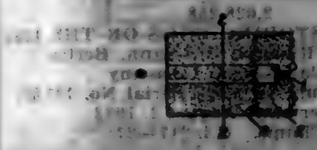
1. A hat container, comprising a box member, a panel, a sheet-like, one-piece flexible member carried by the panel to releasably engage the brim of a hat to hold the hat against a surface of the panel, and means for removably mounting said panel within the box with its other surface against a wall thereof.

2,028,248
LASTING MACHINE
William Thomas Buckingham Roberts, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 28, 1934, Serial No. 712,914
In Great Britain March 24, 1933
22 Claims. (Cl. 12—4)



1. In a lasting machine, the combination with heel-end-lasting mechanism including means for clamping an upper about the heel end of a last and a work support movable to present a last and shoe to said lasting mechanism of means movable automatically into position to hold the upper materials in proper relation to the last in locations adjacent to the opposite side edges of the shoe bottom approximately at the forward end of the heel portion of the last after the work support has received its shoe-presenting movement but prior to any substantial clamping action of said clamping means on the opposite sides of the heel end of the upper.

2,028,249
DAMPER CONTROL SYSTEM
George H. Kent, Kenmore, N. Y.
Application November 10, 1932, Serial No. 742,431
10 Claims. (Cl. 236—86)



1. In a device having a furnace, a stack therefor having an opening in communication with the atmosphere, and a damper for said opening movable between open and closed positions and adapted, in the closed position, to cause the stack to exert a maximum draft in the furnace for the rapid starting of a fire therein, the combination with said stack and damper, of metallic means expansibly responsive to the temperature in the stack, and actuator means controlled by the temperature responsive means to move the damper from the closed position to an open position thereof, and the actuator means having means to cause a rapid initial opening movement of the damper for an initial relatively low rise in temperature from cold in the stack, and a subsequent opening movement of the damper at a decreased rate for a further rise in temperature in the stack, whereby the maximum draft is rapidly reduced as combustion is initiated, and the draft regulated as the temperature in the stack continues to rise.

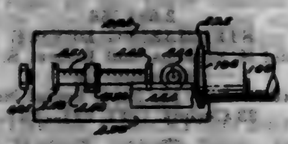
2,028,250
SOOT BLOWER
Alois Riesner, Brunn, Czechoslovakia, assignor to Ruths International Accumulators Limited, London, England, a corporation of Great Britain
Application May 1, 1933, Serial No. 668,679
In Germany December 1, 1932
4 Claims. (Cl. 122—392)

1. In a device of the class described, means comprising a wall of heat-resisting material forming a heating chamber, tubes within said chamber, a conduit extending within said wall and having its open ends in communication with the atmosphere outside said chamber at different elevations, said wall and said conduit being formed with narrow aligned slits extending from said conduit to said chamber and directed toward said tubes, nozzles located within said conduit in alignment with said slits so as to project jets of fluid therethrough and against said tubes, a distributing pipe for supplying fluid under pressure to said nozzles, and heat insulating material surrounding and embedding said conduit and said distributing pipe, said insulating material being formed with narrow slits in alignment with the slits in said wall and said conduit.

2,028,251
WRAPPING TAPE
George Sinz, Columbus, Ohio
Application July 11, 1932, Serial No. 621,819
3 Claims. (Cl. 24—17)

3. A flexible bundle wrapping tape comprising tensilly strong flexible uninterrupted securing means of indefinite length and a flexible strip of indefinite length connected with said securing means against relative bodily movement so as to constitute a composite wrapping tape adapted to be wrapped about an object, said flexible strip constituting an anchoring means for said securing means and being provided with an adhesive coating whereby said flexible strip may be adhesively secured to the face of said object to anchor said securing means against movement relative to said object.

2,028,252
ROTATION MECHANISM
Fred M. Slater, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey
Application December 19, 1934, Serial No. 758,172
4 Claims. (Cl. 121—7)

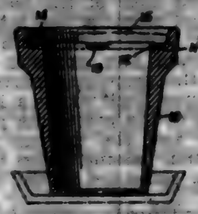


1. A rotation mechanism, comprising a reciprocatory rifle bar, an abutment therefor, clutch members on the rifle bar and the abutment adapted to engage each other, a pressure surface on the rifle bar constantly exposed to pressure fluid tending to actuate the rifle bar for bringing the clutch members into engagement with each other, an opposed pressure surface on the rifle bar of greater area than the first said surface, and means for selectively exposing the pressure surface of greater area to pressure fluid to actuate the rifle bar for disengaging the clutch members.

2,028,253
INSULATION PAD AND CONSTRUCTION
Allen L. Spafford, Cloquet, Minn., assignor to The Weld Conversion Company, Cloquet, Minn., a corporation of Delaware
Application September 15, 1930, Serial No. 481,830
13 Claims. (Cl. 154—44)

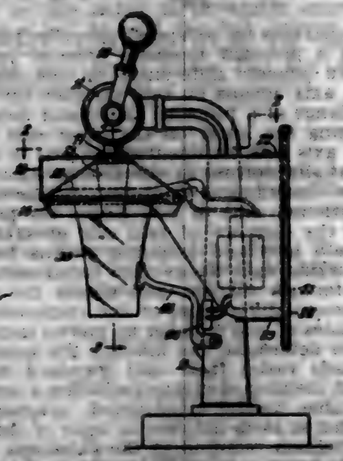
1. Insulation comprising in combination a flexible flat core of insulating material, a liner cemented to one face of the core, and a liner cemented to and covering the other face of the core, one liner being wider than the core and projecting beyond two opposite edges of the core, each of the projecting parts of said liner being folded upon itself along a line intermediate the bounds of the projecting portion to provide a flange, and the extreme edge of each projecting portion passing across the edge of the core and being cemented to the other liner.

2,028,254
APPARATUS FOR BALANCING PROPELLER BLADES
John Squires, Hagerstown, Md.
Application July 3, 1933, Serial No. 679,135
9 Claims. (Cl. 73—51)



1. Apparatus for balancing propeller blades including a pivotally mounted member having a standard moment differential on one side of its pivotal axis, means on said member for receiving a flange of a propeller blade and detachably supporting the latter on the other side of said pivotal axis with its longitudinal axis in a plane substantially normal to the pivotal axis of said member, including a reference surface engageable with one side of said flange for predetermining the distance of said side of said flange from said axis and including means for positively urging said flange into engagement with said reference surface, and means for varying the moment differential of the respectively opposite sides of said member by known increments so as to determine the amount the moment of said blade varies from said standard moment, said last mentioned means including a scale and a shiftable weight constructed, arranged and calibrated so as to indicate in units of thickness, the correction required in the thickness of said flange to bring said blade to said predetermined standard.

3. Apparatus for balancing propeller blades including a pivotally mounted block having a

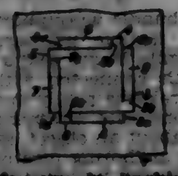


standard moment differential about its pivotal axis, means on that end of said block of lower moment for receiving arcuately spaced portions of a flange of the hub end of a propeller blade so as to detachably support the latter in perpendicular relationship to said pivotal axis and including reference surfaces engageable with arcuately spaced portions of a side of said flange for predetermining the location thereof with respect to said axis, and variable balancing mechanism on said block for determining the difference in the moment of said blade and said standard moment differential and including a scale calibrated to indicate the change in the thickness of said flange required to shift the center of mass of said blade sufficiently to equalize the moment of said blade with the moment differential of said block.

2,028,205
SELF-FERTILIZING FLOWERPOT
Harry Steinbach, Sunnyside, N. Y., assignor to Rex Beach, New York, N. Y.
Application August 22, 1934, Serial No. 741,075
2 Claims. (Cl. 47—34)

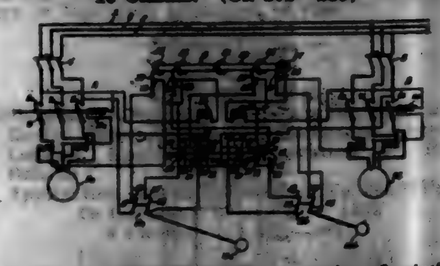
1. A flower pot having a fertilizer receiving recess near the upper edge of the pot, and a solid cake of soluble fertilizer in the recess adapted, when the pot is filled with soil, to be dissolved by moisture in the soil.

2,028,206
STERILIZING DEVICE
Daniel S. Stevens and Robert S. Wolf, Chicago, Ill.
Application July 12, 1934, Serial No. 734,769
23 Claims. (Cl. 225—23)



1. The combination of a dispensing device having a nozzle and a germ destroying sterilizing device operable to sterilize a glass or similar vessel adjacent the nozzle.

2,028,207
MINERAL OIL COMPOSITION
Bertrand W. Story, Pittsburgh, and Everett W. Fuller, Woodbury, N. J., assignors to Socony-Vacuum Corporation, New York, N. Y., a corporation of New York
No Drawing. Application September 7, 1933, Serial No. 688,836
1 Claim. (Cl. 87—9)



This combination, with a highly refined viscous mineral oil, of an addition of not over 0.1% thereof dimethide and of substantially .005 to 0.015% of a substance of the class consisting of monosulfide of m-cresol, monosulfide of thymol, 2,2' dihydroxy, 1,1' dinaphthyl sulfide and 4,4' dihydroxy diphenyl sulfide, said addition being effective to stabilize said oil in a substantial degree, against acid formation.

2,028,258
DEVICE FOR STORING EGGS OR THE LIKE
Johannes Rudolph Surmann, Berlin-Schlachtensee, Germany
Application July 26, 1934, Serial No. 737,811
In Germany August 2, 1933
12 Claims. (Cl. 217—37)

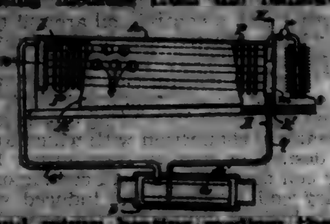
1. A device for use in packing eggs and in like comprising a rim element of pasteboard, a single unitary supporting element located substantially centrally of said rim, and a plurality of stays connecting said rim to said supporting element.

2,028,259
AUTOMATIC CONTROL SYSTEM FOR ELECTRIC MOTORS
Herman L. Van Valkenburg, Wauwatosa, Wis., assignor to Square D Company, Detroit, Mich.
Application January 11, 1934, Serial No. 706,165
10 Claims. (Cl. 172—239)

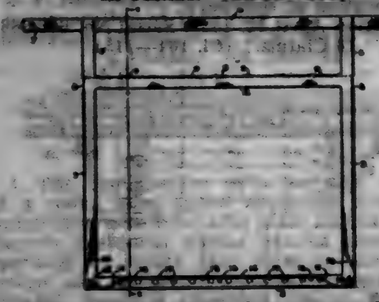
1. In a control system, a pair of electric motors, a source of power for said motors, a pair of fluid condition responsive means respectively controlling said motors, an alternator switch for alternating the respective control of said motors with respect to said fluid condition responsive means, and a transfer switch for stopping the alternation of control, said transfer switch allowing the free mechanical operation of said alternator switch but preventing said alternator switch from altering the control for said motors, said transfer switch transferring the control of one motor or one of said fluid condition responsive means, and the control of the other of said motors to the other

of said fluid condition responsive means irrespective of the position of said alternator switch, whereby when the transfer switch stops the alternation of control, a given motor is always controlled by a given fluid condition responsive means.

2,028,260
CAR HEATER
Sergius Vernet, Brooklyn, N. Y., assignor to Foster-Vernay Corporation, Pittsburgh, Pa., a corporation of New York
Application August 8, 1933, Serial No. 684,542
Renewed September 20, 1935
2 Claims. (Cl. 237—12.3)



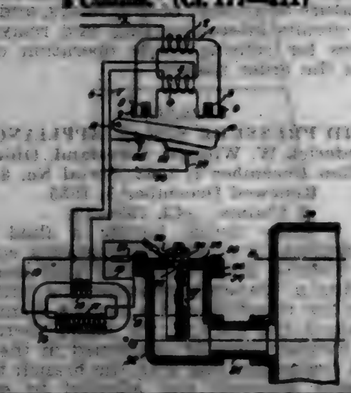
1. In combination, a radiator condenser, a vaporizer, conducting means uniting the vaporizer and the radiator condenser as a closed system for the flow of vaporized heating medium from the vaporizer to the radiator condenser and the return of condensate from the radiator condenser to the vaporizer, and control means automatically responsive to a plus or minus variation in a physical characteristic imparted by the vaporizer to the heating medium in the radiator condenser for trapping and withholding respectively more or less condensate from circulation before flowing back from the radiator condenser, said control means including a receptacle communicating with the radiator condenser for receiving heating medium therefrom and returning heating medium thereto in response to variations in said physical characteristics.



2. In combination, a radiator condenser, a vaporizer, conducting means uniting the vaporizer and the radiator condenser as a closed system for the flow of vaporized heating medium from the vaporizer to the radiator condenser, and means automatically responsive to increases and decreases in the pressure of the heating medium in the radiator condenser for trapping and withholding respectively more or less condensate from circulation before flowing back from the radiator condenser.

2,028,261
AUTOMATIC CONTROL FOR VAPOR HEATING SYSTEMS
Sergius Vernet, Brooklyn, N. Y., assignor to Foster-Vernay Corporation, Pittsburgh, Pa., a corporation of New York
Substitute of application Serial No. 415,712, December 21, 1929, and Serial No. 560,906, September 2, 1931. This application July 31, 1934, Serial No. 737,791
13 Claims. (Cl. 237—12.3)

11. In combination, a radiator condenser, a vaporizer, conducting means uniting the vaporizer and the radiator condenser as a closed system for the flow of vaporized heating medium from the vaporizer to the radiator condenser and the return of condensate from the radiator condenser to the vaporizer, and a control receptacle communicating with a portion of the radiator condenser remote from said conducting means so as to accumulate non-condensing gas contained in said system and to receive vaporized heating medium from the radiator condenser said return heating medium thereto as the pressure in said receptacle is less or greater than the pressure in the system.



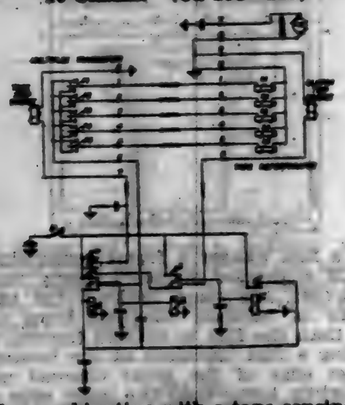
2,028,262
FILM HOLDER AND HANGER
Antonino J. Vicari, Manhasset, N. Y.
Application December 7, 1934, Serial No. 756,415
12 Claims. (Cl. 95—100)

1. In a film hanger a frame comprising four internally channeled members rigidly joined at their corners, the space between the bases of each pair of opposite channels being slightly greater than the film to be held therein, means for sliding a film thereinto at the bottom, and the outer edge of the lower channel member being slightly lower than the inner edge of the same, and means for suspending said frame.

2,028,263
ELECTRICAL INDICATING DEVICE
Charles F. Warrick, Detroit, Mich., assignor to Bendix Warrick Corporation, Detroit, Mich., a corporation of Michigan
Application February 9, 1934, Serial No. 710,414
5 Claims. (Cl. 177—311)

1. An electrical indicating device comprising in combination, an exciting coil to be perma-

nently connected to a source of alternating current, a core therefor, an armature, said core having a shunt for the magnetic flux set up by the exciting coil, a control coil around the shunt to control the effectiveness of the shunt and in turn control armature movements, conductors leading from the control coil, the voltage in the control coil and in said conductors being relatively low and said conductors being extended to a remote means in connection with which an indication is desired, a step-up transformer having a primary coil connected to said conductors, and a secondary coil in which the induced voltage is relatively high, a circuit for the secondary coil, and an electrode in said circuit to be positioned in a container of liquid to be engaged by high liquid level to close the circuit and to be disengaged at low liquid level to break the circuit.



2,022,264

PERFORATOR

Charles S. Whitney, Brooklyn, N. Y., assignor to The Teleregister Corporation, New York, N. Y., a corporation of Delaware

Application April 22, 1932, Serial No. 606,963

10 Claims. (Cl. 164—115)

1. The combination with a tape sensing mechanism and a reperforator for duplicating perforated tapes, of a system of relays for controlling the coordinated operation of said sensing mechanism and reperforator during a continued series of operating cycles, said system of relays comprising a first relay, a second relay and a third relay, each of said relays having an armature for controlling the operation of another of said relays and each relay being controlled by the armature of another of said relays, and relay control circuits interconnecting said relays and armatures for causing cyclic operation of the relays in the order named.

2,022,265

FLUID PRESSURE SPRAY APPLIANCE

Frederick W. Winnen, Cleveland, Ohio

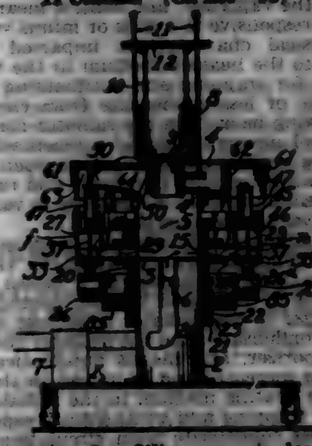
Application December 2, 1932, Serial No. 645,429

Renewed December 5, 1935

3 Claims. (Cl. 299—89)

2. In a spray device having a fluid tight liquid reservoir for forming the spray, a conduit running from a point outside of said reservoir and having a branch communicating with the liquid in the reservoir and a branch communicating above the level of the liquid therein, a tubular member slidably positioned in the conduit and communicating with the branch to the air in said reservoir and adapted to extend across and cut off the liquid-communicating branch of the conduit, resilient means for normally urging said member toward the outer end of said conduit and to the limit of opening of position, said tubular member being cushioned with a valve seat at its outer end, and a valve member loosely located in said conduit between, and adapted alternatively for cooperation with, said valve seat and the outer end of said conduit,

whereby upon the introduction of pressure fluid into said conduit said valve will act to close the outer end of said tubular member and the latter will be moved away from its liquid branch cutting off position against the action of said resilient means and the pressure fluid will pass into the liquid communicating portion of said conduit.



2,022,266

APPARATUS FOR FILLING RECEPTACLES

Richard D. Anderson, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

Application January 28, 1931, Serial No. 511,978

11 Claims. (Cl. 226—26)

1. Apparatus for filling receptacles, comprising a tubular bracket mounted for rotation, a table for spaced receptacles extending around and carried by the bracket, a plurality of measuring cylinders extending around and carried by the bracket over and opening toward the receptacles, means for rotating the bracket, means including a pump and piston for successively injecting fluid into each cylinder, and means for successively ejecting the fluid from the cylinders into the receptacles.

2,022,267

MANUFACTURING KETONES

Francis M. Archibald and Clinton M. Reamer, Elizabeth, N. J., assignors to Standard Alcohol Company, a corporation of Delaware

No Drawing. Application April 5, 1933, Serial No. 664,556

3 Claims. (Cl. 260—134)

1. The improved process for the manufacture of ketones, which comprises subjecting the vapors of aliphatic secondary alcohols to a catalyst consisting essentially of copper, zinc, and tin.

2,022,268

ELECTRICAL CONTACT RECEPTACLE

Alan L. Probst, East Orange, N. J.

Application July 6, 1929, Serial No. 377,030

12 Claims. (Cl. 173—343)

7. A slotted contact receptacle, contacts in said receptacle cooperating with flat prong contacts, ribs on the outside of said first contacts bounding a circle whose plane is at substantially right angles to said flat prong contacts, and holes in said flat contacts cooperating with said ribs.

2,022,269

ATTACHMENT FOR CLOSING DEVICES

Harry M. Bishop, Schenectady, N. Y.

Application November 27, 1934, Serial No. 754,963

2 Claims. (Cl. 20—67)

1. An attachment to a member for closing an opening having a stop, comprising a sealing member, means for attaching said sealing member to said closing member comprising a hook member secured to said closing member and an eye member secured to said sealing member and cooperating with said hook member to provide movement of said sealing member with respect to said closing member, a spring member for moving said sealing member along the shank of said hook member and biasing said sealing member out of engagement with said closing member and with a part forming said opening and a member secured to said sealing member at one extremity thereof and arranged to engage said stop in response to the closing movement of said closing member for effecting rotary movement of said sealing member into engagement with said closing member and said part.

2,022,270

HAT BLOCKING AND STOKING DEVICE

Thomas A. Brennan, Washington, D. C.

Application August 5, 1932, Serial No. 627,884

5 Claims. (Cl. 223—24)

1. A hat cleaning and pressing device comprising a ring member of sheet metal, having the general contour of a rim of a hat, said member being adapted to support the rim of a hat in inverted position, the outer periphery of said member terminating in a substantially vertical flange, said member having an upper substantially horizontal surface with a curved surface connecting said horizontal surface and said vertical flange.

2,022,271

MANUFACTURE OF PARA-CYCLOHEXYLPHENOLS

Karl Brodersen and Hermann Behncke, Dessau in Anhalt, and Ernst Kerten, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application December 15, 1933, Serial No. 702,845. In Germany December 20, 1932

2 Claims. (Cl. 260—154)

1. The process for manufacturing para-cyclohexylphenols which comprises heating to a temperature of about 280 to about 300° C. a pasty, homogeneous mass consisting of a sodium hydroxide solution of 50 per cent. strength and sodium para-cyclohexylbenzene sulfonate.

2,022,272

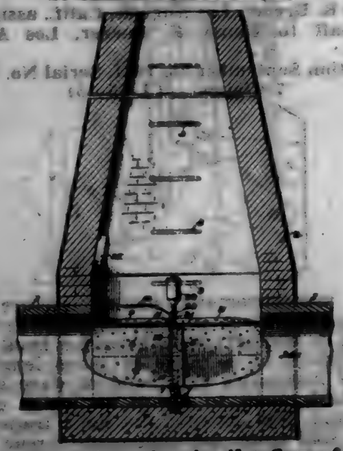
SOUND ABSORBING CONSTRUCTION

Charles F. Burgess, Belleville, Fla., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a corporation of Delaware

Application December 19, 1930, Serial No. 503,542

5 Claims. (Cl. 189—33)

1. The combination with the wall or ceiling of a room, of a sound absorbing construction comprising a stiff metallic plate having openings therein, fastening means passing through said openings to secure said plate to said wall or ceiling and to permit removal thereof, spaced, parallel, laterally extended ribs on said plate, projecting into the room bounded by said construction, and slabs of preformed sound absorbing units mounted between said ribs with a clearance between said slabs and said plate, and held against outward movement by the extended portions of said ribs, but not confined against inward movement thereby.



2,022,273

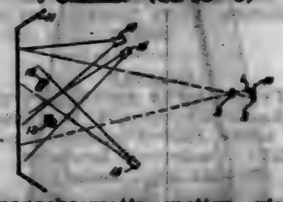
FLOW MEASURING DEVICE

Ingard M. Clausen, Phoenix, Ariz.

Application October 2, 1931, Serial No. 567,021

20 Claims. (Cl. 73—167)

1. An apparatus whereby the flow of a liquid flowing freely by gravity in a pipe normally run-

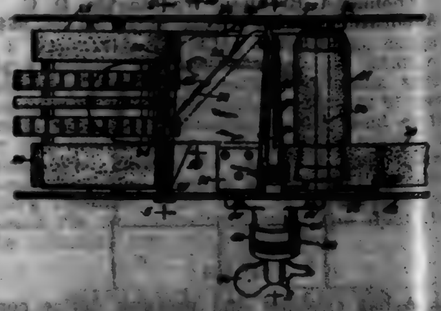


ning less than full and not under pressure may be measured comprising, in combination with said pipe, means therein forming a weir of the submerged type and including a weir member positioned in the bottom of the pipe and shaped to provide a weir crest conforming to the shape of the adjacent bottom surface of the pipe, and vertical walls at the ends of said weir member, said member being of such limited extent in a direction normal to said surface as substantially to prevent the deposition of solid matter in said pipe.

2,028,276
COAL STOKER
Walter M. Cress, Jr., Charles G. Ruder, and Victor C. Norquist, Kansas City, Mo., assignors, by direct and mesne assignments, of one-half to Mid-Continent Investment Company, Kansas City, Mo., a corporation of Missouri, and one-half to Butler Manufacturing Company, Kansas City, Mo., a corporation of Missouri
Application June 9, 1933, Serial No. 675,255
3 Claims. (Cl. 110—101)

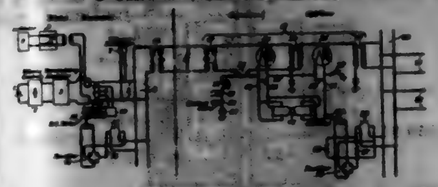
1. A coal stoker including in combination a coal hopper, a coal duct communicating therewith, means for conveying coal therealong, an air duct adapted to supply air for coal being burned, a fan for blowing air through said air duct, an ejector device having a suction leg, means for supplying air from said air duct to said ejector device as the ejecting medium, and means for placing the suction leg in communication with said coal duct, the construction being such that smoke and gas in said coal duct will be entrained in the ejecting medium, and prevented from escaping from said hopper.

2,028,275
MOTION PICTURE FILM AND METHOD OF PHOTOGRAPHY
Charles R. Dreyer, Los Angeles, Calif., assignor of one-half to Henry F. Reeger, Los Angeles, Calif.
Application September 25, 1934, Serial No. 745,442
7 Claims. (Cl. 95—5)



1. In monochromatic motion picture photography, the steps of passing light from an object to be photographed through a front emulsion sensitive to a range of wave lengths of light but insensitive to a band of wave lengths within said range, to record an image of said object, and then passing the light transmitted through said front emulsion upon a rear emulsion preferentially sensitive to wave lengths of light including said band to which the front emulsion is not sensitive and illuminating those portions of the object being photographed which it is desired to correlate with light-containing wave lengths to which both emulsions are sensitive while eliminating the remainder of the scene with light composed essentially of wave lengths to which only one of the emulsions is preferentially sensitive.

2,028,516
BOX
Edward R. Evans, Los Angeles, Calif., assignor to Angeles Paper Box Co., Los Angeles, Calif., a corporation of California
Application August 30, 1934, Serial No. 740,883
5 Claims. (Cl. 229—34)



1. In a polygonal paper box, the combination of an outer bottom of relatively thin cardboard of polygonal form, an inner bottom of relatively thick stiff material also of polygonal form lying on the outer bottom and conforming thereto, a forming ring consisting of a flat board with its flat faces lying in a horizontal plane, and of relatively stiff material, also of polygonal form and with a polygonal opening therethrough, said forming ring lying on the inner bottom and conforming thereto, said outer bottom having a plurality of integral extensions extending upwardly above the forming ring and constituting the outer side walls of the box, said outer walls with extensions extending downwardly and engaging the inner edge of the forming ring, and a holding member of polygonal form fitting into the opening in said forming ring and securing the vertical extensions in position.

2,028,577
ENVELOPE FLAP OPENING AND MOISTENING DEVICE
John Quincy Pimbrook, Los Angeles, Calif., assignor to National Postal Meter Company, Los Angeles, Calif., a corporation of California
Application July 17, 1934, Serial No. 735,573
3 Claims. (Cl. 91—43)

1. In a moistening device for an envelope sealing machine, a flap opening blade operatively mounted for movement to or from its active position, a moistening tube mounted independently of said blade and also operable to or from its operative position, a source of fluid supply for the tube, unitary means operable for simultaneously placing said blade, tube and fluid supply into or out of service.

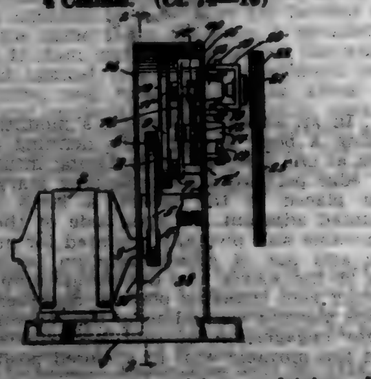
2,028,575
VACUUM TUBE TESTING SYSTEMS
Danforth King Gannett, Jackson Heights, and Benjamin E. Lewis, Flushing, N. Y., assignors to American Telephone and Telegraph Company, a corporation of New York
Application August 10, 1934, Serial No. 740,418
5 Claims. (Cl. 179—175)

1. In a time announcement system in which a signal impulse of given voltage and duration is transmitted to subscribers over lines containing amplifiers to indicate a given instant of time, the method of determining the electrical condition of each of two vacuum tubes of an amplifier which consists in activating the filaments of both tubes by causing the normal currents to flow therethrough and measuring the transmission level at the output of said amplifier upon the transmission of one of said signal impulses, then changing by a known percentage the filament activating current of the first of said tubes and again measuring the transmission level at the amplifier output upon the transmission of another of said signal impulses.

2,028,579
PHOTOGRAPHIC MATERIAL
Béla Gaspar, Berlin, Germany
Application December 1, 1932, Serial No. 645,312
In Germany December 2, 1931
7 Claims. (Cl. 95—8)

1. A color-photographic material, comprising a silver halide emulsion having incorporated therein differently colored dyestuffs having varying powers of resistance to the effect of the agent serving locally to discharge the said dyestuffs for production of the color image.

2,028,230
TYPEWRITING MACHINE
George F. Handley, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a corporation of New York
Application December 29, 1934, Serial No. 759,778
6 Claims. (Cl. 197—145)



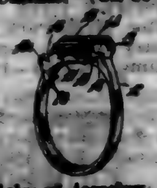
1. In a typewriting or like machine, the combination with a typewriter carriage having end plates, one of said plates having a bearing opening therein, a pinion having one end removably supported by the other side plate, a retractible bearing shaft for the opposite end of the pinion mounted in said side plate opening, and a releasable latch mounted on the bearing shaft for normally coupling the shaft and pinion.

2,028,251
BURNER
Lillard B. Hancock, Humble, Tex.
Application February 20, 1933, Serial No. 657,434
2 Claims. (Cl. 158—56)

1. A burner comprising an outer shell, concentric outer and inner jackets spaced apart to form a steam chamber between them and being arranged within the outer shell, the outer jacket being spaced from the shell to form a fuel chamber between said shell and outer jacket, a steam nozzle pipe within and spaced from the inner jacket and forming an air chamber between them said fuel and steam chambers being closed at both ends and said air chamber being closed at its outer end and open at its inner, or nozzle, end, a fuel nozzle pipe arranged within and spaced from said steam nozzle pipe, a fuel line entering the outer end of the fuel chamber and a fuel pipe leading from the outer end of said last mentioned chamber and entering the outer end of the fuel nozzle pipe, a steam line entering the outer end of the steam chamber and a steam pipe leading from said last mentioned end of the steam chamber and entering the outer end of the steam nozzle pipe.

2,028,252
POWER UNIT
Robert Hoe, Hyde Park, N. Y.
Application January 4, 1934, Serial No. 705,230
4 Claims. (Cl. 74—16)

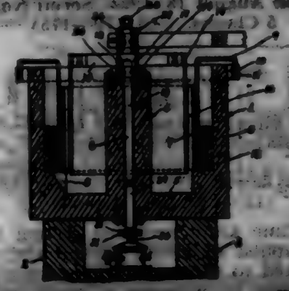
1. A power unit comprising a driving shaft having a clutch element on the end thereof, a second driving shaft parallel to the first shaft and likewise having a clutch element on the end thereof, a pinion on the first shaft meshing with a gear on the second shaft whereby said shafts rotate in opposite directions at different speeds, a large-diameter pulley secured to said first shaft, a motor having a shaft parallel to



both of said first and second shafts, a shaft intermediate said motor shaft and said first shaft and having a small-diameter pulley in line with the pulley on said first shaft, a belt connecting said pulleys, a small-diameter pulley on said motor shaft, a large-diameter pulley on said intermediate shaft, and a belt connecting said two last-named pulleys.

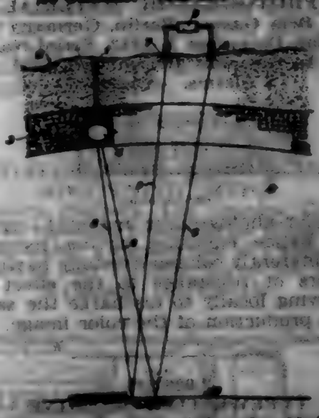
2,028,282
FOAM CONTROLLING BEER FAUCET
Jules Heward, New Rochelle, N. Y., and Sanford E. Richmond, Jersey City, N. J.
Application December 14, 1934, Serial No. 757,568
9 Claims. (Cl. 226—9)

1. In a foam controlling beer faucet, a faucet body adapted to receive a receptacle in sealed relation thereagainst and having a beer supply passage, a vent passage and a third passage, a foam recapture tank connected to said third passage, and valve means for controlling the beer supply passage and the third passage for venting the glass upon return of beer from the tank and for controlling admission of the beer from the supply passage.



2,028,284
GEM OR LIKE SETTINGS IN JEWELRY
Sarah Jackson, London, England
Application September 28, 1934, Serial No. 745,997
In Great Britain September 28, 1933
3 Claims. (Cl. 63—26)

1. In an article of jewelry, a mounting comprising a body having walls defining a socket open at one side, the walls having inturned upper edge portions for overlapping margins of a gem placed in the socket, a latch pivotally mounted adjacent the open side of the socket, a movable wall pivotally mounted for movement into and out of closing relation to the open side of the socket and having an inwardly extending gem engaging portion, and lugs carried by the movable wall adjacent the free end thereof for engagement by said latch to releasably hold the movable wall in a closed position.

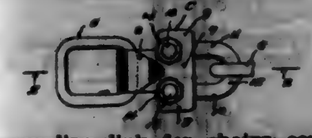


2,028,285
CATHODE FOR ELECTROLYTIC CELLS
Allen C. Jephson and Ernest B. Custer, Johnstown, Pa., assignors to National Radiator Corporation, a corporation of Maryland
Application July 25, 1934, Serial No. 736,897
1 Claim. (Cl. 204—6)

A rotatable cathode for an electrolytic cell including a hub of electrically conducting material provided with a cylindrical surface adapted to be engaged by contact blocks in an engagement permissive of rotation, conducting arms electrically united with and extending from said hub, an expansible and contractible cylindrical shell of conducting material electrically united

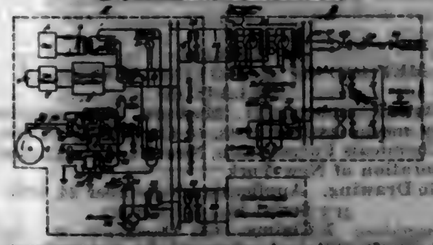
with and borne by said arms, an endless band of conducting material adapted to be secured in electrical union upon said shell by the expansion thereof, and a shaft integral with said hub and extending concentrically within said shell and shaped at its free end to the form of one element of a rotation-imparting shaft-coupling.

2,028,286
SEISMIC SURVEYING
Earle W. Johnson, Dallas, Tex., assignor to Western Geophysical Company, Tulsa, Okla., a corporation of Delaware
Application July 26, 1935, Serial No. 33,307
20 Claims. (Cl. 181)—0.5)



1. A method of determining an underground geological structure comprising drilling a small hole from the surface of the ground into a formation, forming an enlarged cavity in said formation at the base of said hole, thereafter detonating an explosive charge within said cavity and receiving and recording the resulting seismic waves after said waves have penetrated to said structure.

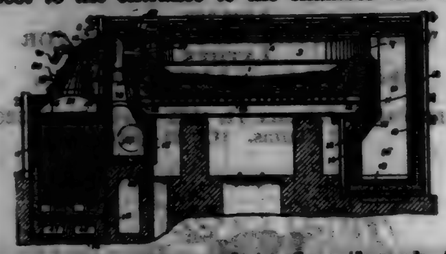
2,028,287
PROCESS OF MAKING GLUED UP PLYWOOD
William F. Leicester, Hackensack, N. J.
No Drawing. Application January 2, 1931, Serial No. 506,221
1 Claim. (Cl. 154—139)



A process of gluing together pieces of wood, more particularly for the manufacture of plywood and for veneering, comprising the use of a glue which when dry is liquefiable by heating to a low temperature, applying said glue when in liquid form to a piece of wood, immediately subjecting the piece of wood to artificial and rapid drying to prevent the liquid of the glue from soaking into the wood and to obtain a practically liquid-free glue film on the piece of wood, and then hot pressing the piece of wood to the piece of wood to which it is to be joined to unite the pieces together.

2,028,288
CROSS-CHAIN COUPLING
Edward H. Lenz, Yeddera, Wis.
Application April 4, 1935, Serial No. 14,650
2 Claims. (Cl. 24—231)

1. A coupling link for chains comprising a plate having a malleable hook-shaped tongue for receiving one link of a chain and laterally extending apertured ears, an open U-shaped link for receiving another link of the chain, angularly extending threaded legs formed on the ends of the U-shaped link detachably received in the apertures of the ears, and means detachably connecting the legs with said ears.



2,028,289
TIME ANNOUNCEMENT SYSTEM
Benjamin F. Lewis, Flushing, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application August 15, 1934, Serial No. 740,497
5 Claims. (Cl. 179—1.75)

1. In a time announcement system characterized by an oral announcement of the time, followed by the transmission of a tone indicating the exact second, the method which consists in listening in upon the system at various points thereof during the making of the oral announcements, and, at the termination thereof, connecting transmission level measuring apparatus to the system at the said points and noting the level at the said points resulting from the transmission of the signal tone over said system.

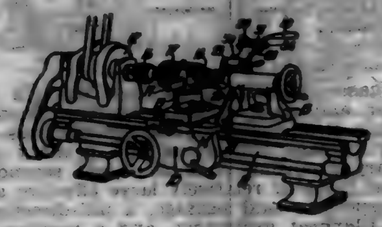
2,028,290
NONREVERSING OPEN-HEARTH FURNACE
Fred H. Lofton, Mount Lebanon, Pa.
Application January 30, 1932, Serial No. 589,935
11 Claims. (Cl. 263—15)

1. In a uni-directional open-hearth furnace, the combination of a port at one end of the furnace designed solely for the introduction of combustion-sustaining fluid, and a port at the opposite end of the furnace designed solely for the escape of waste gases, a waste gas system associated with said furnace, which system includes a primary waste gas cleansing chamber, a downtake connecting the outlet port of the furnace with said primary chamber, said primary chamber being of large effective area as compared with said downtake, whereby gases enter said primary chamber from said downtake at greatly reduced velocity, an outlet from said chamber, which outlet is so disposed with respect to the entrance to the chamber that the

waste gases are caused to flow through the chamber and to flow angularly therefrom, a secondary cleansing chamber, an upwardly-extending passage connecting the primary and secondary cleansing chambers, said secondary chamber being of relatively large effective area with respect to said passage, a uni-directional hollow tile heat exchanger, and a passage for the waste gases from said secondary chamber to said heat exchanger.

2,028,291
IMPLEMENT HANDLE
Albert Alfred MacPherson, Five Dock, near Sydney, New South Wales, Australia
Application September 12, 1935, Serial No. 40,240
In Australia June 6, 1934
5 Claims. (Cl. 273—75)

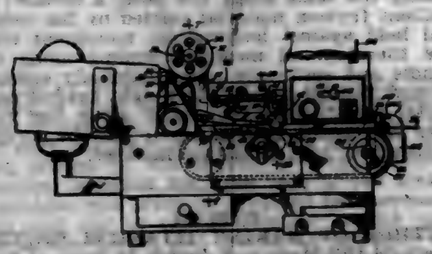
1. An implement having a handle provided with a bore extending longitudinally thereof, a weight within said bore having means to be detachably engaged by a member for forcibly adjusting the same along the bore, a member of resilient friction material carried by the weight and held against longitudinal movement relative thereto, and means extending along the handle and resiliently and frictionally engaged by said member to hold the weight against accidental longitudinal movement along the bore from any position to which it may be forcibly adjusted by said adjusting member.



2,028,292
METHOD OF MAKING TITANIUM DIOXIDE
Reginald Hill Menk and Archibald Stewart Ross, Montreal, Quebec, Canada, assignors to American Zinc, Lead & Smelting Company, St. Louis, Mo., a corporation of Maine
No Drawing. Application July 12, 1934, Serial No. 734,879
23 Claims. (Cl. 23—202)

1. The method of providing titanium dioxide which consists in diluting with water a solution of a hydrolyzable salt of titanium in the presence of a protective colloid.

23. In a method of producing titanium dioxide the step which comprises adding two volumes of titanium sulphate solution containing 100 to 200



grams of titanium dioxide per liter and two volumes of a solution containing approximately 0.15% of a complex polysaccharide in one volume of water under agitation, the two solutions being added at a rate to constantly maintain an excess of the polysaccharide, and then converting the polysaccharide into sugar by boiling.

2,028,282
UNDERCUTTING ATTACHMENT FOR LATHES
John J. O'Brien and Miles W. O'Brien, South Bend, Ind.
Application January 11, 1935, Serial No. 1,325
11 Claims. (Cl. 82—34)

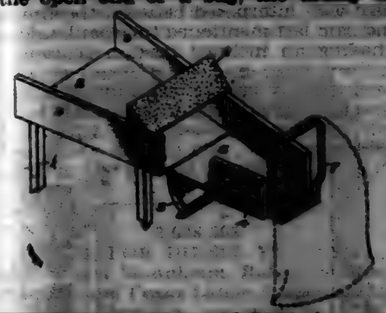
1. A device for undercutting work mounted on a lathe, comprising a support secured to the lathe beneath the work and extending upwardly to a position spaced rearwardly of the work, an arm pivoted to said support about an axis parallel to the work and normally extending forwardly therefrom to a position above the work, a reciprocable member guided by said arm, a cutter carried by said member and engaging the work, and manually operated means for simultaneously reciprocating said member relative to said arm and downwardly pivoting said arm.

2,028,284
PRINTING MACHINE
Commodore D. Ryan, Los Angeles, Calif., assignor to National Postal Meter Company, Los Angeles, Calif., a corporation of California
Application April 13, 1935, Serial No. 16,214
9 Claims. (Cl. 271—3.4)

1. In a tape handling device, a supporting frame, a tape guideway having tape treating and severing portions, a tape feeding roller operatively carried by the frame in tape engaging relation with said guideway, means for turning the roller for advancing or retracting the tape along said guideway, and means associated with the turning means operative only during the action of said turning means to retract the tape for predetermining the withdrawal of the tape end from its severing to its treating position in the guideway.

2,028,285
FOAM RETARDING TUBE
Lee W. Schrader, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 6, 1933, Serial No. 659,613
5 Claims. (Cl. 169—4)

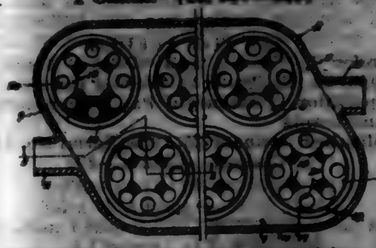
4. In an apparatus for delivering fire foam, a conduit comprising a series of flexible slotted passageways for the foam having a common longitudinal axis and a series of hollow inverted frusto conical foam retarding members of a depth substantially less than the length of the passageways and of which members the lower ends are of substantially smaller diameter and the upper ends of substantially greater diameter than the diameter of the passageways, secured between said passageways and separating one passageway from the other.



2,028,286
METHOD OF REMOVING WATER OF GELATION
Milton J. Shoemaker, Madison, Wis., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, New York, N. Y., a corporation of New York
No Drawing. Application November 24, 1931, Serial No. 577,158
7 Claims. (Cl. 18—57)

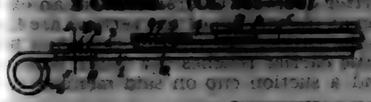
1. The method of substantially decreasing the water content of a cellulosic film which has been coagulated from aqueous solution and which contains non-constraint water of gelation, which comprises immersing said film in an aqueous refrigerating solution of a salt which is at a temperature below the freezing point of water, keeping said film in said liquid until said non-constraint water of gelation freezes and diffuses into said refrigerating solution.

2,028,287
APPARATUS FOR BAGGING ROLLABLE ARTICLES
Harry C. Stockdale, Ravenna, Ohio, assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application March 19, 1932, Serial No. 599,291
8 Claims. (Cl. 226—47)



1. An apparatus for bagging potatoes or any rollable articles comprising an inclined chute to receive a stream of potatoes, a tiltable member at the discharge end of said chute having a depending flange to stop the stream of potatoes

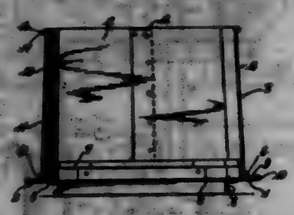
and means on said tiltable member for positioning the open end of a bag, the tilting of said



tiltable member moving said flange to permit potatoes to flow into said positioned bag.

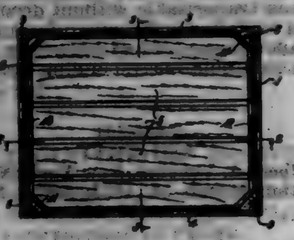
2,028,288
RADIATOR
Chester J. Pasciutti, South Milwaukee, and Arthur W. Lenz, Racine, Wis.
Application November 16, 1934, Serial No. 753,234
1 Claim. (Cl. 257—136)

A core unit for radiators comprising a plurality of interfitting rings, each ring including a body having an annular, outstanding flange formed at one end and an inwardly directed flange formed at the opposite end, means carried by said body forming a stop for the adjacent ring to equidistantly space said flanges, the inner flanges of the rings being staggeredly related to one another and provided with aligned openings.



2,028,289
SPRING LEAF SPACER
David R. Swinfen, Detroit, Mich., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
Application June 30, 1933, Serial No. 678,494
2 Claims. (Cl. 267—50)

1. In a spacer for spring leaves, the combination of a self-lubricating bearing plate adapted to be inserted between adjacent spring leaf surfaces, said plate having a plurality of recesses in its surface, graphitic material filling said recesses, and laterally-extending flanges on said plate projecting above and below said plate and adapted to engage with the sides of the adjacent spring leaves.

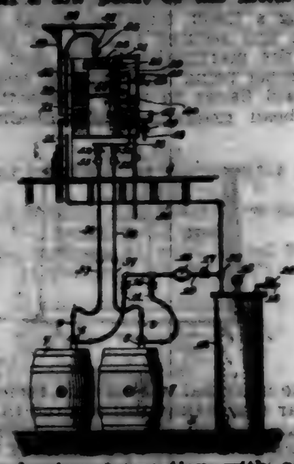


2,028,290
APPLE PACKING DEVICE
Charles L. Taylor, Bigbyville, Pa.
Application May 14, 1935, Serial No. 21,456
1 Claim. (Cl. 226—37)

In an apparatus for packing fruit, a footing plate comprising a flat sheet metal member, an upstanding octagonal member carried by said flat sheet metal member, said upstanding member having a lower marginal flange projecting therefrom and secured to said flat sheet metal member, the marginal edges of said flat sheet metal member being rolled around the marginal edge of said flange to form a smooth gripping finished bead extending substantially entirely

around the marginal edge of said facing plate, a rectangular supporting wall secured to the lower side of said flat sheet metal member through the medium of a second horizontally extending flange, said last-mentioned flange terminating in substantial alinement with the inner surface of said upstanding member whereby the base of said upstanding member is rigidly supported on said flat sheet metal member.

2,028,291
SHIPPING CRATE
Charles L. Taylor, Bigbyville, Pa.
Application May 14, 1935, Serial No. 21,457
3 Claims. (Cl. 217—56)



1. A shipping crate for apples and the like comprising a rectangular bottom, quadrangular complementary side walls, and quadrangular complementary end walls, with the base of each of said walls being of less linear extent than the top thereof, and reinforcing corner posts disposed in the four corners of the crate, said posts being triangular in cross-section and of less cross-sectional area at the base than at the top.

2,028,292
LIQUID DISPENSING APPARATUS
John Thomsen, Buffalo, N. Y.
Application September 27, 1933, Serial No. 691,167
11 Claims. (Cl. 226—1)

1. The combination with a barrel containing a liquid and a compressed-air tank connected to said barrel under reduced pressure, of a liquid container having manually-controllable connection with said compressed-air tank under the normal pressure within the latter, a liquid-supply pipe connecting said barrel with said liquid container at a high point, means to control the supply of liquid from said liquid-supply pipe into said liquid container according to the level of the liquid therein, and a return pipe con-

necting said liquid supply pipe with said container with a low point of the latter, said re-

turn pipe having connection with said barrel through said liquid-supply pipe.

2,028,303

PRODUCTION OF ORGANIC DISULPHIDES

Luther B. Turner, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application October 29, 1932, Serial No. 640,342

13 Claims. (Cl. 260—16)

1. The process which comprises subjecting mercaptans (vaporizable without decomposition) to limited oxidation sufficient to form disulphides in the vapor phase and withdrawing a reaction product containing corresponding disulphides.

2,028,304

ASH TRAY

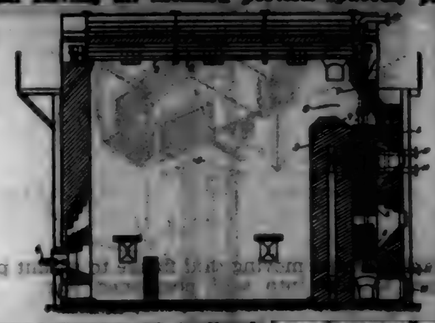
Albert A. Vaccino, New York, N. Y.

Application March 18, 1935, Serial No. 11,700

9 Claims. (Cl. 131—61)

1. In a device of the class described, a body member, a reservoir for holding a supply of water, and an oscillating trough associated with said body member, one end of said trough normally submerged in said reservoir, the other end raised above the water line, whereby when said second mentioned end is depressed water is caused to flow to said second mentioned end.

2,028,305



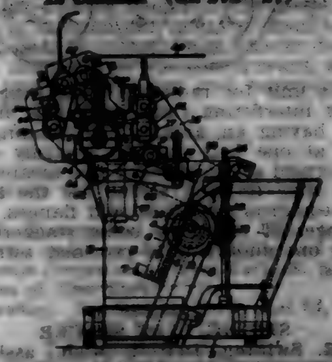
TUBE STILL AND FURNACE CONSTRUCTION

John S. Wallis and Stephen B. de Bence, New York, N. Y., assignors to Alco Products, Incorporated, New York, N. Y., a corporation of Delaware

Application August 31, 1931, Serial No. 560,438

2 Claims. (Cl. 196—116)

1. In a tube still of the character described having a boundary wall having a bare interior surface downwardly inclined to the horizontal, a fire chamber, a roof tube bank adapted to be heated mainly by radiant heat, a tube bank adapted to be heated mainly by convection heat, a bridge wall interposed between the fire chamber and said last mentioned tube bank said bridge wall having an inclined portion spacedly positioned from said inclined boundary wall and adapted to form a downwardly converging passageway therewith leading from said fire chamber to said tube bank adapted to absorb convection heat



2,028,306

TIN POT FEEDER

Alexander E. Weibel and William Jones, Aliquippa, Pa., assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Application January 25, 1926, Serial No. 3,461

12 Claims. (Cl. 271—27)

1. In a tin pot feeder a suction cup mechanism comprising a carrier arranged to oscillate in a vertical arc, a radially movable member on the carrier operable by gravity from an extended position at the bottom of the vertical arc through which the carrier moves to a retracted position when the carrier reaches the upper limit of said arc, and a suction cup on said member.

2,028,307

PROCESS FOR TESTARING CERESIN

Peter J. Wiezevich, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application June 13, 1932, Serial No. 617,665

2 Claims. (Cl. 196—13)

1. Process for obtaining ceresin from ceresin which comprises treating the ceresin at a temperature above its melting point with a light hydrocarbon solvent consisting essentially of a mixture of hydrocarbons having between 3 and 5 carbon atoms, and under a pressure sufficient to retain the light hydrocarbons in liquid phase at the temperature of working, removing any material remaining undissolved at this temperature, heating the solution without substantial intermediate cooling to a temperature close to the critical temperature of the solvent whereby a portion of the ceresin is precipitated and carries with it a substantial proportion of the colored material contained therein, removing this precipitated material, filtering the remaining solution through a bed of finely divided clay, and recovering the ceresin from the filtered solution.

2,028,308

FUEL FOR DIESEL ENGINES

Wilhelm Wilke, Mannheim, Robert Stadler, Hegelhausen, and Franz Leppla, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application November 28, 1932, Serial No. 644,238. In Germany December 5, 1931

4 Claims. (Cl. 44—8)

1. A fuel suitable for use in Diesel motors comprising a hydrocarbon oil heavier than naphtha containing an addition of a sufficient amount, not exceeding 20%, of a solid aliphatic hydrocarbon, containing more than 7 carbon atoms and having more than one multiple carbon bond, to reduce the pressure at which spontaneous combustion of the hydrocarbon oil would normally occur.

2,028,309

SPRING CLOSING DEVICE

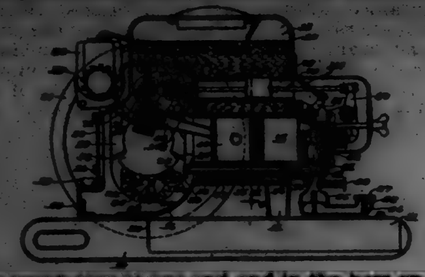
John H. Adams, Seattle, Wash.

Application February 17, 1932, Serial No. 593,643

5 Claims. (Cl. 150—18)

1. The combination with a flexible container, of a closure therefor comprising a pair of bowed springs secured around the mouth of the container, each said spring having a beaked end overlapping a plane end of the other spring, and complementary filling pieces attached to adjoining faces of said springs.

2,028,310



ENGINE

William Otto Beckman, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey

Application November 10, 1934, Serial No. 752,419

9 Claims. (Cl. 123—188)

1. In an internal combustion engine and in combination, a unitary casting embodying a cylinder, a cooling jacket and a crank case, one side of said crank case being open and formed around the opening with an attaching flange, a side plate fitted over the opening and secured rigidly in position against the attaching flange, inwardly projecting aligned bosses on the side plate and on the closed side of the crank case, and a crank shaft, said shaft being journaled in the boss on

the crank case at one end and in the boss on the side plate at the other end.

2,028,311

FISHING REEL

Joseph Calvin Berry, Seattle, Wash., assignor to Utility Electric and Machine Works, Inc., Wheeler, Oreg.

Application June 12, 1933, Serial No. 675,421

4 Claims. (Cl. 43—20)

1. The combination with a fishing rod and reel, a tubular slotted shaft for the reel, a release rod and a rigid cross pin reciprocable in said shaft, and means for operating the shaft, of a clutch-head forming part of the reel, a clutch plate rigid with said pin, a spring device for holding said plate in engagement with the clutch-head, a pivoted lever mounted in the fishing rod, and a pivotal connection between said lever and the release rod.

2,028,312

ELECTROPLATING OF ALUMINIUM

Oscar Bernhauser, Strasbourg, France, assignor to Société d'Electrochimie, d'Electrometallurgie et des Aciéries Electriques d'Ugine, Paris, France, a corporation of France

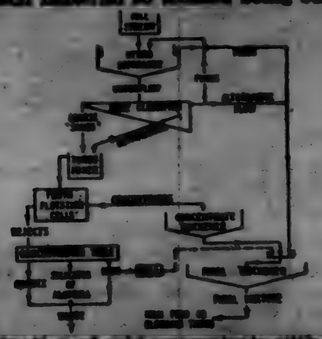
No Drawing. Application July 28, 1933, Serial No. 682,704. In France July 29, 1932

1 Claim. (Cl. 204—3)

In the electro-plating of articles of aluminium and its alloys the preliminary treatment which comprises heating the article to a temperature above 100° C., plunging it into a concentrated bath of basic aluminium chloride brought to the same temperature and then withdrawing from the bath when a violent reaction with attack of the metal is produced.

2,028,313

MANUFACTURE OF CEMENT



Charles H. Steerwood, Narberth, Pa., assignor to Valley Forge Cement Company, a corporation of Pennsylvania

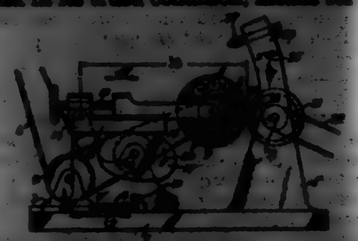
Application July 24, 1934, Serial No. 735,664

11 Claims. (Cl. 106—85)

1. The method of treating lime-bearing cement raw materials containing an undesirable quantity of at least one constituent and in which the calcium carbonate value varies from time to time as received for treatment, which comprises separating from each material the sands from the fine particles, separating an additional quantity of the coarser particles from the fines and combining them with the sands, subjecting the combined

coarse particles to froth flotation, conducting the flotation operation so that the concentrate is maintained substantially at a desired calcium carbonate value and the rejects include the undesirable quantity of said constituent, combining the concentrate from the flotation operation with the untreated fines, the relative quantity of the part of each material so treated being such that

the combination of said concentrate with the untreated fines will provide a mixture of the desired calcium carbonate value and maintaining this value substantially constant continuously by varying the quantity of the coarser particles separated from the fines and added to the mixture, whereby the combined quantity is varied inversely as the calcium carbonate value of the materials varies in the materials received.



2,028,314
SWITCH-TYPE PLUG ATTACHMENT DEVICE
Joseph D. Brown, New York, N. Y., assignor to Raylite Trading Company, Inc., a corporation of New York
Application March 6, 1934, Serial No. 714,548
8 Claims. (Cl. 200—51)

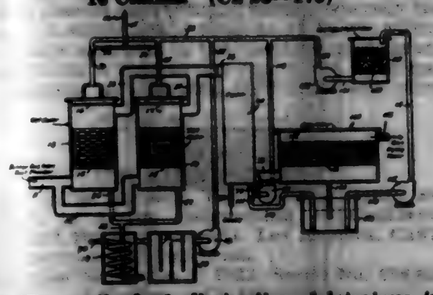
1. In a switch-type plug attachment, an insulating case having a circular groove and a recess concentric with said groove, an element having a curved edge wall fitted to rotate in said groove and an opening concentric with said wall, a circuit closer having trunnion portions journalled in said opening and recess, and a spring mounted between an end of said closer and a part of said element at a spaced distance from the opening thereof.

2,028,315
GRINDING MACHINE
Paul Brühl and Franz Neugart, Berlin, Germany
Application April 14, 1933, Serial No. 666,186
In Germany April 20, 1932
5 Claims. (Cl. 51—105)

1. In a grinding machine, an arm adapted to swing between two given positions, a grinding disk mounted at the end of the said arm, a diamond and a work-holder disposed substantially in a plane with the said disk on either side thereof and so positioned that the extreme points of the said diamond and the piece of work on the said holder situated towards the axis of oscillation of the said arm are located exactly in the arc described by the extreme outer point of the said disk in the trued condition, means for swing-

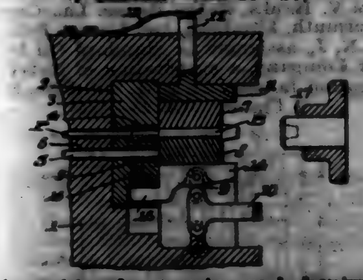
ing the said disk to and fro for operative engagement with the piece of work and the said diamond, and means for advancing the said disk in a direction away from the said axis during the movement of the said disk from the piece of work to the said diamond by an amount which is at least greater than the depth of wear of the said disk incurred during the preceding grinding operation.

2,028,316
HOSE FITTING
Albert Brunner, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application October 16, 1931, Serial No. 569,711
2 Claims. (Cl. 285—84)



1. In combination, a coupling member adapted to be attached to the end of a hose, comprising a body portion and a tubular extension to receive the hose end, the bore of said extension being of substantially the same diameter as the external diameter of the hose, a nipple extending into the hose and having a flanged end interposed between the body portion and the hose end and said tubular extension being adapted, when it is deformed by being radially contracted from adjacent its open end to a point adjacent the flange of the nipple, to form an integral shoulder engaging the rear of the flange of the nipple and holding the flange in pressure engagement with the body portion of the coupling member.

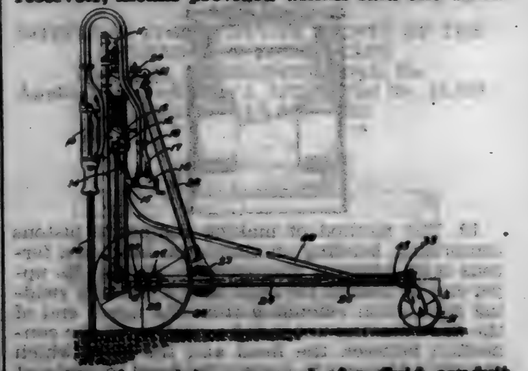
2,028,317
WELDING ROD ALLOY
Homer W. Rattenbaugh, Kenosha, Wis., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application March 5, 1935, Serial No. 9,321
2 Claims. (Cl. 219—8)



1. Filler material for welding composed of an alloy of approximately 58% to 60% copper, 0.1% to 2% nickel, 0.03% to 0.75% silicon and 31.25% to 44.83% zinc.

2,028,318
PURIFICATION OF GASES
Bernard M. Carter, Montclair, N. J., assignor to General Chemical Company, New York, N. Y., a corporation of New York
Application February 3, 1931, Serial No. 513,123
16 Claims. (Cl. 23—178)

1. The method of eliminating deleterious impurities from hot burner gases in the contact sulfuric acid process which comprises cooling the hot gas containing water vapor in stages to cause condensation of the water vapor together with impurities and sulfuric acid contained in the gas, separately collecting condensate from an initial and a subsequent stage of said cooling operation, discarding initial condensate while retaining subsequent condensate whereby impurities are eliminated from the system in the initial condensate, whereas sulfuric acid condensed from the gas is segregated in the subsequent condensate.



2,028,319
METHOD OF AND MEANS FOR PRODUCING BOLTS AND THE LIKE
William L. Clouse, Tiffin, Ohio, assignor to National Machinery Co., Tiffin, Ohio
Application June 1, 1934, Serial No. 729,497
7 Claims. (Cl. 10—27)

1. A machine for pressing and shaping metal including an extrusion die having limited sliding movement, gripping dies for holding a blank in correct position relative to the extrusion die, means for holding the extrusion die in correct position to receive metal while being extruded, and means for shaping the metal within the dies thereby to provide means for transmitting motion from one of the gripping dies while "breathing" during its release from pressure, to the extrusion die.

2,028,320
ROCK DRILL SUPPORTING FRAME
John C. Curtis, Garfield Heights, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a corporation of Ohio
Application December 6, 1934, Serial No. 756,394
4 Claims. (Cl. 255—51)

1. In a drilling apparatus, a substantially U-shaped hollow frame supporting a fluid actuable drill movable relatively thereto, the interior of said frame constituting a fluid tight reservoir, hollow braces welded to said frame across the inner corners thereof, the interior of at least one of said braces constituting a fluid tight chamber, an inlet port leading from said chamber into said reservoir, means provided within said one brace

capable of receiving one end of a fluid conduit for admitting fluid into said reservoir via said chamber and inlet port, and an outlet port leading from the interior of said reservoir adapted to receive one end of a conduit through which fluid from said reservoir may be admitted to the drill for actuating the latter.

2,028,321
SHOE RESHAPING DEVICE
Michael K. Dun, Forest Hills, N. Y.
Application October 5, 1934, Serial No. 746,954
6 Claims. (Cl. 12—51)

1. In a device for treating shoes, a support, a mandrel fixed in said support, a second mandrel mounted therein for movement relative to the first mandrel, pressure means bearing against said second mandrel in the direction of the first mandrel, shoe-engaging members rotatably mounted upon said mandrels, and means within said mandrels for heating members.

2,028,322
COMPOSITE PISTON
John Flammang, University City, Percy L. Bowser, St. Louis, and Herman Ernst, Pine Lawn, Mo., assignors to The Sterling Corporation, St. Louis, Mo., a corporation of Delaware
Application July 25, 1932, Serial No. 624,498
14 Claims. (Cl. 92—222)

1. A composite piston comprising, an aluminum head, a ferrous skirt which is diametrically

rigid at its upper end, and a connection from the upper end of said skirt and integrally bonded to said head, said connection having a portion thereof between the bond and the skirt which can yield in order to permit said head to expand relative to said skirt.

10. The method of making composite pistons comprising, bonding an aluminum head to a ferrous skirt which is diametrically rigid at its upper end, by casting the head on to a part of a yielding connection extending from the upper end of the skirt, leaving unbonded a portion of the connection between the head and the skirt which can yield in order to permit the head to contract relative to the skirt.

2,028,323

SAVINGS BANK ATTACHMENT

Harry S. Goodman, Chicago, Ill., assignor to Jerome H. Arneson, Chicago, Ill.

Application May 2, 1934, Serial No. 723,623

5 Claims. (Cl. 40—62)

1. An information giving attachment for savings bank containers and the like comprising a thin plate having two opposite side edges formed with grooves opening toward each other, the surface between said grooves having a chart of information thereon, a slide having portions fitting in said grooves to guide the slide in movement and having a transverse slot therein for facilitating reading of the chart information, said plate having clip means for temporarily fastening the plate to the containers, said clip means comprising integral portions of said plate at opposite ends thereof bent over to snap onto the edges of the containers.

2,028,324

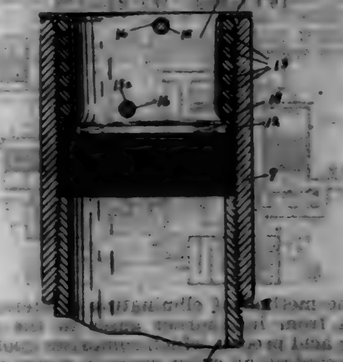
SHOE POLISH

Hugh P. Griffin and Robert P. Richardson, Reidsville, N. C.

No Drawing. Application June 27, 1934, Serial No. 732,715

8 Claims. (Cl. 134—7)

1. Dry composition for white shoe polish comprising a substance selected from the following group; lithopone, or barium sulphate and zinc sulphide, in mixture with talc and trisodium phosphate.



2,028,325

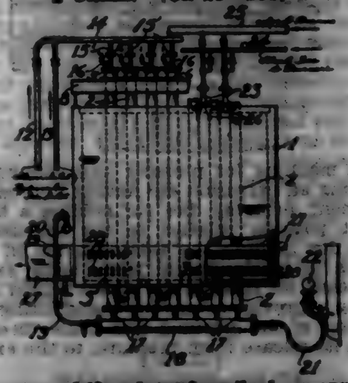
PIPE THREAD PROTECTOR

Lester S. Gunderman, Pittsburgh, Pa.

Application November 19, 1934, Serial No. 753,571

8 Claims. (Cl. 138—96)

1. A pipe thread protector comprising a substantial collar having a right angle flange at one edge thereof for contacting with the end of a pipe, fibrous resilient means wound on the body of said collar and arranged to contact with the thread of the pipe when mounted thereon, means on the opposite edge of said collar to force the resilient member against the said thread for frictionally locking the protector in the pipe, said resilient means being wound on the collar before being inserted in the pipe and said flange having recesses thereon for receiving a wrench for the removal of the protector.



2,028,326

APPARATUS FOR THE PRODUCTION OF HYDROGEN

William V. Hanks, Baton Rouge, La., George H. Freyermuth, Elizabeth, and George Potts, Irvington, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application January 23, 1931, Serial No. 510,066

1 Claim. (Cl. 23—208)

Apparatus of the class described, comprising a furnace of refractory material and a plurality of reaction tubes supported at the upper end outside the furnace and arranged in two rows along the sides and passing freely through the roof and floor of said furnace, means permitting free expansive movement of the tubes below the point of support, means for firing the furnace at the upper end between the rows of tubes, means for withdrawing the combustion gases comprising a flue at the bottom of the furnace between said rows of tubes, a plurality of openings from the flue into the bottom of the furnace between said rows, the area of said openings being graduated with regard to their distance from the point of offtake to an outer stack from the flue and being smallest nearest said point of offtake whereby the pressure is substantially equal at all points within the furnace adjacent to the openings, and means for admitting a fluid to one end of the tubes and for removing said treated fluid from the other end.

2,028,327

ORCHARD HEATER

Wayne A. S. Harmon, Los Angeles, Calif., assignor, by mesne assignments, to California Orchard Heater Company, Los Angeles, Calif., a corporation of California

Application November 6, 1933, Serial No. 696,650

6 Claims. (Cl. 158—91)

1. In a heater, a combustion chamber member having a fuel inlet at one end, air inlet ports in the side wall thereof and an outlet at the opposite end, said ports being constructed to direct air into the combustion chamber member at progressively increasing angles to the general direction of flow of the burning gases from said inlet towards the outlet of the combustion chamber member.

2,028,328

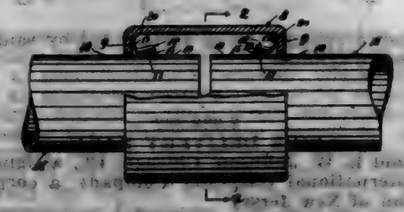
EXPANSION INSERT OR CASTER SOCKET FOR TUBULAR LEGS OR THE LIKE

Walter F. Harold, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut

Application August 15, 1933, Serial No. 684,619

7 Claims. (Cl. 16—39)

7. An expansion insert for tubular legs or the like, comprising a body, gripping means carried outwardly thereof having longitudinal and lateral movement relative to said body, and camming means cooperating between said body and gripping means adapted to impart outward lateral movement to the latter as said gripping means is moved relatively to said body in the direction of insertion in said tubular leg or the like, and spring means acting between said body and said gripping means normally pressing said gripping means in said direction of insertion.



2,028,329

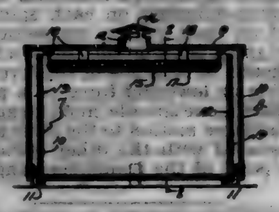
COUPLING FOR TUBULAR JOINTS OF THE EXPANSION JOINT TYPE

Claude M. Houston, Pittsburgh, Pa.

Application November 4, 1935, Serial No. 48,199

6 Claims. (Cl. 285—193)

1. In an expansion joint for a pipe line, a cylindrical housing enclosing the juxtaposed ends of the tubes to be connected, a flexible ring positioned at each end of the housing, each ring being of substantially L-shape cross section comprising a flange and a sleeve element, the flange of each ring being secured to the housing and each sleeve surrounding its corresponding pipe end in spaced relation, and a gasket of yielding material inserted between each sleeve and tube end.



2,028,330

VENTILATED AND HUMIDIFIED STORAGE RECEPTACLE

David W. Hudson, Green Bay, Wis.

Application February 3, 1933, Serial No. 655,004

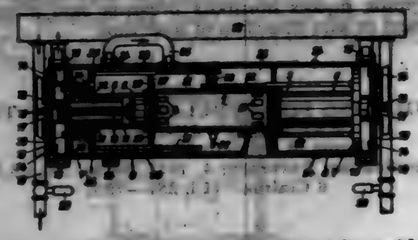
6 Claims. (Cl. 45—113)

1. In a device of the character described, the combination with a receptacle and a shell having walls spaced from said receptacle, and a cover spaced above said receptacle, the space within the walls comprising an air inlet and the upper portion of said shell being vented to provide an air outlet, of a pad disposed above the receptacle, and means connecting said pad with the cover whereby the contents of the receptacle are accessible upon removal of the cover.

2,028,331

FREE PISTON ENGINE COMPRESSOR

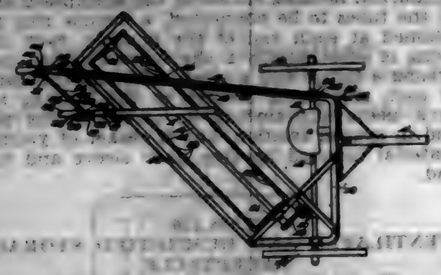
Hermann Jüttche, Dessau, Germany, assignor to Hugo Junkers, Bayrisch-Zell, Oberbayern, Germany



Application May 15, 1934, Serial No. 725,748

In Germany May 24, 1933

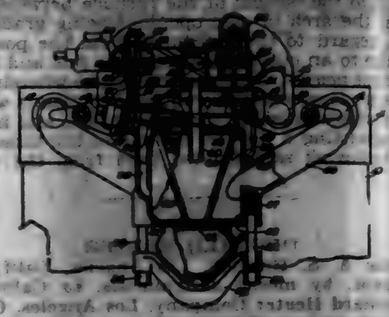
13 Claims. (Cl. 230—56)



1. In a free piston motor-compressor in combination, a motor cylinder, a free piston arranged in said cylinder, and a multistage compressor comprising a low pressure cylinder, a

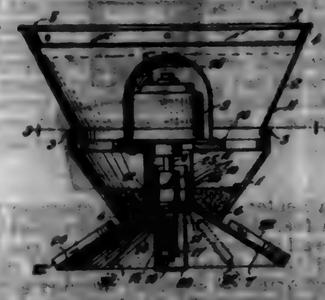
high pressure cylinder and pistons arranged for reciprocation in said two cylinders, said high

pressure cylinder being surrounded by said low pressure cylinder.



2,028,223
SIDE DELIVERY RAKE
Arnold E. W. Johnson, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application February 4, 1935, Serial No. 4,789
9 Claims. (Cl. 56—377)

1. A side delivery hay rake having a frame carried at its rear end on a pair of offset spaced ground engaging supports including upright spindles, a collar mounted on each spindle, a lever fulcrumed on each collar, connections between each lever and a point on the frame adjacent each spindle, means to rock one of the levers to transmit a lifting or lowering force to a point on the frame adjacent one spindle, and linkage for transmitting the same motion to the lever and connections associated with the other spindle to move the other point of the frame conjointly.

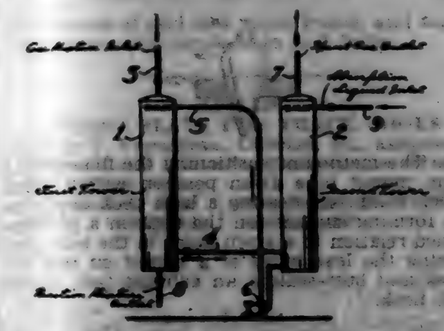


2,028,231
HEAVY FUEL VAPORIZER
Edward A. Johnston, Harry F. Bryan, and Harold H. Turner, Chicago, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application October 16, 1933, Serial No. 693,726
9 Claims. (Cl. 261—18)

1. A heavy fuel vaporizer and carburetor for internal combustion engines comprising an intake manifold, an inlet to said manifold, throttling means in said inlet, a Venturi throat anterior to said means, an air inlet conduit communicating with said throat, a vaporizing chamber, an outlet conduit from said chamber communicating with a low pressure area in the Venturi throat, a heating jacket surrounding said chamber, means for supplying exhaust gas from the engine to said jacket, an inlet conduit communicating at one end with the chamber, means for supplying exhaust gas from the engine to the other end of said conduit at substantially the exhaust pressure, a Venturi throat in said conduit, a fuel supply, a conduit connecting said fuel supply with a low pressure area in said last mentioned Venturi throat, means for metering the fuel supplied to

said conduit, and an air bleed communicating with said fuel supply.

2,028,234
SAND DISTRIBUTOR FOR AUTOMOBILES
Fred G. Kocsh, Newark, and Adolph Markovits, Bloomfield, N. J.
Application December 15, 1934, Serial No. 757,832
8 Claims. (Cl. 291—32)

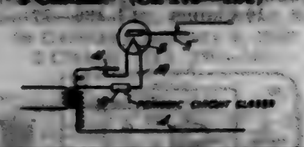


1. A spreader for granular material comprising a box having an outlet to discharge the material by gravity, a combined revoluble distributor and outlet valve for said box which is also movable coaxially of said outlet to open and close the same, a drive shaft and means connecting said distributor and valve to said shaft so that said valve is opened by rotation of said shaft for simultaneously opening said outlet of the box and rotating said distributor to centrifugally spread the material and closing said outlet and stopping rotation of said distributor, upon starting and stopping of rotation of said shaft respectively.

2,028,235
PROCESS FOR DESULPHURIZING A PETROLEUM OIL DISTILLATE
Vladimir Kalichevsky, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 10, 1931, Serial No. 529,202
5 Claims. (Cl. 196—22)

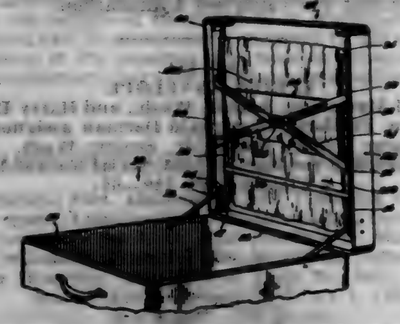
3. A process for desulphurizing a petroleum oil distillate which comprises treating said distillate with a substantially anhydrous mixture of sodium and potassium hydroxides containing about 1¼ lbs. of sodium hydroxide per pound of sour sulphur in the distillate and approximately from ⅛ to ⅜ lbs. of potassium hydroxide per pound of corrosive sulphur in the distillate.

2,028,236
METHOD OF CARRYING OUT CHEMICAL REACTIONS
Paul E. Kuhl, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application October 5, 1932, Serial No. 636,845
6 Claims. (Cl. 23—2)



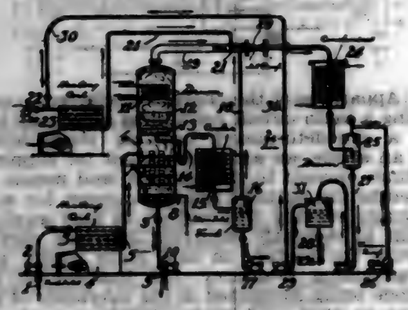
1. The method of removing H_2S from a gaseous mixture by carrying out a chemical reaction in two reaction zones between two gases one of which is H_2S and which are able to react chemically when simultaneously present in solution in a liquid medium and one of which is more readily soluble in the liquid medium than the other one, which comprises, passing a gas mixture containing the two reacting gases through the first reaction zone concurrently with liquid medium containing gases absorbed in the second reaction zone, removing the liquid medium and the reaction product from said first zone, and passing unabsorbed gases into the second reaction zone countercurrently to fresh liquid medium to obtain the liquid medium containing absorbed gases.

2,028,237
HOLDER FOR UMBRELLAS
Jean P. Lane, Seattle, Wash.
Application November 2, 1934, Serial No. 751,220
6 Claims. (Cl. 211—63)



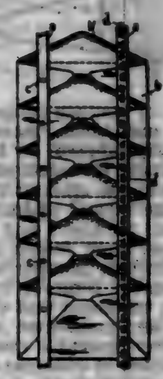
1. In a collapsible container having flexible, foldable walls, the combination with a base secured to said walls and forming an interior cup, of an open neck-portion for the container, said walls adapted to fold within the interior of the cup and said neck adapted to enclose the folded walls and cup when the container is in collapsed condition, and means attached to the neck portion for suspending the extended container.

2,028,238
ELECTRICAL APPARATUS
Clarence J. Le Bel, Lynn, Mass., assignor to Hygrade Sylvania Corporation, Salem, Mass., a corporation of Massachusetts
Application October 30, 1933, Serial No. 695,899
9 Claims. (Cl. 176—126)



1. Apparatus of the character referred to comprising a main circuit containing a cathode having a pre-determined heat-lag characteristic and an anode, an auxiliary circuit for supplying heating current to the cathode, and means operated by the cathode heating current for automatically varying the current in said auxiliary circuit at regularly recurrent intervals, thereby to vary the current in said main circuit at a corresponding frequency, the heat-lag of said cathode being correlated to the operation of said means so that said main circuit current consists of regularly recurrent waves having similar slowly rising wave fronts.

2,028,239
BAGGAGE
Abraham Levine, Elizabeth, and Harry Kaufman, West Orange, N. J.
Application February 15, 1932, Serial No. 593,930
19 Claims. (Cl. 190—41)



3. In an article of luggage comprising complementary bottom and cover members pivotally united along one side thereof by hinge means, a foldable rack pivotally mounted within the cover member to swing about an axis parallel to and adjacent said hinge means within the limits set by the walls of said members and to nest within said cover member when folded and to extend outwardly of the bottom member beyond the side of the bottom member removed from the hinge thereof when it is unfolded and extended to its maximum length and positioned so as to overlie said bottom member, movable means carried by said rack and adapted to cooperate with the side of said bottom member farthest removed from the hinge thereof, means on said rack cooperating with said movable means to support the rack above said body member and in overlying relation thereto, and to prevent movement of said rack therefrom, and garment-supporting means positioned on the free outer end of said rack adapted to receive garments thereover in pendent relation outside of the confines of said article of luggage when said rack is positioned in extended relation so as to overlie said bottom member.

2,028,240
METHOD FOR THE DISTILLATION OF EASILY DECOMPOSABLE MATERIALS
Warren K. Lewis, Newton, Mass., assignor to Standard Oil Development Company, a corporation of Delaware
Application October 17, 1933, Serial No. 693,948
10 Claims. (Cl. 196—77)

1. An improved process for non-destructive distillation of easily decomposable materials which comprises evaporating such material in a distillation zone, withdrawing gases from said zone through a constricted outlet, discharging a stream of vaporized high boiling hydrocarbon material substantially free from constituents having a high vapor pressure through the constricted outlet whereby the distillation zone is maintained at a sub-atmospheric pressure and condensing the vaporized hydrocarbon.

2,028,341
SERIES ENVELOPE
Isobel Masterson, Seattle, Wash., and Harry Dorman, Portland, Oreg.; said Dorman assignor to George Willard Bowen, Jr., Seattle, Wash.
Application October 16, 1933, Serial No. 693,768
6 Claims. (Cl. 229—69)

2. A series of successive envelopes arranged in alinement, the envelopes in said series being joined to each other by a continuous strip of material having an adhesive substance located between said strip and said envelopes, said strip extending across one face of each of said envelopes and being lightly secured by adhesion to each envelope of said series thereby adapted to be easily removed therefrom.

2,028,342
METHOD OF BUTT-SEALING INCANDESCENT ELECTRIC LAMPS
Michael E. McGowan, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application January 28, 1936, Serial No. 761,611
9 Claims. (Cl. 49—78)

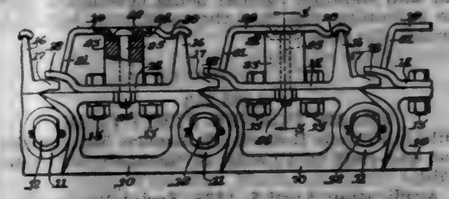
1. The method of positioning the filament of a lamp mount in a given position within a bulb which comprises heating a bulb neck until plastic, forming surfaces on the neck in a predetermined relation to a given point in the bulb, positioning the lead wires of a mount on said surfaces and butt-sealing an exhaust tube on said bulb neck.

2,028,343
METHOD AND MEANS FOR PROTECTING MAGNESIUM AND MAGNESIUM ALLOYS
Josef Martin Michel, Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application July 10, 1933, Serial No. 677,105. In Germany August 6, 1931
9 Claims. (Cl. 252—6)

1. A method of preventing the corroding action, upon magnesium and magnesium alloys, of a liquid consisting substantially of a polyhydric alcohol, which comprises incorporating in said liquid a minor quantity of an alkali fluoride.

2,028,344
SHIELD FOR TOOTHED SEPARATOR ELEMENTS
Melville J. Mitchell, Moline, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application October 18, 1934, Serial No. 748,811
7 Claims. (Cl. 130—23)

7. A rotary separator element having a row of spaced teeth thereon, a shield attachment for the teeth having a curled edge adapted to hook over the ends of said teeth, and an extension included in the shield adapted to be secured to the element.

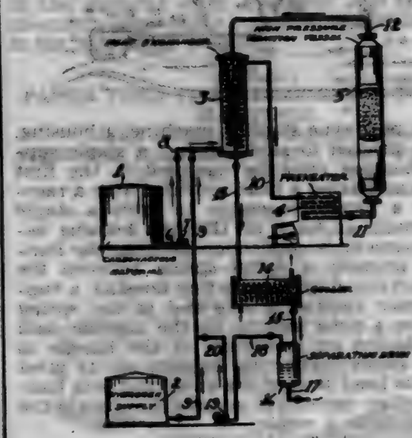


2,028,345
STOVE DOOR
Lewis Moore, Joliet, Ill., and Isaiah S. Hallowell, La Fayette, Ind.
Original application January 26, 1932, Serial No. 587,726. Divided and this application November 25, 1933, Serial No. 699,676
3 Claims. (Cl. 126—194)

1. A stove door, comprising a rectangular skeleton cast metal frame provided with marginal recesses, and a sheet metal door front, brackets welded to said door front for engagement within

the recesses of said cast metal frame, and means for securing said brackets to said frame.

2,028,346
STREET PLATE FOR TRACK SHOES
Norman O. Pannegren, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 5, 1935, Serial No. 25,947
10 Claims. (Cl. 305—16)



1. A street plate attachment for a track shoe having a transverse lug formed thereon adjacent one end, said plate embodying a flat portion having a spacer sleeve secured thereto between its ends and adapted to rest on the shoe over a hole formed in the shoe, a bolt passed through the plate, sleeve, and shoe opening, to secure the plate to the shoe, said plate having one end formed to fit over the lug on the shoe and having its other end bent at an angle to fit against the other end of said shoe.

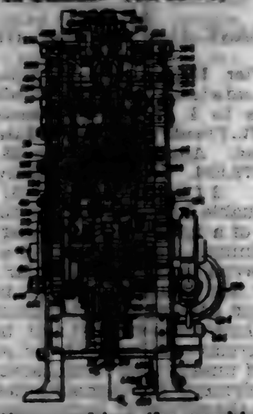
2,028,347
HEATED BOOT
John M. Peloni, Brockton, Mass.
Application December 29, 1933, Serial No. 704,576
1 Claim. (Cl. 219—19)

In combination with a shoe having a main sole and an insole, asbestos sheets between the main sole and insole, a stiff reinforcing shank between the asbestos sheets extending from the rear end of the heel of the shoe and terminating at the junction of the front of the arch of the main sole with the ball portion thereof and conforming to the width and outline of the heel and arch portion of the main sole, said shank consisting of a hollow metal casing having upper and lower walls united along their marginal edges, a core in the hollow casing consisting of a sheet of insulation, a resistance coil about said core, sheets of insulation enclosing the core and coil with their marginal portions projecting therefrom secure along their edges, and conductors leading from said coil between marginal of the sheets of insulation and projecting outwardly from the casing for connection with a source of electric energy.

2,028,348
PROCESS FOR HYDROGENATING DISTILLABLE CARBONACEOUS MATERIALS
Mathias Pier, Heidelberg, and Walter Simon and Walter Kroenig, Ludwigshafen-on-the-Rhine, Germany, assignors to Standard-I. G. Company, Linden, N. J., a corporation of Delaware
Application December 23, 1932, Serial No. 648,435
In Germany January 2, 1932
2 Claims. (Cl. 196—53)

1. The process of destructively hydrogenating a middle oil which comprises subjecting said oil to the action of hydrogen at a temperature of about 440° C. and under a pressure of 200 atmospheres in the presence of a catalyst consisting of molybdenum bromide and tungsten sulfide.

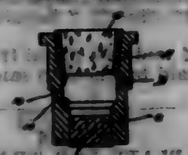
2,028,349
LUBRICANT AND PROCESS OF MAKING SAME
Mathias Pier, Heidelberg, and Friedrich Christmann, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application June 28, 1933, Serial No. 678,054. In Germany July 1, 1932
3 Claims. (Cl. 87—9)



1. A valuable hydrocarbon mixture essentially consisting of a lubricant containing paraffin wax and containing a small amount of a hydrocarbon product having a mean molecular weight of at least 1000 and being capable of increasing the viscosity and flattening the temperature viscosity curve of hydrocarbon oils and being selected from the group consisting of the polymerization products of unsaturated hydrocarbons capable of forming polymeric homologous series, the products obtainable therefrom by hydrogenation, isomerization or isomerization and hydrogenation, hydrogenated rubber, hydrogenated resins soluble in high boiling oils, hydrogenated balata and hydrogenated gutta percha and a small amount of a substance different from the viscosity regulator capable of lowering the setting point of hydrocarbon oils and selected from the group consisting of high molecular weight volatilisation products of waxy hydrocarbons rich in hydrogen, condensation products of paraffinic hydrocarbons having a high molecular weight, both per se and in conjunction with cyclic hydrocarbons, and condensation products of high molecular weight aliphatic oxygen-containing compounds.

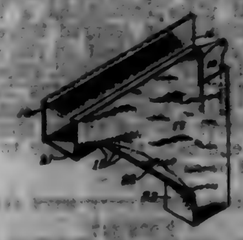
2,028,350
PLIER TYPE STAPLING MACHINE
Fridolin Polzer, South Norwalk, Conn.
Application November 10, 1934, Serial No. 752,491
8 Claims. (Cl. 1—49)

1. In a plier type stapling machine, a housing, a handle pivoted to said housing, a staple supporting housing pivotally mounted in the first housing and having a head provided with a raceway and a plunger operable to drive a staple therethrough, an anvil on the first housing below the raceway, a connection between the handle and plunger, a spiral spring between the handle and the staple supporting housing, a cup-like member embracing one end of the spring and having a pivot bearing on the housing, said spring adapted on movement of the handle to rock the staple supporting housing on its pivot to move its head toward the anvil, and said handle on further movement adapted to operate the plunger to drive a staple.



2,028,351
MACHINE FOR SHAPING UPPERS OVER LASTS
Arthur F. Pym, Swampscott, and William E. Scarlett, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 7, 1934, Serial No. 724,276
61 Claims. (Cl. 12—7)

1. In a lasting machine, the combination with shoe-positioning means, of means for shaping different layers of shoe upper materials separately to a last while working on the different layers simultaneously and for working the marginal portion of each layer into finally lasted relation to a sole.

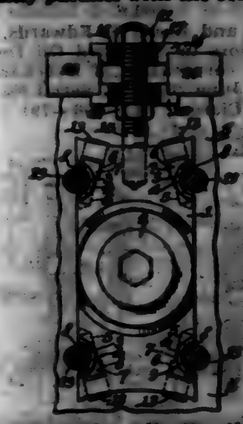


2,028,352
BUNG
Edward A. Rasbridge, Lebanon, Pa.
Application November 8, 1932, Serial No. 642,549
3 Claims. (Cl. 217—113)

1. A bung for kegs comprising a sleeve fitted into the bung opening of the keg and capable of receiving a tap device including a siphoning rod, the bore of said sleeve having a plurality of shoulders defining sections of successively reduced diameters, a packing washer fitted in said outermost section, a removable plug in the inner-

most section of the sleeve to be driven into the keg by the siphoning rod, one of said shoulders constituting a stop for the inner end of the tap and said shoulder further being bevelled to guide the siphoning rod into the innermost section in contact the plug.

2,028,353
FRAME CORNER STRUCTURE
William Francis Roberts, Baltimore, Md., assignor of one-half to Charles J. Seebach, Baltimore, Md.
Application April 6, 1935, Serial No. 15,331
1 Claim. (Cl. 156—44)

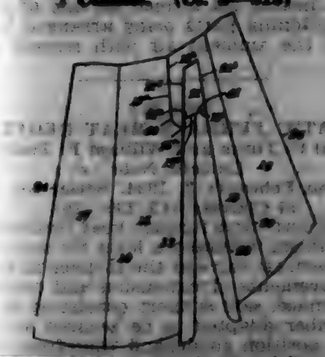


An article of manufacture and merchandise comprising a frame-corner-member of rigid sheet material constituting a channel-member having walls each including two securing-flanges disposed longitudinally at right angles to one another, each flange of one channel-wall being laterally disposed at right angles to the main part of this wall and projecting towards a similarly formed and arranged flange of the opposite channel-wall, said walls being connected by a channel-bottom which is laterally and longitudinally continuous and includes end portions substantially at right angles to one another and united with an intermediate portion that is substantially oblique to said end portions, whereby said walls are held in the maximum rigidity and stability with respect to one another.

2,028,354
ADJUSTABLE DIE HOLDER
Walter H. Rex, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio
Application September 8, 1932, Serial No. 632,214
6 Claims. (Cl. 78—69)

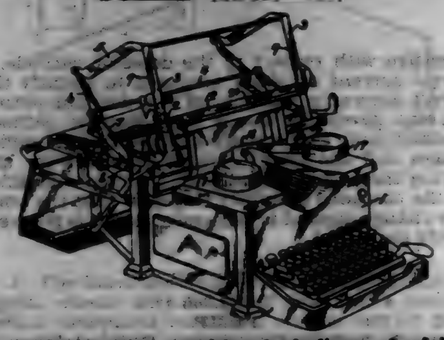
1. In a metal working machine a backing element, a die holder thereon, means normally spaced from the holder for fastening it to said element, wedges adjustably mounted within the holder and each having an obliquely disposed surface for contact with one of the fastening means,

the obliquely disposed portions of the wedges being constantly parallel with the center line of the



holder, and means for adjusting the holder in the direction of said center line.

2,028,355
BULB SPRAYING DEVICE
Joseph Rand, Peabody, Mass., assignor to Hygrade Sylvania Corporation, Salem, Mass., a corporation of Massachusetts
Application June 7, 1935, Serial No. 25,374
3 Claims. (Cl. 91—45)



3. In combination, a spray gun for spraying the interior of a lamp bulb with a translucent refractory coat, and means to project a cleaning jet upon the nozzle of said gun at regularly recurrent intervals when said gun is removed from said bulb.

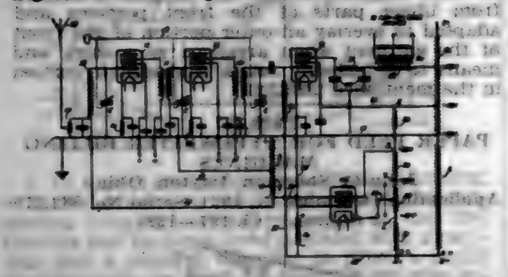
2,028,356
CONVERTIBLE GARMENT
Max L. Schreier, Brooklyn, N. Y.
Application July 10, 1933, Serial No. 679,758
7 Claims. (Cl. 2—213)

1. A convertible garment comprising front portions and back portions, the outer edges of each front portion being permanently secured to the outer edges of the back portions and means on each of the inner edges of the garment portions adapted to separably unite the respective inner edges of the front portions and the respective inner edges of the back portions when the garment is arranged as a shirt, said means being also adapted to separably unite the inner edges of the front portion to the respective inner edges of their respective back portions when arranged as trousers, and a trousers crotch portion formed from upper parts of the front portions and adapted to overlay an outer portion of the front of the garment when arranged as a shirt, and means to detachably retain said crotch portion in the mentioned position.

2,028,357
PAPER FEED FOR TYPEWRITER BILLING MACHINES
John Q. Sherman, Dayton, Ohio
Application December 21, 1931, Serial No. 582,379
2 Claims. (Cl. 197—133)

1. In a writing machine including a feed bar terminating in a pair of brackets extending at right angles thereto, said feed bar carrying a pair of studs for engaging record material, and a retainer terminating in a pair of brackets, said retainer being shorter than the feed bar but similar thereto, the brackets of the retainer being pivotally attached to the brackets of said feed bar.

2,028,358
HANDRAIL FOR MOVING STAIRWAYS
Harold W. Shennard, Montclair, N. J.
Application June 27, 1934, Serial No. 732,554
8 Claims. (Cl. 198—16)



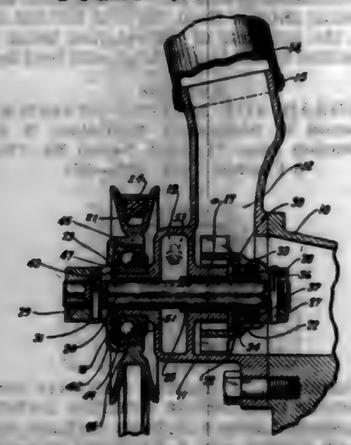
1. A hand rail for moving stairways comprising a flexible body having a central portion and channel shaped sides with inner surfaces adapted to slide on guides, and a frictional non-metallic traction member on the central portion of said body of a material having a higher coefficient of friction than that of said slidable surfaces.

2,028,359
AUTOMATIC VOLUME CONTROL CIRCUITS
Harold A. Snow, Mountain Lakes, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 12, 1935, Serial No. 44,353
13 Claims. (Cl. 250—20)

1. The combination with a plurality of cascaded amplifier stages whose input circuits are

maintained at a common carrier wave potential, of means for varying an amplification controlling voltage applied to each of said stages, said voltage variation means comprising a detector, an input circuit for said detector and shunted across the output of said amplifier stages, said detector being of the self-biased type and including a resistor in its cathode circuit, the detector grid being connected to a point on the resistor which is

negative with respect to the detector cathode, a direct current amplifier arranged to amplify the direct current component of the detector output current developed across said detector cathode resistor, and connections between the amplifier stages and the direct current amplifier for applying the output of said direct current amplifier to the cascaded amplifier stages so that the voltage change applied to successive stages is progressively decreased.



1,928,360

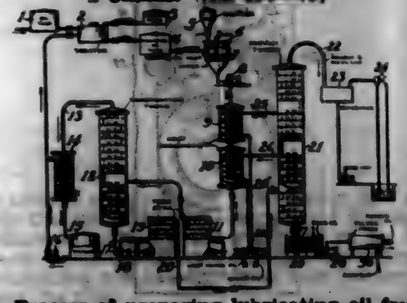
PUMP

Isaac W. Sprink, Whitehouse, Ohio, assignor to The Logan Gear Company, Toledo, Ohio, a corporation of Ohio

Application June 19, 1923, Serial No. 676,436

2 Claims. (Cl. 103—111)

1. In combination, a housing; a lubricant chamber in said housing; a shaft; a plurality of bosses projecting from said chamber having openings to accommodate the shaft; a pump impeller mounted on the shaft adjacent one of said bosses; fluid sealing means between said impeller and said boss; a driving pulley mounted on the shaft adjacent a second boss; an anti-friction bearing between said second boss and said pulley for supporting said shaft; the opening in said boss adjacent the anti-friction bearing being larger than the shaft to facilitate passage of lubricant from said chamber to the bearing.



1,928,361

PROCESS FOR PRODUCING LUBRICATING OILS

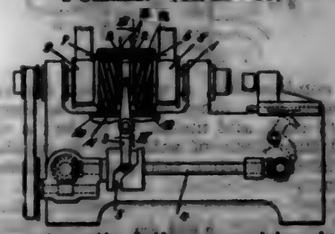
John V. Starr and David F. Edwards, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application June 30, 1923, Serial No. 648,811

2 Claims. (Cl. 196—73)

1. Process of preparing lubricating oil from a lubricating oil stock which comprises agitating the stock with a selective solvent, separating the extract layer from the raffinate layer, subjecting the raffinate layer in the presence of the absorbed selective solvent which it contains at the time of its separation from the extract layer to fractional distillation in the presence of an absorbent clay, and removing the adsorbent clay from the distillation residue.

1,928,362



AUTOMATIC LATHE

Karl Teasky, Esslingen, Germany

Application November 29, 1923, Serial No. 678,254

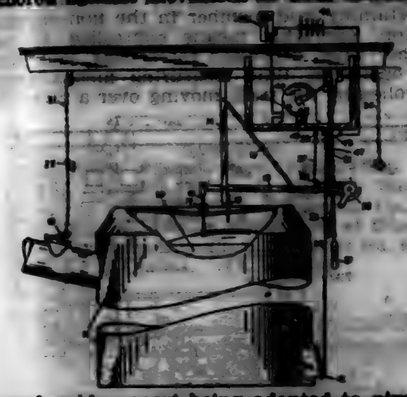
In Germany December 19, 1922

4 Claims. (Cl. 29—53)

1. An automatic lathe comprising in combination, a lathe bed, a lathe spindle revoluble on said bed and a pair of revoluble clutching parts surrounding said spindle and forming a friction clutch, a helical rib formed on one of said revoluble clutching parts being arranged to effect a flow of the ambient air with respect to said parts.

1,928,363

AUTOMATIC FURNACE HEAT REGULATOR



Paul C. Timm and William F. Timm, Lincoln, Nebr.

Application February 3, 1924, Serial No. 691,643

14 Claims. (Cl. 236—14)

1. A support for a furnace heat regulator having mechanism including a lever for opening and closing the draft valve of the furnace in response to the movements of expansion and contraction of the furnace, said support consisting of a vertical member adapted to be secured at a fixed overhead position to depend therefrom, a post for penetrating the furnace jacket, adjustable connections between said support and said post for adjustment of the over-all length of said support and said post, and means for maintaining

said support and said post in alignment, the arrangement being such that said support will be anchored against movement at both extremities

thereof, said support being adapted to pivotally support the lever of the mechanism for opening and closing the furnace draft valve.

1,928,364

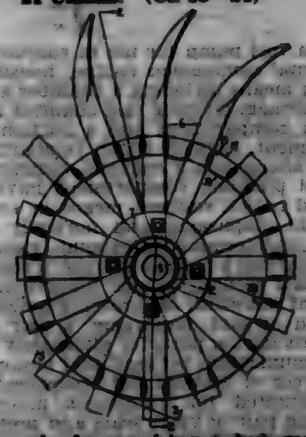
PROCESS FOR PRODUCING ANTIRACHITIC SUBSTANCES

James Waddell, Metuchen, N. J., assignor, by mesne assignments, to E. I. du Pont de Nemours & Co., Wilmington, Del., a corporation of Delaware

No Drawing. Application May 16, 1923, Serial No. 677,267

4 Claims. (Cl. 167—81)

1. A process for producing antirachitic substances which comprises activating lipoid-containing compounds heated to a temperature above 100° C. in the presence of a quantity of water which is greater than the amount of lipoid-containing compounds, the period of heating being sufficient to increase the amount of activatable constituents present but so limited as to prevent substantial injury to such constituents.



1,928,365

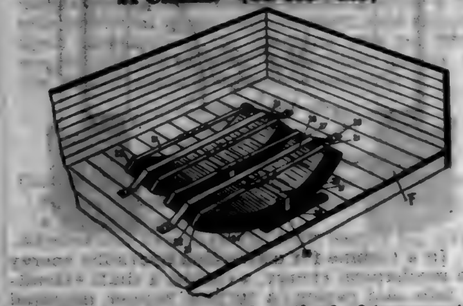
ROTARY HOE

Donald A. Wangelin, Rock Island, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application February 2, 1923, Serial No. 618,549

21 Claims. (Cl. 55—34)

1. A hoe wheel comprising a hub member, a plurality of teeth radiating from said hub member and adapted to be forced into wedging relation when shifted radially inwardly, the inner ends of the teeth having an oblique bend, said hub member being provided with means against which the obliquely bent ends of said teeth are received, and means cooperating with the teeth for clamping them to the hub member with the bent ends reacting against said first named means to force said teeth radially inwardly.



1,928,366

METHOD OF LOADING AND SHIPPING SHEET METAL

Jay Fred Warren, Detroit, Mich., assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio

Application May 25, 1921, Serial No. 539,723

21 Claims. (Cl. 105—369)

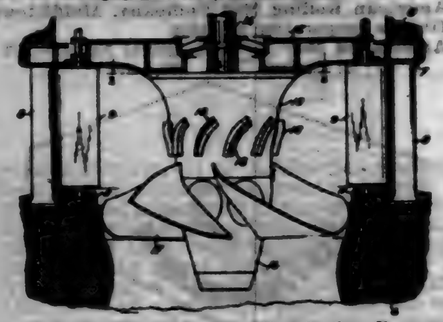
1. The hereindescribed method of transporting metal sheets, such as sheet steel, on a carrier, which comprises mounting on the carrier floor a pack of sheets in bowed condition with the opposite ends of the pack free to rock upwardly and downwardly, and binding the sheets of the pack together.

1,928,367

ELECTRIC CONNECTER

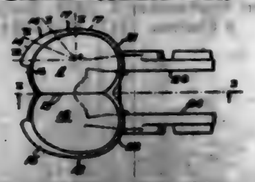
Hugo H. Wermine, Villa Park, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application September 4, 1929, Serial No. 390,822



9 Claims. (Cl. 173—361)

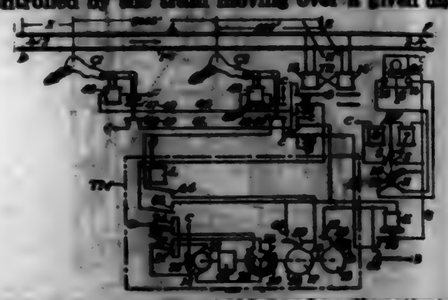
1. In an electric connecter, the combination of inner and outer body parts, the outer part having a recess for receiving the inner part, said parts having interlocking engagement maintaining the same in assembled relation and one of said body parts being made of resilient material so as to be distortable to permit assembling of said parts in said interlocked relation, said inner body part



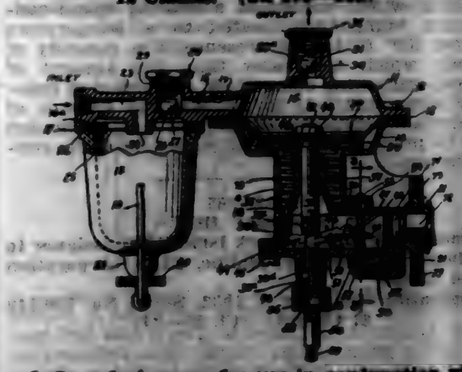
having a longitudinally extending recess in its inner end portion and an opening in its outer end portion communicating with said recess, and a contact member disposed in said recess and provided with means engaging said inner body part at the outer end of said recess and said outer body part at the bottom of the recess therein, thereby to prevent endwise displacement of the contact.

2,028,268
HYDRAULIC TURBINE
William M. White, Milwaukee, Wis.
Application March 21, 1934, Serial No. 716,250
5 Claims. (Cl. 253—146)

1. In a turbine for converting hydraulic energy into mechanical energy, a casing, a shaft extending into said casing, a turbine runner mounted on said shaft within said casing, a plurality of movable vanes forming a gate for said casing and guiding the flow of water to form a vortex, and vanes arranged between said runner and said guide vanes to control the velocity of vortex formed by the action of said guide vanes on the flow thereof.



2,028,269
IMPULSE TURBINE BUCKET
William M. White, Milwaukee, Wis.
Application May 31, 1934, Serial No. 728,235
9 Claims. (Cl. 253—114)



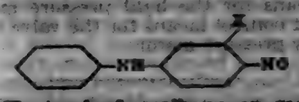
1. A bucket for hydraulic turbines of the impulse type comprising intersecting ellipsoids, and lugs extending therefrom, said ellipsoids having thickened lip and bottom portions and reduced thickness side portions whereby the angle of discharge is decreased.

2,028,270
APPARATUS FOR THE CONTROL OF HIGHWAY CROSSING SIGNALS
Arba G. Williamson, Carnegie, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application August 1, 1933, Serial No. 683,164
14 Claims. (Cl. 246—130)

1. In combination, a stretch of railway track intersected by a highway, a highway crossing signal located at the intersection, a track rail contactor located at a fixed point which a train passes in approaching the highway and which contactor includes a member adapted to be depressed from an engaging position to a non-engaging position by a wheel of the train, means for retaining said member in the non-engaging position, operating means controlled by said member when depressed for setting said signal into operation, time measuring means, means controlled by the train moving over a given distance in approaching said track rail contactor for operating said time measuring means, means controlled by said time measuring means for delaying the operating means from setting said signal into operation in accordance with the measured time, and means controlled by the train moving away from the intersection for restoring the member of said contactor to the engaging position.

2,028,271
FUEL PUMP
Sumner Wilbur, Dearborn, Mich.
Application January 25, 1933, Serial No. 653,734
12 Claims. (Cl. 103—152)

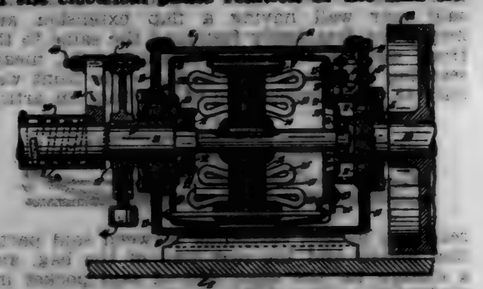
1. In a fuel pump for use in conjunction with an internal combustion engine, housing means, pumping means including a chamber and a flexible diaphragm dividing said chamber into a fuel pumping compartment and a suction receiving compartment, each of which compartments occupy in alternation a common volumetric space, said fuel pumping compartment having a fuel inlet and outlet, resilient means in engagement with said diaphragm and normally urging it with a predetermined maximum yielding pressure to perform a pumping stroke, a reciprocating guide shaft secured to said diaphragm in axial alignment therewith for preventing eccentric distortion of said diaphragm, a pair of spaced valve seats having ports for alternately establishing communication between said motor chamber and sources of vacuum and atmosphere, a valve freely mounted for frictionless movement between said pair of valve seats and provided with valve seating surfaces for engagement with said seats, and lost motion connections between said valve and guide shaft to cause said valve to be actuated into engagement with said seats in alternation as said diaphragm reaches the ends of said working chamber, said connections including a lever extending between said valve and shaft and spring means coacting with said lever normally to hold said valve in engagement with one or the other of said valve seats.



2,028,272
VAPOR STOVE CONSTRUCTION
Anton J. Yeager, Wisconsin Rapids, Wis., assignor to Pressing-Wickam Products Co., Wisconsin Rapids, Wis., a corporation of Wisconsin
Application November 23, 1932, Serial No. 644,914
5 Claims. (Cl. 158—21)

1. In a vapor stove or the like, a fixed stove structure, a generator tube having one portion fixedly secured to the fixed structure and another portion free to move relative to the fixed stove structure, a fuel valve assembly engaging the fixed structure, a member carried by the tube normally engaging the valve, the connection between the fixed structure and tube portion positively maintaining the valve closed, and permitting the valve to open upon predetermined expansion of the tube upon being heated.

2,028,273
MANUFACTURE OF 4-AMINODIPHENYLAMINE DERIVATIVES AND INTERMEDIATES OBTAINED THEREBY
Arthur Zitscher and Wilhelm Schlenfeden, Offenbach-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 10, 1933, Serial No. 660,206. In Germany March 10, 1932
9 Claims. (Cl. 260—62)



5. The compounds of the following general formula:

wherein X stands for alkoxy or methyl and wherein the benzene nuclei may be further substituted by methyl, alkoxy or chlorine, representing in crystalline form strongly colored bodies having metallic luster, capable of forming salts in the presence of acids and alkalies.

2,028,274
TORQUE TESTING APPARATUS
Gordon R. Anderson, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application September 16, 1931, Serial No. 563,159
15 Claims. (Cl. 265—28)

1. In a torque testing apparatus for rotary devices, inductively coupled electromagnetic elements mounted one within the other for concurrent rotation, means connecting one of said elements to a machine under test, a resilient member connecting said elements, means associated with the other of said elements constituting a loading therefor and tending to cause a change in the electrical phase relation of the said elements during test, means for indicating a variable electrical phase shift between said elements, upon operation of the machine, and an electric circuit connecting said indicating means with one of said electromagnetic elements.

2,028,275
ELECTRIC PLUG CONNECTER
Gustaf E. Andre, Richmond, Ind., assignor to Belden Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application February 25, 1930, Serial No. 431,595
4 Claims. (Cl. 173—341)

1. In an electric connecter of the class described, the combination of a resilient material body having a conductor-receiving opening extending therethrough, an elongated contact prong having an inner end portion extending longitudinally into the body portion alongside said opening, said inner end portion having an edgewise extension bent outwardly relative to the plane of said end portion and embedded away from said opening, an ear extending laterally from the upper edge of said extension and embedded in the front end of the body so as to have its top surface substantially flush with the front end surface of the body, said ear being adapted to have an electric conductor connected thereto, and a lipped flange of resilient material formed integral with and extending forwardly from the front end of said body to form, with said front end, a receptacle for the connection between the conductor and prong.

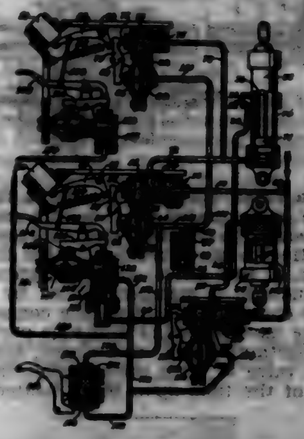
2,028,276
HAND BAG
William Benwer, Brooklyn, N. Y.
Application December 24, 1934, Serial No. 758,896
1 Claim. (Cl. 150—33)

A handbag comprising front and rear walls, partition means forming a plurality of com-

partments between said walls open at the top of the bag, means directly and permanently securing said partition means and said front and rear walls to each other at one end of the bag, said rear wall having a flap extension and means for detachably fastening the same to the front wall to close said compartments, means securing said partition means to the front wall only at the opposite end of the bag, an article

receiving pocket, extending between said partition means and the rear wall of the bag, and a closure for the open end of said pocket including two series of interlocking elements and a slide fastener, one series of said elements being attached to the latter end of the front wall of the bag by the means securing said wall to the partition means and the other series of interlocking elements being secured to the corresponding end edge of the rear wall of the bag.

2,028,277
TOY MENAGERIE CAGE
Adolphe Bernasconi, Rosebank, Richmond, N. Y., assignor to C. F. Mueller Company, Jersey City, N. J., a corporation of New Jersey
Application August 3, 1933, Serial No. 683,423
5 Claims. (Cl. 46—11)



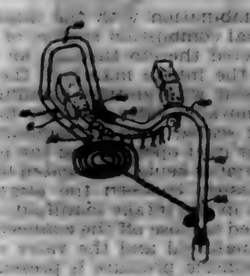
1. A device of the character described comprising an enclosure including a top, side walls, bottom and a false bottom above said bottom, the front wall having an opening therein, and said top and said false bottom having holes therein contiguous to the opening in the front wall for receiving members forming bars engaging said bottom at the lower ends thereof to be supported in position thereby.

2,028,278
ETHERIC VIBRATOR
Hiel Eugene Crum and Anna May Crum, Indianapolis, Ind.
Application February 6, 1935, Serial No. 5,264
2 Claims. (Cl. 176—177)

1. In an etheric vibrator, a box having a top, bottom, front and back sides, the front having a longitudinal slot and a longitudinal series of holes parallel with the slot with a transparent closure of a different color in each hole, a lamp housing in the box having a vertical wall spaced from the front of the housing, a lamp in the housing, a knob extending from the housing through the longitudinal slot for the manual moving of the housing to selectively illuminate one of the colored closures in the series of holes, the top of said box having a longitudinal slot sloping back toward the said vertical wall of the housing and a color strip inserted through the last slot into bending contact with the vertical wall and thence downwardly against said wall.

2,028,279
CONTROL MEANS FOR GARMENT OR BEDDING PRESSES
Ernest Davis, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a corporation of New York
Application February 26, 1931, Serial No. 517,581
Renewed May 1, 1935
31 Claims. (Cl. 121—38)

1. In a garment or laundry pressing machine, in combination, cooperative pressing jaws one of which is movable with respect to the other; operating mechanism for the movable pressing jaw including, a fluid motor to bring the pressing jaws together under light pressure, and a fluid motor to apply heavy pressure to the pressing jaws; valve means to control the flow of working fluid to the light pressure motor; valve means rendered operative upon closing of the press to control the flow of working fluid to the heavy pressure motor; two-hand control means for the valve means for the light pressure motor; and two-hand control means for the valve means for the heavy pressure motor.

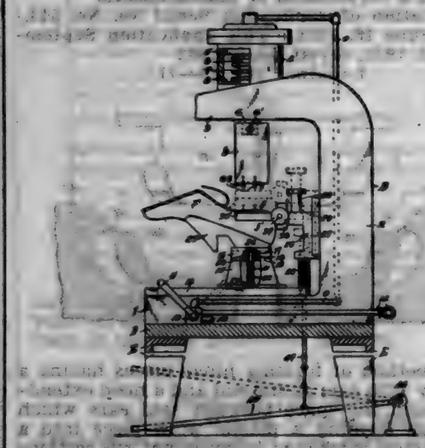


2,028,280
PENCIL
Frank C. Doll, Chicago, Ill., assignor to Autopoint Company, Chicago, Ill., a corporation of Illinois
Application December 7, 1934, Serial No. 756,438
9 Claims. (Cl. 120—18)

1. In a pencil of the "propel-repel" type, the combination of a barrel, and a relatively rotatable tip, a spiral fixed relative to the barrel, lead advancing mechanism operated by the tip and cooperating with said spiral, means in the barrel for deflecting the spiral away from the axis of the barrel to provide a reserve lead chamber alongside of said spiral, said means providing side walls for defining the lateral limits of said lead chamber.

8. In a pencil, the combination of a tubular barrel, a spiral anchored therein, a tip consisting of a metal terminal portion having a shank, and a non-metal portion mounted on said shank, a lead tube anchored in said shank, the tube being of full cylindrical form in substantially all of the portion engaging the shank and slotted throughout the remainder of its length, a portion of the metal of the end of shank being deflected into said slot to anchor the tube within the shank against relative longitudinal and angular motion, and lead advancing mechanism carried in said tube.

2,028,281
SALIVA EJECTOR
William P. De Witt, Auburndale, Mass.
Application May 26, 1932, Serial No. 613,631
8 Claims. (Cl. 32—33)



1. A saliva ejector comprising two intake sections, a connecting member, and a discharge section, the intake sections being spaced apart and one adapted to be positioned in and to drain the buccal cavity and the other the lingual cavity of the mouth, and provided with intake openings in the top thereof, a movable guard for the openings in the lingual section, the guard consisting of coils of wire, the end coils being tight and the intermediate coils being loose upon the section, the connecting member joining the rear ends of the intake sections and being arched to extend over the teeth at the back of the mouth, and the discharge section being connected to the front end of the lingual section and arched to extend over the teeth at the front of the mouth.

6. A saliva ejector comprising an intake section, a discharge section connected therewith and having an arched portion extending over the teeth at the bottom of the mouth, and a descending portion extending downwardly over the chin of the user, and means for holding the ejector in position, said means comprising a spring arm secured at one end to the descending portion and at the other end carrying a flat resilient coil of wire to engage beneath the chin of the user.

2,028,282
MACHINE FOR INSERTING FASTENERS AND FORMING THE HEEL AREA OF A SOLE
Frank E. Depp, St. Louis, Mo., assignor to Forma Corporation, a corporation of Illinois
Original application October 24, 1932, Serial No. 639,231. Divided and this application September 21, 1933, Serial No. 690,562
7 Claims. (Cl. 1—21)

1. In a machine for heeling shoes, a ram, a removable slotted holder on said ram for receiving the apertured ears of a pronged plate, yieldable retaining means on the holder for holding the plate against the holder and means for actu-

ating the ram to force the prongs of the plate through the heel seat material of the shoe for locking the plate against displacement on the heel seat of the shoe.

2,028,283
CHLORINATION OF PHTHALIC ANHYDRIDE
Michael N. Dvornikoff, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 15, 1933, Serial No. 675,463
5 Claims. (Cl. 260—123)

1. A method of chlorinating phthalic anhydride which consists in introducing elemental chlorine into molten phthalic anhydride containing an iron salt of a non-oxidising, strong mineral acid as a chlorinating catalyst.

2,028,284
VAT DYESTUFFS OF THE ANTHRACENE SERIES
Wilhelm Eckert and Otto Braunsdorf, Frankfort-on-the-Main-Hoechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application February 16, 1933, Serial No. 657,102. In Germany February 22, 1932
4 Claims. (Cl. 260—44)

1. The vat dyestuffs which are identical with the products obtainable by condensation of an aromatic ortho-diamino compound of the benzene series with an anthracene-tetracarboxylic acid of the general formula:

wherein one X represents a carboxylic group and the other X hydrogen.

2,028,255

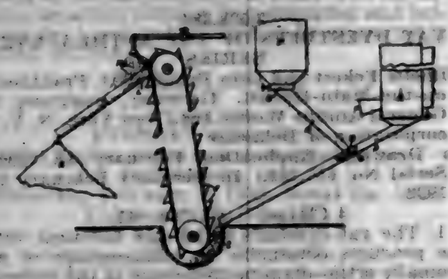
METHOD OF MAKING HINGE LEAVES

James A. Eden, Jr., Springfield, Mass., assignor to Moore Drop Forging Company, Springfield, Mass., a corporation of Massachusetts

Continuation of application Serial No. No. 543,319, June 10, 1931. This application September 12, 1933, Serial No. 632,852

1 Claim. (Cl. 29—11)

The method of forming hinge pieces having a flat body with ears at one end and a hood extending around the space between said ears which comprises forming a plastic work piece into a strip having thickened longitudinal rib sections along each edge thereof, the width of said strip being approximately twice the length of said body, the thickness of said strip between said ribs being approximately the thickness of said body and the length of said strip being at least several times the width of said body, shearing said strip transversely to form slugs having a width substantially equal to the width of said body, compressing and extruding the thickened rib sections of said slug in male and female dies adapted to shape the said ribs into said ears and hood portions of said hinge piece and severing the flattened body part of the thus shaped slug into two separate hinge pieces.



2,028,256

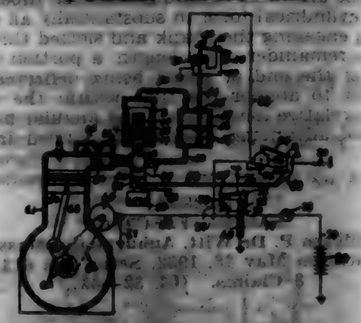
HIGH SILICA CEMENT

Frits A. B. Finkeldey, New York, N. Y.

Application January 24, 1934, Serial No. 708,071

5 Claims. (Cl. 106—25)

7. Improvements in the manufacture of cement which comprise mixing additional siliceous and calcareous materials with hot cement clinker as it comes from the clinkering kiln at a temperature ranging from about 700 to about 1060° C. and maintained in contact therewith for a time period to effect calcination of the calcareous material, the proportion of the added siliceous material being such as to equal up to about 24% of the combined materials when finished, and the calcareous material to yield an additional CaO content up to about 6% of the combined finished materials.



2,028,257

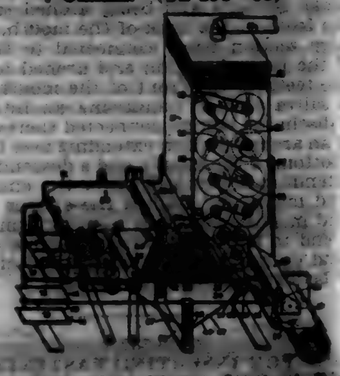
VALVE

Paris E. Forman, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a corporation of West Virginia

Application June 7, 1932, Serial No. 616,433

9 Claims. (Cl. 121—163)

1. The combination with the intake manifold of an internal combustion engine, of an air inlet valve connected thereto through an aperture in the wall of the intake manifold, the inlet valve having a casing with an inlet opening and a seat therein, a movable valve member in the casing which when seated cuts off communication between the air inlet opening and the intake manifold, said member being lifted seated by the difference in pressure between the atmosphere and the pressure in the intake manifold, and a check valve mounted to close off the connection between the intake manifold and the valve casing when super-atmospheric pressure is present in the intake manifold.



2,028,258

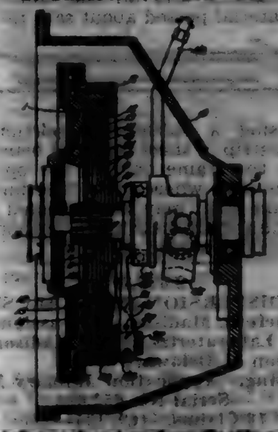
METHOD AND MACHINE FOR MAKING CUSHION PADS

August Gerard and George A. Gerard, Reading, Mass., assignors to Cotton-Wool Products, Inc., Reading, Mass., a corporation of Massachusetts

Original application January 16, 1930, Serial No. 422,022. Divided and this application October 10, 1932, Serial No. 637,940

7 Claims. (Cl. 154—33)

1. A method of making a laminated cushion pad which consists in laying on a continuous traveling sheet a layer of fibrous material in strips separated by spaces transverse to the direction of movement of the sheet, enclosing the separate portions of said layer between fabric sheets, cementing the sheets together in said spaces, and around the edges of the layer, and severing the sheet in said spaces.



2,028,259

CLUTCH

George I. Goodwin, Detroit, Mich.

Application February 27, 1931, Serial No. 518,634

17 Claims. (Cl. 192—68)

1. A clutch mechanism for effecting driving engagement of a driven member relative to a driving member, comprising a pressure plate, levers thereon, abutment means therefor, said levers reacting directly against said driving member during the clutch disengaging action and directly against said abutment means during the clutch engaging action thereof.

2,028,260

METHOD OF PRODUCING THE ALKALI METALS

Miles G. Hanson, Flint, Mich.

Application September 29, 1933, Serial No. 691,491

4 Claims. (Cl. 75—17)

1. The process of producing lithium metal by the reduction of lithium oxide by metallic magnesium or aluminum, the reduction being carried out at a pressure below 6 mm. of mercury, and within a temperature range of 750-900 degrees centigrade, and the metal being recovered by condensation of the vapor on a cooled portion of the apparatus.

2,028,261

GARAGE

Henry Harnischfeger, Milwaukee, Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a corporation of Wisconsin

Application December 11, 1931, Serial No. 580,512

5 Claims. (Cl. 214—16.1)

1. A garage building having tiers of storage compartments and an elevator well adjacent the storage compartments, an elevator in the well, a transfer device mounted on the elevator and movable off of the elevator into the storage compartments and back from the storage compartments onto the elevator for transferring cars directly from the elevator to the storage compartments and from the storage compartments to the elevator, a motor for driving the transfer device and cooperating means on the transfer carriage

and elevator for preventing operation of the elevator at all times except when the transfer carriage is properly positioned thereon.

2,028,262

THREAD CLEARER

Samuel Hyslop, Newton, Mass.

Application December 8, 1934, Serial No. 754,636

4 Claims. (Cl. 28—63)

1. A thread clearer comprising a base member having means to secure it to a support; and a clearing plate member with a thread clearing slot, a fly-waste discharging pocket at its inner end, and an offset flanged portion at the inner end of the plate supporting the slotted member and secured to the base.

2,028,263

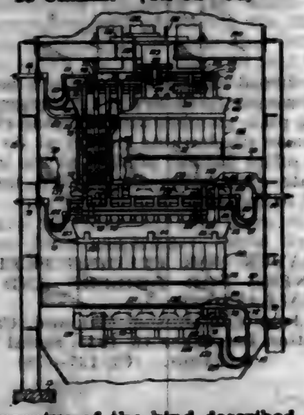
APPARATUS FOR FEEDING FUEL OIL TO BURNERS FOR BOILERS AND SIMILAR INSTALLATIONS

Jens C. Johnsen, Oakland, Calif.

Application December 15, 1934, Serial No. 757,712

5 Claims. (Cl. 137—78)

1. In an apparatus for feeding fuel oil, a multiple column stand-pipe comprising a base pro-



vided with an inlet chamber having an inlet opening, an outlet chamber having an outlet opening and an overflow chamber having an outlet opening, a supply conduit leading from said inlet chamber, a discharge conduit concentric with the first conduit and connected with the outlet chamber, an overflow conduit concentric with the other conduits and connected with the overflow chamber, said discharge conduit extending higher than the supply conduit but not so high as the overflow conduit, and means for venting said discharge conduit into said overflow conduit intermediate the ends of said discharge conduit.

2,028,394
AXLE
Lloyd D. Kay, San Marino, Calif., assignor to Kay-Brunner Steel Products Inc., a corporation
Application January 4, 1935, Serial No. 329
6 Claims. (Cl. 301—124)

1. An axle having a body with a longitudinal web, a spindle at the end of the body, said web having integral forks at its end integrally united to said spindle, the plane of said forks being substantially parallel with said web.

2,028,395
APPARATUS FOR DRYING SLUDGE
Lawrence M. Keoughan, Berwyn, Ill.
Application March 14, 1933, Serial No. 661,513
15 Claims. (Cl. 34—34)

1. In apparatus of the kind described, a tank, exhauster mechanism operable to maintain less than atmospheric pressure in the tank, a plurality of horizontally extending tubes positioned in the tank, said tubes being arranged in spaced apart vertical tiers, alternate rows of said tiers being stationary and the remaining tiers being movable, means operable to vertically reciprocate said movable tiers of tubes, means operable to deliver sludge into the tank above said tiers in a manner whereby the sludge is distributed between the uppermost tubes of said tiers, and means adapted to deliver steam into said tubes at selected pressures and corresponding temperatures.

2,028,396
CLOTH BOARD
Edward F. King, Cranston, R. I.
Application June 20, 1933, Serial No. 676,659
7 Claims. (Cl. 206—59)

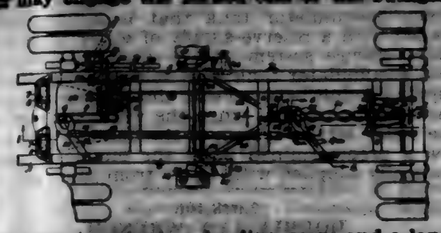
4. A cloth board comprising a supporting frame having opposed tensioning rail members provided with resilient portions and a plurality of spacing members engaging said rail members, means for connecting the end portions of said rail members with portions of certain of said spacing members, and an end connected strip of sheet material passed about said rail members

and enclosing a substantial portion of said frame, said strip of sheet material being attached directly to the frame only at the opposite side edges of the strip whereby the intermediate portions of said strip may be subjected to a substantially uniformly distributed tension from the resilient portions of said rails.

2,028,397
RUBBER DISPERSION BY ALKALI SILICATES
Max H. Kliefoth, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a corporation of Delaware
No Drawing. Application January 25, 1933, Serial No. 653,256
13 Claims. (Cl. 134—17)

1. The method for dispersing rubber in a concentrated alkali silicate solution which comprises thoroughly mixing therewith less than 15 percent of rubber in the form of a rubber emulsion or suspension, and a silicofluoride which is slightly water soluble.

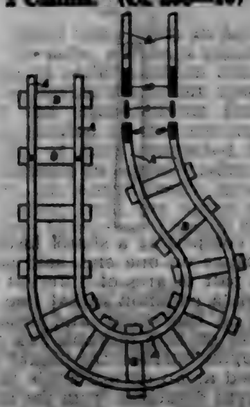
2,028,398
BELT CONNECTER
Edward H. Kramer, Dayton, Ohio, assignor to The Dayton Rubber Mfg. Company, Dayton, Ohio, a corporation of Ohio
Application February 13, 1934, Serial No. 711,815
11 Claims. (Cl. 24—33)



1. A belt connecter comprising clamping members having interlaced tongues with relatively-rocking paired pintle members therebetween, the tongues of one of said clamping members having inwardly projecting lugs on the inner surfaces thereof engaging the pintle member associated therewith, whereby to prevent the sliding-down of one pintle member relative to the other.

2,028,399
PLASTIC COMPOSITIONS AND METHOD OF MAKING THE SAME
Lucas P. Kyrides, Webster Groves, Mo., assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware
No Drawing. Application February 24, 1931, Serial No. 517,674
7 Claims. (Cl. 106—37)

1. A nitrocellulose composition embodying a neutral ester of a dicarboxylic acid containing a cyclohexylcyclohexanol residue in at least one ester group.

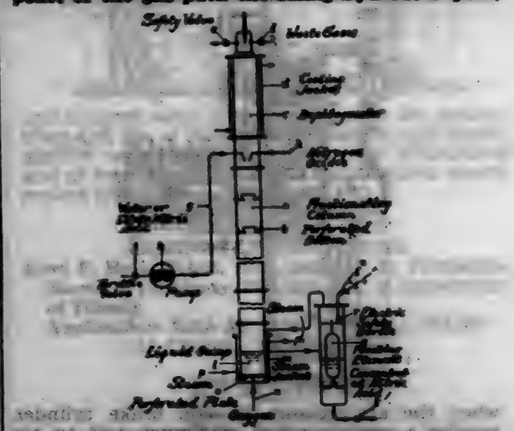


2,028,400
TRACTOR-TRAILER VEHICLE
Charles R. Land and William H. Wilson, Detroit, Mich.; said Land assignor to said Wilson
Application April 13, 1935, Serial No. 16,195
10 Claims. (Cl. 180—33)

1. In a tractor-trailer vehicle, a swinging lever arm forked at one end and pivoted to the trailer frame, adapted to receive a king-pin carried by the tractor, whereby upon backing the tractor into the trailer the king-pin carried by the tractor may engage the forked end of the swinging

lever arm to actuate a landing gear, and a landing gear carried by the trailer, adapted to support the latter when actuated through the operation of the swinging lever arm.

2,028,401
RAILWAY LINE
Mathew Ambrose Lord, Blackpool, England
Application October 9, 1933, Serial No. 692,813
In Great Britain October 22, 1932
2 Claims. (Cl. 238—10)



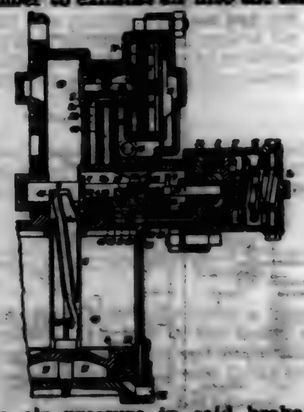
1. A railway track for toy, amusement or light railways comprising rails of rubber composition capable of assuming curvatures in a vertical plane and sleepers having grooves in which the rails are carried whereby by manipulation of the sleepers the rails are caused to slide in the grooves thereby enabling them to be positioned in any desired lateral curvature and retained in such position.

2,028,402
PROCESS FOR THE PRODUCTION OF CONCENTRATED NITRIC ACID
Emil Löscher, Basel, Switzerland, assignor to Lonza Elektrizitätswerke und Chemische Fabriken Aktiengesellschaft (Gampel), Basel, Switzerland
Application May 27, 1933, Serial No. 673,153
In Germany June 4, 1932
7 Claims. (Cl. 23—160)

1. Method of continuously producing concentrated nitric acid from water or dilute nitric acid, nitrogen oxides and oxygen at superatmospheric pressure which comprises bringing downwardly flowing liquid reaction components and reaction products in intimate contact with upwardly rising oxygen and with upwardly rising reaction products in the form of gases or vapors through a temperature gradient, said temperature gradient being obtained by heating

the acid accumulating at the lowest point of the path of the liquid enriched by the HNO_3 formed during its downward flow and containing an excess N_2O_4 to a temperature corresponding at the pressure used to the boiling temperature of an acid having the highest desired HNO_3 concentration and having a content of about 5 to 20% N_2O_4, and condensing by cooling at the highest point of the gas path the rising hydrous vapors,

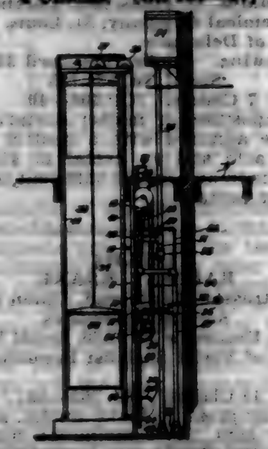
whereby the reaction process is carried out in the form of a fractional distillation, the lower nitrogen oxides are continuously carried upwards and nitrogen tetroxide remains in such quantity in the liquid trickling downwards that fresh HNO_3 is constantly formed in said downwardly trickling liquid and the liquid nitric acid having the desired highest content of HNO_3 and a content of about 5 to 20% N_2O_4 is obtained at the lower end of its path and may be collected therefrom.



2,028,403
PLASTIC COMPOSITIONS OF MATTER
Joseph B. Marra, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application April 30, 1931, Serial No. 534,125
7 Claims. (Cl. 106—48)

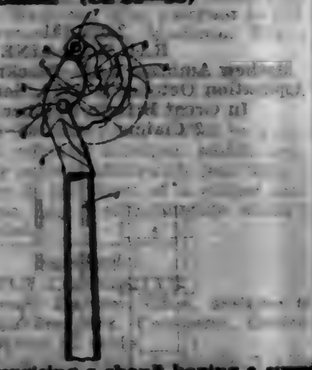
1. A composition of matter comprising cellulose acetate admixed with a neutral ester of a carboxylic acid and an acetal of glycerol and acetaldehyde in an amount sufficient to plasticize the cellulose acetate.

2,028,404
RAILWAY BRAKE
Iwan Matrunoff, Leningrad, Union of Soviet Socialist Republics
Application December 21, 1929, Serial No. 505,843.
In Union of Soviet Socialist Republics June 25, 1929
14 Claims. (Cl. 303—59)



1. In an air pressure brake system, particularly for railway cars, the combination with a train pipe, of an air distributor comprising a casing having a working chamber, a passage in said casing connecting said working chamber with the train pipe in the release position of the brake system, a second passage connecting said working chamber with the brake cylinder and normally closed in said release position, means controlled by the compressed air in said train pipe for closing said first passage and opening said second passage when the air pressure in said

train pipe is decreased, a valve member controlling said second passage and adapted to feed air to said brake cylinder and exhaust the air therefrom, a main control piston in said working chamber acting upon said valve member to cause the same to feed air to said brake cylinder when the pressure in said train pipe decreases, an auxiliary valve member cooperating with said valve member to exhaust air into the atmosphere

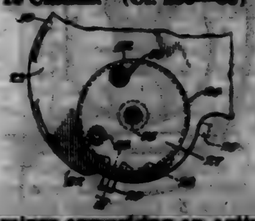


when the air pressure in said brake cylinder reaches a predetermined maximum, and an air reservoir adapted to be brought into communication with said working chamber when the latter is supplied with air from said train pipe, the air stored in said air reservoir being adapted to cause said main control piston to actuate said valve member and to force air into the said brake cylinder when the pressure in said train pipe decreases.

2,023,465
ELEVATOR APPARATUS
Martin B. McLenthlin, Malden, Mass.
Application May 14, 1932, Serial No. 611,299
4 Claims. (Cl. 187—17)

1. In a building, the combination with the gravity water service system thereof, of an elevator apparatus having, in combination, a vertically movable car; a hydraulic engine for operating said car disposed substantially below the level of the normal head of the water of said system so as to be operated thereby; a supply conduit through which water is delivered to said engine from the water service system of the building; valve means for controlling the passage of water to and from said engine and with which one end of said supply conduit is connected; a check valve in said supply conduit which closes toward said water system; an auxiliary emergency accumulator tank that is automatically loaded with a reserve supply of water from said water service system and a conduit connecting said accumulator tank with said first-mentioned supply conduit between said check valve and said valve means so that when the water pressure of the water service system of the building falls below a predetermined point the engine is automatically supplied with water from said tank.

2,023,496
DOUBLE JAW WRENCH
Homer A. Mead, Turlock, Calif., assignor to Masterneck Corporation, Turlock, Calif., a corporation
Application January 16, 1933, Serial No. 2,611
1 Claim. (Cl. 81—98)



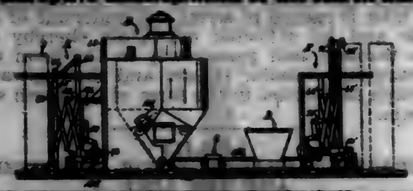
A wrench comprising a shank having a curved gripping surface on one end, said surface being formed of a pair of arcs of different radii whose centers lie on a common radial line, a swinging jaw pivoted on the shank and separate spaced gripping faces on said movable jaw to cooperate with the gripping surface, the planes of said faces being disposed at an obtuse angle to each other and at different distances from the gripping surface; the centers of curvature of said surface being so located that with the swinging of the movable jaw to any position both said faces will be substantially tangent at points intermediate their ends to strokes projected from the center of curvature of the corresponding portion of said gripping surface.

2,023,497
GEAR MECHANISM
René Joseph Louis Molineau, Paris, France
Application March 14, 1933, Serial No. 661,421
In France April 19, 1932
5 Claims. (Cl. 103—117)

1. A gear mechanism adapted for use as a pump, motor or the like comprising a casing, inlet and outlet conduits in said casing, a female helical gear element inside said casing and a male helical gear element located in this latter and always in contact therewith in any cross section, the number of threads of said female element exceeding by one unit the corresponding number of threads on the male element and one at least of said elements being deformable, thus ensuring a perfect tightness of the joints and providing for a closed tight axial space comprised between said male and female elements and wherein the fluid is contained, said space communicating with said outlet and inlet conduits, and driving means for the rotation of one of said gear elements.

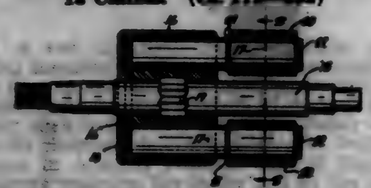
2,023,498
FOOD MIXER
Edward Mross, Racine, Wis., assignor to Hamilton Beach Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application May 23, 1932, Serial No. 613,884
10 Claims. (Cl. 259—95)

1. A food mixer comprising an agitator, means for driving the same, a base, a support for holding the mixer in raised position relatively to the base, the base having a circular opening therein, a flange on the edge defining the opening, a shifter plate located in the opening, and comprising a pair of discs connected together and bearing marginally on opposite sides of the flange of the base, an eccentrically located bearing socket depending from the upper disc, and an actuating lever extending laterally from the lower disc.



2,023,499
OIL WELL PUMPING APPARATUS
William F. Parker, Tulsa, Tex., assignor to Sinclair Prairie Oil Company, Tulsa, Okla., a corporation of Maine
Application July 26, 1934, Serial No. 737,886
7 Claims. (Cl. 74—822)

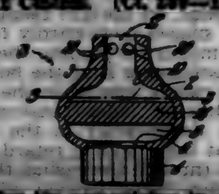
1. In a device of the character described, a driving member connected to a source of power, a driven member comprising a cross head arranged adjacent thereto, a rod line connected to said cross head to permit vertical movement of said rod line, a pivoted hook carried by said driven member and adapted to engage said driving member, and a pivoted plate adapted to be moved into the path of movement of said cross head to arrest its movement before the end of its stroke and cause said hook to disengage.



2,023,510
METHOD AND APPARATUS FOR HANDLING STARCH IN CONFECTIONERY MANUFACTURE
Edward D. Mastierdis, Agawam, Mass., assignor to National Equipment Company, Springfield, Mass., a corporation of Massachusetts
Application July 19, 1934, Serial No. 735,804
28 Claims. (Cl. 107—8)

28. A method of separating relatively heavier articles such as confections from a matrix of a relatively lighter material such as starch, which comprises subjecting the matrix progressively to the action of a portion of an air stream of sufficiently low pressure and high velocity to cause the disruptive disintegration of the starch matrix

and to carry away in suspension both the confections and the so disintegrated matrix, and subsequently segregating separately the confections and at least a portion of the disintegrated starch matrix from the air stream.

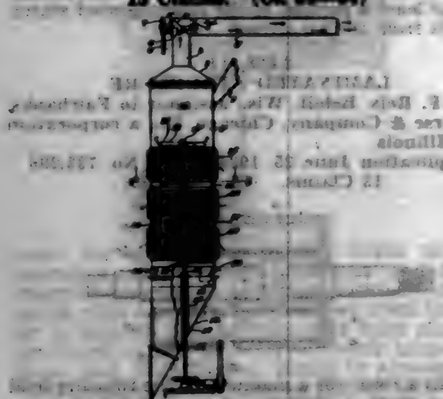


2,023,511
LAMINATED STRUCTURE
Curt F. Reis, Beloit, Wis., assignor to Fairbanks, Morse & Company, Chicago, Ill., a corporation of Illinois
Application June 25, 1934, Serial No. 732,296
13 Claims. (Cl. 171—252)

1. In a rotor for a magneto of the rotating field type, a shaft, a plurality of magnet bars, an assembly of laminations constituting pole shoes carried by the bars, the laminations being apertured, with the apertures receiving the ends of the bars, certain of the bar apertures each being extended in a direction away from the bar to form a slot.

7. A laminated pole shoe for assembly to bar magnets, consisting of a plurality of laminations each apertured so as substantially to surround at least a pair of the bars and characterized by a slit bridging at least a pair of the bar apertures.

2,023,512
BUBBLER TIP
Charles Reberge, Williamsburg, Mass.
Application March 20, 1935, Serial No. 11,999
2 Claims. (Cl. 299—18)



1. A bubbler tip comprising in combination, a body having a lower hub provided with an inlet opening therethrough and a side wall having inner sides which extend outwardly and upwardly from said hub and then inwardly and upwardly forming a relatively elongated outlet at the upper side of the bubbler and an enlarged chamber between said outlet and inlet of a diameter larger than said outlet, an imperforate disc-like baffle in said chamber below said outlet and above said inlet which is of less diameter than the chamber and having its edges spaced from said wall to provide a substantially ring-like water passageway between the edges of said baffle and said wall,

and a relatively narrow connecting member extending between the edge of said baffle and wall firmly holding the said baffle in the chamber at a distance above and below said inlet and outlet, all adapted and arranged whereby water entering the inlet is caused to strike the underside of said baffle and be deflected outwardly thereby and flow through said passageway in the form of a substantially tubular stream and then upwardly through said outlet in the form of a smooth solid stream.

2,028,413
AERATING APPARATUS FOR FERTILIZER AND THE LIKE

Augustus J. Seckett, Anne Arundel County, Md.
Application July 6, 1934, Serial No. 734,094
13 Claims. (Cl. 34—54)

1. The method of cooling and aerating comminuted fertilizer materials and the like after chemical combination thereof which consists in passing the comminuted solid materials in a continuous stream downwardly, successively retarding the downward passage of the comminuted solid by rotating and beating and tossing portions of the material upwardly and gathering the same into cyclonic form, introducing air in the direction of rotation and into the path of the comminuted solids and passing the air upwardly in the opposite direction to the passage of the comminuted solids, the time of passage of the solids and the amount and speed of the air draft being determined to give the desired degree of cooling and aeration.

3. In an apparatus for aerating and cooling comminuted solids, an upright casing having air inlet openings spaced downwardly from the top of the casing, means for feeding the material to the top and discharging it at the bottom, rotary beaters in said casing, spaced in the direction of its length and having blades transversely inclined forwardly and downwardly in the direction of rotation so that they tend to retard the passage of the material through the casing, the respective air inlet openings being located adjacent some of the respective beaters so that the beaters serve to draw the air inwardly and force it upwardly through the comminuted material in opposition to the general direction of motion of the same.

2,028,414
FLUID DISPLACEMENT DEVICE

Heinrich Schneider, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application May 19, 1933, Serial No. 671,529
7 Claims. (Cl. 230—141)

1. In combination in a compressor of the type noted, a case structure having a compression chamber of elliptical section, a chamber inlet port located centrally of one side of the chamber, a plate across the opposite side of the chamber, characterized by parallel, graduated discharge apertures, an inlet port in said case near one end of the elliptical chamber, means disposed across the last said port defining a plurality of parallel,

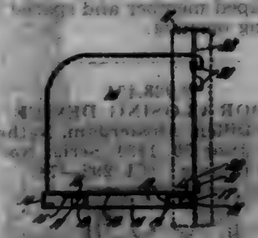
flat entering streams, a substantially curved passage formed in the case and connecting said ports, the passage extending along one end and one side of the chamber between said ports, and a baffle member extending within a portion of said curved passage substantially perpendicular to the entering streams and inwardly of the case ports.

2,028,415
FRUIT JAR HOLDER

Edward J. Schwartz, Wilkinsburg, Pa.
Application April 16, 1935, Serial No. 16,009
2 Claims. (Cl. 81—3)

1. A fruit jar holder comprising a base member of relatively light weight metal rubed to constitute a structural section having integral lugs for anchoring an end abutment thereon and having bent-over parallel portions forming ways for a movable clamp, a band of semi-circular form secured to said integral lugs and having a resilient liner thereon, a movable clamp disposed in the ways of the base member having clamping ears upstanding thereon constituting abutments that coact with the band to grippingly engage a jar or the like, and a lever having a fulcrum pin slidably mounted in said base member and having an eccentric portion for engaging the movable clamp, said lever being adjustable relative to the base to accommodate the clamp to different sized jars to be engaged thereby.

2,028,416
MANUFACTURE OF SULPHURIC ACID



Charles Forbes Bixby, White Plains, N. Y., assignor to General Chemical Company, New York, N. Y., a corporation of New York
Application May 4, 1933, Serial No. 669,291
2 Claims. (Cl. 23—175)

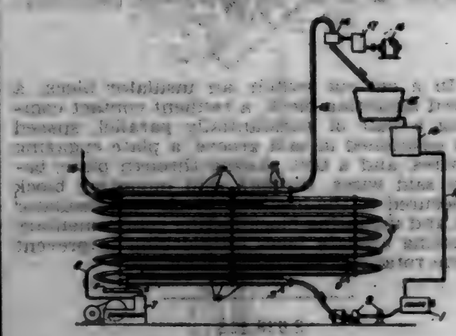
1. In the method of making sulphur trioxide by the roasting of sulphide ore and conversion of the sulphur dioxide produced to sulphur trioxide by the contact process in which method the sulphide ore falls in an uninterrupted drop through the roasting zone counter-current to a rising stream of air which supports the combustion of the sulphide ore, the improvement which comprises regulating the supply of air admitted to the roasting zone so that the concentration of free oxygen in the sulphur dioxide gas at the point of last contact with the ore is at least 5% and not more than about 8% and introducing the sulphide ore in the roasting zone containing at least 5% free oxygen and causing it to fall through said roasting zone from the said point of last contact through an active oxidation zone becoming gradually richer in oxygen in the direction of fall of the ore particles, whereby burning of the ore is promptly initiated upon introduction and substantially complete desulphurization of the ore is accomplished.

2,028,417
SHELF

John G. L. Shaw, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y.
Application May 18, 1932, Serial No. 612,432
7 Claims. (Cl. 211—115)

1. The combination of a shelf, a supporting bracket therefor having an integral hinge lug entering and shaped to turn in a slot in the shelf to permit the bracket to swing from a position substantially parallel with the shelf to a position substantially perpendicular to the shelf, said hinge lug being adapted to pass through said slot and having a notched end adapted by shifting the bracket relatively to the shelf to engage the adjacent edge of the slot to prevent withdrawal of the lug from the slot, and a retaining member on the structure arranged to prevent the bracket from being shifted to a position to disengage the notched end of said lug from the wall of the slot.

2,028,418
WELL CLEANOUT TOOL

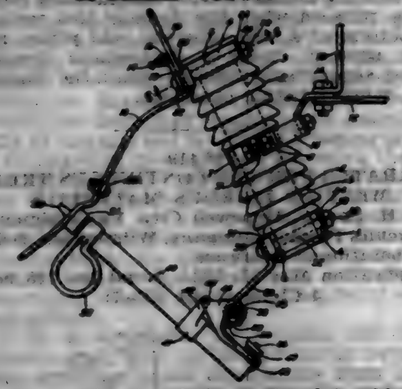


James C. Smith and James B. Taylor, Tulsa, Okla., assignors to Iverson Tool Company, Tulsa, Okla., a corporation of Oklahoma
Application May 15, 1934, Serial No. 725,164
13 Claims. (Cl. 166—19)

1. A well cleanout tool comprising an elongated member having a débris receiving chamber therein and adapted to receive and trap fluid under pressure, the lower end of said chamber being open to the well, a piston slidably mounted in said chamber, latching means for holding said piston in lowered position against fluid under pressure entering the lower end of the chamber and releasing means whereby said latching means will be released when the cleanout tool contacts the bottom of a well, whereby said piston may move upward under a hydrostatic pressure against atmospheric pressure within the chamber for a débris intaking operation.

2,028,419
APPARATUS FOR THE CONTINUOUS TREATMENT OF FIBROUS MATERIALS

Luke H. Sperry, Hopewell City, Va., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
Application May 21, 1934, Serial No. 726,300
4 Claims. (Cl. 92—7)

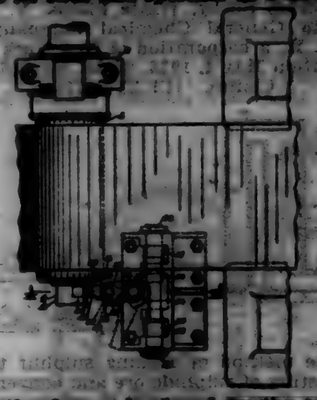


1. In apparatus for the continuous treatment of fibrous material comprising a treating chamber and means for passing a liquid suspension of fibrous material through said chamber; means for regulating the discharge of said suspension of fibrous material from said chamber, said means comprising a valve chamber having inlet

and outlet ports and means positioned in said chamber preventing at all times direct communication between said ports, said means comprising a rotor and vanes mounted thereon to give a running fit with the walls of said valve chamber and being adapted upon rotation to permit portions of said suspension entrapped between said vanes to pass from the inlet port to the outlet port, the edges of said vanes and said valve chamber walls being adapted to sever any fibrous material caught between them during rotation.

2,028,420
ARSENATE CEMENT OR CEMENT MIXTURE
Johan Bertil Stalhane, Stockholm, Sweden, assignor to Boliden Gruvaktiebolag, Stockholm, Sweden, a limited joint-stock company of Sweden
No Drawing. Application February 25, 1935, Serial No. 8,679. In Sweden January 13, 1934
4 Claims. (Cl. 106—24)

1. A cement mixture containing a calcium arsenate with a composition corresponding to one of the following: meta-arsenate ($CaO \cdot As_2O_5$) or pyroarsenate ($2CaO \cdot As_2O_5$), together with one of the following: lime, calcium silicate, Portland cement, aluminate cement.



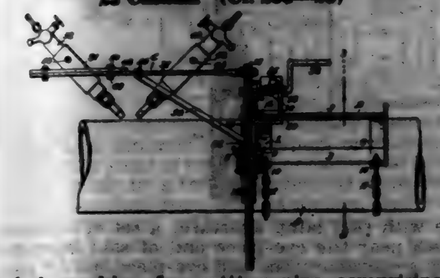
2,028,421
SINGLE INSULATOR FUSE MOUNTING
Alwin G. Stichmayer, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application June 9, 1934, Serial No. 729,985
13 Claims. (Cl. 200—123)

8. In a cut-out switch, an insulator block, a grooved mounting block, a resilient contact comprising a pair of substantially parallel, spaced wires positioned in said groove, a plate engaging the wires, and a bolt passing through plate, between said wires, through said mounting block and secured to the insulator block, said insulator block and mounting block having complementary contacting arcuate faces interlocking to prevent relative rotation.

2,028,422
REEL
Howard H. Talbot, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 12, 1934, Serial No. 757,154
13 Claims. (Cl. 242—78)

1. The combination with a cantilever type reel of a removable brace for the outboard end thereof which is provided with a hinged joint intermediate its ends and operable in a direction opposing the forces developed by the pull of the material being coiled on the reel.

2,028,423
NONSEPARABLE FASTENER
Gilbert R. Upham, Channahon, Pa., assignor to The De Long Hook and Eye Company, a corporation of Pennsylvania
Application December 3, 1932, Serial No. 646,473
8 Claims. (Cl. 292—307)

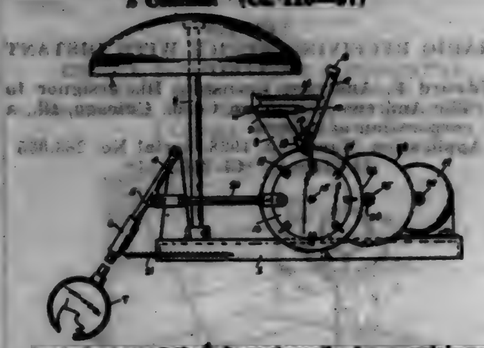


1. A socket member for a non-separable fastener comprising a dome-shaped member having a substantially flat marginal portion thereon, a plate dished substantially throughout its extent toward said dome-shaped member and having a transversely bent marginal flange the free edge of which is reversely bent into engagement with said flat marginal portion to secure said plate and said dome-shaped member together, and a plurality of resilient tongues formed on said plate and extending toward the center thereof with the free ends inclined outwardly toward said dome-shaped member and spaced to form a shank receiving opening.

2,028,424
DOOR-CLOSING DEVICE
Albert van Dillen, Amsterdam, Netherlands
Application June 20, 1934, Serial No. 731,218
3 Claims. (Cl. 292—73)

1. A closing device of the character described for double-swing doors, comprising a double-armed, forked lever mounted on the door frame in position to be swept by the free edge of the door, spring means tending to urge the lever into a central position except when the lever occupies a given position of obliquity in either direction, and a coupling member on the door normally engaging in the fork of said lever and adapted to leave and re-enter the fork after the lever has been turned by the door into one of its oblique positions.

2,028,425
METHOD AND APPARATUS FOR CUTTING METALS
Noah E. Wagner, Tulsa, Okla., assignor to The Linde Air Products Company, a corporation of Ohio
Application September 4, 1925, Serial No. 54,549
Renewed May 23, 1934
23 Claims. (Cl. 266—23)



1. A machine for cutting pipe comprising a member rotatably mounted relative to the pipe, an arm connected to and rotatable with the member, cutting torches carried by the arm, one of the torches being adjustable relative to the other, and means for rotating the member and revolving the torches around the pipe.

2,028,426
BED DAVENPORT
William E. Wunderlich, Muncie, Ind., assignor to The Moore Company, Muncie, Ind., a corporation of Indiana
Application February 12, 1934, Serial No. 710,536
4 Claims. (Cl. 5—67)

1. A bed davenport, comprising a base, a back-frame, a seat-frame, means pivotally interconnecting said back-frame and seat-frame, means guiding said back-frame for movement between a generally vertical position at the rear of said base and a horizontal position, a link pivotally connected to said seat-frame near the rear thereof, a pair of spaced abutments on said link, an abutment on said back-frame normally receivable between the pair of abutments on said link to hold the seat-frame and back-frame in predetermined angular relationship, and means carried by said seat-frame for controlling said link, said means including an operating member normally positioned to permit engagement of the link-abutments with the abutment on said back-frame, said operating member being movable from its normal position to swing said link to disassociate the abutments thereon from the abutment on the back-frame and thereby to permit the back-frame and seat-frame to be swung into substantially co-planar relationship, and co-operating provisions on said link and back-frame for restoring said operating member to its normal position as said back-frame and seat-frame are swung into co-planar relationship.

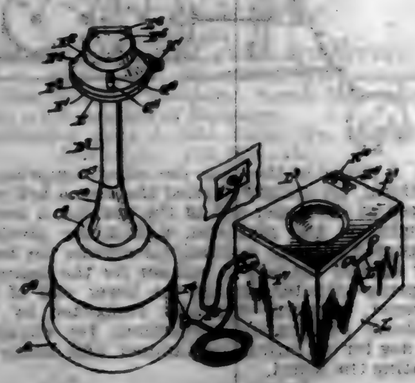
2,028,427
SAFETY SIGNAL
Emil Zlendara, Green Bay, Wis.
Application November 2, 1934, Serial No. 751,339
2 Claims. (Cl. 116—67)

1. A device of the class described comprising a platform, an upright carried thereby, a bell supported at the upper end of the upright, a second upright on the platform, a hammer pivotally supported thereby, a spring for moving the hammer against the bell, a bumper for the hammer, a spring-actuated dog at the lower end of the hammer, a wheel rotatably supported by the platform and having projections for engaging the dog for operating the hammer, and means for rotating the wheel.

2,028,428
FLASHLIGHT DEVICE
Clement Albers, San Francisco, Calif.
Application March 27, 1933, Serial No. 662,864
3 Claims. (Cl. 67—23)

3. Apparatus of the kind described comprising a battery casing having a globe socket therein,

a tubular member having switch means therein, the said switch means being electrically connected to the socket, a spring pressed plunger in the tubular member, the said plunger being adapted to temporarily hold the switch means in an open position when the plunger is in a cocked position with the spring contracted, a second tubular member, a spring pressed plunger located in the second tubular member, trigger means for holding the second mentioned plunger in a cocked position with its associated spring compressed, cable release operating means adapted to be actuated by the second mentioned plunger when the latter is actuated by its spring, and means carried by the first mentioned plunger for releasing the trigger means, whereby the second mentioned plunger may be actuated by its associated spring to operate the cable release operating means.



2,028,429

RADIO RECEIVING DEVICE WITH DISTANT CONTROL

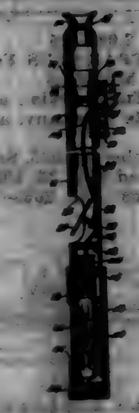
Edward F. Andrews, Evanston, Ill., assignor to The Andrews-Hammond Corp., Chicago, Ill., a corporation of Illinois

Application March 20, 1933, Serial No. 661,065

18 Claims. (Cl. 250—14)

3. A radio receiving set comprising two relatively movable assemblies, thermionic tube means for amplifying and detecting signal current and, tuning mechanism in one assembly, and one or more audio frequency tubes in the other assembly, a single flexible cable extending to the first said assembly, said cable including a pair of alternating current power wires for furnishing filament power to said thermionic tube means and a conductor for conveying amplified detected currents from the first said assembly to the assembly containing one or more audio frequency tubes and a ground conductor and an antenna conductor, means associated with the last said assembly for connecting the ground conductor and antenna conductor to an external ground and to an external antenna respectively, and means to prevent amplified radio frequency currents from entering upon any conductor of said cable.

2,028,430



OIL TANK INSPECTION DEVICE

William A. Badderf and Roy E. Deimler, Harrisburg, Pa.

Application January 16, 1934, Serial No. 706,902

6 Claims. (Cl. 88—71)

1. An inspection implement for oil tanks and other interiors comprising: an elongated tube of small diameter adapted for insertion for a substantial part of its length through a small orifice into the enclosure to be inspected; an eye-piece at one end of said tube; a lamp enclosed in a compartment of said tube having a lateral aperture for emission of a beam of light; a reflector pivoted within said tube adjacent an aperture in

line with said lamp aperture; a set of telescopic lenses near the eye-piece end of said tube; and means operable from said eye-piece end for positioning said reflector at different angles, said means comprising connections which extend from said eye-piece end through said tube and engage said reflector.

2,028,431

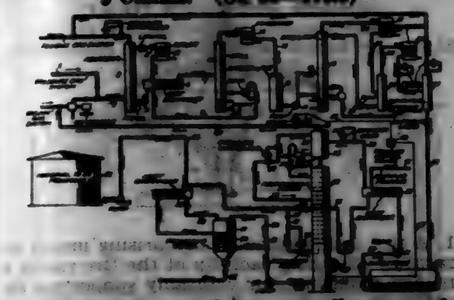
METHOD OF COMPRESSING COMPRESSIBLE MATERIAL INTO A SOLID PACK

William R. Barber, Camas, Wash., assignor to Crown Willamette Paper Company, San Francisco, Calif., a corporation of Delaware

Application December 20, 1933, Serial No. 703,231

1 Claim. (Cl. 100—14)

In the method of compressing into a solid pack, by the aid of a press box, a package comprising a paper bag holding compressible material, the improvement which consists in preforming the walls of the paper bag, before filling and insertion of the package into the press box, with ridges and depressions extending transversely of the line of compression, force applied to the pack whereby the continuity of the surfaces of the walls of the paper bag opposed to the side walls of the press box will be broken and only a reduced portion of the paper bag surface will be brought into direct contact with the walls of the press box, facilitating the movement of the walls of the paper bag against the walls of the press box during the compression of the pack, and whereby the depressions furthermore will hold entrapped air thus aiding in the separation of a substantial portion of the walls of the paper bag from the walls of the press box.



2,028,432

COMBINED RECTIFICATION AND REFRIGERATION PROCESS

Paul D. Barton, Scarsdale, N. Y., assignor to Alco Products Incorporated, New York, N. Y., a corporation of Delaware

Application March 19, 1934, Serial No. 716,281

5 Claims. (Cl. 62—175.5)

1. A process for rectifying normally gaseous hydrocarbons obtained from refinery operations including the steps of expanding compressed hydrocarbon fluids in a vertical condensing zone, introducing the fluid from said expansion step into a rectification zone, withdrawing a selected fraction from said rectification zone, supplying heat to the withdrawn fraction from a material being refrigerated and subsequently passing a portion of the thus heated hydrocarbon fraction into the rectification zone.

2,028,433

SHAKER CONVEYER

Ernst R. Bergmann, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois

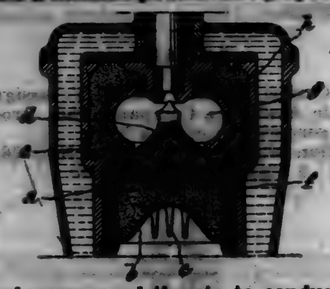
Application March 5, 1934, Serial No. 714,940

9 Claims. (Cl. 198—219)

1. A universal swivel for a shaker conveyer trough line including a trough section, another trough section adapted to discharge into said first-mentioned trough section, and a connection between said trough sections permitting said second-mentioned trough section to pivot about a vertical axis, a horizontal axis disposed forwardly of said vertical axis and transversely of said second-mentioned trough section, and a longitudinal axis pivotally movable about said transverse axis and disposed forwardly of and perpendicular to said transverse axis.

2,028,434

DEVICE FOR EFFECTIVELY DISSIPATING HEAT FROM MACHINE PARTS



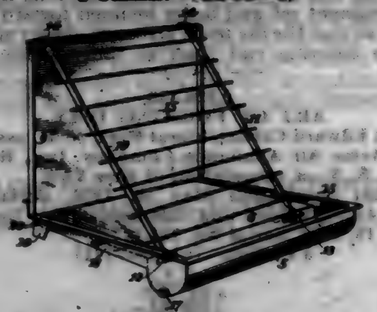
Auguste Louis René Bernard, deceased, late of Rueil-Malmaison, France, by Renée Bernard, née Bourmenville, executrix, Paris, France

Application December 17, 1934, Serial No. 757,878

In Belgium December 21, 1933

4 Claims. (Cl. 192—176)

3. A piston comprising in combination at least two parts made of materials having different respective coefficients of expansion and contacting one another, portions of the faces of said parts adjacent the joints between them constituting at least a portion of the walls of a closed chamber, and a metallic powder filling up said chamber and compressed therein to conduct heat off from said parts and to tighten the joints between them.



2,028,435

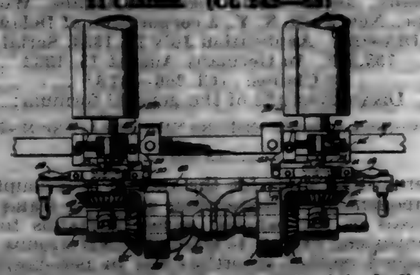
DEVICE FOR GLAZING DOUGHNUTS

Pearl B. Burns, Mentone, Ind.

Application June 19, 1935, Serial No. 27,249

2 Claims. (Cl. 91—4)

1. In a doughnut glazer, a trough having a rearwardly extending inclined drain, a back plate detachably connected to the said drain, racks supported in an inclined position with respect to the drain and the said trough, said racks having rod-retaining seats and rods adapted to receive doughnuts applied to said racks.



2,028,436

JIG FOR TREATING MATERIAL

George H. Cady, Providence, R. I., assignor to United States Finishing Company, Providence, R. I., a corporation of Connecticut

Application March 7, 1935, Serial No. 9,617

11 Claims. (Cl. 249—53)

1. A jigger of the class described including a beam roll shaft, a driven member normally rotatable on said shaft, a driving member arranged to be operatively connected to the driven member, means for operatively connecting the driven member to said shaft, means operatively con-

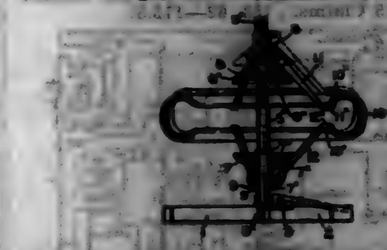
necting the driving member to the driven member, and means for preventing release of the driven member from said shaft when the latter is being driven.

2,028,427
DIE
Albert E. Carlin, Floral Park, N. Y., assignor to Acme Air Appliance Company, Inc., Brooklyn, N. Y., a corporation of New York
Application May 18, 1934, Serial No. 726,416
5 Claims. (Cl. 76—118)

1. A die comprising a cylindrical tube having notches opening at one end and leaving die sections, the walls of the tube and sections being of substantially uniform thickness throughout those portions where the sections appear, the sections being formed with die teeth converging toward the entering end of the die and the sections having a permanent set and being inclined toward each other so that the die teeth are more closely spaced at the entering end than at the opposite end.

2,028,428
ART OF FORMING DIES
Albert Edward Carlin, Floral Park, N. Y., assignor to Acme Air Appliance Company, Inc., Brooklyn, N. Y., a corporation of New York
Original application May 18, 1934, Serial No. 726,416. Divided and this application November 16, 1934, Serial No. 753,462
5 Claims. (Cl. 76—101)

1. In the art of forming a die, forming projections on a tube and forming die teeth on the projections, bending and twisting the projections to provide clearance, and then hardening the projections.



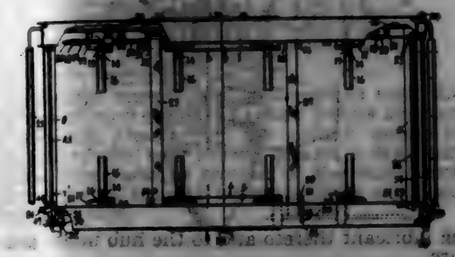
2,028,429
DISAZODYESTUFFS
Heinrich Clingestein, Cologne-on-the-Rhine, and Hans Rees and Carl Hentzner, Leverkusen, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 18, 1934, Serial No. 735,540. In Germany August 18, 1933
5 Claims. (Cl. 260—44.4)

1. Disazodyestuffs of the general formula:

Py—N=N—Ar—CO—NH—R—NH—CO—Ar—N=N—R'

wherein Py stands for the radical of a coupling component of the pyrazolone series, Ar stand for radicals of the benzene series, R stands for a naphthylene radical to which the NH-groups are attached neither in ortho- nor in peri-position to each other, R' stands for the radical of a yellow component suitable for preparing azodyestuffs, and n stands for one of the numbers one and two, dyeing the cellulosic fibre generally yellow to orange shades of good fastness properties.

2,028,440
TIRE SPREADER
William Henry Dalrymple, Brownfield, Ontario, Canada
Application September 28, 1935, Serial No. 42,190
In Canada May 8, 1935
4 Claims. (Cl. 154—9)

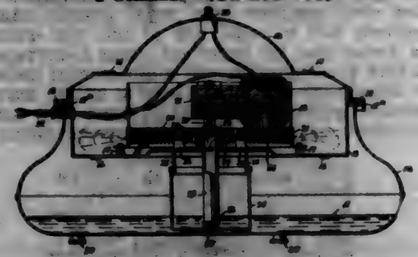


1. A tire casing spreader comprising means for separately engaging each lip of the tire casing, a threaded mounting for rotatably supporting the lip engaging means, and means operated by the thread of the mounting for automatically carrying the lip engaging means and lips apart as the tire is rotated around the mounting.

2,028,441
CLUTCH RELEASE FOR PORTABLE ELECTRIC WRENCHES
Alonzo G. Decker, Baltimore, Md., assignor to The Black & Decker Manufacturing Company, a corporation of Maryland
Application July 14, 1933, Serial No. 680,444
11 Claims. (Cl. 81—54)

1. The combination in a portable power driven manually controlled rotary tool having a source of power and a spindle with means for securing a socket wrench or screw driver thereto, to operate the same and means for transmitting rotary motion from said source to said spindle including an overload release with engaging means operable transversely to the axis of rotation of the spindle, and resilient means tending to hold said release in engaged position providing a definite positive driving connection up to a predetermined torque to be overcome and released when resistance at the tool equal to said torque is encountered, the spindle being mounted to shift in the direction of its axis, and a resilient member tending to advance the spindle in the direction of its axis and to be overcome by the pressure of the tool against the work, and retaining means operable by the motion of the spindle as it is advanced by said spring tending to release the spindle from said transmitting means so that the spindle remains stationary or may be rotated by hand to position for engagement with the work.

2,028,442
LOAD HANDLING DEVICE
Jay R. Dorman, St. Joseph, Mich.
Application August 11, 1933, Serial No. 684,667
12 Claims. (Cl. 87—32)



12. In a device of the class described, the combination of a frame, load supports pivoted to opposite sides of the frame for swinging movement in a common plane, actuators for collapsing said supports alongside of the opposite sides of the frame, and a unitary control for said actuators.

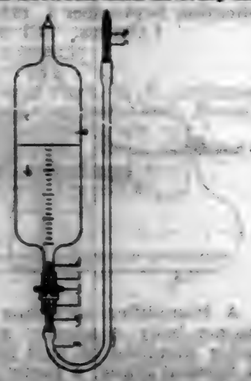
2,028,443
MOLD APPARATUS
Jay R. Dorman, St. Joseph, Mich.
Application August 11, 1933, Serial No. 684,668
4 Claims. (Cl. 25—111)

1. A mold comprising in combination side members of angle section arranged in rectangular end-to-side relation with their side walls vertical and their flanges projecting outwardly from the bottom edge of the side walls, the flanges having a series of holes near the outer ends of the side members, a bracket on the flange near the inner end of each side member and having a loop of inverted U-shape receiving the side wall of the adjacent side member and terminating in an end portion overlapping the flange of said adjacent side member and provided with a hole for registration with a selected one of the holes in the flange, a bolt arranged through each pair of registering holes for connecting the end portion of each bracket to its flange, a vertical supporting screw threaded to the flange near the outer end of each side member and having a handle at its upper end for adjusting the screw to change the vertical position of the mold, and a longitudinally and transversely adjustable mold bottom member consisting of four corrugated sections arranged in overlapping relation with the corrugations of the overlapping parts in registration.

2,028,444
HUMIDIFIER
William Feldermann, South Orange, N. J.
Application September 1, 1934, Serial No. 742,514
4 Claims. (Cl. 261—81)

1. A humidifier including in combination a container body, a support associated therewith, a motor mounted on said support with its axis in a vertical plane, a pump member coupled to said motor and extending downwardly therefrom, a disk secured to the upper end of said pump member and disposed in a horizontal plane, said disk being provided with an annular depressed ring portion adjacent its point of contact with said pump member and a passageway leading from the interior of said pump member to said ring portion, and a screen member secured to the upper surface of said disk and covering said annular ring portion thereof.

2,028,445
BRAKE FOR FOOT STEERED VEHICLES
Louis Geiberman, Yonkers, N. Y.
Application April 22, 1935, Serial No. 17,511
3 Claims. (Cl. 188—20)



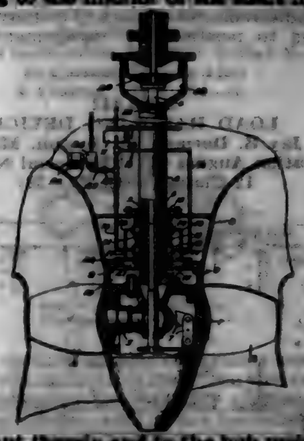
1. A brake for foot steered vehicles comprising a body, a front steering wheel swivelly mounted thereon and having a shank with straight sides, a transverse steering foot bar having a longitudinal opening engaging the straight sides of said shank for pivoting said shank in various longitudinal positions thereof, said transverse steering foot bar having a portion with a transverse opening, a rod slidably mounted on said body and having a portion engaging said transverse opening for unitary longitudinal motion with said transverse steering foot bar, a wheel for the body, and a brake associated therewith and having an operating arm connected with another portion of said rod.

2,028,446
APPARATUS FOR EFFECTING HYPODERMIC INJECTIONS
Felix Serrano Gallo, Gabriel Old Rodriguez, and Rafael Suárez de Deza Segata, Madrid, Spain
Application September 5, 1934, Serial No. 742,796
In Spain September 18, 1933
9 Claims. (Cl. 128—215)

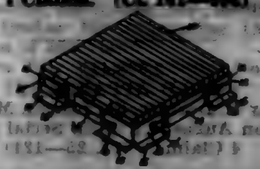
1. A hypodermic injection apparatus comprising a container for liquid, a capillary tube forming an outlet from said container, a delivery

member having a passage therein for liquid discharging through said capillary tube, and a resilient closing means between said delivery mem-

ber and said capillary tube and means for adjusting said closing means toward and away from said capillary tube and maintaining it in adjusted position.



2,028,447
WELL POINT
Timothy G. Griffin, Yonkers, N. Y.
Application February 8, 1935, Serial No. 5,644
4 Claims. (Cl. 166—5)

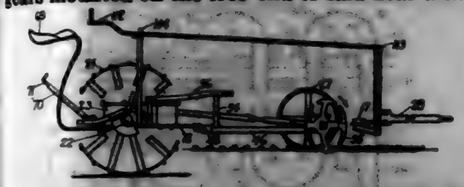


1. In a well point, a conical nozzle having a solid longitudinal center column and a plurality of longitudinal passages surrounding and parallel to said center column, the lower end portion of said nozzle including said passages as grooves; said grooves being throughout of the same width as that of said passages and having parallel inturned overhanging edge portions to thereby adapt the same to retain streams of water under pressure against scattering and to deliver said streams of water in solid formation immediately in advance of the lower end of said nozzle.

2,028,448
HYDRAULIC TURBINE
Leroy F. Harza, Ravinia, Ill.
Application April 8, 1935, Serial No. 14,415
7 Claims. (Cl. 253—160)

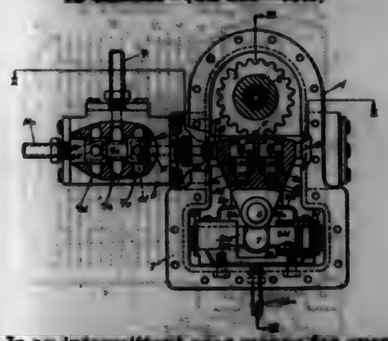
1. In a hydraulic turbine having a hollow hub and a hollow turbine shaft communicating therewith, a bearing for the shaft adjacent the hub, means for feeding a lubricant to the bearing under pressure, and a transfer opening from the bearing to the interior of the shaft for feeding lubricant thereto and to the hub under pressure.

2,028,449
TYPE FORM TIE
William F. Heinrich, North Bergen, N. J.
Application August 27, 1934, Serial No. 741,355
7 Claims. (Cl. 161—404)



1. A type form tie, comprising a right angle member adapted to engage on one corner of the form, a string for engaging around the form, means for attaching the ends of the string on the arms of said angle member, whereby one end of the string may first be attached on one arm, then the string extended around the form, and finally the other end of the string attached upon the other arm, and flanges projecting at right angles from the bottoms of said arms for preventing said string from slipping beneath the type form.

2,028,450
PLANT THINNING IMPLEMENT
Albert Hilyard, Salinas, Calif.
Application November 8, 1934, Serial No. 751,170
8 Claims. (Cl. 97—14)



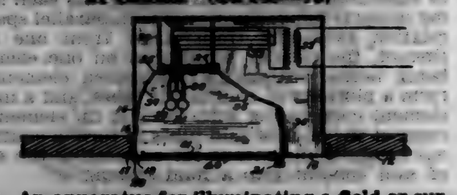
1. In an implement adapted to thin a double row of plants growing on a narrow mounded bed, a structural frame, a main axle journaled on the frame and carrying a pair of drive wheels, a driver fast to the axle intermediate said wheels, a pair of normally parallel forwardly-extended arms hingedly connected with a rearward portion of the frame and adapted for limited vertical movement of their respective free ends, said arms being disposed one on each side of the longitudinal axis of the frame, a pair of intermeshed gears mounted on the free end of the far arm, a pair of intermeshed gears mounted on the free end of the near arm, each pair of gears being adapted to revolve a rotary cutter; a train of gearing operably engaging said driver, one actuator of said train being adapted and arranged to distribute rotary power from the far side of said axis, and another actuator of said train

being adapted to distribute rotary power from the near side of said axis, a revoluble member driven by the far actuator and operably connected to drive said gears mounted on the free end of said far arm, a revoluble member driven by the near actuator and operably connected to drive said gears mounted on the free end of said near arm;

a supporting wheel operably connected with the free end of each said arm, crank means adapted to raise said wheels from the ground, means to lock and release said raising means, a draw-bar carried by a forward portion of the frame and adapted for its support when traveling with said wheels elevated.

2,028,451
AUXILIARY HYDRAULIC STEERING MECHANISM
Edwin T. Hodge and George F. McDougall, Portland, Oreg.; said McDougall assignor to said Hodge
Original application April 30, 1926, Serial No. 723,218. Divided and this application October 29, 1934, Serial No. 749,348
12 Claims. (Cl. 180—79.2)

1. In an intermittent gear means for operation of a valve, a revoluble pinion, an intermittent gear adapted to mesh with said pinion and having a tooth thereon, movable plungers abutting said tooth to cushion ratcheting offset of the tooth and pinion and hydraulic motors adapted to remesh the intermittent gear with the pinion.



2,028,452
STOP WATCH
Henri Hefer, Geneva, Switzerland, assignor to firm Fabrique D'Ebauches Venus S. A., Moutier, Switzerland
Application December 28, 1934, Serial No. 759,505
In Switzerland January 25, 1934
2 Claims. (Cl. 58—76)

1. A spring driven stop watch having a chronograph wheel, a counter wheel indicating the number of revolutions of the chronograph wheel, a driving finger rigid with the chronograph wheel, an intermediate wheel meshing with said counter wheel and actuated by said driving finger, a wheelwork transmitting movement from the driving spring to the chronograph wheel, one of the wheels of said wheelwork being movable into and out of engagement with the chronograph wheel, a rocking lever carrying said intermediate wheel, a fulcrumed arbor carrying said movable wheel of the wheelwork and having one end journaled in said rocking lever, said rocking lever being movable into one or the other of two positions, an apertured plate traversed by said arbor and disposed intermediate the rocking lever and the fulcrum of the arbor, a collar on said arbor coacting with said plate for preventing substantial axial movement of the arbor but permitting

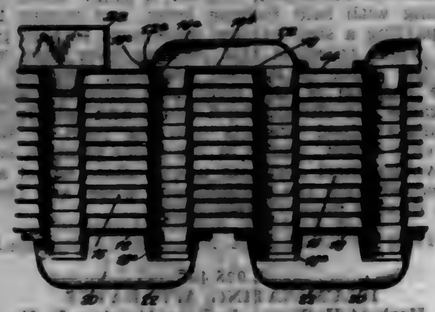
transverse movement thereof, a pillar wheel coacting with said rocking lever, and means for imparting a step by step movement to said pillar wheel to move said rocking lever into one or the other of its two positions, whereby in one position of the lever said movable wheel engages the chronograph wheel and said intermediate wheel projects into the path of said driving finger, whilst in the other position said movable wheel and said intermediate wheel are removed from the chronograph wheel and from the driving finger, respectively.

2,028,453
ILLUMINATING APPARATUS
Herbert Hoffman, Jackson Heights, N. Y.
Application October 25, 1930, Serial No. 491,170
21 Claims. (Cl. 240—78)

1. An apparatus for illuminating a field or surface by oblique projection from an offset position, comprising, the combination of a plurality of longitudinally elongated continuous illuminable tubes providing a light source substantially parallel to the field to be illuminated, at the offset position, said tubes being of a length corresponding substantially to that of said field, a longitudinally elongated prism plate having the prisms thereof disposed throughout one face thereof, arranged in parallelism and extending longitudinally of such face, said plate positioned between said tubes and the field, one or more non-flat longitudinally elongated asymmetric reflectors behind and arranged to distribute reflected light to the prism plate, said elements so combined and arranged as to distribute the obliquely projected light to afford substantially uniform illumination of the field in both longitudinal and transverse directions, and a slidable carriage for suspending and bodily adjusting simultaneously said tubes

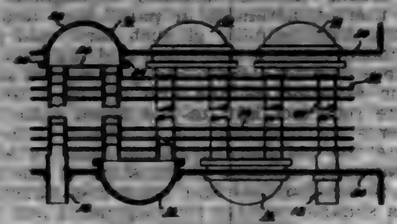
---

2,028,454
BATHTUB COVER
Audrey M. Johnson, St. Joseph, Mo.
Application November 21, 1934, Serial No. 754,115
2 Claims. (Cl. 4—173)



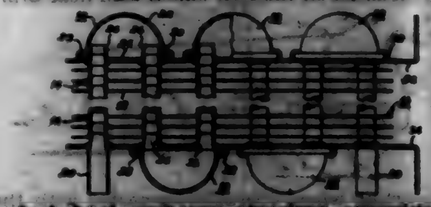
1. A bathtub cover comprising a sheet, a hem along the entire edge of the sheet, elastic strips

in the hem at the end portions of the sheet, and inelastic tapes in the hem at the side portions



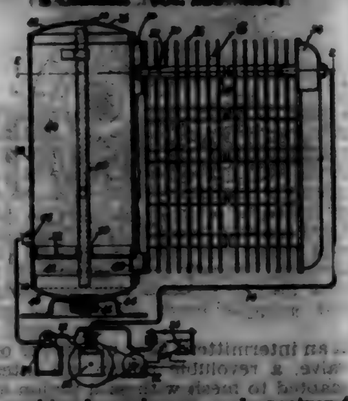
of the sheet, the ends of the tapes being attached to the ends of the strips.

2,028,435
HEADER CONSTRUCTION
John Karmazin, Huntington, Ind., assignor to Karmazin Engineering Company, a corporation of Michigan
Application November 14, 1933, Serial No. 697,956
15 Claims. (Cl. 257—148)



5. A heat exchange unit comprising a plurality of superposed sheet metal fin elements each having integral tubular projections in parallel spaced relation extending transversely from one side thereof, the tubular projections on one element being nested within the juxtaposed element to form a plurality of continuous tubes, and a metal element cooperating with the end fin element to connect the ends of said tubes to form a continuous conduit, and means for connecting the ends of said conduit into a fluid system.

2,028,436
REFRIGERATING APPARATUS
John Karmazin, Huntington, Ind., assignor to Karmazin Engineering Company, a corporation of Michigan
Application May 7, 1935, Serial No. 20,262
4 Claims. (Cl. 257—256)

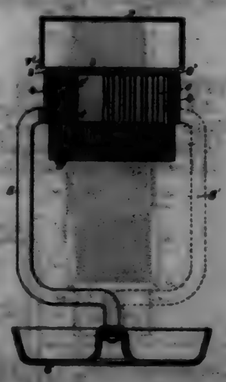


1. A header for a heat exchange device which includes a plurality of parallel tubes comprising a trough-like stamping having a flange extending around the open side thereof, a closure plate extending across the open side of the stamping and in crimped engagement with said flange, said closure plate having a plurality of openings therein having tubular walls for telescopically engaging a plurality of said parallel tubes.

2,028,437
REFRIGERATING APPARATUS
John Karmazin, Huntington, Ind., assignor to Karmazin Engineering Company, a corporation of Michigan
Application May 7, 1935, Serial No. 20,263
4 Claims. (Cl. 257—256)

1. A heat exchange structure comprising in combination means forming a plurality of parallel tubes and transverse fins, return bends connecting the ends of adjacent tubes, said return bends including a flatter member in the general form of a half cylinder, and a supporting frame for said structure comprising a plate extending adjacent said return bends and means formed in said plate engaging the walls of said return bends.

2,028,438
REFRIGERATING APPARATUS
John Karmazin, Huntington, Ind., assignor to Karmazin Engineering Company, a corporation of Michigan
Application May 7, 1935, Serial No. 20,264
6 Claims. (Cl. 257—256)

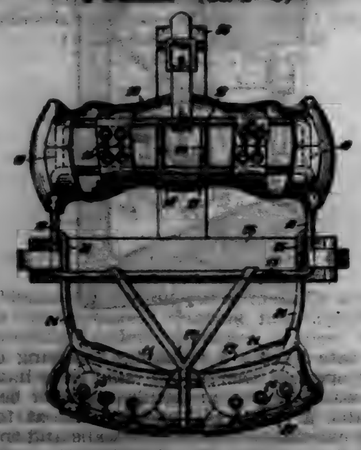


1. A combined condenser and receiver for refrigerating apparatus comprising in combination a fin and tube heat exchange device having vertically spaced horizontal tubes, a vertical inlet header connecting said tubes at one end thereof, means forming a vertical outlet header and receiver connecting said tubes at the other end, and including a passage communicating between said tubes and the interior of said means and arranged to deliver condensed refrigerant to the interior thereof for collection therein to a level above the lowermost horizontal tube.

2,028,439
DEVICE FOR REDUCING TORSIONAL VIBRATIONS IN SHAFTS
Viggo Axel Kjær, Copenhagen, Denmark
Application May 1, 1931, Serial No. [illegible]
In Denmark May 26, 1930
7 Claims. (Cl. 74—574)

5. A device of the character described, comprising in combination a rotatable shaft which is subject to torsional vibration, an inertia mass, an elastic connection between said mass and said shaft, said connection having a continuously variable degree of elasticity so as to avoid sharp and sudden alterations and insure gradual and smooth transitions, and means connected with the shaft and operated by the rotation of the same to influence said connection, so that the degree of elasticity of the connection is varied continuously and periodically with gradual transitions during the rotation of the shaft.

2,028,440
HOLDER FOR MATCH PACKAGES
Kurt Leuckner, Stuttgart, Germany
Application August 2, 1934, Serial No. 738,147
In Germany June 2, 1934
2 Claims. (Cl. 206—50)

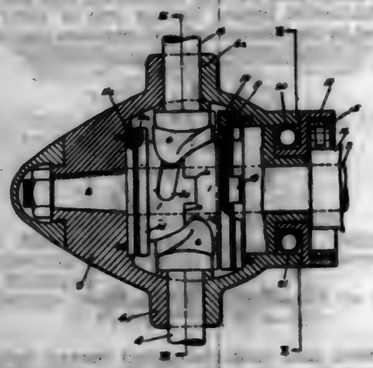


1. The combination of a pull-match package having a flange at the rim thereof, and a holder for said package consisting of a stand and a horizontal frame projecting from said stand, embracing said package and forming a seat on which said flange rests, the matches projecting downwards from said package for removal by downward pull.

2,028,461
SWIMMING GLOVE
Larkin C. Lindsey, Orully, N. Mex.
Application June 25, 1934, Serial No. 732,594
1 Claim. (Cl. 9—31)

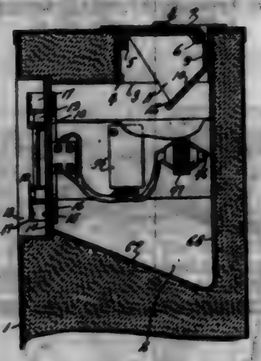
A swimming glove comprising a body, hand receiving means secured to the body and including thumb and finger portions, said means being secured to the body in a manner to provide webs between the thumb and finger portions and laterally of said means, a wrist portion secured to the hand portion, a strap including a buckle and cooperating with the wrist portion for securing the glove to the hand of the user, a strip secured to the strap and having channeled end portions, and channeled means having one of their ends received in the channeled end portions for pivotal movement, and said channeled means receiving the inner free edges of the lateral webs in the channels thereof with the edges secured therein so that said channeled means will hold the lateral webs in spread or folded positions upon movement of the hand of the user accordingly.

2,028,462
MASK
Robert Malcom, Chicago, Ill.
Application January 17, 1935, Serial No. 2,187
4 Claims. (Cl. 2—9)



1. A mask of the character described comprising a single rod bent into a transversely disposed arcuate forehead section, a transversely disposed arcuate face guard section and side frame sections; a single rod bent into a transversely disposed arcuate chin protecting loop; and a nose guard bar rigidly secured to the face guard section and to the chin protecting loop.

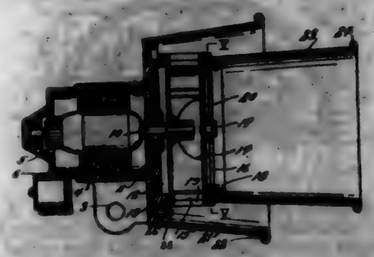
2,028,463
CHANGE PITCH PROPELLER
George F. McDougall, Portland, Oreg., assignor to Edwin T. Hodge, Portland, Oreg.
Application January 7, 1935, Serial No. 657
15 Claims. (Cl. 170—163)



1. A change pitch propeller comprising in combination a blade, a blade shank that is rotatively mounted in a hub, a couple on the blade shank, an axially expansible two part cam rotatably mounted to co-operate with the couple with one element of the couple engaging one

part of the cam and the other element of the couple engaging the other part of said cam, and

means for shifting the cam to change the pitch of the blade.



2,028,484
SECURITY DEPOSITORY
Charles F. Mellish, Toledo, Ohio
Application December 18, 1933, Serial No. 702,959
4 Claims. (Cl. 109—1)

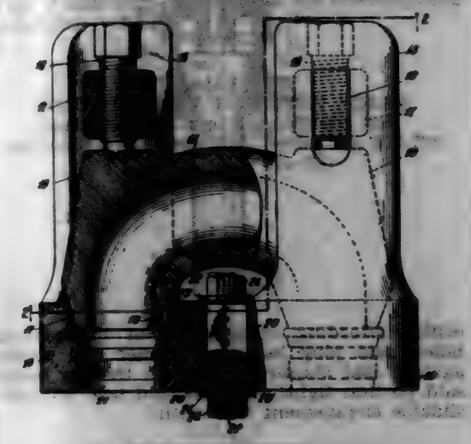
1. A safe having a valuables receiving chamber, an opening thereabove, said safe having a double wall housing, an insulation filler between said walls, a reinforced metallic throat for the opening extending between the walls and through said filler, a pivot bearing providing bar anchored inside said throat in proximity to the outer wall, a closure plate for the opening hingedly mounted on the bar, there being ledge means at the throat to limit inward swinging of the closure to closure position, and a chute in the throat fixed to move with the closure and extending downward from the bearing, said chute at lifted position of the closure providing a receiving platform abutting the lower side of the ledge and at lowered position of the closure providing an inclined way into the chamber.

2,028,485
SOUND SIGNALING
Leslie H. Middleton, Adrian, Mich., assignor to Schwarze Electric Company, Adrian, Mich., a corporation of Michigan
Application October 11, 1930, Serial No. 482,004
3 Claims. (Cl. 177—7)

1. In a sound device a main mounting plate having a central perforation and an aperture, a minor annular flange on one side and a major annular flange forming a siren stator on the other, both being concentric with the perforation, a motor having a portion mounted in the minor flange with a shaft extending through the perforation into a chamber formed by the major flange, a siren rotor mounted on the shaft in said chamber,

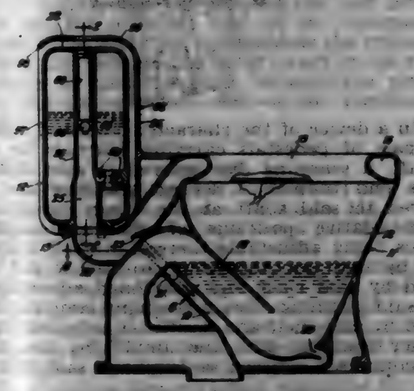
an annular valve member fitting over the stator member, a projection on said member extending through the aperture in the plate, a solenoid mounted on the latter, a core for the solenoid, and means connecting the latter with the projection whereby the valve member may be rotated on energization of the solenoid.

2,028,486
FILTER LEAF
Matthew F. Moran, Kansas City, Mo.
Application May 14, 1934, Serial No. 725,558
4 Claims. (Cl. 210—181)



1. A filter leaf of the character described comprising a pair of articulated frames each having a screen across one side thereof; means for permitting the escape of material from within the filter leaf other than said screens; a pair of standards for supporting the filter leaf; and means on the said frames for slidably engaging the said standards, said means comprising a tube extending through each frame respectively from one end to the opposite end thereof.

2,028,487
RETURN BEND
Henry E. Machnic, Atchison, Kans., assignor to The Locomotive Finished Material Company, Atchison, Kans., a corporation of Kansas
Application January 17, 1933, Serial No. 651,881
5 Claims. (Cl. 285—39)



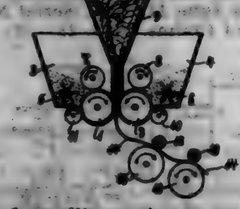
1. In a return bend structure of the character described, a pair of housing sections, each ad-

tured to receive an end of a U-bend section and the end of a tube, the juxtaposed sides of the sections being each provided with a dove-tailed slot; a double dove-tailed key member endwisely insertable in the matching slots of the housing sections, the cross sectional dimensions of said

key being less than the corresponding dimensions of the slots so as to permit a limited degree of independent movement of the housing sections relative to each other in any direction in a plane perpendicular to the tubes; and means for holding the U-bend section in contact with the housing sections.

2,028,468
WATER CLOSET CONSTRUCTION
John N. Murphy, Springfield, Ill., assignor of one-half to August F. Maurer, Springfield, Ill.
Application August 22, 1934, Serial No. 740,951
16 Claims. (Cl. 4—14)

1. An article of the class described comprising an integral structure having a bowl portion adapted to have a fluid retaining reservoir positioned and rigidly secured thereon in operative relation thereto, and a cover member formed integrally with said bowl and adapted to surround a substantial portion of the reservoir positioned on the bowl, said cover member having at least one permanently open side for permitting the insertion and positioning of the reservoir therein and in operative relation to said bowl.



2,028,469
WATER-SOLUBLE AZODYESTUFFS DERIVED FROM BENZOCARBAZOLES
Wilhelm Neelmeier, Leverkusen-Weiderf, and Heinrich Mersshal, Cologne-Deutz, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application February 13, 1933, Serial No. 656,676. In Germany February 15, 1932
10 Claims. (Cl. 260—46.1)

1. Dyestuffs of the formula:

wherein R stands for a tetramethine chain linked to two vicinal carbon atoms of the benzene nucleus R', R'' stands for a non-sulfonated and non-carboxylated radical of the aromatic series, and R''' stands for the radical of a non-sulfonated and non-carboxylated diazotized component suitable for producing azodyestuffs, yielding, when produced on the fibre, various shades of good fastness properties.

2,028,470
ROLLING MACHINE
Emil Nordby, Hamar, Norway
Application January 9, 1935, Serial No. 1,038
In Germany March 5, 1934
7 Claims. (Cl. 107—12)

1. Means for rolling out a mass of dough between two oppositely rotating, non-sticking powder sprinkled rollers, arranged a short distance apart, comprising powder chambers through which the surfaces of the said rollers pass, rotatably mounted strickle devices at that point where the said surfaces leave the said chambers and means to rotate the said strickle devices with a surface speed less than the surface speed of the said rollers, but in the same direction as these latter.

2,028,471
APPARATUS FOR RECLAIMING WASTE HEAT
Emile J. Parent, Bloomfield, N. J., and John L. Krieg, Hollis, N. Y., assignors to Alco Products Incorporated, New York, N. Y., a corporation of Delaware
Application August 2, 1934, Serial No. 738,882
8 Claims. (Cl. 257—237)

1. A heat exchanger comprising in combination a first manifold, a first header communicat-

ing therewith, a second header, tubes providing communication between said headers and a second manifold communicating with said first header.

2,028,472

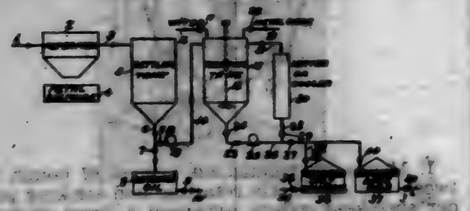
FLUORESCENT SUBSTANCE

Hans Rabe, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application November 28, 1933, Serial No. 700,069. In Germany December 2, 1932

7 Claims. (Cl. 260—168)

1. The process of producing a substance giving rise to fluorescence when dissolved in a hydrocarbon oil which comprises condensing a substance selected from the group consisting of liquid olefines of purely aliphatic nature and halogenated paraffin wax hydrocarbons with a polynuclear aromatic hydrocarbon in which none of the nuclei is saturated with hydrogen, by contacting said substances with a catalyst of the Friedel Crafts' type at a temperature between about 70° and about 250° C. in the presence of a halide of a metal selected from the 1st and 2nd groups of the periodic system which halide does not catalyze the Friedel Crafts' reaction.



2,028,473

PROCESS OF TREATING METALLIC SALT SOLUTIONS

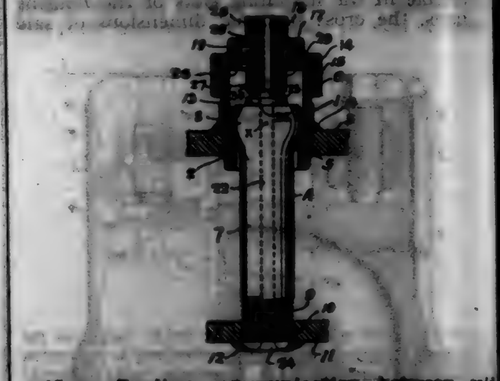
Paul C. Rich, Los Angeles, Calif., assignor to Vapor Treating Processes, Inc., Los Angeles, Calif., a corporation of California

Application June 11, 1934, Serial No. 730,146

14 Claims. (Cl. 23—50)

1. A process of revivifying used water solutions of heavy metal salts, containing nitrogen bases and other organic extracted constituents resulting from the treatment of hydrocarbon oil with a water solution of metal salt at temperatures ranging from about 300 to 450° F., comprising, commingling the used salt solution with a metallic base and then separating the liberated constituents from revivified salt solution.

2,028,474



FLEXIBLE STAYBOLT CONSTRUCTION FOR BOILERS

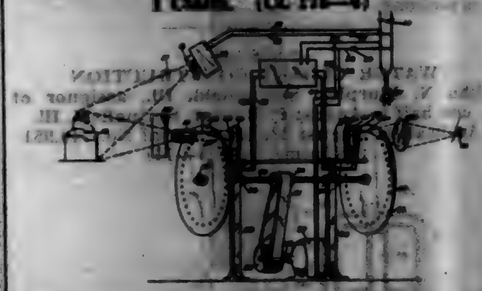
Garland P. Robinson, Glen Ridge, N. J., assignor to American Locomotive Company, New York, N. Y., a corporation of New York

Application September 28, 1935, Serial No. 42,590

7 Claims. (Cl. 85—1.5)

1. The combination of a boiler wall member; a housing member, one of said members having a seat, said housing member comprising a sleeve secured to said wall member and a cap secured to said sleeve and provided with an opening; a plug secured in said opening, having a hole extending therethrough open at the outer end to the exterior; a bolt having a head in flexible engagement with said seat and a longitudinal hole open at said head end; and a diaphragm extending across said housing with its outer periphery sealed to the wall of said housing, its central portion engaging said bolt and provided with an

orifice affording communication between said holes, said plug having its inner end pressing against said diaphragm portion thereby holding said portion tightly against said bolt in relative slidable engagement therewith.



2,028,475

LIGHT CONVERSION SYSTEM

Edward A. Rockwell, Chicago, Ill., assignor to Patent Engineering Corporation, a corporation of Delaware

Application August 23, 1933, Serial No. 685,253

1 Claim. (Cl. 178—6)

In a device of the character described a shaft, a pair of pedestals carrying journals for said shaft, a scanning disc secured to said shaft at one end thereof, a second scanning disc secured to said shaft at the other end thereof, the relative positions of the two scanning discs being adjustable thereon, a shelf supported by said pedestals, a photo-electric cell carried by said shelf and positioned adjacent one of said scanning discs, a receiving lamp also carried by said shelf and positioned adjacent to the other scanning disc, and amplifying means interconnected between said cell and said lamp.

2,028,476

GARAGE FOR AUTOMOBILES AND THE LIKE

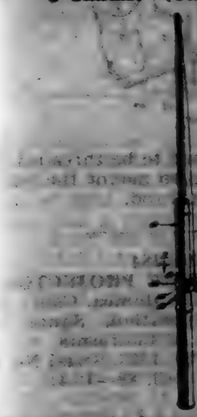
Jacques Rome and Karl Rubinstein, Paris, France

Application May 2, 1933, Serial No. 669,619

In Austria March 31, 1932

4 Claims. (Cl. 214—16.1)

1. In a storage garage, a series of platforms each adapted to support a vehicle, guiding and driving means for causing said platforms to travel in a closed horizontal loop-shaped path, and means for moving said platforms individually out of said loop-shaped path for receiving and discharging vehicles.



2,028,477

HOOK HOLDER FOR FISH POLES

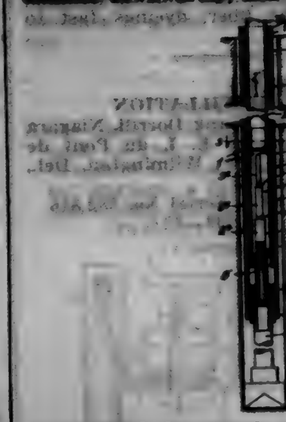
Raymond C. Rapp, Kendallville, Ind.

Application July 10, 1933, Serial No. 679,799

2 Claims. (Cl. 43—23)

1. A fish pole attachment comprising the combination with a fish pole having a fish line and hook attached thereto of: a clamping member adapted to be attached to the fish pole and including a receptacle portion; a pinch plate slidably mounted in the said receptacle portion; and a resilient compressible material arranged between the said pinch plate and the adjacent wall of the fish pole; whereby the hook of the fish line may be readily inserted between the said pinch plate and the adjacent wall of the receptacle portion, thereby slightly compressing the resilient member and causing the latter to act by its own resiliency to bind the hook between the pinch plate and the adjacent wall of the receptacle portion.

2,028,478



ROTARY DRILLING APPARATUS

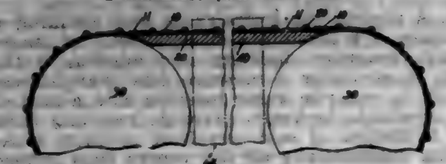
Levyn Ray Salmaander, St. Louis, Mo.

Application August 6, 1934, Serial No. 738,543

6 Claims. (Cl. 255—72)

1. A drill stem comprising a pair of tubular members arranged in telescopic relation, means to restrict rotary movement of said tubular members with respect to each other, communicating passageways for fluid formed through said tubular members, a fluid-controlling element, said fluid-controlling element being supported by one of said tubular members and having a shank portion relative to which an open end of the other of said tubular members moves in a manner to cause said shank portion to be extended into said open end of said other tubular member and partially obstruct same, whereby passage of fluid through the open end of said other tubular member is restricted and the pressure of fluid adjacent to the open end of said other tubular member is increased, a pressure-receiving face formed on said shank portion and movable into and out of said open end of said other tubular member against which said increased fluid pressure acts to move said fluid-controlling element downwardly, and a drill bit to which is

transmitted downward movement imparted by said increased fluid pressure to said fluid-controlling element.



2,028,479

CONVEYER FOR HEAT TREATING FURNACES

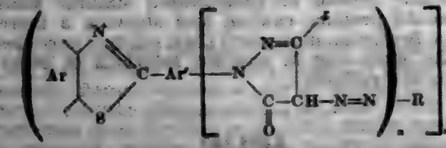
Clarence Winfred Spicer, Toledo, Ohio

Application August 5, 1931, Serial No. 555,167

2 Claims. (Cl. 198—193)

1. In combination with a heat treating furnace, a table; a conveyer to pass over said table comprising a series of links of heat resistant material of substantially flat cross-section; and eyes formed in the ends of said links by bending portions of the material into contact with one another to form a substantially flat surface arranged to expose a maximum wear area to said table, said portions of the material being secured by welding.

2,028,480

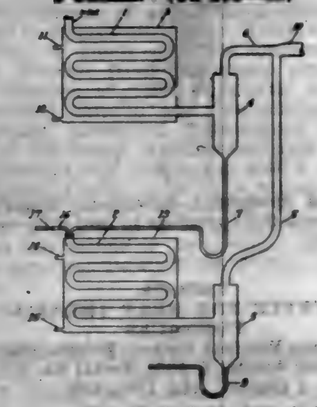


WATERINSOLUBLE AZODYESTUFFS

Richard Stässer, Cologne-Deutz, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application January 27, 1933, Serial No. 653,928. In Germany February 8, 1932

6 Claims. (Cl. 260—44.2)

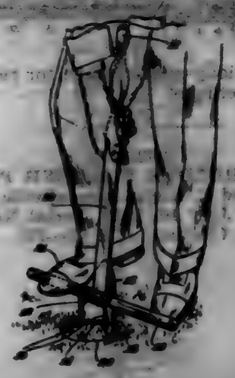


1. Water-insoluble azodyestuffs of the general formula:

wherein the nitrogen atom in the 1-position of the pyrazolone nucleus is attached to a carbon atom of Ar or Ar', Ar and Ar' stand for radicals of the benzene or naphthalene series, z stands for alkyl, a radical of the phenyl series or an esterified carboxylic acid group, R stands for the

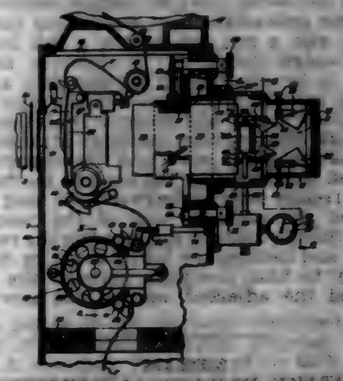
radical of a diazotized aromatic amine, and wherein one a stands for the number 1 and the other a stands for the number 1 or 2, yielding, when produced on the fiber, dyeings fast to washing.

2,028,481
METHOD OF DISTILLATION
Carl William Tucker and Frank Derrill, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del., a corporation of Delaware
Application July 29, 1933, Serial No. 682,826
9 Claims. (Cl. 202—52)



1. A process for hydrolyzing and distilling a solution of a persulfate in a plurality of stages which comprises distilling said solution in the first stage under a pressure less than atmospheric to vaporize water together with a part of the available hydrogen peroxide resulting from the hydrolysis of said persulfate solution, separating substantially all the vapors thus formed from the liquid residue, adding water to said liquid residue and distilling said diluted residue in a subsequent stage.

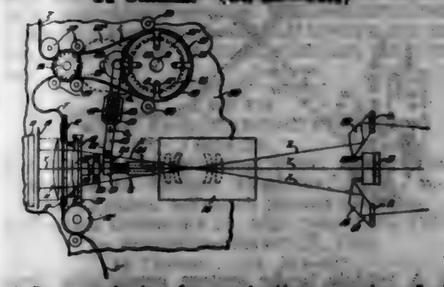
2,028,482
SULPHUR DISPERSION
George R. Tucker, North Andover, Mass., assignor to Dewey and Almy Chemical Company, North Cambridge, Mass., a corporation of Massachusetts
No Drawing. Application July 2, 1932, Serial No. 619,093
1 Claim. (Cl. 252—8)



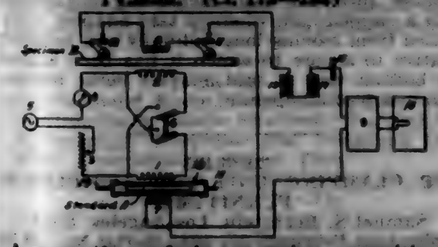
As a new composition of matter, an aqueous dispersion of sulphur which contains a soluble compound comprising the product obtained by condensing an aldehyde with a sulphonic acid of the napthalene series, said composition obtained by grinding the sulphur in an aqueous solution of the compound and being a stable fluid substantially devoid of precipitated sulphur such as would produce caking, and showing a more active Brownian movement than sulphur particles of the same size in aqueous solutions of other protective colloids.

2,028,483
TURF TOOL
George Van Yahres, Westbury, N. Y.
Application February 15, 1935, Serial No. 6,459
2 Claims. (Cl. 56—18)

1. A turf tool comprising a bar having one end bent into a transverse loop, a curved blade having lateral portions, said portions having openings adapted to be brought into alignment with said loop on opposite sides of the latter, respectively, and a rod adapted to be threaded through said openings and loop to mount the rod on the bar and the blade on said rod.

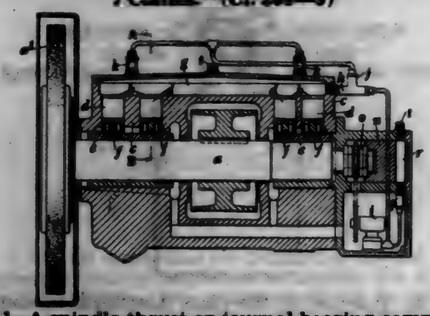


2,028,484
MOTION PICTURE PROJECTOR
Walter L. Wright, Santa Monica, Calif., assignor to Synchrome Corporation, Santa Monica, Calif., a corporation of California
Application November 20, 1933, Serial No. 698,361
20 Claims. (Cl. 88—16.4)



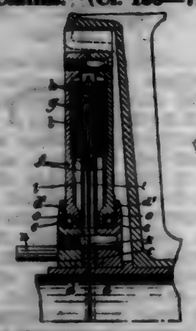
1. In a projector for handling film having longitudinally spaced perforations and bearing a plurality of series of pictures each series comprising a plurality of pictures arranged longitudinally of the film, means for constantly moving the film including moving parts cooperating with perforations spaced a substantial distance along the film, an optical system for projecting shafts of light through the pictures of each of the series to fall on a screen in register, the system including means for projecting light shafts through the pictures of a series, pivotally mounted elements for reflecting the shafts from the end pictures in cross, elements spaced forwardly from the first-named elements to reflect the said shafts to fall in register with the shaft from the center picture, a member bearing on the portion of film between said parts to move in response to variations in the length of the said portion, and a connection between the member and certain of said elements whereby the said elements are pivoted to compensate for such variations.

2,028,485
OPTICAL SYSTEM AND AUTOMATIC CONTROL FOR THE SAME
Walter L. Wright, Santa Monica, Calif., assignor to Synchrome Corporation, Santa Monica, Calif., a corporation of California
Application November 20, 1933, Serial No. 698,763
14 Claims. (Cl. 88—16.4)



1. In a projector for projecting a series of pictures arranged longitudinally of a photographic film, an optical system including means for passing shafts of light through the several pictures of a series, and a plurality of optical elements operable to direct the said shafts of light so that their images fall into register on a screen, one of the optical elements being operable to direct a plurality of said shafts of light and being shiftable relative to the other elements to effect the registration of the images when there are variations in the length of the film, and a control for the optical system operable to move and position said optical element to compensate for variations in the length of a portion of the film, said control including means engaging the film at longitudinally spaced points and a shiftable member operatively associated with the said optical element and having engagement with the portion of film between said points to move in response to variations in its length.

2,028,486
MAGNETIC ANALYSIS
Theodor Zamboni, Englewood, N. J., assignor to Magnetic Analysis Corporation, Long Island City, N. Y., a corporation of New York
Application November 3, 1933, Serial No. 696,270
1 Claim. (Cl. 175—183)



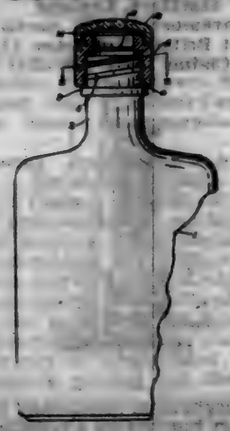
A magnetic analysis apparatus comprising a primary circuit connectible with a source of alternating current and containing two primary coils disposable in inductive relationship respectively with a magnetizable standard and a specimen, switching means whereby said primary coils may be connected in series or in parallel, cooling means adapted to maintain the magnetizable standard at a constant temperature, a secondary circuit containing two secondary coils connected in series opposition and disposed respectively in inductive relationship with said primary coils, a current indicating device associated with said secondary circuit, an eutectic filler adapted to pass current of one frequency only connected in said secondary circuit, and automatic switching means adapted to close the secondary circuit when a specimen is placed within the field of a primary coil.

2,028,487
SPINDLE BEARING
Harry Hales Ashbridge, Ashton-on-Mersey, England, assignor to The Churchill Machine Tool Company Limited, Broadheath near Manchester, England, a British company
Application March 1, 1934, Serial No. 713,595
In Great Britain April 18, 1933
7 Claims. (Cl. 308—9)

1. A spindle thrust or journal bearing comprising two portions, one portion being fixed and one movable towards and away from said fixed portion, together with means to apply a hydraulic load to said movable portion comprising a member movable with said movable portion adapted by its movements to vary the volume of a substantially fluid tight chamber, an orifice in said chamber adapted for admission of hydraulic fluid thereto, and a non-return valve in said orifice.

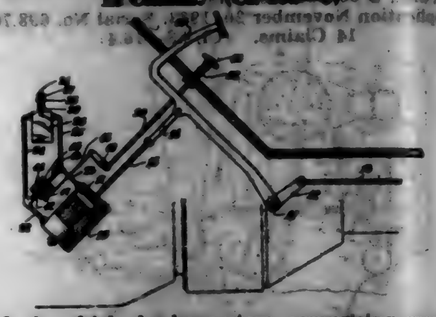
2,028,488
BRAKE
William Leicester Avery, Thorley, Bishop's Stortford, England
Application November 2, 1932, Serial No. 640,886
In Great Britain November 12, 1931
2 Claims. (Cl. 188—72)

1. A brake mechanism comprising in combination, a stationary hub having a radially projecting annular flange thereon, a pair of flexible annular metallic brake discs mounted at their inner peripheries upon the hub so that the flange thereon is disposed between the discs, a pair of annular clamping rings mounted upon the hub and adapted to clamp the inner peripheral surfaces of the discs against the said flange so that opposite surfaces of each disc are held by friction over a substantial area between the adjacent ring and the adjacent side wall of the flange, an expan-



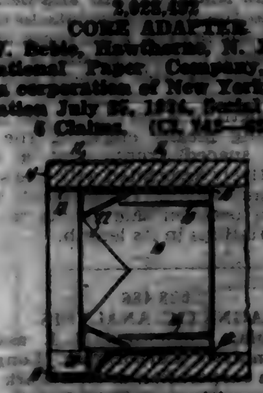
sible fluid capsule for actuating the brake discs, the capsule being mounted upon the hub and disposed between the discs, a hollow casing enclosing the discs and capsule and bearings rotatably supporting the casing upon the said rings, the annular side walls of the casing extending to the rings and being supported against lateral outward distortion at their inner peripheries by means of said bearings.

2,028,489
CLOSURE
William Baker, Toledo, Ohio
Application September 21, 1933, Serial No. 690,365
7 Claims. (Cl. 215—7)



1. In a device of the class described, in combination, a container, a fitting therefor, a nonreplaceable diaphragm forming a part of said fitting extending across an opening in said fitting to prevent passage of the contents of said container, said diaphragm being adapted to be broken away to permit such passage, and a stopper within said opening and removable therefrom after the breaking away of said diaphragm.

2,028,490
CLOSURE
William Baker, Toledo, Ohio
Application September 29, 1933, Serial No. 691,429
8 Claims. (Cl. 215—9)

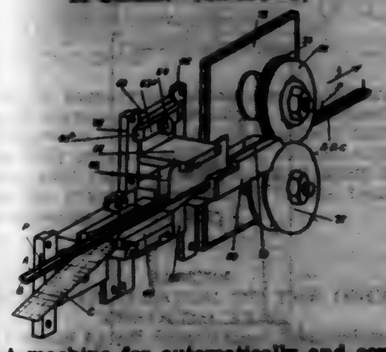


1. In a device of the class described, in combination, a container element, a fitting element, an inaccessible lock to prevent removal of said fitting element from said container element, an easily broken nonreplaceable diaphragm extending across an opening in said fitting element to prevent passage of the contents of said container element, and a removable and replaceable closure adapted for leak-proof application to said fitting element.

2,028,491
BRAKE MECHANISM
Burton A. Barrett, Tenafly, and George E. Perreault, Streamville, N. Y.
Application March 28, 1933, Serial No. 662,788
12 Claims. (Cl. 188—3)

1. A vehicle brake system comprising means under the control of the operator for applying and releasing the brakes, means automatically rendered effective by bringing the vehicle to a stop for holding the brakes applied, and means under the control of the operator for disabling said holding means at will.

2,028,492
CORE ADAPTER
Edwin W. Bebie, Hawthorne, N. J., assignor to International Paper Company, New York, N. Y., a corporation of New York
Application July 26, 1934, Serial No. 736,873
6 Claims. (Cl. 242—68)

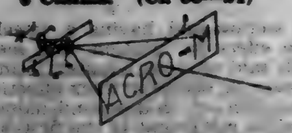


1. A core adapter comprising a cup-shaped member provided with means for engagement with a capped core whereby said adapter is prevented from moving longitudinally and rotatively relative to a core to which it has been applied, the bottom wall of said adapter being provided with a polygonal opening.

2,028,493
WEB CLAMPING UNIT FOR ARTICLES OF FURNITURE
Samuel S. Bernstein, Los Angeles, Calif.
Application February 27, 1933, Serial No. 658,701
4 Claims. (Cl. 155—179)

4. In an article of furniture having a [illegible] frame; a slotted flange member mounted on one side of said frame; a flexible strip having a loop fold on one end inserted through the slot in said flange member; retaining means in the loop of said fold for holding same against movement through said slot; and means for securing the other end of said strip to the opposite side of said frame, said last mentioned means comprising a slotted member, yieldable means securing said slotted member to said frame, a loose fold in the other end of said strip extending through the slot in said slotted member, and retaining means in said last mentioned fold for holding the strip against movement through said last mentioned slot.

2,028,494
MACHINE FOR MAKING FINISHING WELTS
Paul Blanchet and Gaston Tillie, Paris, France, assignors to Société Anonyme: F. A. C. A., Neuilly, France, a French limited company
Application December 14, 1934, Serial No. 757,577
In France December 21, 1933
18 Claims. (Cl. 154—1)



1. A machine for automatically and continuously making welts of the type formed of juxtaposed elements such as strips and cords, comprising an upstanding frame, dragging means on said frame for pulling each welt element from a separate feed, guiding means on said frame for causing the welt elements to travel along separate paths, cement applicators mounted on said frame and traversable by selected elements on their way from their feeds to the dragging means, a drying chamber located in the paths of the selected elements between the feeds and the dragging means, and means on the frame for juxtaposing and shaping the welt elements intermediate the drying chamber and dragging means.

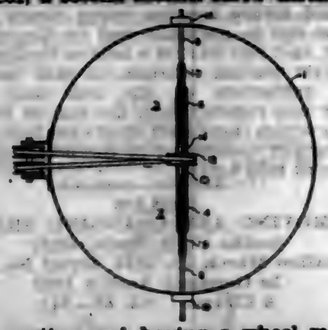
2,028,495
LOCK
John Raymond Brook, Fairmont, and Arthur[illegible] S. Strassbeck, Castle Shannon, Pa., assignors to American Telephone and Telegraph Company, a corporation of New York
Application January 27, 1933, Serial No. 653,168
1 Claim. (Cl. 70—73)

A lock comprising a casing having an aperture therein, a bolt, a shoulder on said bolt, a barrel having a slot for the reception of a key, an extension on said barrel engaged with said shoulder for causing movement of said bolt as said barrel is rotated, said casing having a notch adjacent said barrel to permit the insertion of a key in said barrel only when said notch and said slot are in alignment, a key operated tumbler for controlling the retraction of the bolt and a spring member mounted on the exterior of the casing with one end thereof passing through said aperture, said spring member being biased to cause said one end to normally rest on the surface of the bolt, said bolt having a hole so located therein that after partial rotation of said barrel and partial retraction of the bolt said hole is brought into registry with the end of the spring member which thereupon enters the hole and prevents further movement of the bolt and further rotation of said barrel.

2,028,496
MOVING AND CHANGING SIGN
Areide Chiti, Turin, Italy
Application March 29, 1934, Serial No. 718,014
In Germany April 3, 1933
6 Claims. (Cl. 88—24)

1. In an apparatus for producing moving illuminated inscriptions, signs or designs for advertising purposes, the combination of an opaque film, in which the letters or signs are formed by a sequence of small holes, a source of light, a projector and a screen constituted by a double convex lens system, in which each lenticular element is in such relation with said holes that each luminous beam passing through each hole of the film reproduces a separate distinct and sharp image of said source of light.

2,028,497
RADIO SIGNALING SYSTEM
Leroy M. E. Clansing, Chicago, Ill., and Joseph Edwin Smith, Jr., Gary, Ind.
Application June 22, 1931, Serial No. 546,362
12 Claims. (Cl. 250—2)

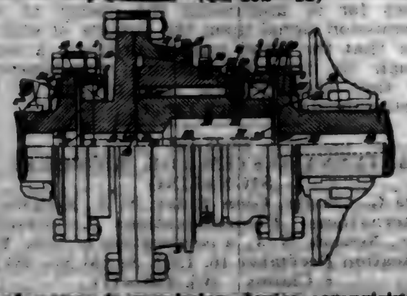


12. In a signaling arrangement, the combination with a radio receiver carried in a vehicle and having adjustable means to receive transmissions over a predetermined frequency range, and means for audibly indicating the same, and warning means useful in the manual operation of the vehicle and operable in response to a transmission signal outside of said frequency range, said warning means comprising coupling devices for so impressing the energy of said transmission signal upon the circuits of said receiver that the latter audibly produces a signal through its indicating means simultaneously with that received over any portion of the predetermined frequency range.

2,028,498
ANTENNA SYSTEM FOR MICROWAY SIGNALING
André G. Clavier, Glen Ridge, N. J., assignor to International Communications Laboratories, Inc., Newark, N. J., a corporation of New York
Application December 16, 1931, Serial No. 581,242
8 Claims. (Cl. 250—11)

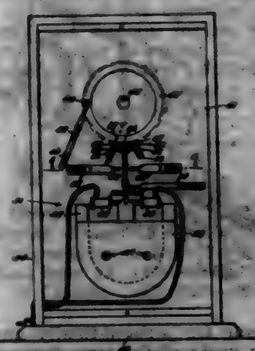
1. In combination with a parabolic reflector, an antenna having two telescoping sections mounted

at the focal point of said reflector, a rectangular cross-sectioned insulation member fixedly secured at one end to one of said sections and at its other end to said reflector by means of a bearing permitting axial movement while preventing rotation thereof, a second section screw-threaded to



said first section and having a wheel mounted thereon to effect its rotation, and means associated with said sections adapted to micrometrically increase or decrease their effective lengths by the rotation of said second-named section effecting axial movement of the first-named section.

2,028,499
LIGHT BAFFLING SCREEN
Clarence W. Cole, Los Angeles, Calif.
Application January 4, 1935, Serial No. 2324
2 Claims. (Cl. 240—78)

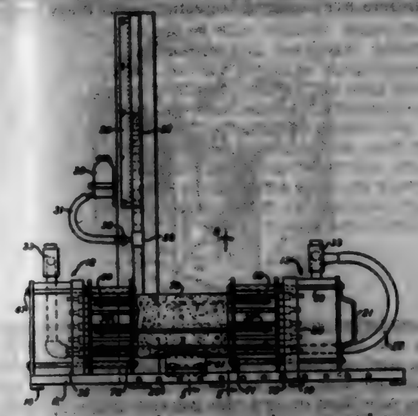


1. A light baffling screen comprising a rectangularly shaped frame including longitudinal channel shaped members having inwardly turned flanges formed thereon, a plurality of light baffling plates disposed in said frame with their opposite ends projecting into the side members thereof, and a plurality of channel shaped separators disposed between said light baffling plates and removably mounted in said frame.

2,028,500
POWER-TRANSMISSION COUPLING
Stanley Smith Cook and Louis Mortimer Douglas, Wallsend-on-Tyne, England, assignors to The Parsons Marine Steam Turbine Company, Limited, Wallsend-on-Tyne, England
Application June 8, 1934, Serial No. 725,684
In Great Britain June 8, 1933
7 Claims. (Cl. 192—41)

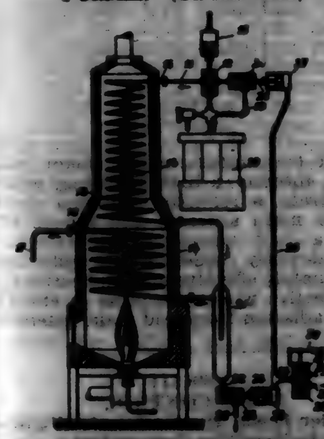
1. A power-transmission device comprising, in combination, a driving and a driven element subject to misalignment, each of said elements being provided with a set of dogs and an interposed coupling device in power-transmitting relation with said driving and driven elements and tiltable in relation thereto to accommodate said misalignment, said coupling device including coaxially-juxtaposed end members carrying sets of dogs engaging respectively with said sets of dogs on said driving and driven elements and including also an intermediate member in screw-threaded relation to one of said dog-carrying members and engageable in driving association with the other of said dog-carrying members.

2,028,501
ELECTRIC GAUGE
Rich Cowan, Cemya, Tex.
Application April 13, 1932, Serial No. 606,457
1 Claim. (Cl. 74—150)



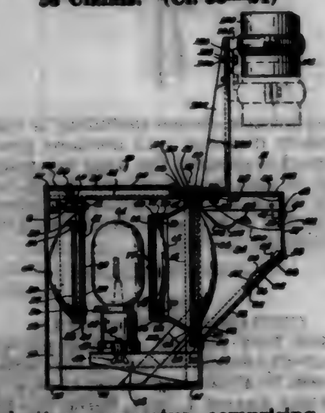
Feed means for ratchet wheels comprising a pair of pawls, means for swingably mounting the pawls adjacent a wheel for engagement therewith, adjustable fulcrums for the said pawls, said fulcrums each consisting of a slotted plate, a member disposed through the slot of the plate for tightening the plate against a suitable support, and a spring connecting said pawls together and tensionally urging the same toward the wheel, each of said plates being provided with a lug against which said pawls fulcrum.

2,028,502
SEASONING PLASTIC
Paul W. Crane, Riverside, and Reuben T. Fields, Arlington, N. J., assignors to Du Pont Viscoloid Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 27, 1933, Serial No. 668,922
5 Claims. (Cl. 18—51)



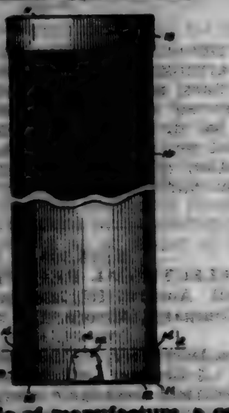
1. Method of seasoning extruded cellulose ester plastic sheeting comprising running the sheeting through sodium chloride brine, the temperature of said brine at the point where the sheeting is introduced therein being relatively low and the temperature of the brine progressively increasing along the path of travel of the sheeting at a rate correlated with the rate of decrease of solvent content in the sheeting as it travels through the brine so that the temperature of the sheeting does not rise sufficiently to cause distortion of the sheeting, and thereafter seasoning the sheeting further in air.

2,028,503
MEASURING APPARATUS
Walter G. Doherty, New York, N. Y.
Application November 13, 1933, Serial No. 697,824
21 Claims. (Cl. 33—147)



12. In a measuring apparatus, members for engaging therebetween an object to be measured, fluid reservoirs into which the members movably and variably project, and a fluid column communicating with the reservoirs for indicating by its length the average projections of the members when engaging the object.

2,028,504
STEAM GENERATOR OF THE ONCE THROUGH TYPE
Hans Conrad Egloff, Winterthur, Switzerland, assignor to the firm of Sulzer Frères Société Anonyme, Winterthur, Switzerland
Application January 24, 1934, Serial No. 708,035
In Switzerland November 15, 1932
4 Claims. (Cl. 122—379)



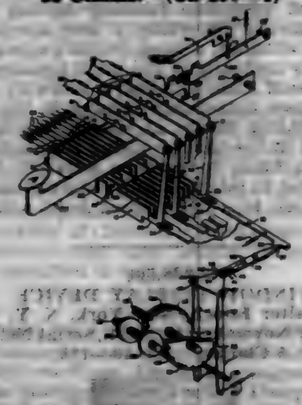
1. The method of removing impurities introduced in the tubes of steam generators of the once-through type by feed water, which comprises heating the water fed to the generator to the boiling point in a first zone of the tube, gradually converting the water to saturated steam in a second zone of the tube with resultant precipitation therein of impurities which tend to adhere to the walls of the tube, superheating the steam in a third zone of the tube, and periodically increasing the rate of feed of the liquid to the tube to advance along the tube the zone where said impurities normally tend to adhere, utilizing the flow of water during the period of increased feed to loosen said impurities from the tube walls, and removing loosened impurities from the working medium flowing through the tube.

2,028,505
LAMP AND LENS HOUSING FOR PROJECTORS
August D. Ritzau, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York
Application May 31, 1930, Serial No. 457,880
Renewed September 25, 1934
58 Claims. (Cl. 88—24)

1. Projecting apparatus comprising a main housing, an extension housing having a light aperture, means providing a lens aperture between the housings, a lamp socket supported approximately centrally in the main housing, a lens mount in said main housing, a plurality of condensing lenses detachably secured in the mount, and cooperating means at spaced points on the mount and in the main housing for securing the mount detachably in position adjacent the lens aperture and in laterally and longitudinally centered relation to a determined light axis of the housing.

2,028,506
WINDOW DISPLAY DEVICE
Walter Enoch, New York, N. Y.
Application November 15, 1934, Serial No. 753,076
5 Claims. (Cl. 40—126)

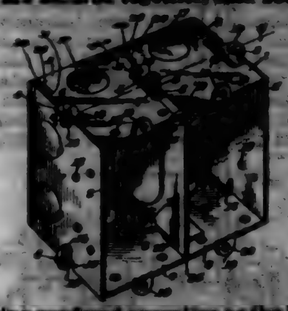
1. In an article of manufacture, a cap for the end of a hollow column, comprising a cup shaped



member having upstanding tabs provided with outwardly turned points and disposed inside the walls of the member to engage and hold the end of the column against the said wall.

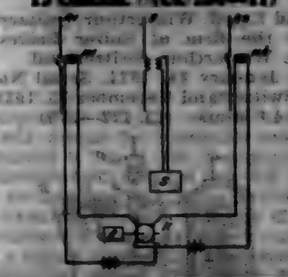
2,028,507
PYROMETRIC DEVICE
Herbert B. Henderson and Edward O. Henderson, New Brighton, Pa.
Application April 28, 1933, Serial No. 668,123
5 Claims. (Cl. 73—32)

2. A pyrometric device including a body having angularly disposed wall portions providing a base adapted to support the body in upright position, one of said wall portions being thin and having its opposite major surfaces exposed to the free circulation of kiln gases thereabout when the body is disposed upright.



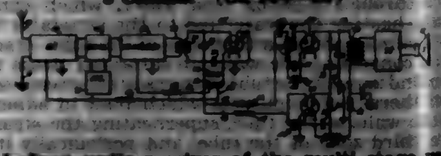
2,028,508
CIPHERING APPARATUS
Parker Hitt, New York, N. Y., assignor to International Communications Laboratories, Inc., New York, N. Y., a corporation of New York
Application August 7, 1931, Serial No. 555,649
15 Claims. (Cl. 197—4)

1. In a ciphering apparatus, a set of permutation bars arranged in pairs, a second set of permutation bars, means associated with each bar of said second set and adapted to co-operate with one bar or the other of each pair of bars of said first set, reversing means for controlling the operation of said first named means and means for variably operating said reversing means.



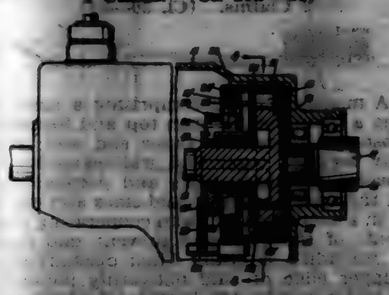
2,028,509
ELECTRICAL RECEPTACLE
John Knell, Aurora, Ill., assignor to All-Steel-Equip Company, Aurora, Ill., a corporation of Illinois
Application December 19, 1933, Serial No. 647,848
5 Claims. (Cl. 247—14)

5. An electrical receptacle comprising a plurality of box body members adapted to be arranged and secured together in juxtaposed position to form a gang receptacle, a barrier plate adapted to lie transversely within said receptacle between adjacent body members, cooperative interfitting means on the plate and body members to positively secure the plate in position when the body members are secured together, said body member



means being rendered operative as the body members are brought into operative juxtaposed position, and means on the body members to secure them together, said last named means being operative whether or not the barrier plate is in place between the body members.

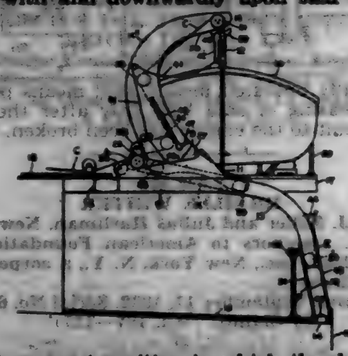
2,028,510
TRANSMITTER FOR ELECTROMAGNETIC WAVES
Ernst Kramar, Berlin-Tempelhof, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany
Application October 22, 1932, Serial No. 638,907
In Germany April 16, 1932
15 Claims. (Cl. 250—11)



1. A radio transmitting arrangement comprising a main antenna, a high frequency generator coupled thereto, a reflecting antenna on either side of said main antenna and spaced in line therewith a half wavelength therefrom, and means for abruptly rendering said reflecting antenna alternately effective and ineffective so that one is ineffective whilst the other is effective to reflect the radiation from said main antenna.

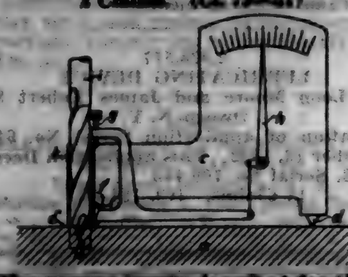
2,028,511
TONE CONTROL
Harold Miller Lewis, Douglaston, N. Y., assignor to Hazeltine Corporation
Application August 28, 1933, Serial No. 686,681
3 Claims. (Cl. 250—20)

1. In a radio receiver of the multi-stage vacuum-tube type, a radio-frequency amplifying section, a detector, an audio-frequency amplifying section, a tone control circuit including a voltage responsive variable impedance device for controlling the fidelity of said audio-amplifying section, circuit means for causing said detector to develop audio-frequency voltages in accordance with the modulation of the carrier wave being received and a direct-current potential substantially proportional to the average amplitude of said carrier wave, means for applying said audio-frequency voltages to said audio-frequency amplifying section, and a plurality of means for applying said direct-current potential to said voltage responsive variable impedance device and to said radio-frequency amplifying section, whereby the fidelity and amplification of signals reproduced is controlled by the average amplitude of said carrier wave.



2,028,512
FREEWHEELING DEVICE FOR MOTOR VEHICLES
Albert Maier, Friedrichshafen, Germany, assignor to Zahnradfabrik Friedrichshafen Aktiengesellschaft, Friedrichshafen, Bodensee, Germany
Application January 30, 1934, Serial No. 708,947
In Germany February 14, 1933
1 Claim. (Cl. 192—48)

A device of the type comprising: two shafts substantially in alignment with each other; means for connecting both shafts in either direction of rotation; means for eliminating the connecting effect in one driving direction; a fixed friction surface; a rotating friction surface in fixed relation to one of said shafts; a shiftable rotatable member having two different friction surfaces, one of said latter surfaces being adapted to co-operate with said fixed friction surface and the other one being adapted to co-operate with said friction surface in fixed relation to one of said shafts; means for shifting said shiftable member alternately into and out of either operative position; and means for operating said connecting means between said two shafts; said operating means being in operative connection with said means for shifting said shiftable member.

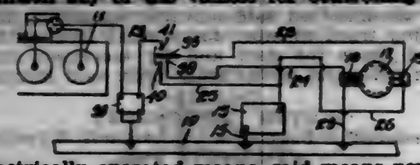


2,028,513
DAVIT MECHANISM DEVICE FOR LAUNCHING LIFEBOATS
Thomas H. Morton, Toronto, Ontario, Canada
Application August 13, 1931, Serial No. 557,757
22 Claims. (Cl. 9—27)

1. A davit structure comprising a movable supporting and guiding track member, track means normally supporting said movable supporting and guiding track member above a ship deck with its outward end adjacent the ship side and also guiding said movable supporting and guiding track member to move outward and downward with its outward end to a lowered position at the ship's side, a davit proper having an arm formation for boat suspension and movably mounted on said movable supporting and guiding track member for normal location inboard above the deck and for movement outward with and downwardly upon said member

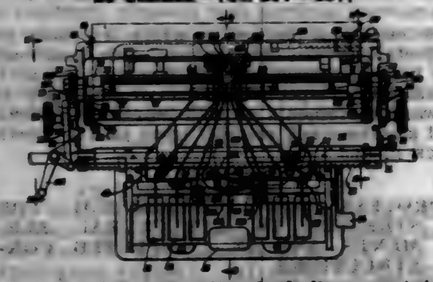
to a lowermost position in which the davit arm projects outboard from the ship side, positioning the boat for lowering, and common means for limiting the respective extents of downward and upward movements of said movable supporting and guiding track member upon said supporting track means.

2,028,514
PROCESS FOR DETERMINING THE STRESSES IN STRUCTURAL ELEMENTS AND IN COMPLETED CONSTRUCTIONS
Josef Mather, Aachen, Germany, assignor of one-half to Schurmag Schumacher Metallwerke Aktiengesellschaft für Präzisionsmechanik, Aachen, Germany
Application August 18, 1932, Serial No. 628,241
In Germany August 17, 1931
2 Claims. (Cl. 73—41)



1. The process herein described for the determination of stresses in structural elements and completed constructional works which consists in marking two measuring points on the body under stress to be tested, destroying the equilibrium of the stresses present in the body by removing a minute part of the material at a spot in the immediate neighborhood of one of the measuring points, though without materially impairing the carrying capacity of the body, and measuring the alteration thus produced in the distance between the measuring points as an index of the stress prevalent at said spot in the body.

2,028,515
MECHANISM FOR LOCKING GAS TANK COVERS
Frederick C. McClanahan, Homer, La.
Application February 27, 1935, Serial No. 8,573
6 Claims. (Cl. 123—146.5)



1. The combination with a gas tank cover of a lock for said cover, electrically operated means

for releasing said lock, means operated by the ignition key of the vehicle for controlling said

electrically operated means, said means permitting releasing of said lock only after the ignition circuit to the engine has been broken.

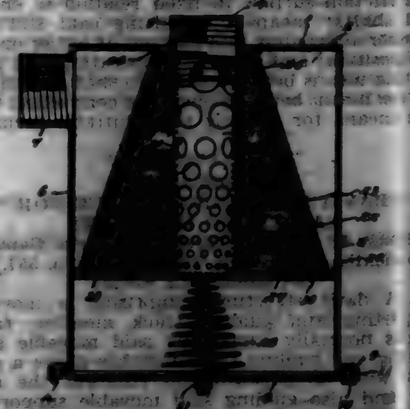
2,028,516
BRAILLE WRITER
George J. Miller and Julius Hurliman, New York, N. Y., assignors to American Foundation for the Blind, Inc., New York, N. Y., a corporation of Delaware
Application September 17, 1932, Serial No. 633,586
25 Claims. (Cl. 197—127)

1. An embossing writer including a rotatable drum for the paper, introductory feed rolls leading to the drum, a paper clamping jaw carried by the drum, means interlocking with the drum to stop its rotation at a predetermined point, and means for simultaneously retracting one of said rolls and said stopping means.

2,028,517
LUBRICATING DEVICE
George Leep Moore and James Robert Steele, Owego, N. Y.
Continuation of application Serial No. 646,983, December 12, 1932. This application December 1, 1933, Serial No. 700,486
12 Claims. (Cl. 184—3)

1. A lubricator adapted to be mounted adjacent a rail, said lubricator comprising a lubricant reservoir, a lubricant distributing member, and a chambered member associated with said reservoir and said distributing member having its chamber in communication with said reservoir and said distributing member, an expansible member connecting the chamber member and the reservoir, and a plunger member within said chambered member adapted, in service, to transmit a percussive action on the lubricant to force said lubricant from said distributing member, and means for automatically refilling said reservoir and said chambered member adapted to maintain a constant head of lubricant within said reservoir and said chambered member, whereby a predetermined quantity of lubricant is forced from the distributing member upon the operation of the plunger.

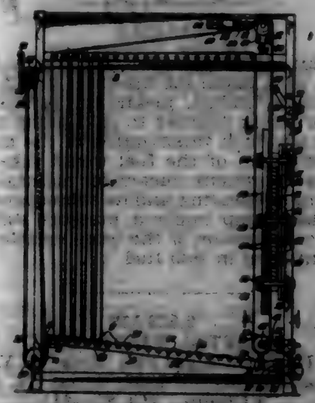
2,028,518
CELL OF THE SOLID ELECTROLYTE TYPE
René Oppenheim, Gennevilliers, France, assignor to Société Anonyme Le Carbone, Gennevilliers, France
No Drawing. Application November 28, 1933, Serial No. 700,248. In France December 5, 1932
4 Claims. (Cl. 136—153)



1. The combination, in an electric cell of the solid electrolyte type, of an initially dry electrolyte mixture comprising a solidifying agent in the form of a quantity of dry flour, farina or the like which is capable of being converted to a jelly by cooking, and an active ingredient comprising an alkaline base of the class of soda and potash which, upon addition of water to the dry mixture to put the cell into service, is capable of producing a sufficient amount of heat within said cell to cook said solidifying agent in situ and cause the same together with said active ingredient to solidify into a jelly-like mass of electrolyte.

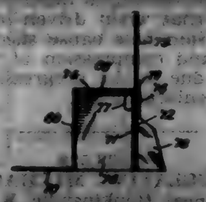
2,028,519
TOOTHBRUSH SPOON
Jessie Evelyn Fotheringham and Frederick William Marlow, Toronto, Ontario, Canada
Application August 20, 1934, Serial No. 740,571
2 Claims. (Cl. 30—25)

1. A medicine spoon comprising a spoon bowl having a permanently open top and formed with a substantially vertical inner end wall, an outwardly inclined outer end wall extending to a transverse discharge edge, and parallel vertical sides, the upper edges of said sides and end walls lying in a common plane and cooperating to guide contents of the bowl and prevent said contents from spreading laterally when discharging over the upper edge of said outwardly inclined end wall, and a handle the bottom of which is on a level with the bottom of said bowl and of a greater width than the same so as to prevent lateral tilting of the bowl when the spoon is set down.



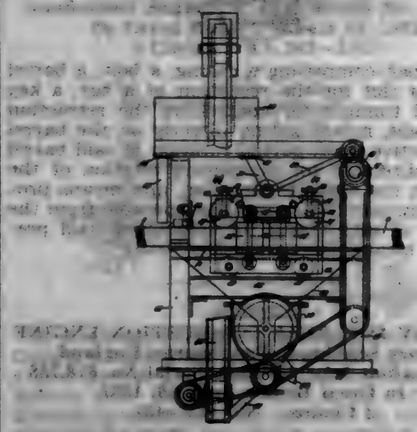
2,028,520
STRAINER
Howard D. Phillips, Vancouver, Wash.
Application January 29, 1935, Serial No. 2,509
4 Claims. (Cl. 210—165)

1. A strainer, comprising a casing having a central inlet at its top and an outlet adjacent its



top, an apertured pipe leading downwardly from said inlet to a point spaced from the bottom of the casing, an apertured plate dividing the casing transversely and abutting the inner end of said apertured pipe, a cone-shaped strainer unit interposed between the plate and the top of the casing and surrounding the apertured pipe, the base of said unit bearing on said plate and the top engaging the wall of the casing having the inlet therethrough, said casing bottom being removable and spring means carried by said bottom and engaging said plate to maintain the same and the strainer unit in operative position.

2,028,521
ELECTRIC SIGN CONTROLLER
Frank C. Reilly, New York, N. Y.
Application July 25, 1932, Serial No. 624,192
1 Claim. (Cl. 74—242.15)



In a machine of the character disclosed, a roll carrying frame pivotally supported at one end, an equalizing bridle attached to the opposite end of said pivoted roll carrying frame and a flexible connection engaged with said bridle for raising and lowering said end of the frame.

2,028,522
DISPLAY DEVICE
Alexander Rice, Brooklyn, N. Y., assignor to Juxte-Display Corporation, New York, N. Y., a corporation of New York
Application October 23, 1933, Serial No. 695,439
4 Claims. (Cl. 206—44)

1. A display device formed from a single blank of material cut and scored to provide a body adapted for the display of articles of merchandise and simulations thereof, said body having a rear wall formed by folding two portions of said blank against each other and extending one of said portions above the body to constitute a back for the device, said two portions having openings therein which register with each other when the portions are folded, and end members for the said body having flaps provided with tabs insertable through said registered openings and bendable into engagement with one of said portions to thereto and thereby maintain said end members in position.

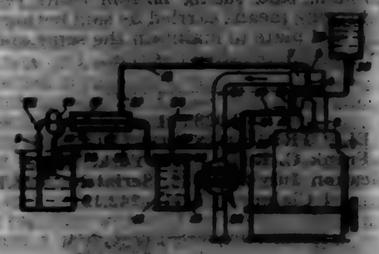
2,028,523
APPARATUS FOR THE MANUFACTURE OF BRICKS OR THE LIKE
George Ernest Rogers, Morden, England
Application March 7, 1935, Serial No. 9,240
In Great Britain March 17, 1934
6 Claims. (Cl. 25—1)

1. Apparatus for facing shaped strips of soft clay comprising in combination a frame having a strip-supporting table, means for supplying facing material to at least one face of the clay strip, means for spreading the said facing material on the strip, carriage guides operatively connected to the frame, a reciprocable carriage on the said carriage guides and having roller means rotatably supported therein, and arranged to bear on the clay strip, and means for reciprocating the said carriage whereby the facing material is rolled into the strip.

2,028,524
NEEDLE GUARD ATTACHMENT FOR SEWING MACHINES
Louis Sanil, Brooklyn, N. Y.
Application November 7, 1933, Serial No. 696,943
2 Claims. (Cl. 112—261)

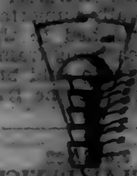
1. A needle attachment for sewing machines, comprising a front portion for extending along the long finger of a presser foot and having a horizontal continuation extending near the shank of the presser foot, and a rear portion from said continuation extending vertically along the short finger of the presser foot, a support portion swivelly mounted on the horizontal continuation and adapted to be clamped upon a support collar or presser rod, means for holding said horizontal continuation fixed in various swivelled positions, and said support portion having offset parts with openings for selective engagement with a clamp screw coacting with said collar or presser rod.

2,028,235
LOCK
Frederic E. Schmidt, Crestwood, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application January 23, 1933, Serial No. 2,156
14 Claims. (Cl. 70—31)



1. A lock comprising a casing, a bolt, a barrel having a slot for the reception of a key, a key operated tumbler for controlling the retraction of the bolt, means acting directly on the barrel and effective upon partial rotation of said barrel in one direction for preventing rotation of the barrel in the opposite direction, and means projecting outside the casing and operable from the exterior of said casing for controlling said preventing means.

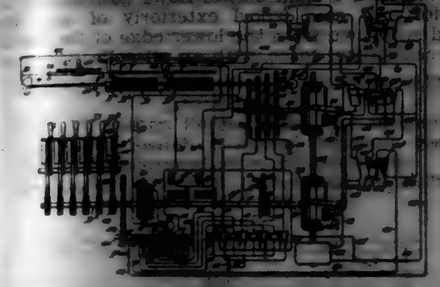
2,028,236
ROTARY INTERNAL COMBUSTION ENGINE
Henry Schulmann, Pangbourne, England
Application June 22, 1932, Serial No. 618,782
In Great Britain June 30, 1931
2 Claims. (Cl. 123—43)



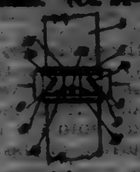
1. A rotary internal combustion engine of the type referred to comprising in combination an annular rotary multi-cylinder unit, a co-operating rotary multi-piston unit co-axial with the cylinder unit, valve and ignition means operable to occasion explosions alternately on opposite sides of the pistons, those on one side producing power strokes of the cylinder unit about the common axis of rotation of the units and those on the other side producing auxiliary strokes of the piston unit about said common axis and in the same direction as the strokes of the cylinder unit, the auxiliary strokes of the piston unit serving to return the two units to their initial relative positions at the commencement of the power strokes of the cylinder unit and means comprising stationary reaction members cooperating with unidirectional clutch elements on the rotating units to prevent reverse rotation of each unit during the strokes of the other unit, the cylinder unit having a moment of inertia substantially exceeding that of the piston unit and constituting thereby a flywheel in the engine from which the power of the engine is arranged to be transmitted.

2,028,237
INTERNAL COMBUSTION ENGINE IN WHICH THE FUEL IS PREHEATED
Oscar Simmen, Winterthur, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application November 22, 1934, Serial No. 754,402
In Switzerland December 6, 1933
15 Claims. (Cl. 123—32)

1. In an internal combustion engine the combination of a pump for injecting liquid fuel into the engine cylinders, means for preheating the fuel prior to its delivery to said pump to a temperature at which vaporization of the more volatile constituents of the fuel would take place at atmospheric pressure, means for maintaining said fuel during preheating and its subsequent delivery to the fuel pump under a pressure sufficient to prevent vaporization of the more volatile constituents contained in said fuel.



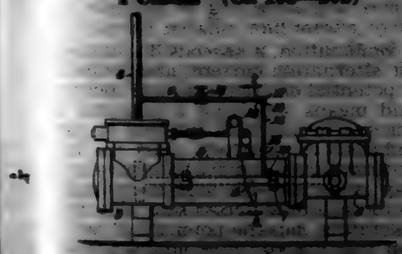
2,028,238
METAL FASTENING
Harry E. Hips, New York, N. Y.
Application July 15, 1932, Serial No. 622,691
4 Claims. (Cl. 85—31)



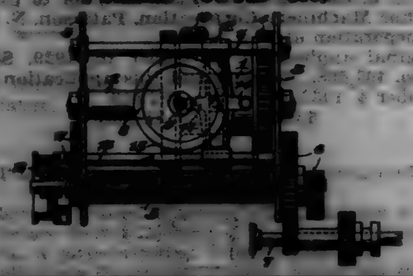
1. In a fastener for metal work a tapered pin member comprising a series of independent deformable conical enlargements, said enlargements progressively increasing in taper from the entering end such that when driven into a hole the side walls of said hole cause successive greater deformation and compression of the respective enlargements due to the progressive increase of taper of said enlargements.

2,028,239
CALCULATING MECHANISM
Clyde Smith, near Hopkinsville, Ky., assignor to International Communications Laboratories Incorporated, New York, N. Y., a corporation of New York
Refiled for abandoned application, Serial No. 184,182, August 2, 1927. This application April 12, 1929, Serial No. 355,215
40 Claims. (Cl. 235—60)

1. In a calculating machine, the combination of a counter, means settable in accordance with a commodity quantity, and [illegible] of the weight thereof, means settable in accordance with the extent of price change in said commodity, and means for operating the counter in a lower or higher value in accordance with, jointly, the settings of said settable means.

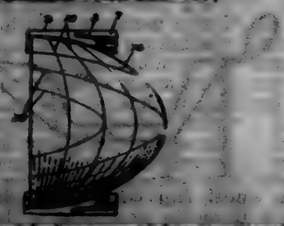


2,028,240
CLAMPING BUCKLE
Leo Steiner, Budapest, Hungary
Application August 25, 1934, Serial No. 741,438
In Germany September 8, 1933
4 Claims. (Cl. 24—194)



1. A buckle comprising a pair of clamping members adapted to clamp a strap between them, in combination with a member movable crosswise to the longitudinal axis of said clamp and projecting sideways beyond said clamping members so as to be moved inwards by pressure exerted upon the opposite sides of the buckle between two fingers of one hand, and having such mechanical connection with both said clamping members that its inward movement causes the clamping members to drive inwards and its movement in the longitudinal direction of the strap is communicated to the clamping members.

2,028,241
PUMP FOR COMPRESSED LIQUEFIED GASES
Claude F. Tours, Mountain Lakes, N. J., assignor to The Petroleum Process Corporation, Wichita, Kans., a corporation of Kansas
Application July 31, 1933, Serial No. 682,948
1 Claim. (Cl. 103—202)

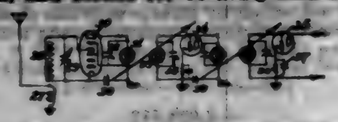


In a pump for compressed liquefied gases, the combination of steam and pump cylinders with pistons operating therein connected by a piston rod operating through glands at the confronting ends of the cylinders, steam connections with the steam cylinder and piston rod steaming means supplied from said steam connections and located adjacent the gland of the pump cylinder and including a steam nozzle directed toward the piston rod connected by piping with the steam connections aforesaid, said piping having a controlling valve therein.

2,028,242
CABLE AND ROPE WINDING APPLIANCES SUCH AS WINCHES AND HOISTS
Wilfred Charles Trolesgen, Brooksmerse, England
Application August 16, 1934, Serial No. 739,559
In Great Britain August 16, 1933
6 Claims. (Cl. 242—156)

1. A winch of the class described including side frames, a shaft mounted between said side frames, a gear pinion journalled in the side frames and having gear teeth extending from end to end thereof, a winding drum mounted to rotate and slide on the shaft, gear teeth associated with the drum for continuously meshing with the teeth of the gear pinion during the rotary and sliding movement of the drum, means for reciprocating the drum, and cable guiding means fixed with reference to the drum.

2,028,243
TURBINE BLADE
Fritz Alexander Wettstein, Lidingö, Sweden, assignor to Aktiebolaget Ljungström, Stockholm, Sweden, a corporation of [illegible]
Application January [illegible], 1932, Serial No. 588,350
In Germany [illegible] 1932
12 Claims. (Cl. [illegible])



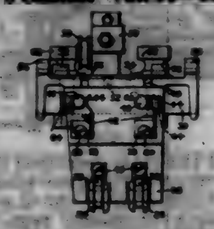
1. A turbine blade comprising a member of sheet material having the form of a catenary-like curve between its ends and curvilinear in section in three right angularly related planes.

2,028,244
VARIABLE-SELECTIVITY RADIO RECEIVER
Alfred Crossley, Chicago, Ill., assignor to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application May 11, 1934, Serial No. 725,460
9 Claims. (Cl. 250—20)

1. A fixed-frequency amplifier including pairs of coupled resonant circuits, each of said pairs comprising two ferro-magnetic-cored inductors, one inductor in each of said pairs being rotatable

and mounted at an oblique angle to its axis of rotation, and means for rotating said rotatable

inductors in unison to vary the selectivity of said resonant circuits.



2,028,535

THERMOSTATIC WAX POT

Harry E. Dow, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Original application November 16, 1929, Serial No. 407,662. Divided and this application October 4, 1933, Serial No. 692,119

6 Claims. (Cl. 91—55)

1. A wax pot having, in combination, a receptacle for the wax and a stripper comprising a fixed surface and a spring blade cooperating therewith to wipe wax from a thread passed between, the acting end of the blade being split into three fingers, the central one of which presses the thread against the fixed surface while the outer ones prevent lateral escape of the thread.

2,028,536

WHEEL RIM

Carolus L. Ekergian, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania

Application July 9, 1932, Serial No. 621,539

14 Claims. (Cl. 152—30)

1. A wheel rim comprising sheet-metal elements defining the axial area of the rim and having spaced inner surfaces, and annularly extending interbracing means for said surfaces including a sheet-metal element having portions disposed over substantial areas of said surfaces, respectively, and a transversely extending section bridged between said portions.

2,028,537

SPINNING SPINDLE

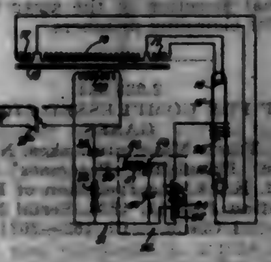
Emile H. Erhard, Dedham, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine

Application September 29, 1934, Serial No. 746,188

2 Claims. (Cl. 242—149)

1. The combination of a spinning spindle having an oil-containing base, a bolster, a whorl, and a circumferentially extending oil reservoir in said base, said spindle being of the type wherein oil supplied to said bolster flows downwardly interiorly of said whorl exteriorly of said base and is thrown from the lower edge of the former by centrifugal force, with an oil-collecting mem-

ber for collecting the oil thrown as aforesaid, said member completely enclosing the space between said whorl and said oil reservoir, and an open-ended tube extending from the outside of said member downwardly into the oil reservoir to a point below the surface of the oil supply in the reservoir.



2,028,538

STARTING CIRCUIT FOR GASEOUS DISCHARGE LAMPS

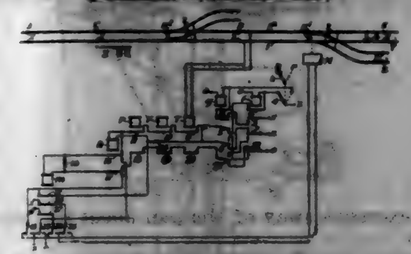
Ellis O. Erickson, Pasadena, Calif., assignor to Claude Neon Electrical Products Corporation, Ltd., Wilmington, Del., a corporation of Delaware

Application February 20, 1933, Serial No. 657,406

9 Claims. (Cl. 175—194)

1. In combination, a gaseous discharge tube, a source of alternating current, and means for applying a potential derived from said source to said tube, said means supplying a potential to said tube sufficient to maintain the tube in operation but insufficient to positively start the tube unaided and having substantial inductive reactance effectively in series with said source and tube, whereby the potential across said tube, when the tube is operating, lags the potential of said source, means for starting said tube adapted to be energized from alternating current to produce a starting effect during a portion only of each half cycle of the energizing alternating current and phase-shifting means connecting said starting means to said source of alternating current for causing said starting means to function as a [illegible] during the cycle of said operating current when

under normal operation conditions of said tube, the potential across said tube would be sufficient to sustain said tube in operation.



2,028,539

RAILWAY TRACK SWITCH CONTROLLING APPARATUS

Arthur W. Fisher, Forest Hills, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

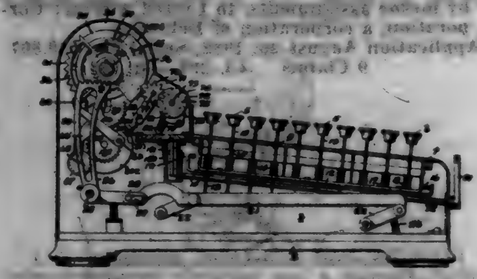
Application March 12, 1934, Serial No. 11,382

6 Claims. (Cl. 246—119)

1. In combination, a railway track switch, a polarized relay having a neutral contact as well as polar contacts, a neutral relay, a traffic contact controlled by traffic conditions and arranged to be closed only when said traffic conditions are suitable for said switch to be moved from one of its extreme positions to the other, normal and reverse manually controllable contacts, a source of current, a normal circuit including said traffic contact and said source of current and controlled by said normal manually controllable contact as well as by said neutral contact and a normal polar contact of said polarized relay for energizing said neutral relay by current of normal polarity, a reverse circuit including said traffic contact and said source of current and controlled by said reverse manually controllable contact as well as by said neutral contact and a reverse polar contact of said polarized relay for energizing said neutral relay by current of reverse polarity, a resistor, a shunt path for the winding of said neutral relay including said resistor and said traffic contact, normal and reverse pick-up circuits for said polarized relay including said normal or reverse manually controllable contacts respectively and said traffic contact as well as said source of current and controlled by a front contact of said neutral relay, normal and reverse stick circuits for said polarized relay including one of its own normal or reverse polar contacts respectively and controlled by a back contact of said neutral relay, a second resistor, a shunt path for the winding of said polarized relay including said second resistor, and means controlled by normal and reverse polar contacts of said polarized relay for operating said switch to normal and reverse positions respectively.

2,028,540

CALCULATING MACHINE



Carl M. F. Fridén, Piedmont, Calif., assignor to Marchant Calculating Machine Company, Emeryville, Calif., a corporation of California

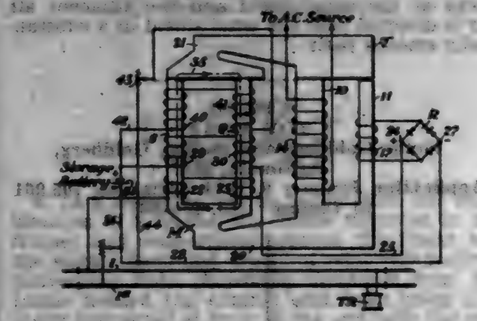
Application February 27, 1932, Serial No. 595,422

Renewed August 2, 1933

4 Claims. (Cl. 235—78)

3. In a calculating machine, differential actuating mechanism comprising settable control members, key set differential mechanism comprising key latches which controls the setting of said members, means for locking said members in selected adjustments during a plurality of operations of said actuating mechanism, and means

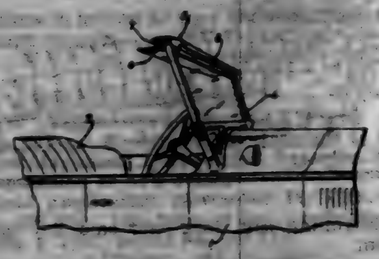
for controlling said lock and said key latches seriatim.



2,028,541

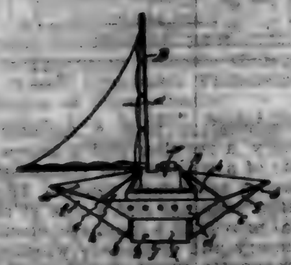
APPARATUS FOR AUTOMATIC REGULATION OF RECTIFIERS

Robert M. Gibson, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania



Application December 20, 1932, Serial No. 647,647

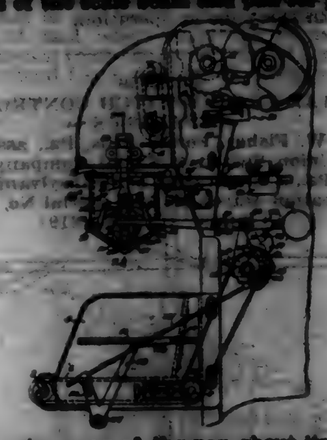
11 Claims. (Cl. 175—363)



1. The combination with a variable load, a storage battery, a rectifier and a source of periodic current; of a transformer comprising a primary winding, a secondary winding, three separate regulating windings and a core of magnetizable material providing a magnetic circuit carrying said primary and secondary windings and a stationary magnetic shunt carrying all three of said regulating windings; means for connecting the primary winding with the source of periodic current, means for connecting the secondary winding with the input terminals of the rectifier, a load circuit for serially connecting a first of said regulating windings and the load with the output of the rectifier to establish a given flux density in the magnetic shunt, another circuit for connecting the storage battery with the output of the rectifier to normally charge said battery and including a second of said regulating windings, and means for connecting the third of said regulating windings across the storage battery and arranged that the flux created therewith substantially neutralizes the normal flux of the second of said regulating windings whereby said first and second of the regulating windings are effective to jointly vary the reluctance of the magnetic shunt in inverse proportion to variations of the output voltage of the rectifier and in inverse proportion to variations of the load resistance.

2,028,542
WINDSHIELD CONSTRUCTION
Michael E. Gluhareff, Stratford, Conn., assignor, by mesne assignments, to United Aircraft Corporation, a corporation of Delaware
Application August 26, 1932, Serial No. 630,607
9 Claims. (Cl. 296—84)

1. In a motor vehicle, in combination, an uncovered compartment, a wind shield adjacent said compartment, a flat plate secured adjacent its leading edge, adjacent the top of said wind shield and projecting rearwardly therefrom, a curved plate projecting forwardly and rearwardly of said wind shield and adjacent to and spaced from said first mentioned plate, and arranged to form a slot for the passage of air between the plates whereby upon relative movement of the wind shield and the adjacent air, air is directed past the wind shield in a substantially smooth path.

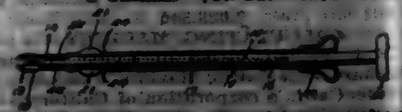


2,028,543
TOY BOAT
Victor Goldberg and Max L. Goldberg, Baltimore, Md.
Application January 9, 1934, Serial No. 705,961
21 Claims. (Cl. 46—83)

1. A toy boat comprising a hull formed as an integral unit from an initially flat blank of material, oppositely disposed flaps projecting from the hull and adapted to be horizontally fastened in overlapping engagement to each other and to said hull and defining a deck thereof.

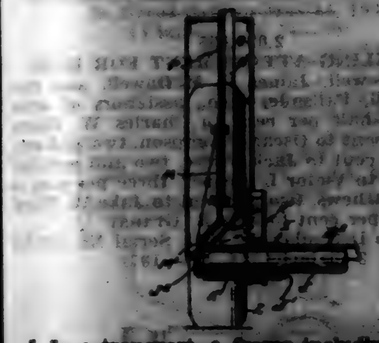
2,028,544
AUTOMATIC WEIGHING MACHINE
Joseph B. Howe, Worcester, Mass., assignor to Geo. S. Harwood & Son, Boston, Mass., a copartnership composed of John H. Harwood and John H. Harwood, Jr.
Application March 28, 1932, Serial No. 601,113
20 Claims. (Cl. 265—43)

1. Weighing mechanism of the class described having in combination a scale beam and a scale pan fulcrumed thereon, means providing a substantially vertical fixed guideway, a slide member arranged to slide vertically in said guideway, and means normally spaced from said slide member, but operative to engage said slide member at all positions of the scale beam and pan for preventing excessive sway of the pan about its fulcrum axis.



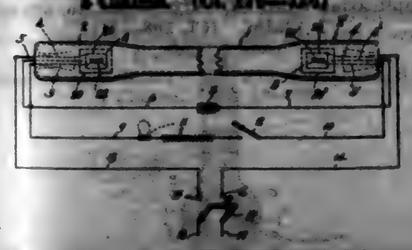
2,028,545
WEIGHING MECHANISM
Joseph B. Howe, Worcester, Mass., assignor to Geo. S. Harwood & Son, Boston, Mass., a copartnership composed of John H. Harwood and John H. Harwood, Jr.
Original application March 28, 1932, Serial No. 603,113. Divided and this application February 26, 1934, Serial No. 712,206
11 Claims. (Cl. 265—8)

2. In combination in a machine of the class described having a scale pan provided with an end member, a sheet metal, wear-resistant element adjustably secured to the end member of the pan, said element having a substantially flat under surface, a knife edge fulcrum engaging said surface, the wear-resistant member having a substantially vertical flange, and a retainer device pivotally secured to the said vertical flange and having an inverted substantially V-shaped notch receiving the knife edge to prevent accidental bodily displacement of the wear-resistant element of the pan transversely of the knife edge.



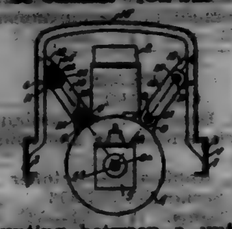
2,028,546
SCREW DRIVER
Frank B. John, Nashville, Tenn., assignor of one-half to William A. Cox, Nashville, Tenn.
Application March 7, 1935, Serial No. 9,[illegible]
3 Claims. (Cl. 145—63)

1. A screw driver, comprising a shank, a handle secured to one end of the shank, a blade on the other end of the shank, a pair of yieldable article-clamping members attachable on the shank and having a gripping means on the forward ends thereof, said clamping members having a plurality of longitudinally spaced openings therethrough, and a pair of opposed cams secured [illegible]



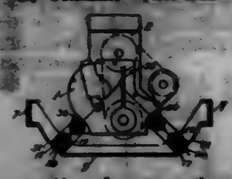
the shank and engageable in a selected opening to hold the clamping members in either operative or inoperative position.

2,028,547
AUTOMOBILE TRANSPORT
Irving H. Judd, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a corporation of Michigan
Original application January 30, 1934, Serial No. 708,914. Divided and this application May 21, 1934, Serial No. 726,527
34 Claims. (Cl. 296—30)



5. In a transport, a frame including a longitudinally extending member, a cross member, and an upright, a walking beam upon the outer side of the longitudinally extending member, a bearing member connected to the cross member, an axle extending through the bearing member and walking beam, and means connected to the upright and axle for holding the walking beam in proper position relative to said frame.

2,028,548
LOW VOLTAGE GAS ARC LAMP
Kurt F. J. Kirsten, Seattle, Wash., assignor to Kirsten Lighting Corporation, a corporation of Washington
Application April 2, 1932, Serial No. 603,545
5 Claims. (Cl. 176—124)



1. In combination a sealed gas containing vessel provided with sealed in terminal electrodes, connectors joining the electrodes, respectively, with opposite sides of an electric circuit through which electrical potential may be impressed on the electrodes to establish an arc between them; said resistance elements connected to said circuit in shunt with the discharge path, resistance elements adjacent the electrodes adapted to become heated by the current flow, thereby to heat the electrodes by radiation, and a corona current conductor extending from the close proximity of one electrode within the vessel to close proximity of the other through which a corona current will be established incident to heating of the electrodes, thereby to stimulate electronic emission from the electrodes and the establishment of an arc between them.

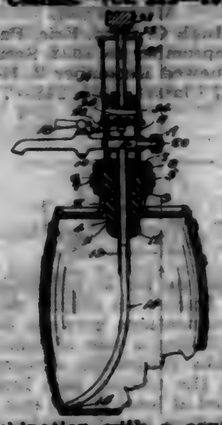
2,028,549
MOUNTING
Hugh C. Lord, Erie, Pa.
Application January 25, 1933, Serial No. 653,635
20 Claims. (Cl. 248—7)

1. A mounting between a unit subjected to torque induced vibration and a support including relatively inclined swinging connectors between the unit and support converging toward the axis of vibration, said connectors being rubber cushioned and some of the cushions at least so constructed and arranged as to yieldingly resist the swinging movement of the connectors.

2,028,550
MOUNTING
Hugh C. Lord, Erie, Pa.
Application September 15, 1933, Serial No. 688,324
Renewed December 2, 1935
17 Claims. (Cl. 248—7)

8. In a mounting for an automobile, the combination of a frame; an engine mounted in the frame; and connections between the frame and the engine including a pair of relatively inclined converging links projecting upwardly from the frame toward the engine, said links being pivotally connected at least at one end with the pivotal axis extending longitudinally of the engine and swinging in response to the torque impulses of the engine to permit the rocking of the engine on a longitudinal axis and having means yieldingly resisting the swinging movement of the links.

2,028,551
MOUNTING AND JOINTS THEREFOR
Hugh C. Lord, Erie, Pa.
Application December 5, 1933, Serial No. 701,064
24 Claims. (Cl. 248—7)

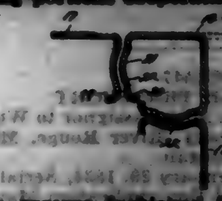


1. A mounting between a unit having oscillatory vibration about an axis and a support including inclined converging swinging connectors between the unit and support, said connectors being provided at least at one of the ends thereof with pivotal rubber cushions so constructed and arranged as to respond to endwise thrusts on the connectors through shear stress of the rubber and

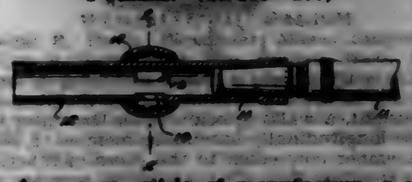
presenting an arcuate surface in the direction of thrust and a curved seubbing means having a surface opposing the arcuate end, said curved and arcuate surfaces centering in the direction of the rocking centers of the cushions and limiting the shear movement of the cushions.

2,028,552
CIGARETTE
Albert H. Law, Denver, Colo., assignor of one-fourth to Carle Whitehead and Albert L. Vogl, Denver, Colo.
No Drawing. Application October 15, 1932, Serial No. 637,985
5 Claims. (Cl. 131—53)

1. As a new article of manufacture, a cigarette having its wrapper impregnated with a soluble silicate, having a fixed alkali base and a fixed alkali nitrate.



2,028,553
DISPENSING APPARATUS
Harry R. Lubin, Spokane, Wash.
Application August 8, 1934, Serial No. 739,630
3 Claims. (Cl. 225—16)

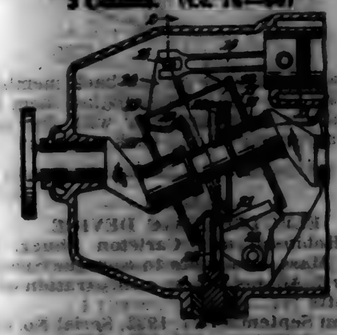


1. The combination with a container having a tapered neck, of a tapered, resilient stopper having an annular flange having a central tube, a conical clamp nut on the inner end of the tube engaging the outer periphery of said stopper, a presser-cap rigid with the other end of the tube and having a shoulder engaging the flange on said stopper, an attaching nut threaded to the neck and having a flange engaging the presser cap, a casing mounted on said cap and a cross tube in said casing, a faucet at one end of the cross tube and a port at the opposite end of the tube, a pipe connected to the cross tube and extending through the central tube to form an annular chamber in the latter in communication with the casing, and means for charging fluid pressure to said chamber through the casing.

2,028,554
STRUCTURAL ELEMENT
Frank L. Main, Birmingham, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application January 4, 1934, Serial No. 705,590
13 Claims. (Cl. 189—34)

11. A metallic structural element comprising a member having integrally connected angularly disposed portions and having flanges at the free ends of said portions extending at an angle to the latter, and strips secured to the member and having portions cooperating with the flanges to form grooves fashioned for the retention and retention of fastener elements.

2,028,555
SPRINKLING ATTACHMENT FOR HOSE
John McDowell, James F. McDowell, and Earl McDowell, Palisade, Colo., assignors of seven and one-half per cent to Charles W. Thary, five per cent to Oscar Thompson, two and one-half per cent to Jodi Reeve, two and one-half per cent to Victor L. Lotspei, three per cent to Tom Matthews, two per cent to John W. Ward, and five per cent to Nels E. Granat
Application December 26, 1934, Serial No. 759,748
3 Claims. (Cl. 299—107)

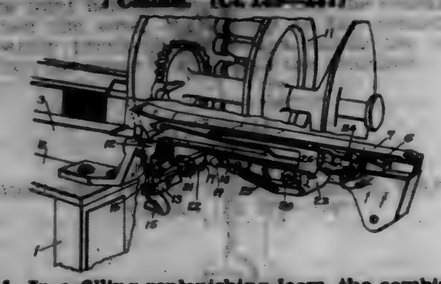


2. As a new article of manufacture, a spray condensing means for spray nozzle comprising a tubular member adapted to removably telescope an end of the nozzle, said member having an opening in the wall thereof intermediate its ends and a hollow body secured to the member about the opening.

2,028,556
ADJUSTABLE BEARING
Arthur L. Marshall, San Francisco, Calif.
Application April 18, 1932, Serial No. 606,643
1 Claim. (Cl. 308—71)

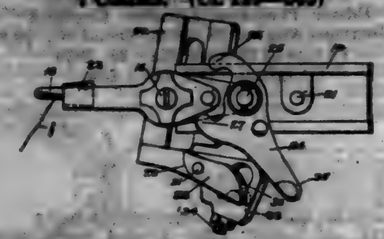
In a device of the character described, a bearing having a tapered bore, said bore being enlarged and interiorly threaded at both ends, a bearing bushing comprising longitudinally separable halves and having an outside surface fitting said tapered bore and an inner bore of uniform diameter to receive a shaft, an exteriorly threaded nut surrounding the shaft and received by one of the threaded ends of the bearing to engage and force the halves of the bearing bushing into the tapered bore until their separable edges abut, a similar nut received by the opposite end of the bearing and engageable with the bushing to eject it from the bearing, said bushing halves being cut away at their mutually opposite faces adjacent their separable edges to provide relatively narrow abutting edges and to provide longitudinal channels in the assembled bushing, and keys in the bearing bore projecting into said channels to prevent rotation of the bushing in the bearing.

2,028,557
SWASH TYPE ENGINE
Christopher George Newall, Bristol, England, assignor to The Bristol Tramways & Carriage Company Limited, Bristol, England, a British company
Application May 17, 1934, Serial No. 726,179
In Great Britain May 14, 1933
3 Claims. (Cl. 74—60)



1. A swash-type engine comprising a frame, a crank-shaft having an inclined crank, a plurality of cylinders surrounding the crank-shaft with their axes substantially parallel with the crank-shaft, a hollow multi-part swash-member having a bearing at each side thereof rotatably mounted on the crank, a piston in each cylinder connected to the swash-member by a connecting rod, a gear-wheel concentric with the crank within the swash-member and anchored thereto, a second gear wheel concentric with the crank-shaft within the swash-member meshing with the first gear, and means for anchoring the second gear to the engine frame.

2,028,558
DOUBLE LEVER SIDE CUTTING IMPLEMENT
John A. Nietzel, Elizabeth, and Richard Teeplitz, Irvington, N. J.
Application February 25, 1935, Serial No. 8,350
7 Claims. (Cl. 30—253)

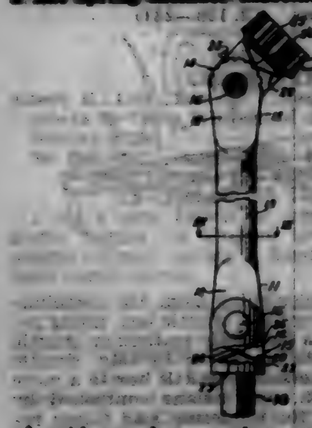


7. An article of manufacture of the class described including a pair of shear jaw members made from suitable sheet metal, each member having a central portion bent over U-shape, with the arms of the U in parallel relationship to form bearing surfaces of relatively large area, reduced ends extending from said arms of the U for attaching handles thereto, the bottom part and arms of the U at the end of each of said members opposite from said end extensions, merging into a curvilinear formation having cooperative cutting edges, said arms of the U on one member enclosing and overlapping and closely fitting directly on the arms of the other member, and each having a transverse hole therein for a pivot pin, and handles adapted to be fastened to said end extensions.

2,028,559
LOOM
James Northrop, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application September 20, 1934, Serial No. 744,313
7 Claims. (Cl. 139—231)

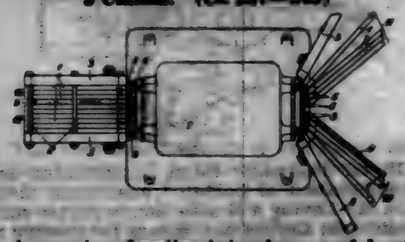
1. In a filling replenishing loom, the combination of the lay, a shuttle, a shuttle box, filling replenishing means, a normally stationary shuttle feeler capable of being moved by said shuttle when the latter enters said shuttle box to a more than normal depth, and means controlled by said shuttle feeler for rendering said filling replenishing mechanism inoperative.

2,028,560
PARTER OPERATING MEANS FOR LOOMS
James Northrop, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application February 15, 1935, Serial No. 6,739
7 Claims. (Cl. 139—245)



1. In an automatic filling replenishing loom, the combination of bobbin transferring mechanism, a lay having a shuttle box, a parter carrier adjacent said shuttle box, means for moving said parter carrier toward said shuttle box prior to each transferring operation and away from said shuttle box simultaneously with each said transferring operation, parting and clamping blades movably mounted on said carrier for movement between open and closed positions, and means consisting of a single pivoted cam and a blade operating lever operated by said cam for opening said blades as said carrier moves toward said shuttle box and closing said blades as said carrier moves away from said shuttle box.

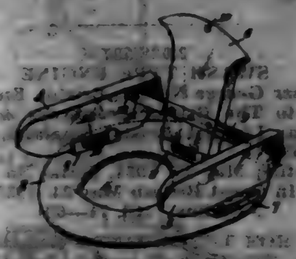
2,028,561
WRENCH HANDLE
Emil F. Pilger, Kenosha, Wis., assignor to Snap-On Tools, Inc., Kenosha, Wis., a corporation of Delaware
Application October 18, 1931, Serial No. 569,591
4 Claims. (Cl. 81—177)



1. In a device of the character described, the combination with a handle member, of a turning member pivoted to said handle member, one of said members having a curved surface, the other of said members being bifurcated to receive

the other of said members with the curved surface in confronting relation to the bottom of said bifurcation, a shoulder formed in the bottom of said bifurcation, there being circumferentially spaced elongated transverse flutes in said surface, a flat spring member associated with the other

of said members, and a projecting elongated transverse ridge formed in said flat spring to present diverging portions terminating in angular extremities that resiliently embrace said shoulder to retain said spring in compression so that said ridge resiliently engages said curved surface for selective registry with said flutes.



2,022,561
PLATE HEAT EXCHANGER
Edwin Prestage, London, England
Application August 28, 1933, Serial No. 686,250
In Great Britain May 25, 1934
5 Claims. (Cl. 257—245)

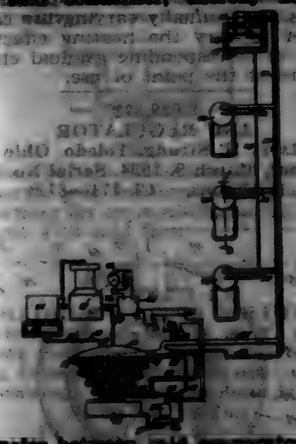
1. Apparatus for the interchange of heat between two streams of fluids of the type in which the heating and cooling units are formed by nests of plates clamped together to form separate channels for the two fluid streams, comprising a supporting standard, said plates in operative position being in contact with each other to form fluid channels therebetween, a nest of heat exchange plates and their clamping covers, and means mounted at one edge of each plate for connecting it to said supporting standard to permit it to be turned at an angle in relation to the other plates, whereby their heat-transmitting surfaces may be entirely exposed without dismounting the plates from said standard.

2,022,562
CHILD'S TOILET SEAT
Henry E. Bohlder and Chester H. Calame, Denver, Colo.
Application February 21, 1935, Serial No. 7,686
7 Claims. (Cl. 4—239)

1. In a device of the character described, a child's toilet seat adapted to be hinged at its rear end to the rear portion of the usual seat and a three part cover hinged to the child's seat the parts of said cover when swung to upright positions forming a back and side arms for the

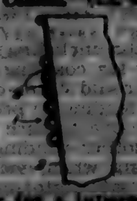
child's seat and means on the back member underlying the side arms for swinging them to upright positions simultaneously with the upward swinging movement of the back member.

2,022,563
ELECTROLYTIC DEVICE
Preston Robinson and Carleton Shugg, North Adams, Mass., assignors to Sprague Specialties Co., North Adams, Mass., a corporation of Massachusetts
Application September 27, 1932, Serial No. 635,907
9 Claims. (Cl. 175—315)



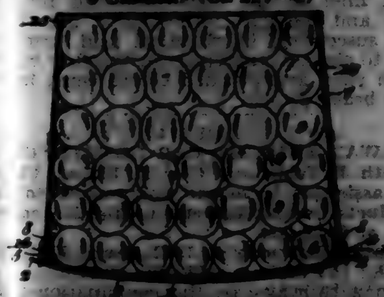
1. In an electrolytic condenser in combination a condenser body comprising two metal foil electrodes and a highly viscous electrolyte interposed between said electrodes, and a protecting envelope comprising a thin-walled metal tube having at least one axially-extending fold, said tube tightly cinching and directly contacting with said body over its entire circumferential area and being closed at one end and projecting beyond the body at its open end, and a sealing compound filling out the space formed by the projecting end of the envelope above the body.

2,022,565
REFRIGERATING SYSTEM
Siegfried Rosenblatt, New York, N. Y.
Application March 18, 1933, Serial No. 661,471
12 Claims. (Cl. 62—4)



1. In an auxiliary refrigerating system, a main refrigerated chamber, an auxiliary condenser in heat exchange relation to said chamber, a receiver associated with said condenser, an evaporator adapted to receive liquid refrigerant from said receiver, a return pipe between said evaporator and the condenser, and means responsive to pressure in said return pipe for admitting

liquid refrigerant with the gaseous refrigerant entering said condenser, thereby accelerating



heat transfer between said evaporator and said chamber.

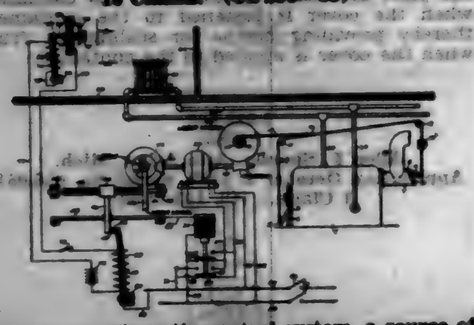
2,022,566
CUP HOLDER
Harry C. Seipel and Paul A. Yerger, Easton, Pa.
Application October 24, 1934, Serial No. 749,841
1 Claim. (Cl. 62—13)

A cup holder for a tapered cup, comprising a sleeve formed of flexible material and said sleeve being provided with circumferentially extending corrugations which gradually increase in depth from the one end of the sleeve to the other end thereof, the corrugations forming interior and exterior ribs and separating grooves, the interior ribs forming a plurality of spaced gripping points for a tapered cup placed in the holder and the exterior projections providing finger holds, said sleeve being of considerable less length than the length of the cup so as to fold and adapted to engage an intermediate part of the cup.

2,022,567
CAP FOR FRUIT BASKET COVERS
Samuel H. Shaffer, Marion, Pa., assignor of one-half to George H. Hamlin, Washington, D. C.
Original application September 18, 1933, Serial No. 689,834. Divided and this application September 29, 1934, Serial No. 745,343
5 Claims. (Cl. 217—3)

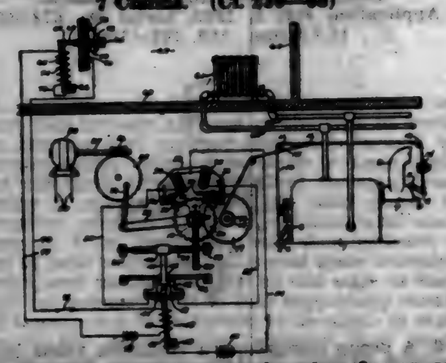
3. An independent cover for the open top of a fruit container, said cover being provided with a rim upstanding from the said cover, in combination with an internally arranged cap having a peripheral flange or side wall higher than the upstanding rim of said cover, and a fruit container, said flange or side wall on the cap overlapping the joint between the cover and the container when the cover is fastened to the container, thereby providing means for sealing the fruit when the cover is applied to the container.

2,022,568
PUMP
Allen F. Shoerer, Ann Arbor, Mich.
Application October 2, 1933, Serial No. 693,661
1 Claim. (Cl. 103—109)



A pump, comprising a rotatable vessel having a fluid inlet and a fluid outlet with the latter positioned to discharge the fluid directly into a gaseous medium under pressure produced by the rotation of the vessel in a substantially radial direction, and a curved deflector secured to and rotatable with said vessel for changing the direction of the fluid discharged from said outlet so that it will be substantially opposite to the peripheral speed vector at the discharge from said deflector.

2,022,569
PUMP
Allen F. Shoerer, Ann Arbor, Mich.
Application July 2, 1932, Serial No. 618,962
13 Claims. (Cl. 103—106)



8. A pump comprising a rotatable vessel having a fluid inlet and arms curved opposite to the direction of rotation of said vessel provided with contracted fluid outlets at their ends, said outlets having an aggregate area appreciably less than the inlet area and lying in substantially radial planes, the axes of said outlets being inclined to the plane of rotation of said outlet arms and said outlets relating in air at atmospheric pressure, and a stationary upwardly and outwardly flared guide arranged to convert part of the kinetic energy of the fluid discharged from said outlets into potential energy.

2,028,570
ELECTRIC CONTROL SYSTEM
Theodore J. Smulski, Gary, Ind., assignor to The Anderson Company, Gary, Ind., a corporation of Indiana
Application July 18, 1930, Serial No. 468,975
10 Claims. (Cl. 236—68)

1. In an automatic control system, a source of power, a movable element adapted to be periodically reversably moved thereby, a movable contact adapted to be reciprocatively moved by the movable element, a relatively stationary contact engageable thereby, electrically operated means controlled by the contacts and adapted to effect periodic reversals of the movable element within a predetermined zone of movement, shifting means for shifting the said stationary contact toward or from the movable contact to shift the zone of said movement, said shifting means comprising a thermostatic element movingly associated with said stationary contact, and automatic means for variably heating the thermostatic element and movable therewith according to variations of a variable quantity controllable by said movable element.

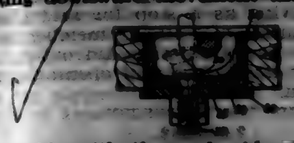
2,028,571
ELECTRIC CONTROL SYSTEM
Theodore J. Smulski, Gary, Ind., assignor to The Anderson Company, Gary, Ind., a corporation of Indiana
Application October 4, 1930, Serial No. 486,418
7 Claims. (Cl. 236—68)

1. In an automatic control system for an apparatus adapted to supply heat at a point of use, a movable element of the heat supplying apparatus adapted to vary the heat output thereof in accordance with its position in a range of movement, a source of power for moving the movable element, thermo-responsive means for effecting successive initiation and interruption of the application of power to the said movable element and selectively controlling the directions of movement of the movable element by said power to cause it to take up successive determined positions within the range, an electric heater for the thermo-responsive means, and means for gradually varying the current in said heater to vary the heating effect thereof responsive to corresponding gradual changes of temperature at the point of use.

2,028,572
ARC REGULATOR
Harry H. Strang, Toledo, Ohio
Application March 6, 1934, Serial No. 714,811
12 Claims. (Cl. 171—312)

1. An electric motor, including: an armature; a single stator-core for coacting with said armature; a winding for said stator-core, said winding when energized tending to produce a flux in said stator-core effective to turn said armature in one direction; another winding for said stator-core, said winding when energized tending to produce a flux in said stator-core effective to turn said armature in the opposite direction while said first named winding is energized, said armature responding to the resultant flux in said stator-core; said windings being disposed on said stator-core in spaced relation so as to promote leakage of flux between said windings.

2,028,573
LINER FOR A BRAKE DRUM AND METHOD OF MAKING THE DRUM
Robert E. Surtees, Riverside, Ill., assignor of one-half to Louis D. Meichetin, Milwaukee, Wis.
Application September 28, 1931, Serial No. 565,136
2 Claims. (Cl. 29—153.3)



1. A liner of the class described for brake drums and the like, formed of a flat strip of metal susceptible to nitriding, said strip being rolled to shape transversely of the flow of metal in said strip and nitrided before being inserted in the brake drums.

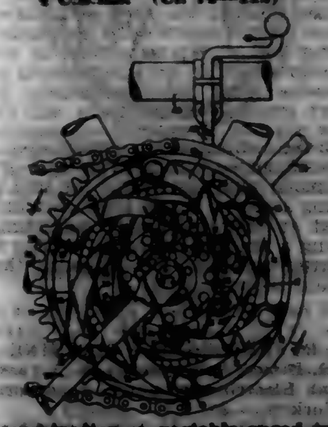
2,028,574
RAILWAY FREIGHT CAR CONSTRUCTION
Kenneth J. Tobin and Carl E. Eklund, Chicago, Ill., assignors, by mesne assignments, to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application February 1, 1932, Serial No. 590,635
7 Claims. (Cl. 105—369)

1. In a railway car, the combination with a floor provided with a plurality of spaced open-

ings, of anchoring devices seated in said closing said openings; means provided on said devices for limiting downward movement thereof, members

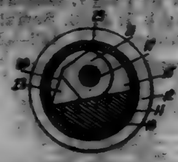
engageable with the underside of the floor extending across said openings, and means carried by said devices for maintaining said members in engagement with said floor.

2,028,575
COLLOIDAL COPPER SOLUTION
John Terigian, Queens Village, N. Y., assignor to The Drug Products Co. Inc., Long Island City, N. Y., a corporation of New York
No Drawing. Application June 11, 1934, Serial No. 730,196
2 Claims. (Cl. 167—77)



1. A product for the treatment of anemias comprising the suspension of colloidal copper hydroxide in the medium of an aqueous salt of an organic hydroxy-acid.

2,028,576
PIPE SECTION PROTECTION
John W. Van Dyke, Philadelphia, Pa.
Application August 1, 1935, Serial No. 34,177
2 Claims. (Cl. 138—96)

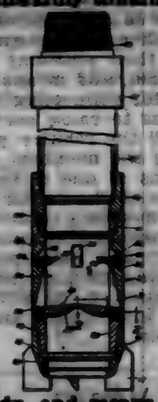


1. A device for protecting the end of a pipe or conduit comprising a metal cap overlying the end, said cap being provided with a relatively narrow annular flange which overlies said end, said flange of the cap being secured to the pipe or conduit as an integral part thereof by means of welding.

2,028,577
SPEED TRANSMISSION MECHANISM
Alvaro Visconmenti, Rome, Italy
Application March 22, 1934, Serial No. 717,891
In Italy June 2, 1933
4 Claims. (Cl. 74—113)

1. In combination, a variable speed transmission mechanism comprising a pair of members including a driving member and a driven member mounted for rotation and translation in respect to each other, means for guiding one of said members in translation in respect to the other member in a line to one side of the center of rotation of said other member and extending to opposite sides of their positions for one-to-one ratio of transmission, and means including connecting elements for connecting said two members together so as to cause continuous motion transmission in all the relative positions of the axes of rotation of the members, the guiding by said guiding means of one of said members in a line to one side of the center of rotation of the other of said members resulting in enabling variation in the ratio of transmission through a one-to-one ratio from a high speed to a reduction speed, depending upon the relative positions of the axes of rotation of the driving and driven members, without interrupting the continuity of motion transmission.

2,028,578
TUBE CUTTER
Gustav Wiedeke, Oakwood, Ohio, assignor to Gustav Wiedeke Company, Dayton, Ohio, a copartnership consisting of Gustav Wiedeke, Otto Wiedeke, and Robert Wiedeke
Application July 9, 1934, Serial No. 734,605
1 Claim. (Cl. 51—196)

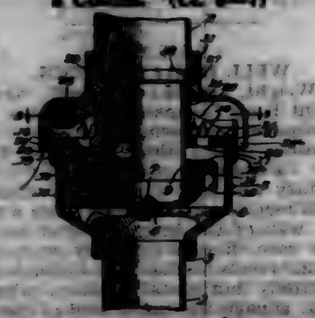


A tube cutter comprising a rotatable frame having a segmental transverse slot extending through opposite sides thereof, said slot having a substantially straight bottom wall for the full length thereof, a pivot pin mounted in said frame in off center relation thereto and extending through said slot at a point spaced from said bottom wall, and a cutter having a hub portion mounted on said pivot pin within said slot and having a blade portion projecting from one side of said hub portion and arranged to be moved into said slot and to be projected beyond said frame by the rotation of said cutter about the axis of said pivot pin, said hub portion also having on that side thereof opposite said blade a part one end of which is rounded to permit said cutter to move about the axis of said pivot pin and the other end portion of which is provided with a substantially flat surface to engage the bottom wall of said slot when said blade portion has been projected beyond said frame and to interrupt the movement of said cutter about the axis of said pivot pin.

2,028,579
WELL DRILLING TOOL
James C. Wright, Los Angeles, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application April 3, 1933, Serial No. 664,166
5 Claims. (Cl. 255—72)

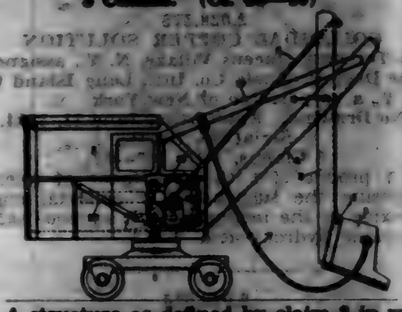
1. A rotary well drill including, a tubular body adapted to receive a core, there being a recess in the inner wall of the body, a cutter for cutting away the core, means pivotally mounting the cutter in the recess so that it is shiftable between a substantially horizontal position where it is adapted to engage the upper end of the core to cut away the core as the drilling progresses and a substantially vertical retracted position in the

recess, the cutter having a cutting edge curved upwardly and inwardly toward the longitudinal



axis of the body, and means yieldingly urging the cutter to the substantially horizontal position.

2,093,598
SUCTION NOZZLE
Guy A. Todd, Oakland, Calif., assignor of one-half to John R. Posey, Oakland, Calif.
Application March 7, 1933, Serial No. 659,915
7 Claims. (Cl. 262—2)



1. In an hydraulic suction nozzle, a tubular shaft having a longitudinal external groove therein, a port connecting said groove with the duct of the shaft, a closure member for said port engaged entirely in said groove, and means to fix said closure member in either operative or inoperative relation to said port while disposed in the groove.

2,093,581
VALVE
Roy H. Zbaft, Oak Park, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application October 6, 1934, Serial No. 748,709
8 Claims. (Cl. 6—7)

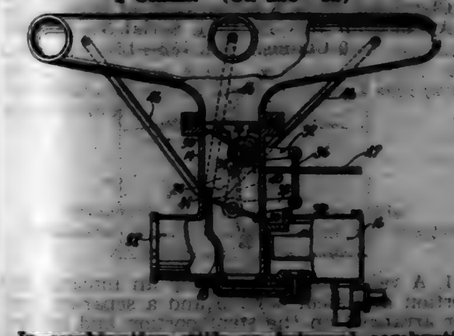
1. In a pressure actuated valve, a casing comprising in combination a fluid inlet, a fluid outlet, a vent opening to atmosphere, a valve closure member having means for directing the flow of fluid to said outlet, a cup-shaped member within said casing serving as a stop for said closure member and causing said closure member to restrict the back flow from the said outlet, said closure member closing the vent opening during the flow of fluid.

2,093,582
TOY MECHANICAL SHOVEL
Thomas R. Arden, Baldwin, N. Y., assignor to Buddy "L" Manufacturing Company, East Moline, Ill.
Application September 21, 1935, Serial No. 41,301
5 Claims. (Cl. 46—69)

5. A structure as defined by claim 3 in which the noise producing mechanism comprises a clapper and an abutment to be struck by the clapper as it oscillates, in combination with a latch to prevent the oscillation of the clapper when it is not desired that the toy shall operate.

2,093,583
BRAKE
Vincent Bendix, Chicago, Ill., and Ledger L. La Brie, South Bend, Ind., assignors to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application June 1, 1936, Serial No. 347,249
10 Claims. (Cl. 188—79)

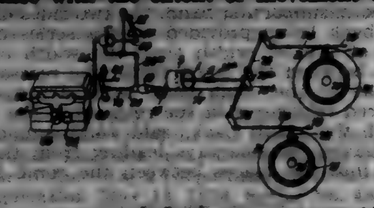
1. A brake comprising, in combination, friction elements supported within a rotatable drum by a support plate, applying means for said elements comprising a pair of cam links, said links being journaled at their ends upon adjusting means comprising a pin and sleeve surrounding said pin, which latter members are extended through a slot in said support plate.



2,093,584
REFRIGERATING MACHINE
Harley H. Binder, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 11, 1935, Serial No. 1,326
14 Claims. (Cl. 230—226)

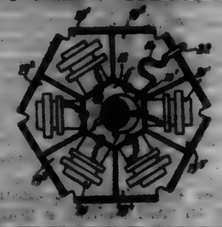
1. A refrigerating machine comprising a heavy, rigid base which is relatively unresponsive to vertical forces tending to move said base in a vertical direction, a motor and a compressor assembled as a unitary structure, said unitary structure including a plurality of moving parts exerting horizontal displacing forces thereon during the normal operation of said machine, and resilient means attached to said unitary structure for supporting the same on said base, the region of attachment of said resilient means to

said unitary structure being positioned at a sufficient vertical distance below said moving parts and said resilient means having such elastic characteristics that the horizontal axis of the normal modes of vibration of said unitary structure on said resilient means having relatively high natural frequencies lie in the region of said displacing forces in order to minimize the horizontal force transmitted to said base.



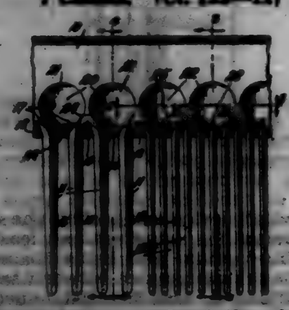
2,093,585
CARBURETOR
Kenneth R. Blake and Robert H. Hill, Anderson, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application February 23, 1933, Serial No. 657,760
1 Claim. (Cl. 123—53)

In combination with an internal combustion engine having an intake manifold, a carburetor, a throttle in the carburetor, a fuel nozzle discharging adjacent the lip of the throttle, a plurality of conduits leading from adjacent the nozzle to the manifold, a pressure responsive valve between the carburetor and the manifold, and resilient means influenced by the degree of opening of the throttle for urging said pressure responsive valve toward its closed position.



2,093,586
BRAKE MECHANISM FOR AUTOMOTIVE VEHICLES
Caleb S. Bragg, Palm Beach, Fla., and Victor W. Kliesrath, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a corporation of New York
Application November 3, 1927, Serial No. 231,121
4 Claims. (Cl. 188—152)

3. In a braking system for vehicles embodying brakes jointly controlled by a vacuum operated servo motor and by a control lever, the initial movement of the control lever rendering the servo motor operative and the continued movement supplementing the operation thereof in accordance with the extent of movement of said



lever, a source of fluid power for said servo motor, means for reducing the effectiveness of said fluid power, and means for regulating said reducing means.

2,093,587
MULTIPLE SWITCH
Jean Brunstein, Paris, France, assignor to Georges Gaveret & Cie, Paris, France, a limited company of France
Application October 20, 1934, Serial No. 749,143
In France September 4, 1934
9 Claims. (Cl. 200—8)

1. In a multiple switch: an insulated casing; a shaft rotating within said casing; a conducting contact member freely surrounding the shaft and capable of displacement relatively to the said shaft in a plane perpendicular to the axis of the shaft; a rigid conducting rod fastened to said conducting contact member and guided by the casing so as to prevent the rotation of said rod and member; studs distributed over the inner surface of the casing in the plane of the conducting contact member; a resilient member mounted on the rotary shaft and exerting a pressure on the contact member in a radial direction to press it against the stud situated in this direction.

2,093,588
COMB
Oswald K. Carver, Scarsdale, N. Y., assignor to American Hard Rubber Company, New York, N. Y., a corporation of New York
Application May 10, 1935, Serial No. 21,713
7 Claims. (Cl. 132—11)

1. A hairdressing comb of the character described comprising a back having on its inner

edge a tooth-supporting band, and teeth extending outwardly from said band, the inner or base portions of said teeth overlapping the sides of said tooth-supporting band, the two sides of said comb back being provided with a series of recesses of greater width than the width of the spaces between the comb teeth, the recesses on one side of the comb back being arranged in staggered relation with the recesses in the other side of the comb back, said tooth-supporting band having passageways leading from the recesses into the spaces between the comb teeth.

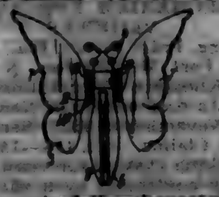
2,028,589
ELECTRICAL APPARATUS
Frank M. Clark, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application December 21, 1932, Serial No. 648,286
4 Claims. (Cl. 250—82)

1. In electrical apparatus, a casing, an electrical conductor in said casing, a body of mineral insulating oil in said casing for insulating said conductor, oil level indicating means comprising a portion of said casing, said portion having the capacity to transmit light, said oil being exposed to light passing through said light transmitting portion, and means for substantially restricting transmission of light through said portion to wave lengths in excess of 500 millimicrons to reduce the depreciation of the insulating value of said oil.

2,028,590
ELECTRIC CAPACITOR AND METHOD OF FABRICATION
Frank M. Clark and Ralph A. Russetta, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
Application November 30, 1934, Serial No. 755,427
4 Claims. (Cl. 175—315)

1. An electric device comprising the combination of cooperating armatures at least one of which is film-forming and being spaced closely adjacent one another, space between said armatures containing a concentrated aqueous solution of salt, said solution containing fine particles of salt in suspension.

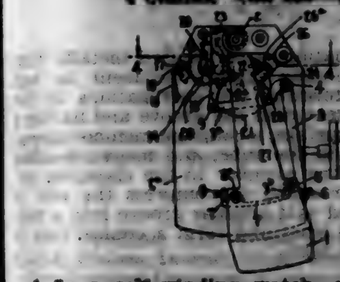
2,028,591
CHANGE RECEIVER AND ADVERTISING DEVICE
Leo Oehm, Los Angeles, Calif.
Application August 12, 1934, Serial No. 739,859
7 Claims. (Cl. 40—28)



1. In mechanism of the class described, a tiltable normally counter-balanced change tray; a tiltable display device having a display surface correlated to the change tray to be concealed thereby when the tray is in a normal counterbalanced position, and means for tilting the display device to expose the display surface thereof when the tray is depressed, and including a shaft supporting the display device; an arm on the tray; and means disposed to be engaged by the arm when the tray is depressed and having operative motion imparting connection with the shaft to turn same and thus tilt the display device and expose the display surface thereof from the tray.

2,028,592
VALVE STEM
John C. Crowley, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application July 13, 1934, Serial No. 734,611
9 Claims. (Cl. 152—13)

1. A valve stem comprising an integral head portion and stem portion and a separate member arranged on the stem portion and contacting the head portion, said member and said stem portion being provided with interengaging deformed and interlocked threads.

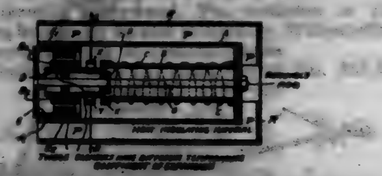


2,028,593
ORNAMENT
Ralph De Rosa, New York, N. Y.
Original application August 18, 1925, Serial No. 50,523, now Patent No. 2,024,934, January 7, 1935. Divided and this application December 9, 1935, Serial No. 53,512
1 Claim. (Cl. 41—3)

In an ornament of the character described, a body portion, wings at the opposite sides of the

body portion, hinges for swingably securing said wings and said body portion together, said hinges being arcuately shaped, and arcuate extensions on said hinges cooperating with the hinges for maintaining the ornament in place on the hair of the wearer.

2,028,594
SELF-WINDING WATCH
Anton Polzal, Astoria, N. Y.
Application April 15, 1931, Serial No. 530,246
4 Claims. (Cl. 185—41)



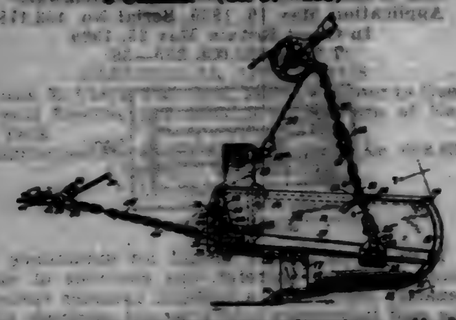
1. In a self-winding watch, a prime mover member adapted to be actuated by the movement of the body of the user, a main spring, connecting means between said main spring and said prime mover member, said connecting means having a lost motion, a regulating spring adapted to prevent said lost motion until the main spring has been wound up to a predetermined extent, said connecting means including a link pivotally connected to said prime mover member, said regulating spring being pivotally connected to said prime mover member and having an end thereof in contact with said link, and a regulating screw passing through said regulating spring and bearing against said prime mover member.

2,028,595
DRINK MILL
Frederick W. Flagel, Racine, Wis.
Application April 30, 1934, Serial No. 723,318
4 Claims. (Cl. 259—108)

1. In a drink mill, a container having a closed lower end portion, a plurality of low disintegrating baffles rigidly mounted in spaced, circular formation within said closed end of the container and obliquely to radii of the container, an agitator revolubly mounted within said closed end of the container within the circle of baffles, the baffles being positioned so as to obstruct the normal direction of flow of material from the agitator, and a screen member removably engaging the baffles and completely covering and enclosing the baffles and agitator.

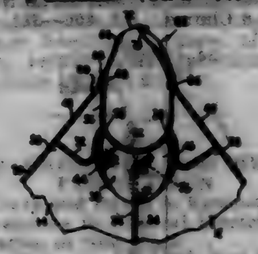
2,028,596
OSCILLATION CIRCUIT
Charles Samuel Franklin and Bertram John Witt, London, England, assignors to Radio Corporation of America, a corporation of Delaware
Application May 19, 1930, Serial No. 453,478
In Great Britain May 23, 1929
7 Claims. (Cl. 250—36)

1. In an oscillatory circuit an inductance, a tuning capacity therefor, one electrode of said capacity comprising a metallic cylinder enclosing said inductance and a second electrode adjustably mounted within said cylinder, a compensating capacity whose electrodes are enclosed in said metallic cylinder, one electrode of said compensating capacity being integral with an electrode of said tuning condenser, the other electrode being mounted on material having a different coefficient of expansion than the first mentioned electrode of said compensating condenser and being connected to said metallic cylinder.



2,028,597
FASTENING AND SECURING MEANS
George W. Gall, Barrian, Md.
Application March 2, 1934, Serial No. 713,757
2 Claims. (Cl. 306—38)

1. In combination, a member having an opening therethrough, another member fitting into said opening, said latter member comprising two parts jointed to each other lengthwise, each of said parts having a longitudinal groove, said grooves being disposed adjacent to each other and forming a longitudinal, substantially central passageway through said second member, and means for securing said members to each other, said means comprising a tie-member threaded at each end and passing through the longitudinal passageway of the second named member and projecting into the opening of the

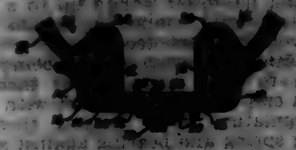


first named member, a nut on each end of said tie-member and means for securing said nuts in fixed relation to each other.

2,022,536
DRAG LINE BUCKET
Alfred E. Gibson, Cleveland Heights, Ohio, assignor to The Wellman Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application January 18, 1933, Serial No. 652,249
8 Claims. (Cl. 37—126)

1. In a bucket of the drag line type, attaching means for the drag lines or chains arranged at the forward ends of the sides of the bucket and comprising hitch members secured to the sides and separate cap members connected to said hitch members so as to be movable relative thereto.

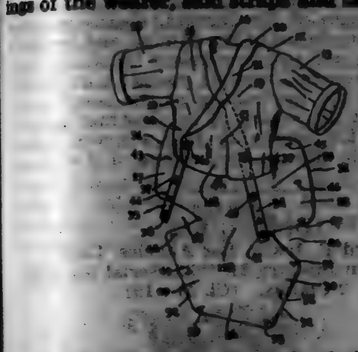
2,022,539
UNDERGARMENT FOR WOMEN
Lillian Goodman, Brooklyn, N. Y., assignor to Mitchell Brothers, Inc., Bridgeport, Conn., a corporation of New York
Application November 22, 1934, Serial No. 754,299
4 Claims. (Cl. 2—73)



1. An integral undergarment structure for wear by women, the garment structure comprising a slip to be worn beneath the outer dress of the woman for imparting to the dress certain properties and characteristics, the garment structure including means for supporting the slip in a predetermined relationship to the arm-pits of the wearer and cooperating with top edges of the slip to define passages for the arms of the wearer, the slip including fabric sections located at the portions of its top edges normally brought into association with the arm-pits, the fabric sections being prepared for preventing the passage of moisture through the sections, the fabric sections being positioned between the skin and the dress, the fabric sections extending beyond the upper edge of the slip, the supporting means including means extended from the slip to an extended fabric section, and a strap slidably receiving the extended means and passing over the shoulder of the wearer.

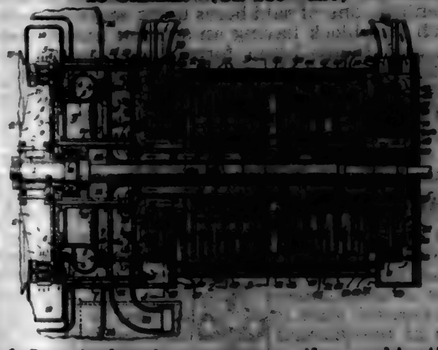
2,022,590
FLEXIBLE TUBING
Stephen Gasmanschilli, Brooklyn, N. Y., assignor to Packless Metal Products Corporation, New York, N. Y., a corporation of Delaware
Application April 20, 1934, Serial No. 722,062
3 Claims. (Cl. 285—72)

1. In combination, a corrugated metallic tube having an annular groove adjacent its end formed by deforming the corrugations in the tube, a collar seated in the groove and having a tapered outer surface, a coupling member clamping the collar to the tube, and means coacting with the coupling member in the clamping operation and arranged to compress the end of the tube beyond said annular groove into a substantially solid mass and form a conical nail in the end of the tube.



2,022,591
TIRE AND RIM CONSTRUCTION
Eric E. Hall, Chicago, Ill.
Application September 15, 1932, Serial No. 633,213
4 Claims. (Cl. 152—10)

1. In a tire and rim construction, the combination with a generally U-shaped rim, of an outer casing having its edges adapted to fit against the inner sides of the rim, a plurality of cam plates mounted in the rim and adapted to be turned into position to secure the casing in the rim, and means for locking the plates in their securing position, said means consisting of a plate for each of the cam plates secured on the inner side of the rim and having a pin extending through an aperture in the rim and into an aperture in the cam plate which registers with the aperture in the rim when the cam plate is in securing position.

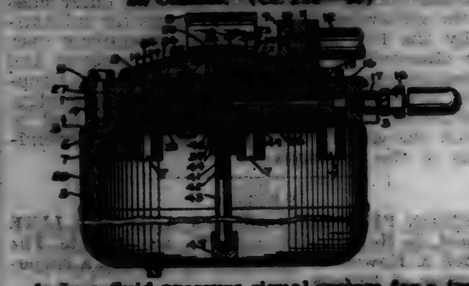


2,022,602
DIAPER GARMENT
Helen M. Hansen, Argyle, Wis., assignor to Martin Brothers Company, Minneapolis, Minn., a corporation of Minnesota
Application February 19, 1934, Serial No. 711,361
6 Claims. (Cl. 2—49)

1. A diaper including a front and a back, portions of one being adapted to overlap portions of the other along the sides of the diaper from top to bottom thereof, the lapping portions at each side of the garment having a series of paired registering button holes therein, a pair of straps, one for each side of the garment, each strap underlying the lapping portions of the diaper at its respective side and having thereon a series of buttons, one for each pair of registering button holes, each button being adapted to be buttoned into the respective pair of holes and fastening means secured to the lower portions of said straps for attachment to the stockings of the wearer, said straps and buttons being

adapted to distribute the pull of the stockings along the lapping portions of the diaper.

2,022,605
TURBO AIR COMPRESSOR
John O. Heintz, Detroit, Mich., assignor to Heintz Development Company, a corporation of Michigan
Application August 30, 1933, Serial No. 687,480
13 Claims. (Cl. 230—127)



1. In a turbo air compressor, the combination of an external rotor having an air intake at each end, a manifold connecting said intakes, an internal stator having an air outlet intermediate its ends, a fixed axial member to which said stator is secured, said axial member forming an air outlet passage in communication with said air outlet of said stator, and means for rotating said rotor including a shaft extending axially through said axial member, and a motor attached to the outer end of said shaft.

2,022,604
ELECTRIC HEATER
Alfred Hermanni, Berlin-Frohnau, Germany, assignor to General Electric Company, a corporation of New York
Application July 12, 1933, Serial No. 679,713
In Germany October 6, 1934
9 Claims. (Cl. 219—27)

1. An electric hot-plate comprising a receptacle, a plurality of heating elements in said receptacle, a pivotal connecting member mechanically connecting one of said heating elements to said receptacle providing for limited movement of said heating element out of said receptacle and for rotation of said element relative to said receptacle and a member pivotally connecting another of said heating elements to said connecting member providing for movement of said other heating element out of said receptacle and for rotation thereof relative to said receptacle independently of said one heating element.

2,022,605
SIGNAL VALVE DEVICE
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application January 12, 1933, Serial No. 651,457
23 Claims. (Cl. 116—37)

1. In a fluid pressure signal system for a train, the combination with a train signal pipe charged with fluid under pressure, of a pneumatically operated signal indicating device, a valve device operative to vent fluid under pressure from the signal pipe, and means responsive to a reduction in signal pipe pressure, upon the vent valve device being maintained in venting position for a predetermined period of time, to supply fluid under pressure to the signal indicating device to effect the operation of the signal indicating device to indicate a signal for a predetermined uniform period of time regardless of variations in the rate and amount of reduction in signal pipe pressure.

2,022,606
PEDESTAL BRAKE VALVE DEVICE
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application October 20, 1934, Serial No. 749,290
17 Claims. (Cl. 303—86)

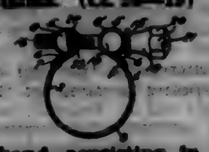
1. In a fluid pressure brake, in combination, a pedestal adapted to be mounted on the floor

of a vehicle, a brake valve device secured to an upwardly facing surface of said pedestal and having an overhanging downwardly facing surface, and a brake pipe discharge valve mechanism secured to said downwardly facing surface.

2,022,697
ROOFING
James L. Holt, Newfoundland, N. J.
Application February 7, 1934, Serial No. 710,123
5 Claims. (Cl. 189—19)

1. Roofing including a pair of parallel gutters, separate coverings of stiff sheet material arranged one on each side of the pair of gutters and respectively resting at their adjoining edge portions on the edges of the relatively outer sides of the gutters with their own edges for substantially the full length thereof respectively over the channels of the gutters, said gutters and coverings being inclined, and supporting structure including an elongated member extending lengthwise of and spacing the gutters and to which the gutters are rigidly secured independently of the coverings.

2,022,698
MOTION PICTURE CAMERA AND THE LIKE
Albert S. Howell, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application January 12, 1931, Serial No. 508,927
25 Claims. (Cl. 88—18.4)



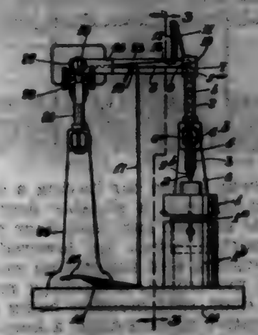
2. In a motion picture camera the combination with a camera device and a magazine for containing sensitized film adapted to be interchangeably mounted on the camera device and having its front wall portion curved and provided with a correspondingly curved intermittent film feed exposure guide, of an intermittent film feed shuttle pivoted on the camera device to one side of said magazine and having a portion projecting transversely in front of the magazine for engagement with a film in said guide, an exposure shutter pivoted on the camera device at said side of said magazine and having a shutter portion projecting transversely in front of the magazine, and means on said camera device at said side of the magazine for oscillating said shuttle and shutter in timed relation.

6. In a motion picture machine the combination of a revoluble ratchet toothed film roll drive element, a reciprocating ratchet member engaging said drive element for driving the same, a second ratchet member mounted on said first mentioned ratchet member for reciprocation therewith and engaging said drive element to cooperate therewith to drive said drive element at a fast rate, and automatic means for intermittently rendering said second ratchet member inoperative to effect a substantially uniform rate of feed movement of the film at the roll.

20. In a motion picture camera the combination with a camera device including a casing provided with an opening and a cover closing said opening, of means for stopping operation of the mechanism of the camera, means operated with the mechanism of the camera and normally maintaining said stopping means inoperative and adapted to render the same operative at the end of a run of the mechanism of the camera, and means under the control of opening movement of said cover for rendering said stopping means inoperative to effect a further run of the camera mechanism.

2,022,699
LOCKING-BAND
Clifford R. Irwin, Los Angeles, Calif.
Application January 21, 1935, Serial No. 2,762
2 Claims. (Cl. 24—19)

2. A locking-band, consisting in a circularly formed strap having an integral housing at each end, each said housing being formed with a pair of openings, all of said openings being in alignment, a cylindrical trunnion-block rotatively mounted in the respective housings formed with transverse bores in alignment with the housing-openings, one of said bores being screw-threaded, each said block having an annular groove therein, said straps being formed with indentations extending into the respective grooves, and a screw-bolt extending through said bores and threaded in said screw-threaded bore.

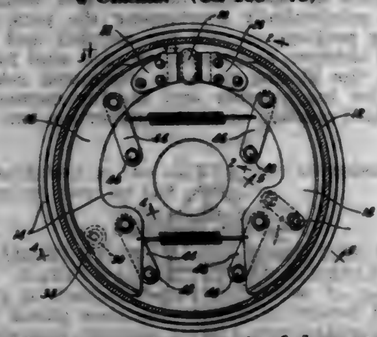


2,022,616
CABLE SPLICER
Isidore Jacoel, Norfolk, Va.
Application July 27, 1934, Serial No. 737,312
10 Claims. (Cl. 140—121)

1. A device of the character described including a handle having a flexible portion, a member carried by the handle and rotatable relative thereto, the member being engaged by the flexible portion of the handle which tends to restrict rotation of the member relative to the handle, and clamping jaws carried by the member.

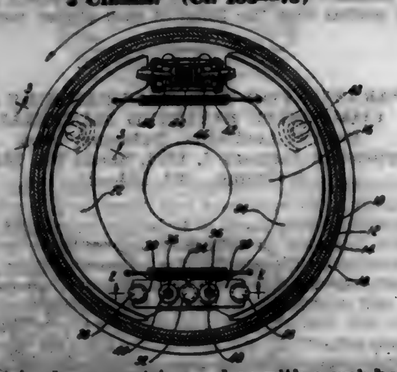
2,022,611
PRECISION MEASURING INSTRUMENT
Carl Edvard Johansson, Detroit, Mich.
Application April 19, 1931, Serial No. 531,726
14 Claims. (Cl. 33—147)

1. In a precision measuring instrument, the combination of a measuring support, a measuring plunger movable relatively to said support, a lever mechanism having a short arm and a long arm, said long lever arm having a substantially vertical position, said plunger engaging said short arm so as to transmit its movements thereto, whereby said long arm will reproduce the movements of said plunger on an enlarged scale, a microscope located with its objective adjacent to the end of said long arm and a transparent scale in the ocular, whereby the movements of said end may be observed as well as the graduations on said scale, both in focus in the same plane, said micrometer-scale serving to determine the movements of said end.



7. A precision measuring instrument comprising, a base, a coacting member movably mounted upon said base one end of which is adapted to bear against the work to be measured when said work is positioned upon said base and the other end of which is positioned so as to indicate the size of said work, means for urging said member against said work with a uniform predetermined force, a manually operated lever, and a connecting means connecting said lever and said member, so that manual actuation of said lever withdraws said member from the work being measured, said connecting means being a non-conductor of heat whereby the body temperature of the operator will not be transmitted to said coacting member.

2,022,612
BIRD CAGE SEED GUARD FRAME
Ben Kesvich, New York, N. Y.
Application April 25, 1935, Serial No. 18,152
7 Claims. (Cl. 119—17)



1. A bird cage seed guard, comprising several elements for engaging against the sides of a bird cage and having outward extending ends, a band with free ends attached upon said outward extending ends and adapted to have said free ends engaged together for clamping said several elements upon the sides of a bird cage, a member vertically spaced from said band and extending over all portions except the free ends of said band, spaced supports between said member and band, and a bag having its open top end between said member and band and attached upon said spaced supports.

2,022,613
BRAKE
Ludger E. La Brie, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 20, 1932, Serial No. 634,044
6 Claims. (Cl. 188—78)

1. A brake comprising a pair of shoes each provided with a pair of inclined parallel-motion anchoring links.

2,022,614
BRAKE
Ludger E. La Brie, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application March 6, 1933, Serial No. 659,369
3 Claims. (Cl. 188—78)

1. A brake comprising a shoe with a web having an opening at its end and with a pivot a short distance from said end, a pair of anchor links on opposite side of said web and notched at their ends for pivotal engagement with said pivot, and a fastening passing through the links and through said opening and normally preventing relative movement of the links and the shoe but permitting such movement of the links upon the pivot upon the application of a substantial force.

2,022,615
GLAZING STRUCTURE
George H. Leake, Elmhurst, Ill., assignor of one-half to Julius J. Olds, Oak Park, Ill.
Application January 8, 1934, Serial No. 705,758
8 Claims. (Cl. 189—16)

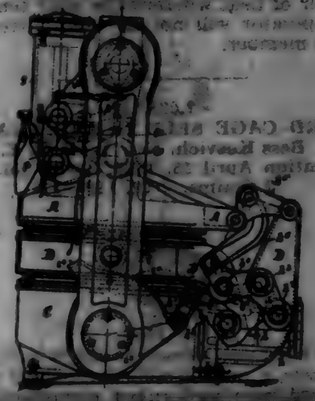
1. In a glazing structure, a supporting bar having an upwardly and laterally opening socket in its upper edge and flat throughout its vertical dimension, a pane supporting lug member seated directly upon the top of the bar and having a bifurcation for receiving the top of the bar, said

pane supporting lug member having legs embracing the lateral sides of the bar and pane supporting portions extending substantially beyond said lateral sides of the bar, a stud having a head engageable in said socket and a shank passing upwardly through said lug member, glazing parts supported by said lug member and including panes substantially overlapping the pane supporting portions of said lug member and supported thereon, and means on said stud for securing the glazing parts in assembled relation upon the lug member and the lug member in assembled position upon the supporting bar.

5. In combination a gutter member for glazing structures, said gutter member having an intermediate channel portion with folds forming the opposite sides of said channel portion, integral gutter portions flanking said folds, and glass seating members having downwardly directed channels seated over the folds of said gutter member.

2,028,616
APPARATUS FOR THE MANUFACTURE OF A COMPOSITE BUILDING MATERIAL
Emil C. Lostetcher, Dubuque, Iowa
Application January 7, 1934, Serial No. 704,831
8 Claims. (Cl. 134—1)

1. In an apparatus of the character described, the combination of a horizontal conveyor adapted to advance shallow open forms of board dimensions at a predetermined constant speed, a sifting device above said conveyor, means for feeding a loose material to said sifting device, and means for operating said sifting device whereby layers of predetermined uniform thickness and density are deposited in said forms.

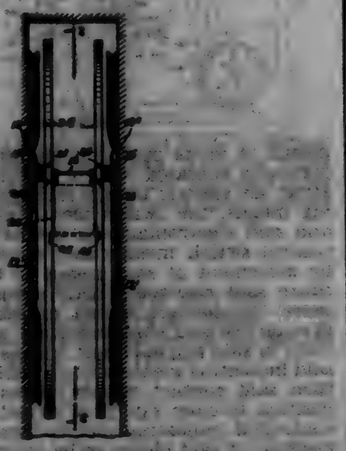


3. In an apparatus of the character described, the combination of a horizontal traveling conveyor adapted to advance forms of board dimensions from one end to the other thereof, a series of sifting devices mounted above and at spaced intervals along said conveyor, means for feeding loose materials of different compositions to predetermined sifting devices, and independent variable operating means for said sifting devices whereby the materials are deposited into said advancing forms in superimposed layers of predetermined uniform density and thickness.

2,028,617
CAR DOOR
Carl Lotz, Hammond, Ind., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application December 11, 1933, Serial No. 702,500
11 Claims. (Cl. 105—46)

1. In a railway house car having a door opening in a side thereof, a slidable door mounted upon said side of said car, said door being frictionally supported when in lowered position, means for elevating and supporting said door for antifrictional movement, a latching member secured to said door, said member being capable of movement relative to said door, a keeper secured to said car adapted to receive said member in the closed and lowered position of the door, said keeper being disposed substantially below said door opening, said member being automatically released from said keeper by the elevating movement of said door.

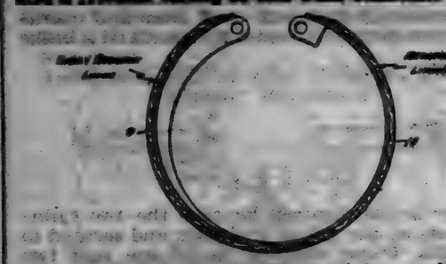
2,028,618
VULCANIZING PRESS
Colin Macbeth, Birmingham, England
Application June 22, 1932, Serial No. 617,333
In Great Britain June 26, 1931
10 Claims. (Cl. 18—17)



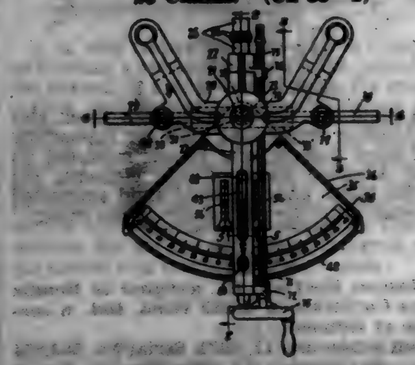
17. A power-operated double-mould vulcanizing press of the horizontal type comprising a lower stationary mould-member and two mould-members superposed thereon when in operative position, the superposed members being articulated by superposed hinges to a support, and being adapted to be swung relatively to one another and to the stationary mould-member, the pivot points of said superposed members being movable vertically to impart separating and closing movements to the said members, and means to move the pivot points during the separating and closing movements.

2,028,619
METHOD OF OBTAINING FINGERPRINTS
Justin J. McCarthy, Boston, Mass.
No Drawing. Application March 14, 1935, Serial No. 11,160
10 Claims. (Cl. 41—41)

10. The method of obtaining a finger print impression comprising passing a powder embodying hydroquinone and cotton on the finger print, the said hydroquinone exceeding the said cotton in the said powder by weight a plurality of times, placing a sensitized sheet which had been wet with a solution embodying sodium hydroxide and sodium sulphite in substantially equal parts and water, on said powdered finger print, and removing said sensitized sheet and wetting it with an acid fixing bath.



2,028,620
ONE-WAY ELEVATOR SYSTEM
Francis Miller, Brooklyn, N. Y.
Application October 24, 1934, Serial No. 749,087
6 Claims. (Cl. 187—16)



1. A one way elevator construction, comprising a pair of spaced vertically opposed annular members, each having laterally directed rack teeth on the sides thereof, downward directed rack teeth on the bottom, and upward directed rack teeth on the top, said all of said rack teeth continuing in a series, a car support frame between said pair of annular members, worms mounted on said frame and engaging said racks, means for driving said worms, a car depending from said frame, and tracks for guiding said frames to travel along said racks, said annular members having removable sections at the extreme tops and bottoms for the convenient removal of the car.

2,028,621
BRAKE APPARATUS
Raymond J. Norton, Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind., a corporation of Illinois
Application June 16, 1931, Serial No. 544,896
1 Claim. (Cl. 188—78)

A brake apparatus comprising a drum, a non-rotating friction means within the drum comprising a single continuous band, said band including a relatively flexible loading part and a relatively rigid loaded part, a friction facing of highly wear resistant material secured to the loaded part and a friction facing of less wear resistant material attached to the loading part to equalize the extent of wear on the parts.

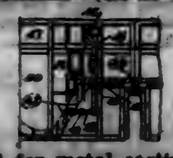
2,028,622
APPARATUS FOR CALCULATING THE ANGULARITY OF STEERING WHEELS
Clyde H. Phelps, Mount Vernon, N. Y., assignor, by mesne assignments, to The Master Electric Company, Dayton, Ohio, a corporation of Ohio
Application January 6, 1933, Serial No. 650,457
23 Claims. (Cl. 33—1)

14. In a calculating apparatus of the character described, a support, two members each pivotally and slidably mounted at a fixed point representing the pivot of one of a pair of steering wheels of a vehicle, a pivotal and slidable element arranged to be positioned at a point representing a known calculation made to determine the correct angle of one steering wheel when the other steering wheel is at a known angle, means for pivotally connecting said members and element on a common axis such that when said parts are moved to a position to bring one of said members on a line representing the axis prolonged of one steering wheel when in steering position the other member will represent the correct angle of the axis prolonged of the other steering wheel, and means for indicating such positions of said members.

2,028,623
BRAKE RIGGING
John E. Redford, Florissant, Mo., assignor to The American Brake Company, St. Louis, Mo., a corporation of Missouri
Application June 2, 1933, Serial No. 674,307
4 Claims. (Cl. 188—52)

1. In a brake rigging, the combination with a railway car truck comprising a truck frame and a plurality of wheels, of a slack brake rigging associated with each wheel comprising operatively connected truck levers located on the respective sides of a wheel, a dead lever pivotally mounted on the truck frame adjacent the transverse center line of the plane and operatively

connected to one of said truck levers, and a cylinder lever pivotally mounted on the truck frame in close proximity with said dead lever and operatively connected with said dead lever, and a brake



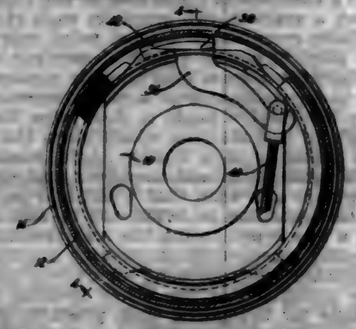
cylinder device disposed between the two cylinder levers at one side of the truck and secured to the truck frame adapted to actuate said two cylinder levers.

2,028,624

APPARATUS FOR MAKING CASTINGS

Harry E. Rogers, Wyanewood, Pa., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware

Application June 26, 1933, Serial No. 677,538
6 Claims. (Cl. 22—93)



1. In a mold for metal castings, a flask, elements extending across said flask for supporting the mold sand therein, and means mounted on said flask adjacent some of said elements for moving the latter and the mold sand supported thereby relative to the remainder of the mold.

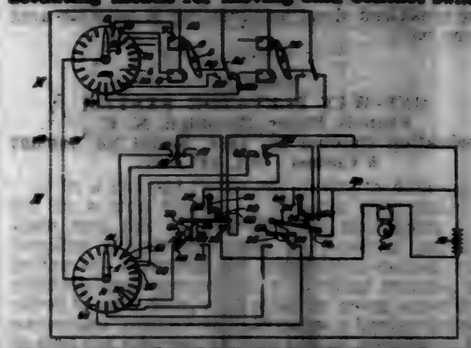
2,028,625

BRAKE

Adolph Roemer, Rockton, Ill., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Illinois

Application September 17, 1931, Serial No. 563,254
24 Claims. (Cl. 188—78)

1. A brake comprising a backing plate of pressed sheet-metal having outwardly-extending radial lugs at its periphery forming anchors arranged in spaced relation upon its perimeter.



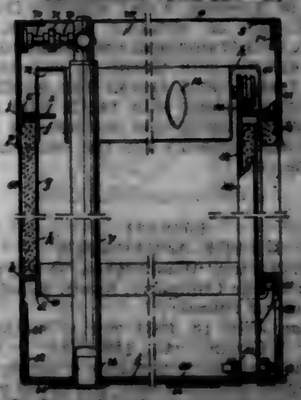
2,028,626

REMOTE CONTROL DEVICE

Manfred Schleicher, Berlin-Charlottenburg, and Leo Brandenburger, Berlin-Halensee, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany

Application November 7, 1927, Serial No. 231,684
In Germany November 11, 1926
4 Claims. (Cl. 177—311)

1. A remote control device, comprising means to be controlled mounted at a sub-station, manually operated switch means mounted in the main controlling station, contact switch means in said main station, means at the sub-station for varying the position of said means to be controlled, an electrical circuit connecting said manually operated switch means, said contact switch means and said position varying means, said means for varying the position of said means to be controlled being controlled through said circuit by said manually operated switch means, an alarm circuit having contacts adapted to be closed by said contact switch means, manually controlled movable indicating means having switch means attached thereto, electromagnetic actuating means for moving said contact switch



means to break said first circuit to render said manually operated control switch means inoperative, an electric circuit including said indicating means, the switch means attached thereto, and said electromagnetic means for moving the control switch means, said circuit being closed by movement of said means to be controlled to cause said electromagnetic actuating means to move the contact switch means to break said first circuit and simultaneously to close the contacts in said alarm circuit, means associated with said indicating means and operable thereby to return said contact switch means to its original position to close said first circuit, said manually controlled indicating means then indicating the position of said means to be controlled.

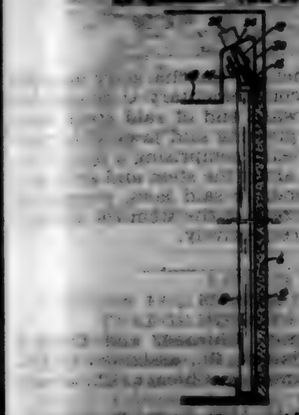
2,028,627

TELEPHONE BOOTH

Percival H. Sherren, Jamaica, N. Y.

Application November 7, 1932, Serial No. 641,571
23 Claims. (Cl. 179—2)

1. A telephone booth comprising a floor, a cylindrically shaped wall extending from the floor throughout the height of the booth and provided



with an opening forming a doorway, a door adapted to close said doorway, and a removable top comprising a roof and an annular flange thereon adapted to engage the upper end of the cylindrical wall.

2,028,628

TELEPHONE BOOTH

Percival H. Sherren, Jamaica, N. Y.

Application May 31, 1932, Serial No. 614,827
12 Claims. (Cl. 20—12)

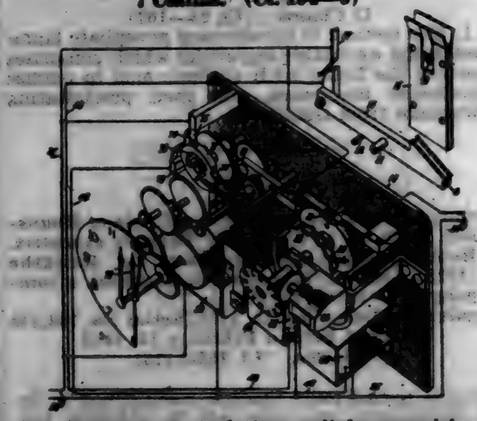
1. A telephone booth provided with a vertical door moving in an arcuate path, a curved track and rollers running on said track for supporting said door, said rollers having their axes inclined to the horizontal.

2,028,629

AUTOMATIC LOCKING DEVICE

Sheldon T. Smith, Detroit, Mich.

Application September 5, 1933, Serial No. 688,140
8 Claims. (Cl. 192—8)



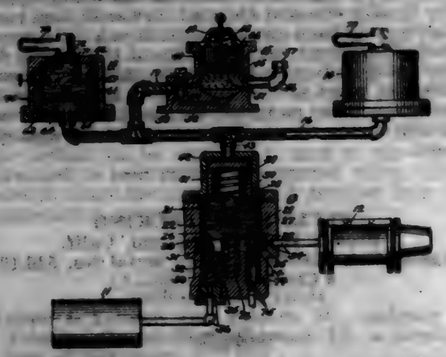
1. An automatic locking device adapted for engaging two mounted members together, comprising a casing formed with a cylindrical chamber therein and provided with a center pivot shaft therethrough concentric with the casing chamber axis, a circular lock disc having one receded edge loosely fitted within the said casing chamber and concentric therewith, but capable of slight edgewise displacement therein, sufficient to form a locking angle between the disc edge and the chamber wall, said lock disc being formed with an irregular shaped central opening surrounding the pivot shaft, an irregular shaped lock hub having rotatable means provided thereon, loosely but rotatably mounted on said pivot shaft, positioned within the disc central opening, for engaging the disc opening walls concentrically and displacing the said lock disc edgewise within the casing chamber when a force is applied rotatably in one direction to said lock hub, sufficient to cause the two members to engage and lock together.

2,028,630

COIN TIME SWITCH SYSTEM

Julian H. Stark, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application May 11, 1931, Serial No. 536,393
7 Claims. (Cl. 194—9)



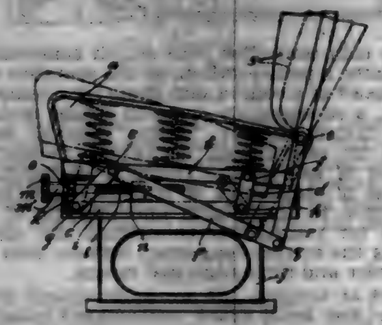
1. A coin controlled time switch comprising a coin chute, a service switch, means operative upon the deposit of a coin in said chute for closing said switch, a continuously operated timing device, a clock driven thereby, timing interval means driven by said timing device for causing the opening of said service switch a predetermined interval of time after it is closed, and means responsive to the closing and opening of said switch for respectively connecting and disconnecting the driving connection between said timing device and timing interval means.

2,028,631

FLUID PRESSURE BRAKE

Roy R. Stevens, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application March 24, 1932, Serial No. 602,479
2 Claims. (Cl. 60—54.6)



1. A fluid pressure impulse device comprising a casing having a cylinder, a piston within said cylinder having a cam member thereon, a manually operated rotary cam member mounted on said casing and adapted to engage and cooperate with said cam member on the piston for moving said piston against the pressure of fluid acting thereon, said cam members cooperating to retain the piston in any position to which it is moved against the pressure of said fluid, and without the application of operating force.

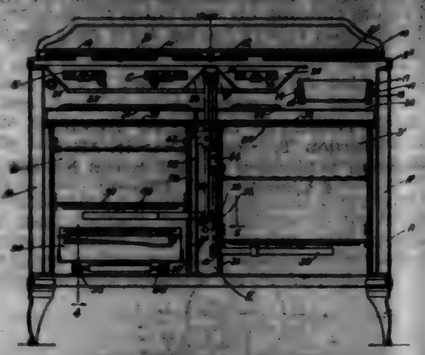
2,028,623
MANUFACTURE OF PHOSPHATES
George E. Taylor, Westfield, N. J., assignor to General Chemical Company, New York, N. Y., a corporation of New York
No Drawing. Application July 12, 1932, Serial No. 622,106
11 Claims. (Cl. 23—107)

1. The method of decolorizing phosphate liquor containing oxidizable impurities which comprises treating the liquor with chromic acid to oxidize discoloring impurities, and then precipitating chromium from the liquor.

2,028,632
SEAT
Sydney Edward Thomas, deceased, late of Hounslow, England, by Eva Emily Thomas, executrix, Hounslow, England, assignor to Quickthe (1928) Limited, Wandsworth, England, a company of Great Britain
Application December 29, 1932, Serial No. 647,530
In Great Britain February 10, 1932
7 Claims. (Cl. 155—116)

1. An adjustable seat structure comprising a base, angularly movable seat and back elements, means supporting the seat element on said base causing the seat element through forward movement to rise at its front edge and to lower at its rear edge, mechanism connected to the seat element and to said base element manually operative to slide the seat element forwardly and rearwardly, said back element including a rigid means pivoted adjacent the rear edge of the seat to the base, and linkage connected to said rigid means below its pivot and to the means supporting the seat element so as to tilt the back element rearwardly during forward movement of the seat element.

2,028,634
FLUID PUMP PACKING
Brooks Walker, Oakland, Calif.
Application March 30, 1931, Serial No. 526,191
8 Claims. (Cl. 286—1)

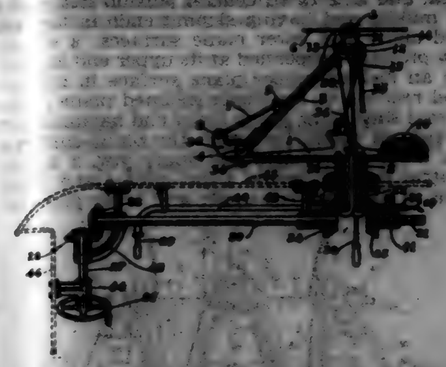


1. A packing element for self sealing a shaft against the pressure of a fluid having a body portion out of contact with the shaft, a flexible tapered lip portion engaging the surface of the shaft and integral means within said lip portion of said element for effecting its lubrication relative to the surface of the shaft.

2,028,635
PERFORATED SURGICAL INSTRUMENT
Frederick Charles Wappler, New York, N. Y.
Application September 11, 1933, Serial No. 688,681
20 Claims. (Cl. 174—98)

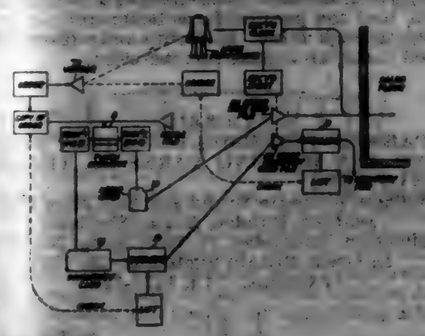
9. In an instrument of the character described, a stem, a pair of complementary U-shaped jaws pivoted to the forward end of said stem, means for independently pivoting said jaws with respect to the stem, said means comprising a pair of control rods arranged along the stem and articulated at their forward ends to said jaws, respectively, and devices at the rear of the stem for actuating said control rods, respectively.

2,028,636
RANGE
George D. Wilkinson, Chicago, and Elmer D. Pellegrin, Des Plaines, Ill., assignors to Cribben & Sexton Company, Chicago, Ill., a corporation of Illinois
Application April 16, 1932, Serial No. 605,746
5 Claims. (Cl. 126—39)



1. In a range, a frame, a pair of covers hingedly connected to said frame, burners supported in the top of said range below said covers, and guide trays supported below said burners, said guide trays being provided with inwardly inclined sides and having their adjacent sides providing a pipe-space compartment between them.

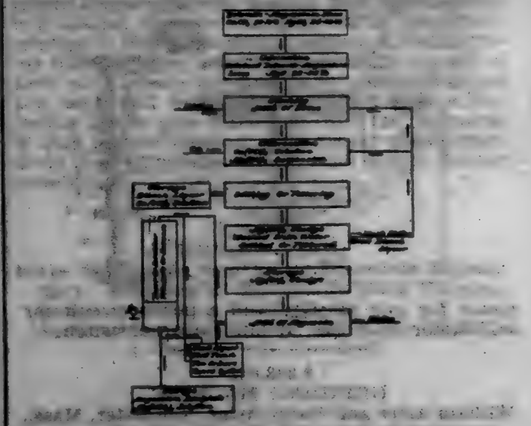
2,028,637
REVERSIBLE MOUNTING FOR TROLLEY WHEELS
James C. Wilson, Traverse, Mi.
Application March 31, 1934, Serial No. 718,488
9 Claims. (Cl. 191—64)



1. A reversible mounting for trolley wheels comprising a frame, a vertical pivotal support therefor, a trolley pole pivotally mounted on the frame, and a trolley harp pivotally supported at the end of the trolley pole about a vertical axis and normally positioned substantially vertically above the pivotal support for said frame; means operatively connected with said frame for the horizontal rotation thereof upon its pivotal support, means for holding said trolley wheel in alignment with said trolley pole when in use, and

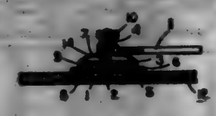
means for releasing said holding means to permit the trolley pole to rotate with the frame support

therefor while the wheel remains on the trolley wire.



2,028,638
MEANS FOR CONTROLLING CARD PERFORATING MACHINES
Louis Frank Woodruff, Brighton, Mass., and Martin L. Nelsen, Park Ridge, Ill.; said Nelsen assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware, and said Woodruff assignor to Central Records, Inc., Chicago, Ill., a corporation of Delaware
Application June 17, 1929, Serial No. 371,417
Renewed June 17, 1933
42 Claims. (Cl. 164—113)

1. In a card perforating system, two card perforating mechanisms each having a carriage operated step by step to successive setting positions, a single set of keys for controlling the operation of both said mechanisms, means for moving the carriage of the first mechanism to successive setting positions responsive to each successive operation of said keys, and means for moving the carriage of the second mechanism to successive setting positions responsive to only each successive second operation of said keys.

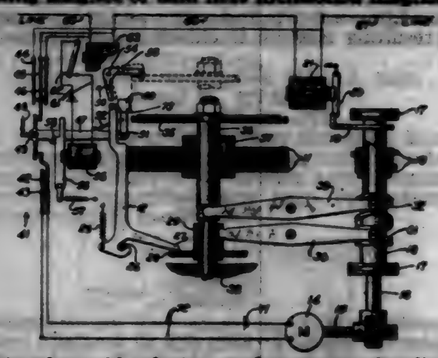


2,028,639
DECALCIFICATION OF MAGNESIAN DOLOMITES
Clyde Douglas Wygal, Manistique, Mich., assignor to Inland Lime and Stone Company, a corporation of Michigan
Application October 20, 1934, Serial No. 750,207
7 Claims. (Cl. 23—120)

5. In the method of preparing magnesium bisulphite from a high magnesian rock containing calcium, the steps of calcining the rock to produce a mixture of calcium and magnesium oxides, adding water to the oxides and chlorinating the resulting mixture to chlorinate substantially

all of the calcium without chlorinating substantial amounts of the magnesia, separating the residual magnesia, and treating it with sulphur dioxide to produce magnesium bisulphite.

2,028,640
SUCTION CUP
Louis Enigw, Lynn, Mass.
Application May 27, 1935, Serial No. 22,617
1 Claim. (Cl. 248—206)

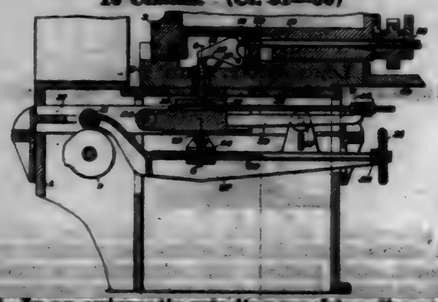


A suction cup for attaching an article to a support, said suction cup comprising a rubber body member having a normally flat continuous suction face and having a relatively thick central portion, a relatively thin annular portion surrounding the central portion and a peripheral bead at the outer margin of the relatively thin portion, a threaded stud anchored in the thick portion, a cup-shaped compression member enclosing the thicker portion and having its edge bearing against the thinner portion inside of the bead, said screw-threaded stud extending through the compression member and through the article to be supported, and a nut screw threaded to said stud and adapted when tightened to draw the central thick portion into the compression member.

2,028,641
MOTOR CONTROL
Walter J. Zenner, Des Plaines, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application November 1, 1934, Serial No. 752,513
13 Claims. (Cl. 172—4.1)

1. In a motor control system, a mechanical selector, a selectable mechanical member operable thereby, a magnet, an electric switch operable in one manner under control of said mechanical member and subsequently operable in reverse manner under control of said magnet, a line circuit, a line signaling magnet for said mechanical selector normally included in said line circuit, contacts in said electric switch for including in

said line circuit alternatively either said line signaling magnet or said first mentioned magnet, a

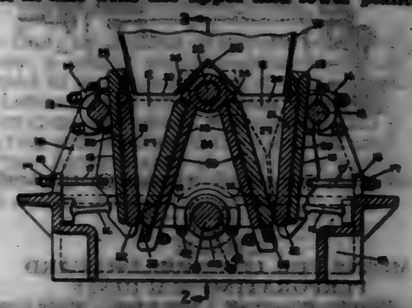


motor for said selector, and a power circuit for said motor controlled by said electrical switch.

2,028,642
GRINDING MACHINE

William Arter and Harry Arter, Worcester, Mass., assignors to Arter Grinding Machine Company, Worcester, Mass., a corporation of Massachusetts

Application September 24, 1930, Serial No. 484,870
Renewed January 13, 1934
16 Claims. (Cl. 51—50)

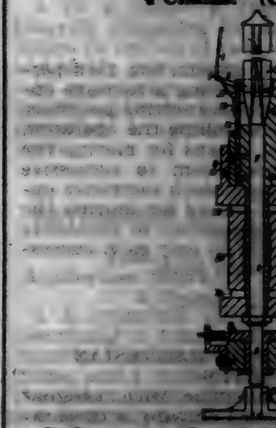


1. In an automatic grinding machine, the combination of a grinding wheel support; a work support; a machine bed having guideways upon which one of said supports is mounted for sliding movement to produce relative approaching and receding movements of the work and grinding wheel; a rod adjustable in said slidable support; screw threaded means for adjusting said rod relatively to said support; power driven mechanism operable through said rod to control said approaching movement; and a stop rigid with the machine frame for engaging said rod and limiting said approaching movement, said mechanism comprising a power driven cam, a lever operated thereby, means for transmitting the motion of said lever to said rod, said cam having a portion to control said relative approaching movement and another portion to permit the grinding out operation at the end of said approaching movement, and means adjustable to vary the ratio between said approaching and grinding out periods.

2,028,643
CRUSHER

Johan R. Bohstad, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a corporation of Ohio

Application November 26, 1930, Serial No. 498,121
1 Claim. (Cl. 83—53)



A crusher comprising a stationary jaw having an inclined plane face at its upper end, a substantially vertical plane face at its lower end, said upper and lower faces being of substantially equal area, and a serrated central portion flattened at its middle and having sloping ends in line with said upper and lower plane surfaces; a movable jaw pivotally suspended at its upper end and having an inclined upper plane surface in non-parallel relation to the upper inclined plane surface of said stationary jaw, a lower end having a plane surface in parallelism with the plane surface at the lower end of said stationary jaw, a serrated central portion having a flat middle and sloping ends in line with the upper and lower plane surfaces; and jaw actuating means disposed substantially in the vertical plane of said movable jaw pivot to engage the lower end of said pivotally suspended jaw in line with the parallel lower plane surfaces of said jaw to effect a crushing movement of said movable jaw relative to the path of movement of material passing between the crushing portions of the jaws, the non-parallel faces forming a material receiving throat from which material is discharged in comminuted form, and the parallel faces being in close proximity to each other, to permit only finely powdered material to pass therebetween.

2,028,644
APPARATUS FOR SIMULTANEOUSLY TWISTING AND WINDING YARNS OR THREADS INTO COPS

William Thomson Brand and Eric John Fairweather, Dundee, Angus, Scotland

Application September 27, 1934, Serial No. 42,548
In Great Britain September 29, 1934
4 Claims. (Cl. 117—27)

1. Apparatus for simultaneously twisting together a plurality of yarns or threads and winding the same into a cop or the like, comprising a rotary cop-receiving structure, an axially movable spindle coaxial with said structure, and relatating yarn guides, one carried by said structure, and a cam for imparting traversing movements to the other of said guides, the axis of said cam lying on the axis of rotation of said structure.

2,028,645
FOUNTAIN PEN

Nathan G. Burgeler, Chicago, Ill.

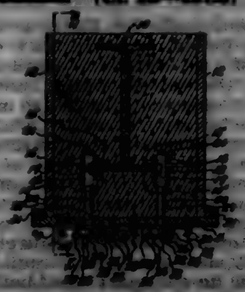
Application July 14, 1933, Serial No. 679,626
15 Claims. (Cl. 120—47)

1. In a fountain-pen: a barrel, an opening in the top end of barrel, a cap adapted to close said opening, a piston-rod loosely mounted in said cap and slidable thru said opening, lower end of said piston-rod, when in its lowest position, being free to move laterally.

2,028,646
COMPOSITE LOCOMOTIVE DRIVING WHEEL

Amos G. Cole, Barrahan, Pa.

Application June 27, 1932, Serial No. 619,437
11 Claims. (Cl. 295—6)

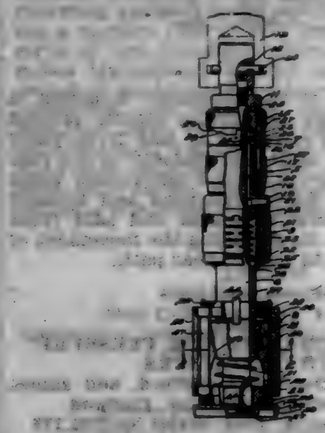


3. A composite locomotive driving wheel comprising, in combination, a rim, a central member of irregular shape providing a hub and wristpin support, and means connecting said central member and rim in supporting relation including plate steel sides having inner edges conforming to the irregular shape of said central member and secured thereto, and means for supporting a tire by said plates.

2,028,647
FORM ATTACHING SUPPORTING MEANS

Samuel S. Colt, Orange, N. J.

Application January 9, 1934, Serial No. 705,883
9 Claims. (Cl. 25—121.5)

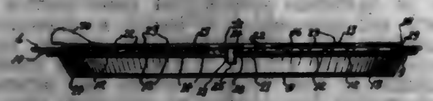


1. Means cooperable with structural iron or steel elements for supporting forms in connection therewith, comprising a hanger member having a suspension ear to engage the element, a supporting member, a bolt assembled with said supporting member, said supporting member having means cooperable with the bolt head to retain the bolt against rotative and longitudinal movement relative to said supporting member, said supporting member being adapted to abut and support a form wall, means for detachably connecting said bolt with said hanger member, a laterally projecting spacer stop extending from the outer side of said hanger member, and keeper arms oppositely projecting from lateral sides of said hanger member.

2,028,648
HONING TOOL

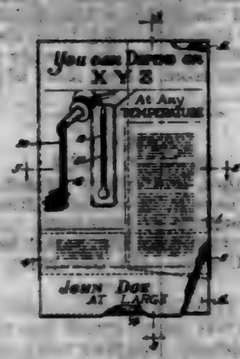
Kirke W. Comtor and Albert Elesadale, Detroit, Mich., assignors to Micromatic Hone Corporation, a corporation of Michigan

Application July 15, 1932, Serial No. 622,688
4 Claims. (Cl. 51—124.5)



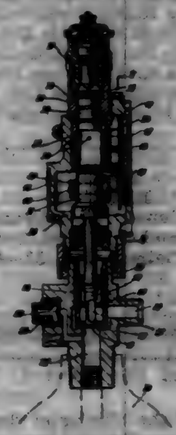
1. A honing tool including, in combination, a unit spindle, expansible abrading elements tiltably mounted for radial movement on said spindle, a spring associated with the lower ends of said elements for biasing them inwardly toward the spindle, and a spring of less tension than said first spring associated with the upper ends of said elements for biasing them toward the spindle.

2,028,649
BROILER



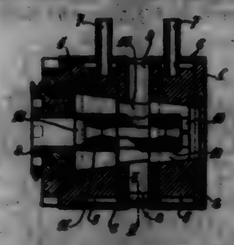
James P. Conroy, East Orange, N. J.

Application September 5, 1934, Serial No. 742,719
10 Claims. (Cl. 53—6)



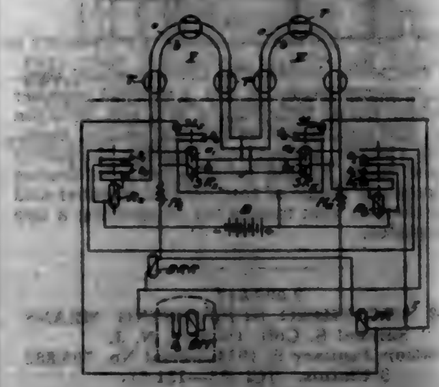
1. A broiler of the character described having movable bars for serving as a food supporting surface, and means for moving said bars, whereby when said bars are in one position they enable the broiler to provide a continuous, smooth and unbroken surface for supporting food during the singeing thereof, and when said bars are in another position they enable the broiler to provide an apertured upper surface for supporting food during the broiling thereof.

2,028,639
ADVERTISING FOLDER
Terence P. Cunningham, Chicago, Ill., assignor, by mesne assignments, to Donnle-Kircher Organization, Inc., Chicago, Ill., a corporation of Illinois
Application May 19, 1934, Serial No. 726,534
5 Claims. (Cl. 40—65)



1. In a device of the character described, a front panel having advertising matter printed thereon, a lateral extension of said front panel integral with the same and foldable to the rear of said front panel, a second advertising panel united with said lateral extension and foldable between said lateral extension and said front panel, and means for confining the movement of said second panel to a rectilinear path.

2,028,651
RELEASE MECHANISM FOR PRESSURE FLUID CONTAINERS
Reginald Foster Dagnall, Guildford, and James Graham Lambert, Leicester, England
Application June 18, 1934, Serial No. 731,175
In Great Britain June 24, 1933
3 Claims. (Cl. 221—75.5)



1. In a flotation gear for aircraft, a release mechanism comprising in combination a frangible closure for the container, a cutter, means for driving the cutter foward to pierce the closure and release the gas from the container, a pawl and cooperating ratchet one of which elements is fixed and the other movable with the means for actuating the cutter, said pawl and ratchet being capable of relative movement to allow the cutter to move forward and pierce the closure, and a spring adapted to hold the pawl and ratchet in locking engagement to prevent return movement of the cutter.

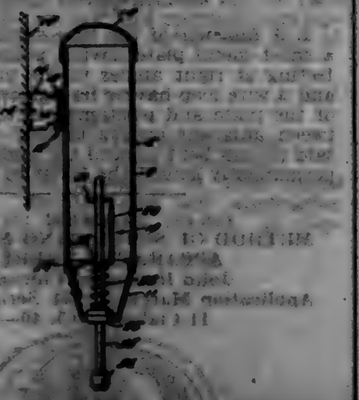
2,028,656
DRAWING OF WIRES
Jean de Malsitior, Sainte-Foy les Lyon, France
Application June 20, 1934, Serial No. 732,143
5 Claims. (Cl. 205—65)

1. A wire drawing device comprising in combination a cylindrical die-holder having circular grooves on its outer periphery; a tube tightly fitting on said grooved portion; a cooling fluid inlet in communication with one of said grooves; a cooling fluid outlet in communication with another one of said grooves; and passages between said grooves to ensure circulation of the cooling fluid.

2,028,663
FIRE ALARM SYSTEM
Olof Ingemar Harald Ekman, Stockholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a company of Sweden
Application May 19, 1931, Serial No. 538,561
In Sweden May 7, 1930
4 Claims. (Cl. 177—353)

1. In an automatic fire alarm system, a protective circuit including a plurality of loops each made up of two adjacent parallelly extending conductors, the corresponding conductors of all loops being connected in series so as to form two circuit branches connected in parallel to a common source of current, thermostatic circuit breakers inserted in both conductors of each loop, a first electromagnet coil in one of said circuit branches, a second electromagnet coil in the other of said branches, an alarm, contact means and connections controlled by said electro-magnet coils, jointly, for closing a circuit through the alarm on the de-energization of both conductors, indicating means individual to each loop including two windings, each normally shortcircuited by one loop conductor, an indicator for each loop and connections and contact means controlled by said windings to close a circuit through a corresponding indicator, on a break in any loop.

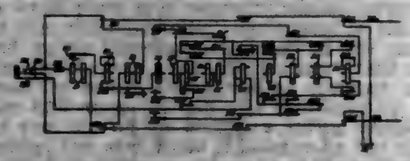
2,028,654
PROCESS FOR THE PREPARATION OF ETHERS HAVING AT LEAST 8 CARBON ATOMS IN THE MOLECULE
Eberhard Ellel, Duesseldorf, Germany, assignor to Henkel & Cie, G. m. b. H., Duesseldorf, Germany
No Drawing. Application March 14, 1933, Serial No. 660,774. In Germany March 24, 1932
17 Claims. (Cl. 260—151)



1. The process for the preparation of ethers having at least 8 carbon atoms in the molecule, characterized in that the acid esters which are obtained from polybasic oxygen containing mineral acids and non-aromatic alcohols of the group consisting of aliphatic alcohols containing at least 12 carbon atoms and hydroaromatic alcohols, are reacted with organic hydroxy compounds of the group consisting of alcohols and phenols in an alkaline medium.

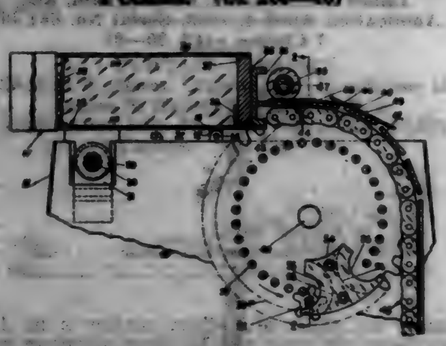
15. As new products of manufacture, monoalkyl-ethers of glycerol of the structural formula

R—O—CH_2——CHOH—CH_2OH



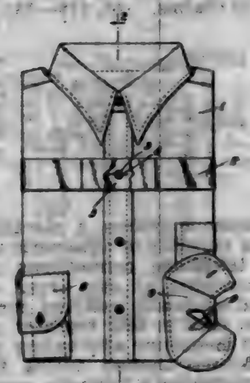
where R is a member of the group consisting of the dodecyl and the tetradecyl radical.

2,028,674
FLUENT MATERIAL DISPENSING DEVICE
Marcia Wilson Fitzhue, San Francisco, Calif.
Application December 15, 1933, Serial No. 702,599
Renewed July 5, 1935
3 Claims. (Cl. 221—62)



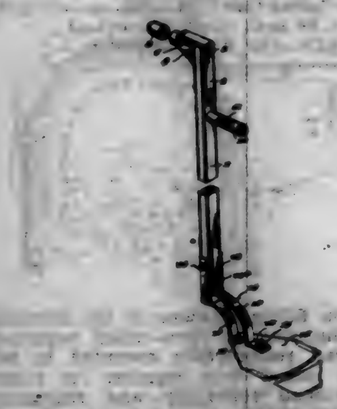
1. A dispensing device of the class described comprising a container having a hopper-shaped lower end provided with a centrally arranged hole, a guide member located in the container, a stem supported for vertical movement by said guide member, said stem having a valve member intermediate its ends for closing the hole, a spring for normally holding the stem in a position with the valve member closing the hole, and a downwardly curved strip having a centrally arranged hole therein through which the stem passes, with one end of the spring bearing against the central part of the strip to hold the same against the valve member, said strip being slidably and rotatably arranged on the stem and acting as an agitator for the material within the container.

2,028,656
AUTOMATIC TELEPHONE SYSTEM
Fernand Pierre Gehaval, Paris, France, assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application May 15, 1933, Serial No. 670,831
In France October 14, 1932
31 Claims. (Cl. 179—18)



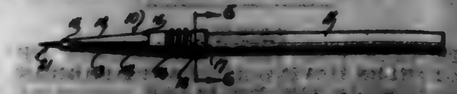
1. In a telephone system, a plurality of trunk circuits and a plurality of automatic switches for establishing telephone connections, an impulse repeater common to all said trunk circuits for operating said automatic switches, means including a vacuum tube in said repeater operated by series of high frequency alternating current impulses transmitted thereto during the dialling period in establishing a telphone connection for converting said series of impulse into corresponding series of direct current impulses for operating said switches, and means for associating said repeater with any of said trunk circuits only during the dialling period in establishing a telephone connection.

2,028,657
FILLING MACHINE
Max Goldberg, New York, N. Y.
Application February 17, 1934, Serial No. 711,795
3 Claims. (Cl. 226—46)



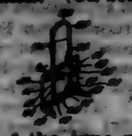
1. A cushion filling machine of the character described comprising an open-ended receptacle, a plunger-head reciprocably mounted in said receptacle, a linked drive member for sliding said plunger-head forwardly and rearwardly within said receptacle, means for temporarily keeping said linked member rigid in alignment in said receptacle to operate said plunger-head, and means for actuating said linked member forwardly and reversely, said actuating means comprising a wheel provided on one face with a circumferential series of pins positioned in perpendicular relation to said face, a driving pinion supported for movement with respect to said wheel and which coacts with said pins, and a guide member fixed to said wheel and providing opposed concave guide surfaces for guiding said pinion during the movement of said pinion with respect to the wheel.

2,028,638
SHIRT
Deckerd J. Gray, Ware Shoals, S. C., assignor to Riegel Textile Corporation, New York, N. Y., a corporation of New York
Application December 22, 1934, Serial No. 758,789
2 Claims. (Cl. 223—37)



1. As a new article of manufacture, a folded shirt and a retaining band surrounding the same and attached at the front to a button thereof and at the back having its ends attached together and to the tail of the shirt.

2,028,650
HAND TOOL FOR CUTTING GRASS, WEEDS, AND THE LIKE
James L. Green, Sr., Birmingham, Ala.
Application April 4, 1933, Serial No. 664,465
7 Claims. (Cl. 30—9)



1. A tool of the class described comprising an elongated shank, a forwardly extending cutting blade carried by the lower end of the shank, a rearwardly extending bracket carried by the upper end of the shank, a rotating hand grip supported upon said bracket in rearwardly spaced relation with respect to said shank, and a second grip member carried by the front face of the shank and extending forwardly thereof and arranged in spaced relation with respect to said first mentioned grip for facilitating the swinging of said shank upon said first mentioned grip in a pendulum-like manner.

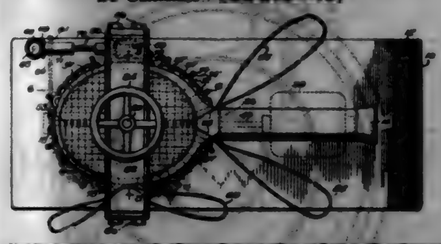
2,028,660
PENCIL SHARPENER
Elias Ernest Grossman, Chicago, Ill.
Application November 6, 1934, Serial No. 752,774
1 Claim. (Cl. 120—87)

In a pencil sharpener, a conical body portion, a cylindrical threaded portion at the larger end of the conical portion, and a plain cylindrical terminal end outwardly of the threaded portion and of the same diameter as the threaded portion, a sharpening blade extending longitudinally of the conical portion and a thread cutting finger carried by the terminal end of the sharpener outwardly of the threaded portion to provide a thread on the pencil in advance of the threaded portion of the sharpener to receive the threads of the latter, said thread cutting finger being resilient and exposed at the outer side of the plain cylindrical portion for manual pressure, whereby pressure thereon regulates the depth of the thread cut in a pencil.

2,028,661
BOX FASTENER
Carl E. Gustafson and Harry R. Holbrook, Attleboro, Mass., assignors, by direct and mesne assignments, to The Mason Box Company, Attleboro Falls, Mass., a corporation of Massachusetts
Application September 17, 1931, Serial No. 563,304
2 Claims. (Cl. 292—253)

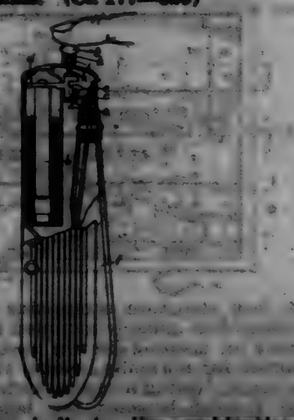
1. A fastener of the type specified comprising a sheet-metal plate having pointed prongs projecting at right angles to the plane of its face, and a wire loop having its legs overlying the face of the plate and positioned in the openings between adjacent prongs thereof with certain of said prongs bent around the ends of the loop to permanently attach the latter to the plate.

2,028,681
METHOD OF SIMULATING MOTION AND APPARATUS THEREFOR
John Hansmann, Chicago, Ill.
Application March 5, 1934, Serial No. 714,144
11 Claims. (Cl. 40—44)



1. The method of simulating animation in a scene adapted to apparent animation which com-

prises passing a plurality of beams of light through a refractive medium toward the scene in such manner that adjacent beams are concentrated and are refracted in markedly irregular and different directions, and continuously passing a plurality of small openings across said beams.

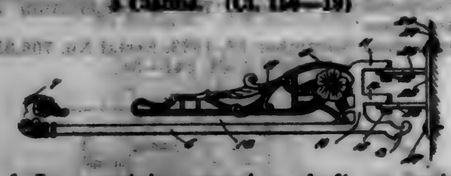


5. Apparatus for producing an animated picture, comprising a luminous element, means for distorting and concentrating the light from said element, means for continuously moving a plurality of small openings across the light, and a scene adapted to apparent animation upon which the light passing through said openings is concentrated.

2,028,682
APPARATUS FOR STRINGING TENNIS RACKETS
John William Harroff, Youngstown, Ohio
Application January 2, 1935, Serial No. 197
20 Claims. (Cl. 273—73)

1. Apparatus of the character described comprising a pair of complementary guide plates corresponding in shape and size to the inside of a tennis racket frame and adapted to be arranged therein in face to face relation, said plates being provided in their adjacent faces with corresponding grooves forming guide openings for the passage of the racket strings, said openings registering at their ends with the string openings of the racket frame.

2,028,684
VEHICLE DIRECTION INDICATOR
Rudolf Hohenmann, Berlin, Germany
Original application November 28, 1930, Serial No. 498,886. Divided and this application August 12, 1934, Serial No. 739,872. In Germany January 27, 1930
2 Claims. (Cl. 177—329)



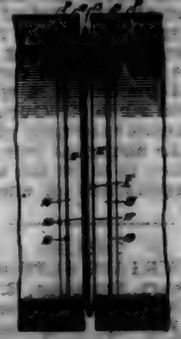
1. In a direction indicator the combination of a casing, an indicating arm pivoted at the upper end of the casing, a solenoid disposed within the casing and having a core with respect to which the indicating arm is normally parallel, a head plate on the core, an abutment formed integral with the head plate, a pin connected to the arm, said pin being arranged above and towards the solenoid side of the pivot of the arm, said pin normally bearing against the abutment in a direction substantially at right angles to the axis of the solenoid to retain the arm within the casing, an actuating member formed integral with the head plate and normally spaced away from the pin, whereby initial movement of the solenoid moves the abutment clear of the pin and releases the arm while further movement of the armature causes the actuating member to engage and move the pin and consequently swing the arm out of the casing, a spring adapted to cushion the arm when it returns to the normal position, and means externally of the casing so as first to move the abutment into a non-retaining position and then to allow the arm to be swung outwardly independently of energization of the solenoid.

2,028,685
CURTAIN SUPPORT
Charles P. Henry, Cranston, R. I., assignor to James N. Henry, Providence, R. I.
Application July 27, 1935, Serial No. 33,428
4 Claims. (Cl. 156—19)

1. In a curtain support, a shaft, an upright post upon the shaft, an arm upon the upper portion of the post, and a depending pivot lug upon the arm.

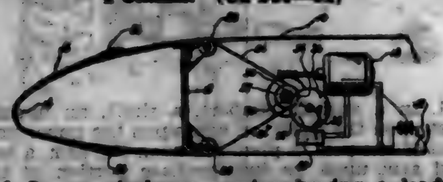
2,028,686
CURTAIN SUPPORT
Charles P. Henry, Cranston, R. I., assignor to James N. Henry, Providence, R. I.
Application July 27, 1935, Serial No. 33,429
5 Claims. (Cl. 156—19)

1. In a curtain support, a shaft, an upright post upon the shaft; an arm upon the upper portion of the post, a pivot lug upon the arm, a second arm upon an intermediate portion of the post, and a pivot lug upon the second arm.



2,028,687
CURTAIN SUPPORT
Charles P. Henry, Cranston, R. I., assignor to James N. Henry, Providence, R. I.
Application July 27, 1935, Serial No. 33,430
4 Claims. (Cl. 156—19)

1. In a curtain support, a shaft, an upright pivot post upon the inner end of the shaft, a sec-



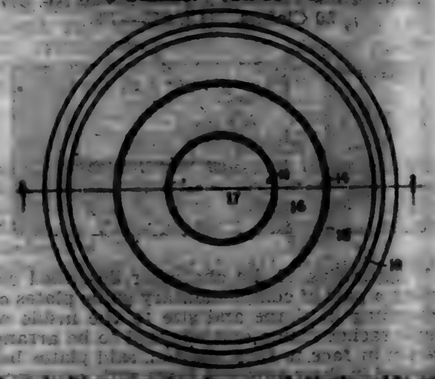
and post upon the shaft spaced from the pivot post, an arm upon the upper portion of the spaced post, and a depending pivot lug upon the end of the arm in vertical alignment with the pivot post and spaced therefrom.

2,028,662
JOINT FOR CONCRETE PIPES
William S. Hewett, Elmhurst, Ill.
Application December 6, 1934, Serial No. 756,395
2 Claims. (Cl. 285—98)

2. An expansion joint for use in securing the ends of two concrete sections in spaced aligned relationship, comprising a reinforcing bar having a web embedded in each section so that the bar lies substantially flush with the inner surfaces of the sections adjacent the spaced ends thereof, a substantially V-shaped joining member for said sections adapted to extend outwardly therebetween, said member having oppositely extending flanges at its base adapted to extend into and embrace the inner faces of said bars, and means securing each of said flanges to said bars with the ends of said sections abutting the base of said V-shaped member.

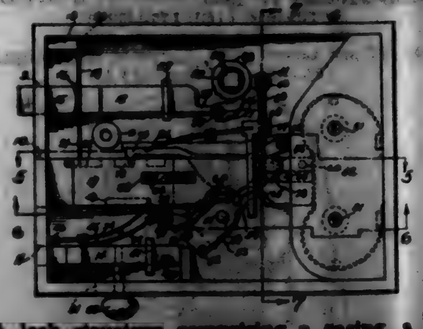
2,028,669
ICE REMOVING MEANS
Thorp Hiscock, Seattle, Wash., assignor, by mesne assignments, to United Air Lines Transport Corporation, Chicago, Ill., a corporation of Delaware
Application November 18, 1933, Serial No. 700,852
4 Claims. (Cl. 244—31)

1. In an airplane: a wing having a leading edge whose radius of curvature is smaller than that of adjacent portions of the wing, a strip of curtain snugly enveloping said leading edge and adjacent portions of the wing, and means for drawing said curtain back and forth about the leading edge of the wing while conforming the curtain thereto to break loose ice formations.



2,028,670
REINFORCED LIGHT-TRANSMITTING SHEET
Richard T. Hosking, Wilmette, Ill.
Application December 11, 1933, Serial No. 701,791
4 Claims. (Cl. 154—43)

2. A sheet of material comprising a woven mesh screen having a sheet of flexible transparent material secured to each side thereof, wherein the wires of said woven screen are formed with flat areas at the outer faces of their points of cross-



ing and at their inner crossing faces are mutually interembedded, the said transparent sheets being adhesively fixed to said flatted areas only.

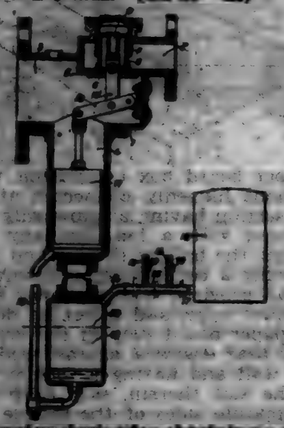
2,028,671
CAKE PAN
Jacob Hollman, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application February 14, 1934, Serial No. 711,261
6 Claims. (Cl. 53—6)

2. A baking pan having a relatively wide concentric ridge in the bottom thereof, in combination with dividers coacting with said ridge to be positioned in spaced relationship thereby.

2,028,672
COMBINED LOCK AND LATCH
John Kubina, Brantford, Ontario, Canada, assignor of one-half to Matvas Rhejba, Brantford, Ontario, Canada
Application July 12, 1934, Serial No. 734,831
1 Claim. (Cl. 70—99)

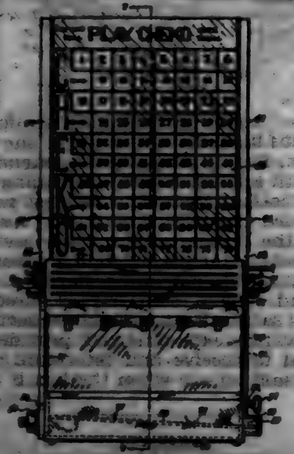
A lock structure comprising a casing, a key-operated bolt slidably mounted in the casing and having an opening therein inwardly of its edge, a spring for normally holding the bolt projected, the casing having a recess formed in the interior wall thereof beneath the bolt, a spring arm mounted over the recess having one end prevented to the sliding bolt, a key stud mounted on the spring arm laterally of the bolt and adapted to receive a key for the operation of the bolt, a pin mounted on the free end of the arm adapted to enter the opening in the bolt, and said key stud adapted to be depressed by the bolt operated key for moving the spring arm into the recess to permit retraction of the bolt from its locked position against the tension of the spring.

2,028,673
STOCK INLET CONTROL FOR PAPER MAKING MACHINES
Richard T. Lang, Heidenheim-on-the-Brenz, Germany, assignor to American Voith Contact Co., Inc., New York, N. Y., a corporation of New York
Application December 7, 1934, Serial No. 756,516
In Germany September 19, 1933
3 Claims. (Cl. 92—44)



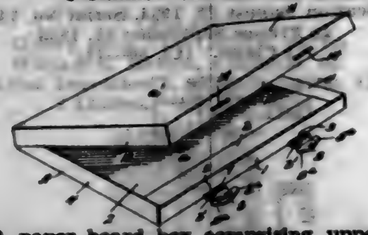
1. In a Fourdrinier or like machine, the combination with a stock container and a wire of a stock discharge device, said stock container having a roll close to the stock discharge device, including a non-flexible adjusting board, means on the container to adjust said board, a flexible connection extending from said adjusting board to the stock container, a flexible member extending from the other end of the adjusting board and having free ends, and means supported on the adjusting board for adjusting the free ends of the second flexible member from the adjusting board independently of the adjustment of the adjusting board itself, whereby the size of the continuous discharge outlet with respect to the wire which receives the stock through such outlet and the discharge angle of the stock to the wire may be varied.

2,028,674
CLAW GUARD
Albin E. Larson, Webster, S. Dak.
Application October 12, 1934, Serial No. 748,334
1 Claim. (Cl. 119—97)



A device of the class described comprising an elongated resilient member having a longitudinally extending bore for receiving a claw of a turkey or the like, and a spring member carried by the resilient member and having a substantially straight part extending into the bore thereof and said straight part having its free end pointed and bent to extend diagonally across a part of the bore for partly penetrating the claw.

2,028,675
EXPANSION VALVE FOR STEAM
Jean Lavergne, Paris, France, assignor to Society Compagnie de Chauffage Central par la Vide, Neuilly-sur-Seine, Seine, France, a corporation of France
Application August 28, 1934, Serial No. 741,466
In France September 27, 1933
1 Claim. (Cl. 60—12)



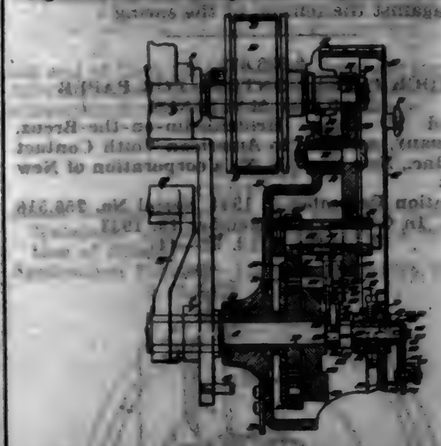
An expansion device for obtaining a fluid under a variable vacuum, applicable to steam heating plants with variable vacuum comprising two branches of a manometer of the liquid type, a float arranged in the upper branch, a steam chamber communicating with said upper branch, a regulating ventil in said chamber connected with said float, a fluid tank under constant pressure communicating by a reduced aperture and a conduit with the lower branch, and cocks connected with said conduit for regulating the pressure of the lower branch.

2,028,676
AMUSEMENT DEVICE
Harry Light, Atlantic City, N. J.
Application October 17, 1934, Serial No. 748,049
11 Claims. (Cl. 273—132)

1. An amusement device comprising a cabinet having openings therein, an underlying substantially horizontal member having a plurality of receptacles, a trough, and means to tilt the member to a substantial vertical position to discharge game pieces from the receptacles to the trough.

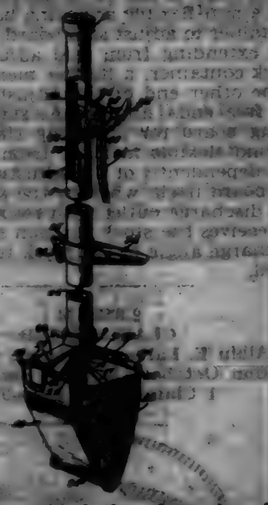
2,028,677
LOCKING MEANS FOR PAPER BOARD BOXES
Elmer H. Lupton, Rehoboth, Md.
Application April 2, 1935, Serial No. 14,248
5 Claims. (Cl. 229—45)

1. A paper board box comprising upper and lower sections hingedly connected at one side, the lower section having an upwardly extending wall provided with a longitudinally extending slot adjacent the bottom thereof and said upper section having a corresponding downwardly extending wall provided with a similar slot spaced from its lower edge, and a locking device comprising a paper board strip in the lower section adapted to bear edgewise against said upwardly extending wall and having a tongue projecting through the slot therein, said strip being cut away at opposite sides of the tongue so as not to engage the latter wall at the ends of the slot, and said tongue having a foldable head adapted to be extended through the slot in said downwardly extending wall of the upper section when the box is closed.



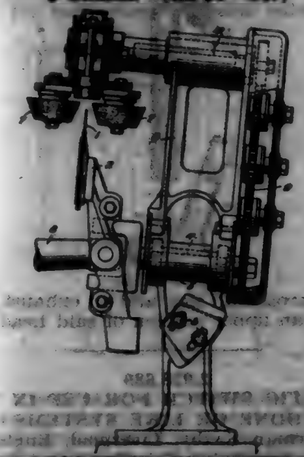
2,028,678
LOCKING AND REENFORCING MEANS FOR PAPER BOARD BOXES
Elmer H. Lupton, Rehoboth, Md.
Application April 18, 1935, Serial No. 17,092
4 Claims. (Cl. 229—15)

1. A paper board box comprising upper and lower sections hingedly connected at one side, the lower section having an upwardly extending wall provided with a longitudinally extending slot adjacent the bottom thereof, a locking and reenforcing device comprising a paper board strip resting on the bottom of the lower section and having a locking tongue extending through said slot and upwardly extending flaps at opposite sides of said tongue, said flaps secured to the inner side of said wall, and the upper section having a downwardly extending wall provided with a slot adapted to receive and inter-lock with the free end of said tongue when the box is closed.



2,028,679
WINDING MACHINE
William Marcroft, South Chatham, Mass.
Application August 18, 1932, Serial No. 629,461
10 Claims. (Cl. 75—115)

1. In a gainer mechanism for winding machines, the combination of a driving gear, a rotary element adapted to be driven from said gear, a pinion carried by said last-named element in mesh with the driving gear, a pair of friction clutches for rotating the pinion to impart it relatively of the driving gear, a fixed pin disposed eccentrically with respect to the axis

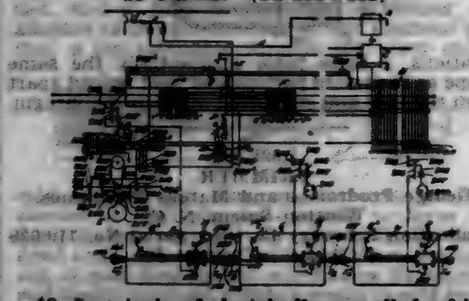


of the driving gear, and a pair of arms connecting said eccentric pin and clutches to cause the arms to oscillate the clutches to intermittently turn the pinion to advance it circumferentially of the driving gear during its planetary motion therewith.

2,028,680
DIGGER
Mitsuo Mayeda and Yoshigura Okamoto, Waialua, Territory of Hawaii
Application February 4, 1933, Serial No. 655
3 Claims. (Cl. 55—71)

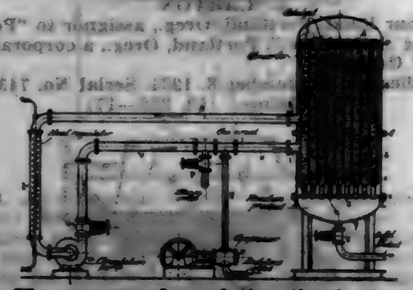
1. An implement of the character describ[ed] comprising a tubular shank, a hanger at one [end] of the shank and providing double arms oppositely extended, scoop blades pivotally supported [on] said arms and adapted for opening and clos[ing] movements relative to each other, means work[ing] within the shank and connected with the blades for effecting opening and closing thereof, means on the shank for locking said means connected with the blades, and a stirrup carried by the shank and adjustably connected therewith.

2,028,681
GRINDING OF ROTATING ECCENTRIC KNIVES
Walter Everett Molins, Deptford, London, England; Harold Fernando Molins and Moses Hyman Isaacs, executors of said Walter Everett Molins, deceased
Application January 11, 1934, Serial No. 706,268
In Great Britain January 11, 1933
5 Claims. (Cl. 51—247)



1. The combination with a cutting device for severing axially moving rods into lengths, said device comprising a rotating member, a knife supported on said member for rotation therewith and for axial displacement with respect thereto, a guide member associated with said knife for determining the axial displacement of the knife during rotation thereof, and means for effecting relative angular adjustment of said members substantially in a plane containing the axis of said rotating member to vary the extent of axial displacement of said knife, of a grinder for the knife, and means carried by said guide member for supporting said grinder, whereby relative adjustment of said members may be effected without disturbing the operative relation of said grinder and knife.

2,028,682
MODIFYING ROOM ATMOSPHERIC CONDITIONS
James H. O'Brien, Chicago, Ill., assignor to American Blower Corporation, Detroit, Mich., a corporation of Delaware
Application November 3, 1932, Serial No. 642,942
3 Claims. (Cl. 240—1)



1. The combination with a room for human occupancy and incandescent electric lamps for lighting the room and air ventilating and conditioning means for supplying cooled air to the room, of means for minimizing the heating effect of said lamps on the room atmosphere, comprising a dust system having an air inlet and an air outlet, each external to said room and having portions in immediate heat absorbing relation with said lamps, and power means for moving air through said system from said inlet to said outlet.

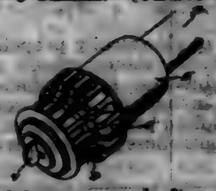
2,028,683
MULTIPLE UNIT CONTROL SYSTEM
Louis Eugène-Widelt Mentrasso-Oster, Karlsbad, Czechoslovakia
Application December 15, 1929, Serial No. 502,535
In Germany December 16, 1929
23 Claims. (Cl. 188—158)

19. In a train of electrically propelled vehicles each having a driving motor, circuit connections for electrically braking said vehicles through said motors and including a brake controller for each vehicle, and fluid pressure means for actuating said brake controllers in unison from any one of the vehicles.

2,028,684
METHOD OF AND AN APPARATUS FOR SUBJECTING A FLOWING MEDIUM IN A CONTINUOUS OPERATION TO A REACTION
Walter Pahl, Bruchhausen/Hasten, Germany, assignor, by mesne assignments, to the firm of Deutsche Gold- und Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a corporation of Germany
Application January 16, 1926, Serial No. 421,230
In Germany January 18, 1925
10 Claims. (Cl. 23—288)

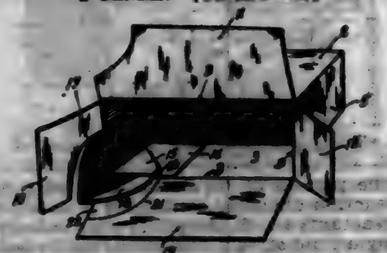
2. The process of regulating the temperature in a reaction chamber containing a catalyst for fluid reactants which comprises continuously circulating a fluid stream containing said reactants in a closed path, continuously branching off a minor part of said stream at substantially catalyzing temperature and subjecting it to catalytic action while keeping it in intimate and indirect heat exchange relation with said circulating fluid stream and continuously supplying fluid containing fresh reactants to said closed path to compensate for said minor part which has been branched off.

2,028,685
MICROPHONE TRANSMITTER
Stephen Case Porter, New York, N. Y.
Application December 24, 1934, Serial No. 758,877
3 Claims. (Cl. 179—187)



3. A transmitter of the class described comprising the combination with a microphonic ap-

paratus having a diaphragm, of a sound box having a front face, the center portion being raised outwardly from the face and provided with per-



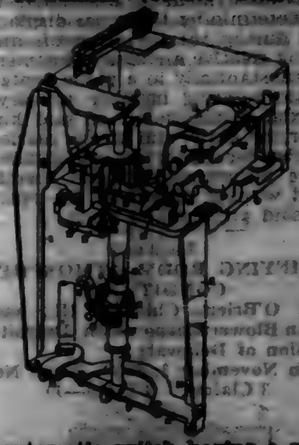
forations, a baffle plate substantially the same shape as the raised portion and held spaced apart from the face and supported over the diaphragm.

2,028,626
TRIMMER
George Predromos and Marcus Predromos, Winston-Salem, N. C.
Application February 12, 1934, Serial No. 710,939
6 Claims. (Cl. 262—58)

1. In a trimmer, a shaft, a toothed cutter mounted thereon, a guard in advance of said cutter, a spring on said shaft bearing against said cutter and serving normally to hold said cutter against said guard, said guard having a plurality of depressions on its under face in which the cutter teeth seat whereby relative rotation between said cutter and said guard is prevented, and means carried by said shaft for detachably latching said guard to said shaft.

2,028,627
CARTON
Arthur Read, Portland, Oreg., assignor to "Touring Sports Inc.", Portland, Oreg., a corporation of Oregon
Application September 3, 1934, Serial No. 743,262
4 Claims. (Cl. 229—17)

1. A carton comprising side and end walls and overlapping and sealed end flaps, a pouring spout formed integral with one of said end walls and movable with respect thereto, said pouring spout having two walls, a guideway formed between overlapping portions of said side and end walls and adapted to slidably embrace one wall of said pouring spout.

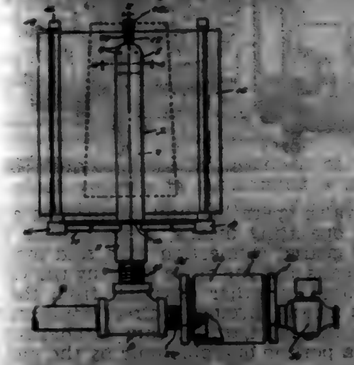


2,028,628
BALLAST CLEANING APPARATUS
Walter S. Rugg, Pittsburgh, and Alexander Palmros, Zelienople, Pa.
Application October 16, 1931, Serial No. 569,276
26 Claims. (Cl. 262—3)

1. Apparatus for cleaning ballast and the like material in place comprising a hollow apertured head provided with depending spike members and a transverse slot, barrier members secured at

intervals across said slot, and an exhaust conduit secured to an upper portion of said head.

2,028,629
AUTOMATIC SWITCH FOR USE IN TELEPHONE OR LIKE SYSTEMS
Robert Norman Starky, Liverpool, England, assignor to Associated Telephone and Telegraph Company, Chicago, Ill., a corporation of Delaware
Application September 22, 1932, Serial No. 634,285
In Great Britain October 14, 1931
11 Claims. (Cl. 179—27.58)



1. An automatic switch having a wiper shaft and mechanism for moving the same in a vertical and rotary direction, a plurality of contact spring sets, means for operating said springs by the mechanical movement of the shaft, said spring sets mounted in a plane transverse to the plane of the wiper shaft, and means for operating said sets at different positions of the wiper shaft.

2,028,630
WASHER FOR MUGS, GLASSES, ETC.
Joseph Schanzer and Dale E. Andrews, Kaukauna, Wis.
Application March 21, 1936, Serial No. 12,218
1 Claim. (Cl. 241—2)

A receptacle washer comprising an upstanding nozzle having ports in the upper end thereof and

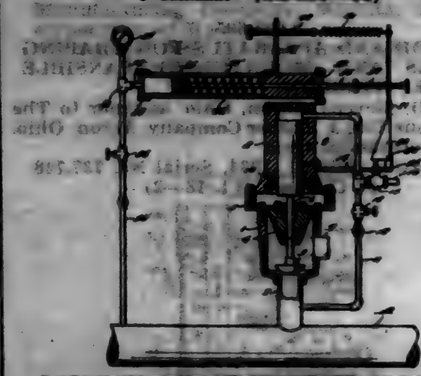
receivable in a receptacle, a plurality of pipes communicating with the lower portion of said nozzle, tubes rising from said pipes in spaced relation to said nozzle and being provided with ports in the upper portion thereof, the lower portion of said nozzle being adapted to be connected to a source of liquid supply, a valve seat in the lower portion of said nozzle, a stationary valve guide in said nozzle, adjacent said valve seat, a slidable guide having a depending sleeve, a valve for contacting with the valve seat and

having a rod extending upwardly through the stationary guide and said sleeve of the slidable guide and projecting beyond the upper end portion of the nozzle, a coil spring disposed in said nozzle between the stationary and the slidable guide, a coil spring encircling said valve rod and disposed between the stationary guide and the lower portion of said sleeve, means connecting said valve rod to said slidable guide, a substantially C-shaped shield mounted on the tubes and a horizontal shield encircling the lower portion of the nozzle, and resting on said pipes.

2,028,631
METHOD OF PACKAGING ARTIFICIAL SAUSAGE CASINGS AND PRODUCT
Bernard H. Sobotnik, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application June 8, 1934, Serial No. 729,691
10 Claims. (Cl. 206—46)

1. A method of preparing artificial sausage-casings for shipment and handling which comprises: applying to a compressed, shirred casing while on a mandrel a container having end-away end-walls which accommodate the mandrel.

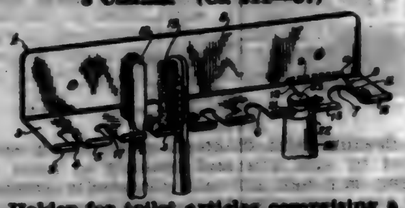
10. A container for the purpose set forth comprising an elongated shallow cardboard band having recessed end-walls, said container having two opposite open sides, and a relatively short transverse band encircling the intermediate portion of said first-mentioned band.



2,028,632
YARN TENSION FOR AUTOMATIC KNITTER
Allan M. Sturgeon, Philadelphia, and Hamlet H. Meehan, Aston, Pa., assignors to Textile Machine Works, Reading, Pa., a corporation of Pennsylvania
Application August 29, 1933, Serial No. 687,564
6 Claims. (Cl. 139—317)

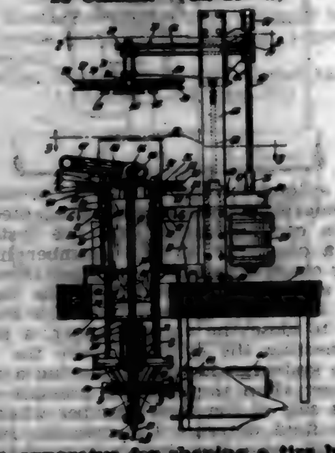
1. In a weft-threading shuttle, the combination with a thread-guide bracket having a longitudinal yarn-receiving passage, a slot in the upper end of said block adjacent one side of said passage and communicating with the latter, a tensioning device at one end of said block comprising a relatively fixed open frame having an arm extending diagonally across one end of said passage and with its upper end adjoining the said slot, and a thin floating bar paralleling and adapted to contact the face of said diagonal portion, a pin extending through the lower end of

said floating and diagonal elements, a spring carried by said pin and tending to force said floating bar against said diagonally relatively fixed arm, said an arm extending from the upper end of said floating bar and having its terminal end loosely confined within a recess in said frame, said bar being substantially free to move to and from the opposed diagonal arm of said frame, while being restrained from transverse displacement at both terminal ends.



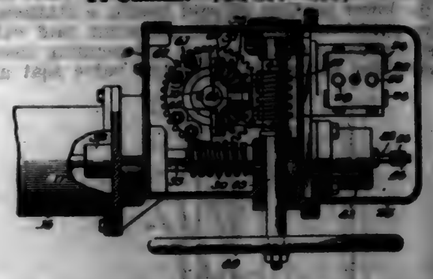
2,028,633
AUTOMATIC RELEASE VALVE
John A. Sharp, Marshall, Tex.
Application August 31, 1934, Serial No. 743,513
3 Claims. (Cl. 137—53)

1. An automatic release valve for pressure systems comprising a valve casing adapted to be placed in communication with the system and having a discharge, a valve member having a stem for controlling communication through the casing, a cylinder mounted on the casing, a plunger therein contacting the valve stem and tending to close the valve member, a pipe line for connecting the cylinder above the plunger with the system, said plunger having a pressure area larger than the effective pressure area of the inlet side of the valve member whereby the pressure fluid entering the cylinder from the system will cause the plunger to hold the valve member closed, a pressure opened valve member in communication with the pipe line, a spring actuated member for normally holding the last-mentioned valve member closed, a second cylinder adapted to be placed in communication with the system at a point in advance of the first mentioned valve member, a plunger in the said second cylinder operated by the pressure fluid entering the same, a spring for resisting movement of the second mentioned plunger caused by said pressure fluid and means for operating the spring actuated member by the



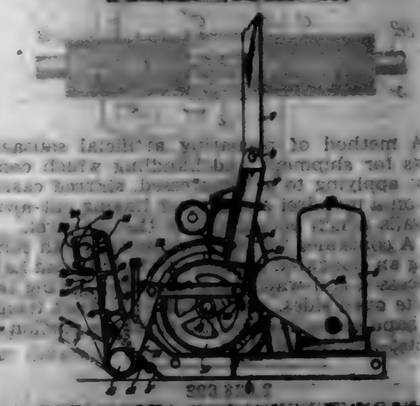
second mentioned plunger when said plunger has moved a predetermined distance by excessive fluid pressure in the system.

2,028,624
HOLDER FOR TOILET ARTICLES
Joseph M. Spinks, Atlanta, Ga.
Application September 10, 1934, Serial No. 743,646
3 Claims. (Cl. 211—87)



1. Holder for toilet articles comprising a substantially horizontal shelf having receiving slots cut in from the forward edge thereof, said forward edge between said slots being turned up to form retaining flanges, and a resilient element adjacent one side of at least one of said slots guarding the entrance thereto and yielding to admit an article, said element comprising a spring wire anchored adjacent the back of said shelf and having an outer free end turned away from the slot which it controls, the flange adjacent said free end being turned over forming a guard slidably receiving said free end.

2,028,655
METHOD AND APPARATUS FOR SHAPING TIRES AND MOUNTING EXPANSIBLE CORES THEREIN
Horace D. Stevens, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 31, 1934, Serial No. 737,748
18 Claims. (Cl. 18—3)

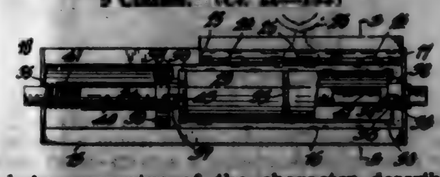


17. In apparatus for shaping a tire band and inserting an expansible core therein, the combination of opposed, axially aligned platens, means for rotating the platens in unison, means for moving the platens axially relatively of each other, means on the platens for clamping the bead portions of a tire band positioned between the platens, a hollow cylinder secured to one of the platens and opening thereonto, said cylinder being adapted to receive an expansible core in folded condition, and means for ejecting the core therefrom while the platens and cylinder are rotating.

2,028,696
VALVE OPERATING UNIT
Clinton H. Beckwith, Geneva, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application February 3, 1934, Serial No. 709,422
14 Claims. (Cl. 137—139)

1. A valve operating unit comprising a motor, a hand operating means, a mechanism in permanent geared connection with said motor and hand means and the valve whereby the valve can be operated in either direction from the motor or hand means through a direct connected positive driving mechanism, said mechanism comprising a portion operable only by the motor and a portion operable only by the hand means and a valve-operating portion operable in common by the other two, means controlled by a portion of the mechanism operable either by the motor or the hand means for rendering the motor ineffectual when in the valve opening operation the valve is brought to a predetermined open position, and means controlled by a motor operated portion of said mechanism for rendering the motor ineffectual when under the applied power of the motor a predetermined resistance to the valve closing operation is encountered.

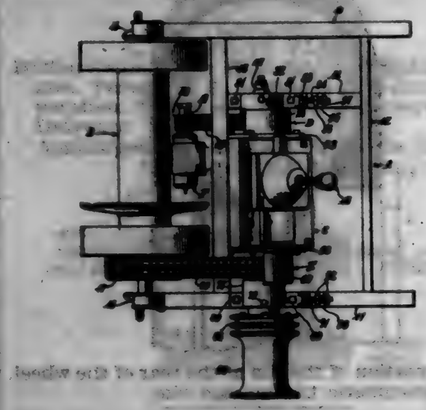
2,028,697
WELL STUDDING APPARATUS
Harland W. Cardwell, Wichita, Kans., assignor to The All Steel Products Manufacturing Company, Wichita, Kans., a corporation of Kansas
Application May 18, 1934, Serial No. 726,483
5 Claims. (Cl. 255—11)



1. Well spudding apparatus of the type described comprising a chassis formed of parallel side beams having upwardly bent windy o spudding shaft rockably mounted on the underneath surfaces of said upwardly bent beam windy, a pair of spudding arms fixed on said spudding shaft, a sheave slidably and rotatably carried by the spudding arms, a cable drum supported on the chassis above the plane of the spudding shaft, and means for driving the spudding shaft to effect oscillation of the spudding arms.

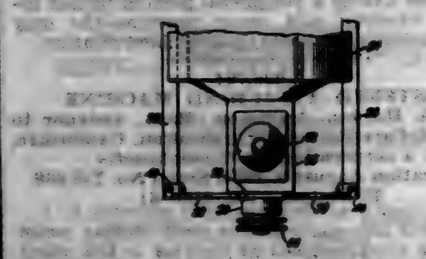
2,028,696
COTTON PICKING SYSTEM
Robert S. Curley, Lowell, and William Shaw, Needham, Mass., assignors to Saco-Lowell Shops, Boston, Mass., a corporation of Massachusetts
Application November 5, 1931, Serial No. 572,684
8 Claims. (Cl. 19—70)

1. That improvement in methods of picking cotton which consists in performing a plurality of picking operations on a stream of loose cotton and finally working it into the form of a finished lap, feeding the cotton in a continuous and approximately uniform stream from the delivery of each of said operations to the infeed of the next, at an intermediate point in the process working the cotton into a thickened web in which the fibres are loosely associated with each other, and evening said thickened web.



2,028,698
APPARATUS FOR MAKING PRINT ROLLERS AND THE LIKE
William M. Greene and Fred E. Lothey, Salamanca, N. Y., assignors to Lindsdale Products Corporation, Salamanca, N. Y., a corporation of New York
Application October 9, 1933, Serial No. 692,746
9 Claims. (Cl. 22—135)

1. An apparatus of the character described, comprising a chill including companion mold-sections having end walls and shaped to form a cavity, a pouring gate applied to the chill immediately above and substantially centrally of the cavity to receive the molten metal and having a plurality of narrow discharge openings in its bottom and at spaced intervals for directing the molten metal in a thin stream into the mold cavity, said openings terminating substantially at the periphery of the cavity in knife-like horizontal edges for permitting drawing from the gate for final shrinkage of the casting, a metal core, and means for supporting and centering the core in said cavity, said means including a hollow mandrel extending through the core and having collars slidably mounted thereon and detachably fitted in said core and supported at its ends in the chill, said mandrel having vent opening therein.

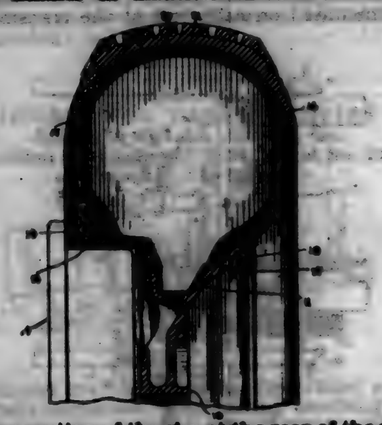


2,028,709
TRACTOR MOUNTED WINCH WITH DRIVE TRANSMISSION
William C. Guier, Wichita, Kans., assignor to The All Steel Products Manufacturing Company, Wichita, Kans., a corporation of Kansas
Application June 26, 1934, Serial No. 731,966
14 Claims. (Cl. 254—187)

5. A device of the type described comprising a supporting frame, a variable speed transmission unit, a detachable power connection attachment mounted on each end of the transmission

unit, said attachments being constructed to support the weight of said unit on the frame.

2,028,761
OIL FIELD SKID WINCH
William C. Guier and Gerald G. Brown, Wichita, Kans., assignors to The All Steel Products Manufacturing Company, Wichita, Kans., a corporation of Kansas
Application June 23, 1934, Serial No. 732,949
9 Claims. (Cl. 254—187)



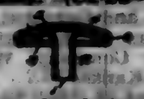
5. In a device of the type described, a power plant unit including an engine and a variable speed transmission connected end to end, and a power output attachment for the free end of said transmission, said attachment comprising a casing secured to the transmission housing to encircle the driven shaft of the transmission, supporting legs for one end of said unit carried by said casing, and a driving gear connected to said transmission shaft and projecting from said casing.

2,028,762
VEHICLE WHEEL
James E. Hale, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application June 24, 1932, Serial No. 619,011
10 Claims. (Cl. 301—6)

8. In a vehicle wheel, the combination of a wheel structure comprising a pneumatic tire-supporting rim and a brake drum, the tire bead seating portion of the rim at the rear of the wheel overlapping said brake drum, the tire bead seating portion of the rim at the front of the wheel

being smaller in diameter than the tire bead

seating portion of the rim at the rear of the wheel, and a pneumatic tire on said rim.



2,028,703

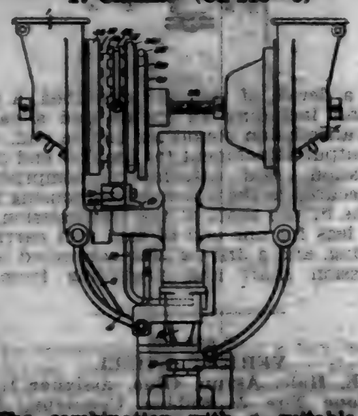
CAP MEMBER FOR FASTENERS

Charles W. Hatch, Brighton, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application April 6, 1935, Serial No. 15,323

4 Claims. (Cl. 24—243)

1. A cap member for fasteners including two superposed metal parts and a non-metallic cover, said cover having a peripheral portion turned inwardly whereby said cover provides the only means holding the parts in assembled relation.



2,028,704

FASTENER ATTACHING MACHINE

Lester N. Hayden, Arlington, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application August 9, 1934, Serial No. 739,668

17 Claims. (Cl. 218—6)

1. The combination with a suitable setting mechanism of two hoppers operable to supply different parts to the setting mechanism, a track leading from each hopper, a stop means associated with each track at a predetermined point between the hopper and the setting mechanism to control the movement of parts at those points, springs normally pressing said stop means toward track-obstructing positions and stop-controlling means operable to lift either stop means against the action of its associated spring to permit free passage of parts from one of said tracks.

2,028,705

COLLAR FASTENER

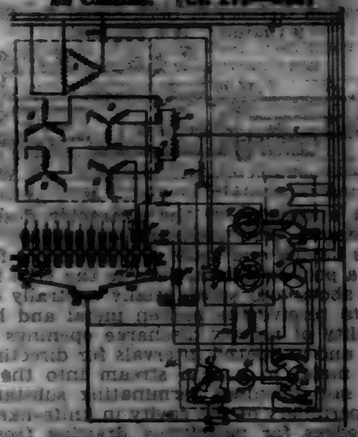
Gustav Johnsen, West Roxbury, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application October 8, 1934, Serial No. 744,087

4 Claims. (Cl. 24—81)

1. A fastener of the class described comprising a pair of cooperating bars bent to form a pair of jaws at each end thereof, one of said bars having a U-shaped mid-portion, the second of said bars having an aperture to receive the U-shaped portion of said first bar, and a cam member assembled between the closed end of the U-shaped portion and the slotted bar, said cam member being adapted to set upon said bars to force each pair of jaws towards each other when moved in one direction and to release said jaws when moved in another direction.

2,028,706



ELECTRON DISCHARGE DEVICE CONTROL SYSTEM

Erwin Kern, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a joint-stock company of Switzerland

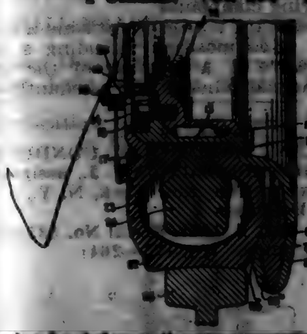
Application December 14, 1932, Serial No. 647,124

In Germany December 24, 1931

22 Claims. (Cl. 175—363)

1. In a system for controlling the flow of electric current, an electric current circuit, a second electric current circuit, electron discharge means having a plurality of anodes and a cathode, means for connecting said discharge means with each of said circuits, a plurality of control electrodes severally operable to release and to interrupt the flow of current through said anodes, a source of electromotive force connected with said cathode, means for continually impressing electromotive forces from said source on said control electrodes, and means controlling the last said means and operable to simultaneously advance the impression of said electromotive forces on some of said control electrodes and retard the impression of said electromotive forces on others of said control electrodes.

5. In a system for controlling the flow of electric current, an alternating current circuit, a transformer connected with said circuit and having a plurality of windings, an electron discharge device having two groups of anodes connected with distinct windings of said transformer and having a cathode, a direct current circuit connected with said transformer and with said discharge device, control electrodes in two groups severally operable to release and to interrupt the flow of current through said groups of anodes, a source of electromotive force connected with said cathode, means for continually impressing electromotive forces from said source sequentially on the several control electrodes of each group of such sign and magnitude as to cause each control electrode to control the establishment of said arcs by way of the associated anode and to effect the interruption thereof at such moments as to cause flow of current at substantially unity power factor between said alternating current circuit and said transformer.



2,028,707

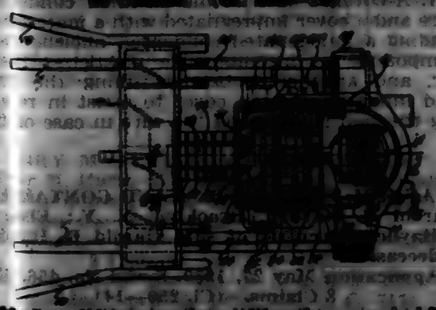
WHEEL FOR RAIL CARS

Clifford D. Smith, Fairlawn, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application April 25, 1932, Serial No. 607,312

4 Claims. (Cl. 295—7)

1. A wheel for rail cars comprising a resilient tire, and a wheel flange at one side thereof, said wheel flange having a rail-engaging portion that is reversely curved in transverse section and terminates radially at the periphery of said wheel flange, and an interposed cushion of resilient rubber composition serving as the sole means for connecting said rail-engaging portion to said wheel flange.



2,028,708

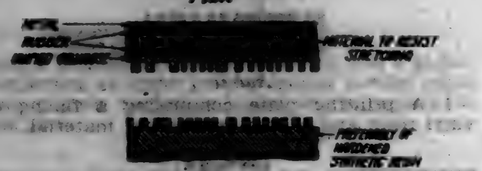
MULTIPLE STAGE LIFTING TRUCK

William Stenting, Jr., Cincinnati, Ohio, assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application September 12, 1932, Serial No. 633,037

20 Claims. (Cl. 214—16)

20. In a lifting truck, a lifting fork, a holding hook to hold said fork in an elevated position, and means for moving the hook out of holding position in the direction of the line of its holding pressure.



2,028,709

PRINTING PLATE

Hylton Swan, Upper Montclair, and Sigfried Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y., a corporation of Delaware

Application May 26, 1934, Serial No. 727,722

12 Claims. (Cl. 41—35)

1. A printing plate comprising a facing of regenerated cellulose and a body of rubber.

2,028,710

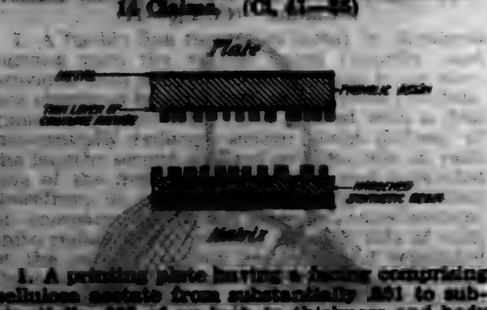
PRINTING PLATE

Hylton Swan, Upper Montclair, and Sigfried Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y., a corporation of Delaware

Application May 26, 1934, Serial No. 727,723

21 Claims. (Cl. 41—35)

1. A printing plate comprising a facing of cellulose acetate from substantially .001 to substantially .035 of an inch in thickness and a body of rubber.



2,028,711

PRINTING PLATE

Hylton Swan, Upper Montclair, and Sigfried Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y., a corporation of Delaware

Application May 26, 1934, Serial No. 727,724

14 Claims. (Cl. 41—35)

1. A printing plate having a facing comprising cellulose acetate from substantially .001 to substantially .035 of an inch in thickness and body of resin.

2,028,713
PRINTING PLATE
Hylton Swan, Upper Montclair, and Sigfried Sigius, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y., a corporation of Delaware
Application May 26, 1934, Serial No. 727,725
19 Claims. (Cl. 41—35)

1. A printing plate comprising a facing of vinyl resin and a body of another material.

2,028,714
PRODUCTION OF SO_2 FROM ACID SLUDGE
Frank J. Bartholomew, Westfield, N. J., assignor to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application December 2, 1933, Serial No. 700,757
15 Claims. (Cl. 23—177)

1. A method of heating fluid materials which are too viscous to permit a flash decomposition by contact with extensive heating surfaces which are decomposed by heat treatment into a volatile portion and a carbonaceous residue, which comprises thoroughly mixing the fluid material with heated finely divided solids, the amount of solids being sufficient to transfer the required amount of heat to decompose the fluid material, removing volatile products from the zone of heating, removing the carbonaceous residue intimately mixed with the heating medium and reheating the heating medium by burning the carbonaceous residue in intimate contact therewith and reusing at least a major portion of the reheated material.

2,028,715
FASTENER
Lloyd W. Barwick, Pasadena, Calif., assignor to Brogdex Company, Winter Haven, Fla., a corporation of Florida
Application October 9, 1933, Serial No. 692,567
9 Claims. (Cl. 150—11)

1. The combination, with a bag and an end-less drawstring for closing the mouth of the bag, said drawstring being drawn up to form two gathers at spaced points in the mouth of the bag and a double slack loop leading from said gathers, of an elongated member provided with drawstring-fastening means adjacent its ends for fastening said drawstring adjacent said gathers, said member maintaining the spacing of said gathers and cooperating with the drawstring to provide an open looped-string handle for the bag.

2,028,715
FIRE RESISTANT COMPOSITION
Ernest R. Hansen, Bloomfield, N. J., assignor to Halowax Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application April 27, 1931, Serial No. 533,271
19 Claims. (Cl. 134—78.5)

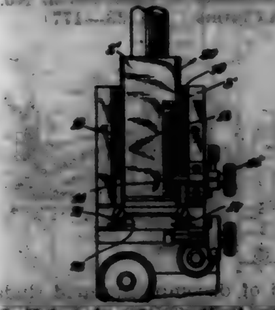
13. Composition suitable for impregnating substances such as textiles, paper and the like including a member of the group consisting of halogenated diaryls, aromatic carbon ring compounds of crystalline character and tricyclic aromatic carbon ring compounds of crystalline character, and a plasticizer therefor comprising an incombustible amorphous halogenated aromatic carbon ring compound.

16. Flame resistant textile comprising a textile base carrying a composition including a halogenated derivative of a member of the group consisting of acenaphthenes and phenanthrene.

2,028,716
FIRE RESISTANT ELECTRICAL CONDUCTOR
Myron E. Delaney, Bloomfield, N. J., assignor to Halowax Corporation, New York, N. Y., a corporation of Delaware
Application May 8, 1931, Serial No. 535,973
8 Claims. (Cl. 173—264)

1. A covered wire having an inner conducting core and a cover impregnated with a material including a halogenated condensed nucleus cyclic compound, an incombustible plasticizer therefor, and an inert substance filling the pores and interstices of the cover to assist in retaining the said material on the wire in case of fire.

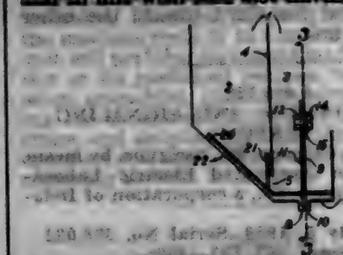
2,028,717
VACUUM TUBE SYSTEM AND CONTAINER
Harold B. Hayden, Brooklyn, N. Y.; Alice G. Hayden executrix of said Harold B. Hayden, deceased
Application May 27, 1930, Serial No. 456,043
8 Claims. (Cl. 250—14)



4. A cabinet having shelves, bases removably positioned on said shelves for detachably hold-

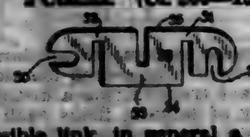
ing the various electrical elements of a vacuum tube system, each base comprising groups of sockets, each group being adapted to receive

prongs secured to and electrically connected with the terminals of an element, and independently detachable connectors on said bases electrically connected respectively with said sockets.



2,028,718
BALL-BEARING FOR SCIENTIFIC INSTRUMENTS
Hermann Heinz, Wetzlar, Germany, assignor to Ernst Leitz, Optische Werke, Wetzlar, Germany
Application July 3, 1933, Serial No. 678,183
In Germany July 8, 1931
1 Claim. (Cl. 308—6)

In a ball bearing for optical, physical or like instruments a plate having formed therewith a central depression, and its side walls provided with longitudinally extending incisions or slots, a displaceable carriage guided in said depression and having its side walls also provided with longitudinally extending incisions or slots, two substantially similar narrow strips of flexible, wear resisting spring steel, the free edges of said strips constituting the guide tracks for the balls and the opposite edges of said strips held in said incisions, to form a yielding ball bearing to accommodate balls of varying sizes.



2,028,719
DRY MATERIAL FEEDING DEVICE
Wilbur M. Hurd, Washington, D. C., and Walter E. Humphries, Silver Spring, Md.; dedicated to the free use of the Public
Application October 9, 1934, Serial No. 747,997
3 Claims. (Cl. 221—129)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A dry material feeding device comprising a hopper having an offset supply section and a main discharge section, said discharge section having a slot formed in the bottom thereof, a partition between said sections, a trough below and in line with said slot having open ends pro-

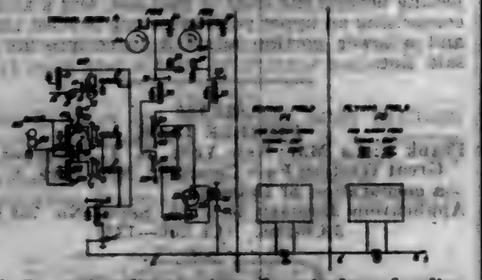
jecting beyond the ends of said slot, and a kicker comprising an upper portion having beveled edges and a lower portion adapted to reciprocate in said slot.

2,028,720
FUSIBLE LINK
Frank C. La Mar, New York, N. Y., assignor to Great Western Fuse Company, New York, N. Y., a corporation of Delaware
Application January 24, 1934, Serial No. 708,025
2 Claims. (Cl. 200—135)

1. A fusible link, in general a relatively thin flat rectangle formed of metal and provided at each end with means for attachment to terminals, and formed with three reduced cross-section portions, one adjacent each end and one substantially in the center, those at the ends being both produced by removing the metal from one longitudinal edge inwardly, the other being produced by removing the metal from the opposite longitudinal edge inwardly, the end reduced sections being each smaller in cross-section than the other.

2,028,721
FUSIBLE LINK
Frank C. La Mar, New York, N. Y., assignor to Great Western Fuse Company, New York, N. Y., a corporation of Delaware
Application July 2, 1934, Serial No. 732,447
7 Claims. (Cl. 200—135)

7. A fusible link formed of metal, in thickness varying with the normal rated capacity; and provided with means for attachment in an electric circuit to be protected; substantially rectangular in general form; and formed with a first substantially reduced section about midway of the length; second reduced sections, one on each side of the first reduced section, and separated therefrom by substantially rectangular sections of comparatively much greater cross-section; third reduced sections, one on each side of each of the second reduced sections, and separated therefrom by substantially rectangular sections of comparatively much greater cross-section; said last named sections each having one corner substantially rounded whereby it is prevented from



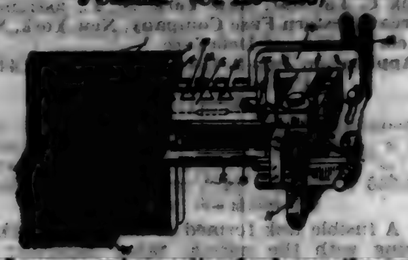
coming in contact with the adjacent end, and the second and third reduced sections being out of alignment with each other and with the first reduced section and the second section toward one side edge and the third toward the other side edge of the link.

2,028,721

AIRPORT CONTROL AND SIGNALING SYSTEM

Lawrence J. Leib, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application July 5, 1928, Serial No. 376,622
4 Claims. (Cl. 177—352)



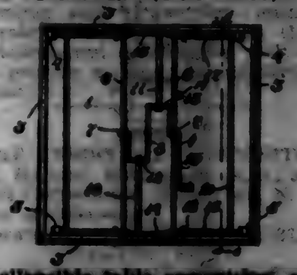
4. In a signaling system for airplane landing fields, a plurality of planes each having a transmitter for always transmitting a distinctive signal, a plurality of landing fields each having a receiving device and landing lights, said fields linked together by a land line, the receiving device at each field responsive to a signal transmitted from any one of said airplanes to light the lights at a landing field and to retransmit over the land line a signal indicative of the airplane from which the signal was received and the particular field at which it was received.

2,028,722

WARP STOP MOTION

Harold Marsh, Pawtucket, R. I., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine

Application February 6, 1935, Serial No. 5,969
5 Claims. (Cl. 139—365)



1. In a warp stop motion for looms, the combination of a stationary holder having spaced teeth on its upper edge, and an endwise reciprocating detector bar mounted in said holder and having spaced teeth on its upper edge; said bar and holder being constructed to support the former for sliding movement in operative position in the holder with the teeth on the bar projecting above the teeth on the holder, and also to support the bar in threading position wherein the tops of the teeth on the bar are in the same plane as the tops of the teeth on the holder and form with the latter a substantially continuous surface.

2,028,724

COLLAPSIBLE BRIDGE TABLE

William S. Ritchie, Winnipeg, Manitoba, Canada

Application December 27, 1934, Serial No. 758,439
In Canada, December 8, 1934
3 Claims. (Cl. 211—85)

1. A collapsible table comprising, a combination with a table surface and swingable legs attached thereto and lying therebeneath, rotatable rods extending between pairs of said legs, crank portions upon said rods, further cranking means beneath said table, a lever attached to said further cranking means, crank arms connecting between said further cranking means and said crank portions, said lever being manually operable to swing said legs into extended or closed position.

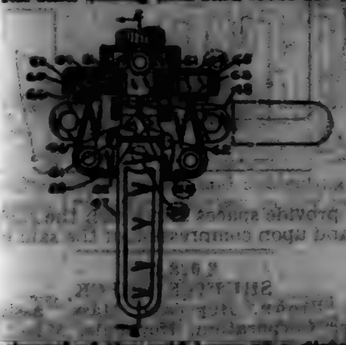
2,028,725

PRODUCTION OF SO_2 FROM ACID SLUDGE

James M. Rample, St. Louis, Mo., assignor to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware

Application December 8, 1932, Serial No. 766,758
16 Claims. (Cl. 23—177)

1. A method of decomposing acid sludge from the sulfuric acid purification of hydro-carbonaceous material which comprises thoroughly mixing the sludge with a stream of a highly heated non-gaseous heating medium, the temperature and the amount of the heating medium being such as to decompose the sludge in a carbonaceous residue with evolution of SO_2 free from H_2S, continuously removing the SO_2 and evolved from the reaction zone and removing the carbonaceous residue and the heating medium.



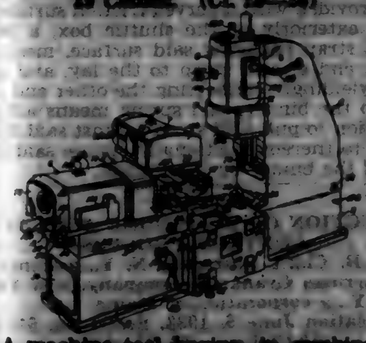
2,028,726

TRIP COCK DEVICE

Carlton D. Stewart, Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application July 5, 1932, Serial No. 621,197
1 Claim. (Cl. 251—152)

A trip valve device comprising a casing, a slidable valve therein movable in opposite directions from a central valve-closed position to a valve open position on either side of said central closed position, an operating lever for said valve adapted to be engaged by a trip member and to be moved thereby to move said valve to either of said valve open positions, means cooperating with said casing for yieldingly arresting movement of said lever in said valve-closed and valve open positions, said yielding stop means cooperating with said casing and said lever for limiting



the overtravel of the said lever as a distance beyond said valve open positions of said valve which distance is greater than the distance between said intermediate position and either of said operative positions.

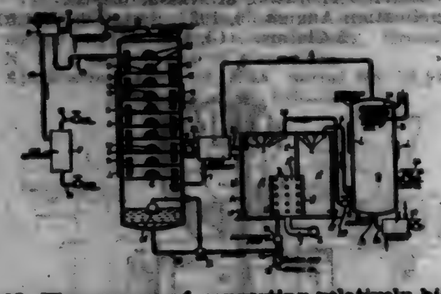
2,028,727

CONSTRUCTION OF MACHINE TOOLS

Raymond S. Parry, John R. Johnson, and Alexander Oberhuber, Rockford, Ill., assignors to The Ingersoll Milling Machine Company, Rockford, Ill., a corporation of Illinois

Application November 21, 1931, Serial No. 576,149
29 Claims. (Cl. 29—26)

1. A machine tool having, in combination, a work pedestal having side walls fashioned for attachment of a plurality of bed wings thereto, a pair of structurally separate and interchangeable bed wings each having end and wall rigidly joined to said pedestal but detachable therefrom, structurally separate guide members having abutment surfaces fashioned for rigid attachment interchangeably to said bed wings, said members respectively providing horizontal and vertical guideways and each being rigidly secured to one of said wings, a pair of saddles having surfaces mating with said guideways, interchangeable tool units demountably secured to the respective saddles and each having a tool spindle, and power actuated mechanisms demountably carried by the respective saddles and each adapted to drive the tool spindle thereon and move the saddle back and forth along its supporting guideway.



28. The method of constructing machine tools for the performance of any one of a variety of distinct types of metal removing operations, which comprises preforming and fashioning structurally separate units for interchangeable attachment together in a variety of different relations as required by the angle and number of lines of relative approach between the tool and the work, such preforming and fashioning being effected along such lines of division between such units as to segregate in each unit a distinct and individual function which is common to all of the machine tools to be constructed, so that each unit will perform its individual function irrespective of its positional relation to the other units when assembled, selecting particular units having the functions required for a particular machine, and securing together the selected units in operative relation to carry on the particular metal removing process desired.

2,028,728

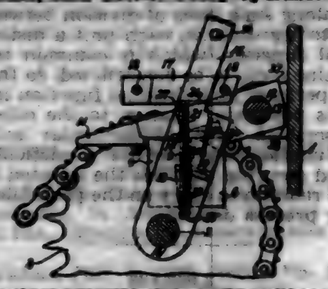
OIL CRACKING SYSTEM

Albert G. Peterkin, Jr., Bryn Mawr, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania

Original application May 4, 1929, Serial No. 360,259. Divided and this application March 3, 1933, Serial No. 659,451
21 Claims. (Cl. 196—49)

13. The process of converting relatively high-boiling hydrocarbon oil to lower boiling oil, which comprises, subjecting high boiling oil to cracking temperature while passing under pressure in a stream of relatively small cross-sectional area through zones of a furnace which are respectively convectively and radiantly heated, introducing the cracked oil directly into a vaporizing zone, conducting vapors from said vaporizing zone to a fractionating zone wherein there are separated a series of liquid fractions of progressively increasing volatility, removing from an intermediate point in said fractionating zone a liquid fraction having lower volatility than gasoline but which will substantially completely vaporize under vapor phase cracking conditions, substantially completely vaporizing said fraction and heating it to cracking temperature while passing in a stream of relatively small cross-sectional area through a third heating zone in a furnace wherein it is subjected to substantially only radiant heat, and thereafter directly introducing the cracked products into the said vaporizing zone.

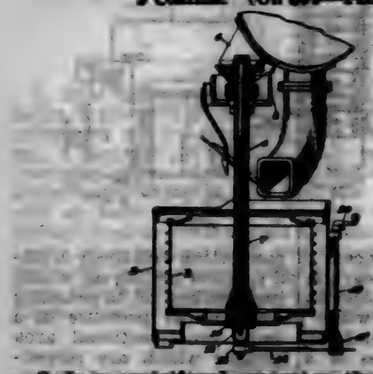
2,028,729



COIN CONTROLLED APPARATUS

Heinrich F. Fischenberg, Newtown Square, Pa., assignor to Joseph G. Denny, Jr.

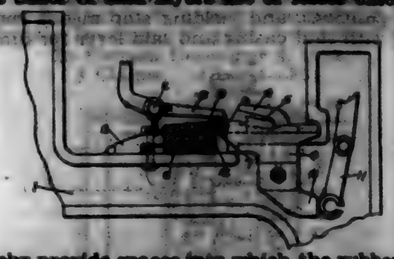
Application December 17, 1932, Serial No. 647,893
7 Claims. (Cl. 194—41)



1. In a coin-controlled mechanism, the combination with a movable shaft and a detent controlling the movement of said shaft of a member having thereon coin guides for the engagement of faces of coins and a member containing a plurality of coin slots of different sizes and having thereon a plurality of coin stops adapted for the engagement of the edges of coins at different po-

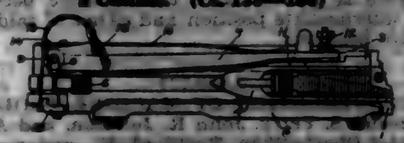
sitions in their path of movement between said coin guides, said detent being operable by coins

inserted through said slots and positioned by said stops.



2,028,720
STEADY BEARING FOR CENTRIFUGAL SEPARATORS
John F. Theil, Needham, Mass., assignor to American Tool and Machine Company, Hyde Park, Mass., a corporation of Massachusetts
Application August 30, 1932, Serial No. 631,074
5 Claims. (Cl. 308—142)

2. In a centrifugal separator, the combination with a basket and means supported at a point above the basket for suspending the basket for rapid rotation about an approximately vertical axis, of a shaft extending downwardly from said basket, a bearing for said shaft located below said basket and mounted to swing in a horizontal plane with said shaft, an arm connected with said bearing and extending laterally therefrom toward the frame of the machine, a bracket secured to said frame and having a guideway in which said arm slides, and a rod threaded through said bracket to bear on said arm for clamping it to the bracket.

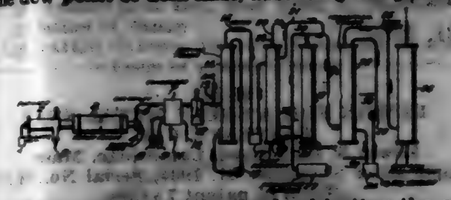


2,028,721
LOOM PROTECTION MECHANISM
Carl D. Brown, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application November 23, 1934, Serial No. 754,519
8 Claims. (Cl. 139—346)

1. In a loom protection mechanism, a frog support, a thrust wall, a frog slidably mounted on said support and recessed to form with said support and wall a substantially closed cavity, and a cushion member positioned in said cavity and substantially co-extensive in length therewith, said member being comprised of alternate layers formed respectively of a resilient rubber material and a relatively rigid material, each of said layers being positioned normal to the direction of movement of the frog and certain of said layers being co-extensive in width and height with said cavity while other of said layers are of lesser extent to

thereby provide spaces into which the rubber layers expand upon compression of the said member.

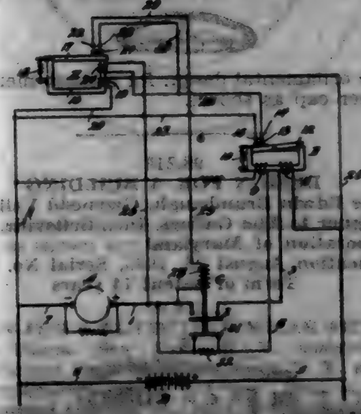
2,028,722
SHUTTLE CHECK
Carl D. Brown, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application September 17, 1935, Serial No. 40,542
3 Claims. (Cl. 139—188)



1. In a fly shuttle loom, the combination of a lay, a shuttle, a shuttle box having a binder adapted to be engaged and moved laterally of the shuttle box by the incoming shuttle, said binder being provided with a curved friction surface projecting exteriorly of the shuttle box, a flexible friction strap engaging said surface, means fixing one end of said strap to the lay, and spring means yieldingly connecting the other end of the strap to the binder, said spring means acting in a direction to pull said strap against said friction surface to thereby frictionally oppose said movement of the binder by the shuttle.

2,028,723
PRODUCTION OF SULPHURIC ACID BY THE CONTACT PROCESS
Cyril B. Clark, Scarsdale, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application June 6, 1933, Serial No. 674,439
18 Claims. (Cl. 23—175)

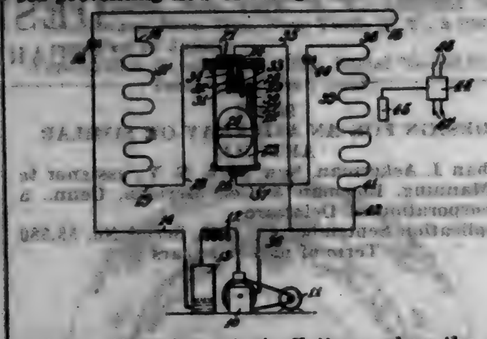
1. A process of producing sulphuric acid which comprises subjecting a gas containing SO_2, sufficient oxygen to permit oxidation of the SO_2 to SO_3, and a gaseous combustible hydrogen containing material in the gas having a hydrogen content greater than 8 milligrams per cubic foot to oxidation in a sulphuric acid converter in the presence of a sulphuric acid contact mass at reaction temperature whereby the SO_2 is transformed into SO_3 and the hydrogen content of the gas is oxidized to H_2O, passing the resulting gases into a sulphuric acid absorber without permitting the temperature to fall below the dew point for acid mist and subjecting the exhaust gases from the absorber to dry precipitation of residual acid mist.



10. A method of producing sulphuric acid from gases containing an SO_2 concentration insufficient for adequate heat maintenance in the converter, which comprises adding to the SO_2 gas mixture gaseous hydrogen containing substances to supply enough heat during the conversion to maintain proper temperature conditions in the converter, adjusting the oxygen content of the gas for conversion of the SO_2 and combustion of the hydrogen containing material and passing the gas stream at reaction temperature over a contact

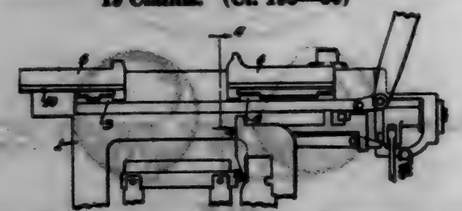
sulphuric acid catalyst in a converter, maintaining the temperature of the converted gases above the dew point of acid mist, absorbing the gases in

a sulphuric acid absorber and subjecting the exhaust gases from the absorber to dry precipitation of acid mist.



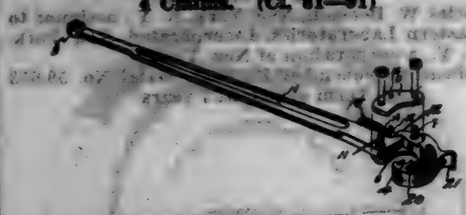
2,028,724
TRAIN LIGHTING SYSTEM
Joseph F. Frese, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a corporation of Maryland
Application October 7, 1935, Serial No. 43,983
3 Claims. (Cl. 171—313)

1. In a train lighting system, a storage battery, a variable speed generator for charging the battery, a charging circuit including a normally open contactor, a normally open circuit for connecting the magnet of said contactor to the generator and means controlling said latter circuit to close the same only when the generator voltage is above the battery voltage comprising a relay having a coil constantly energized by current from the battery and having a switch biased to closed position but normally held in open position by the magnetizing effect of said coil and having also a coil adapted to be connected to the generator and to neutralize the magnetizing effect of the battery coil when the generator voltage is above the battery voltage, thereby to permit said switch to close, and a relay responsive to generator voltage adapted to connect said generator coil to the generator at a predetermined generator voltage.



2,028,725
REFRIGERATING SYSTEM
Franklin B. Hunt, Chicago, Ill., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application April 24, 1931, Serial No. 533,439
18 Claims. (Cl. 62—116)

1. In a refrigerating system, a source of volatile liquid refrigerant, a refrigerating element connected to said source, a second refrigerating element connected to said source through said first refrigerating element, and automatic means for preventing flow of refrigerant to said second



refrigerating element at all times when the demands upon said first refrigerating element are not satisfied.

2,028,726
VISE FOR SLUG CASTING MACHINES
Einar G. Klingberg, Long Island City, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a corporation of New York
Application April 29, 1935, Serial No. 18,911
19 Claims. (Cl. 199—56)

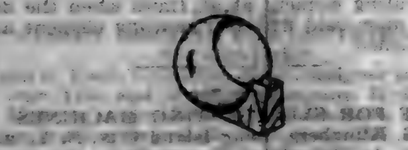
1. In a slug casting machine having a vise, a vise jaw support mounted thereon, and means for mounting a vise jaw on said support at different levels.

2,028,727
OIL WELL TUBING WRENCH
James S. Taylor, Tulsa, Okla.
Application July 18, 1934, Serial No. 735,547
4 Claims. (Cl. 81—91)

1. A tubing wrench comprising a semicircular shaped jaw adapted to arch one side of a tube, the outer end of said jaw having a tube gripping member, a handle member adjacent the inner end of the jaw, a link connection between the handle member and the inner end of the jaw and forced into engagement with the tube upon movement of the handle member in one direction, said link connection having tube engaging means adjacent its pivotal connection to the jaw and cooperating with the periphery of the tube whereby upon movement of the handle in one direction a tube will be rolled into the segmentally shaped jaw and gripped therein and upon movement in an opposite direction a tube will be rolled from its gripped position within the jaw.

DESIGNS

JANUARY 21, 1936



98,207

DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE

Arban J. Ackerman, New York, N. Y., assignor to Manning, Bowman & Co., Meriden, Conn., a corporation of Delaware

Application September 17, 1935, Serial No. 38,580

Term of patent 7 years

The ornamental design for an ash tray or similar article, substantially as shown and described.

98,208

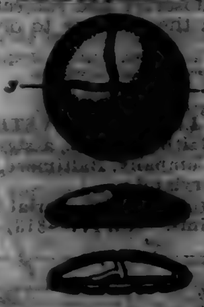
DESIGN FOR A MULTIPLE SERVICE HAIR DRIER APPARATUS

Charles W. Boosten, New York, N. Y., assignor to Eastern Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 19, 1935, Serial No. 39,483

Term of patent 7 years

The ornamental design for a multiple service hair drier apparatus, substantially as shown and described.



98,209

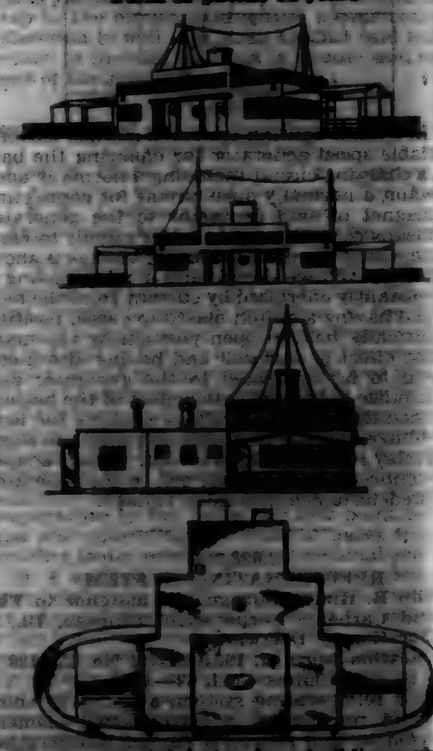
DESIGN FOR A SHEET METAL SNAP FASTENER CAP

Edwin S. Blanchard, Cambridge, Mass.

Application November 27, 1934, Serial No. 54,178

Term of patent 7 years

The ornamental design for a sheet metal snap fastener cap as shown.



98,210

DESIGN FOR A BUILDING

George Edwin Brumbaugh, Gwynedd Valley, Pa., assignor to The Gallery, Inc., Beltsville, Md., a corporation of Maryland

Application August 28, 1935, Serial No. 38,341

Term of patent 14 years

The ornamental design for a building, substantially as shown and described.

98,211

DESIGN FOR A PLATE OR SIMILAR ARTICLE

Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan

Application October 16, 1935, Serial No. 39,839

Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

98,212

DESIGN FOR A PLATE OR SIMILAR ARTICLE

Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan

Application October 16, 1935, Serial No. 39,840

Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

98,213

DESIGN FOR A PLATE OR SIMILAR ARTICLE

Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan

Application October 16, 1935, Serial No. 39,841

Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

98,214

DESIGN FOR A PLATE OR SIMILAR ARTICLE

Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan

Application October 16, 1935, Serial No. 39,843

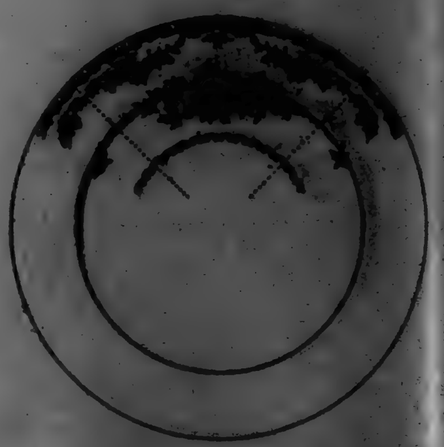
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

98,215
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,647
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

98,216
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,648
Term of patent 7 years

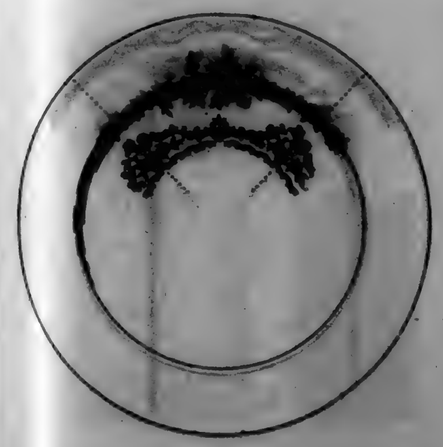


The ornamental design for a plate or similar article, as shown and described.

98,217
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,649
Term of patent 7 years

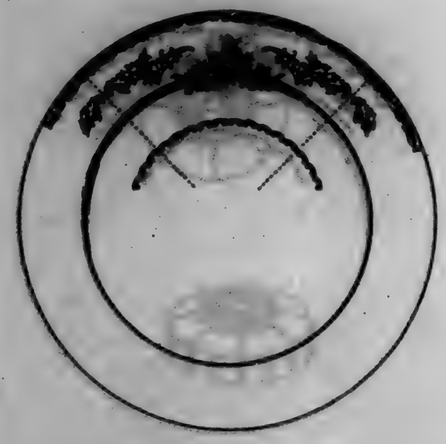
The ornamental design for a plate or similar article, as shown and described.

98,218
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,650
Term of patent 7 years



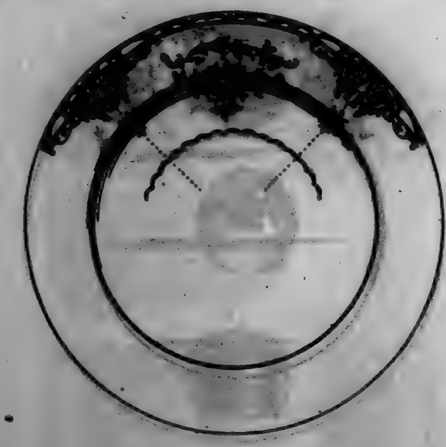
The ornamental design for a plate or similar article, as shown and described.

98,219
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,669
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

98,220
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,694
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

98,221
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,669
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

98,222
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Bunna, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,671
Term of patent 7 years

The ornamental design for a plate or similar article, as shown and described.

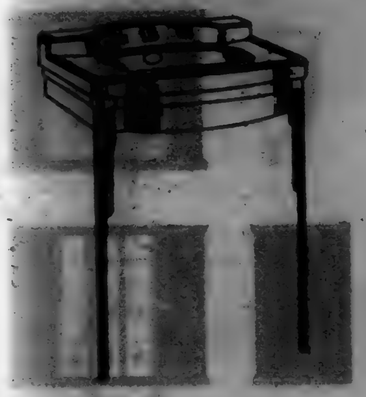
98,326
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,073
Term of patent 7 years

The ornamental design for a plate or similar article as shown and described.

98,327
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,077
Term of patent 7 years

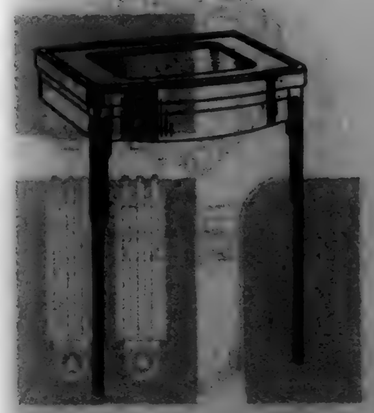
The ornamental design for a plate or similar article, as shown and described.

98,328
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,078
Term of patent 7 years



The ornamental design for a plate or similar article, as shown and described.

98,329
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Yukio Ikuma, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application October 16, 1935, Serial No. 39,161
Term of patent 7 years

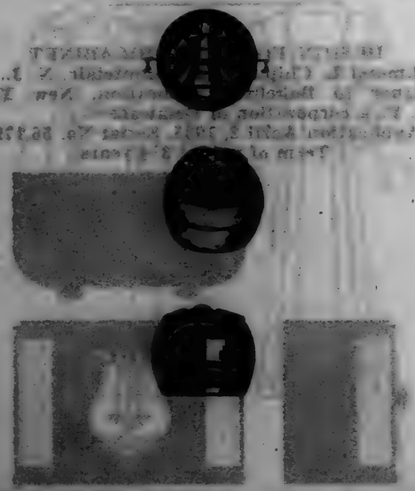


The ornamental design for a plate or similar article, as shown and described.

98,327
DESIGN FOR A WASHSTAND
John A. Callahan, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 20, 1935, Serial No. 16,264
Term of patent 14 years

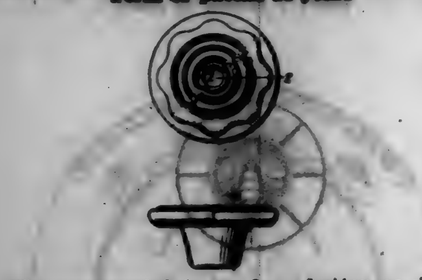
The ornamental design for a washstand, substantially as shown.

98,328
DESIGN FOR A WASHSTAND
John A. Callahan, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 20, 1935, Serial No. 16,265
Term of patent 14 years



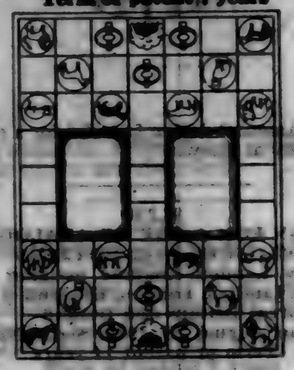
The ornamental design for a washstand, substantially as shown.

98,329
DESIGN FOR A LID FOR A CONTAINER
Reco Capey, London, England, assignor to Yardley & Co. Limited, London, England, a corporation of Great Britain and Ireland
Application August 26, 1935, Serial No. 38,184
Term of patent 14 years



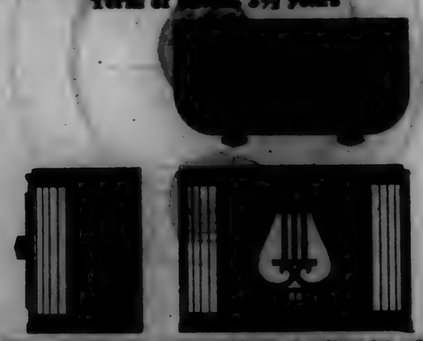
The ornamental design for a lid for a container, substantially as shown.

98,330
DESIGN FOR A CAP OR ANALOGOUS CLOSURE FOR BOTTLES
Reco Capey, London, England, assignor to Yardley & Co. Limited, London, England, a corporation of Great Britain and Ireland
Application August 26, 1935, Serial No. 38,187
Term of patent 14 years



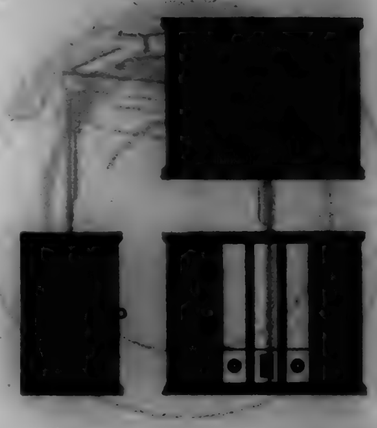
The ornamental design for a cap or analogous closure for bottles, substantially as shown.

96,231
DESIGN FOR A BUTTON
Leonard R. Curley, Watertown, Conn., assignor to The Patent Button Company, Waterbury, Conn., a corporation of Connecticut
Application October 16, 1935, Serial No. 49,996
Term of patent 14 years



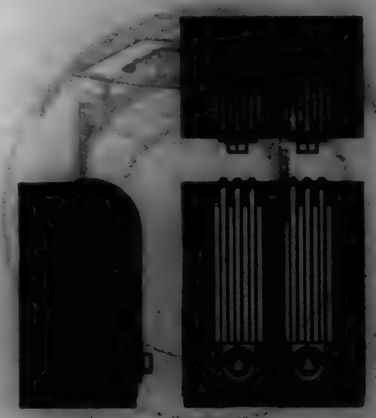
The ornamental design for a button as shown.

96,232
DESIGN FOR A GAME BOARD
Toni C. Eibl, Chicago, Ill.
Application November 27, 1935, Serial No. 59,993
Term of patent 7 years



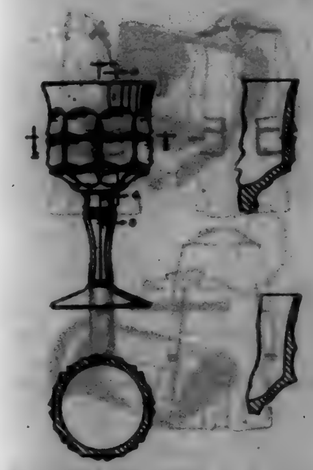
The ornamental design for a game board, as shown.

96,233
DESIGN FOR A RADIOCABINET
Richmond L. Chipman, Jr., Montclair, N. J., assignor to Bakelite Corporation, New York, N. Y., a corporation of Delaware
Application April 2, 1935, Serial No. 56,179
Term of patent 3½ years



The ornamental design for a radiocabinet, as shown and described.

96,234
DESIGN FOR A RADIOCABINET
Richmond L. Chipman, Jr., Montclair, N. J., assignor to Bakelite Corporation, New York, N. Y., a corporation of Delaware
Application June 26, 1935, Serial No. 57,446
Term of patent 3½ years



The ornamental design for a radiocabinet, as shown and described.

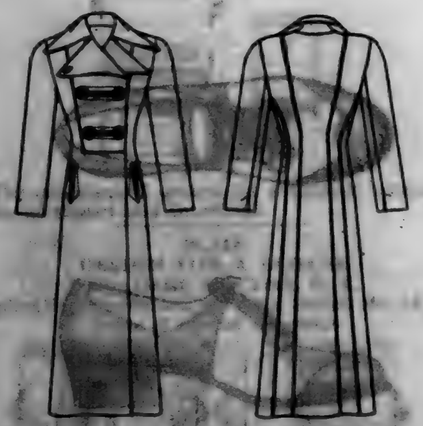
96,235
DESIGN FOR A RADIOCABINET
Richmond L. Chipman, Jr., Montclair, N. J., assignor to Bakelite Corporation, New York, N. Y., a corporation of Delaware
Application June 26, 1935, Serial No. 57,445
Term of patent 3½ years

The ornamental design for a radiocabinet, as shown and described.

96,236
DESIGN FOR A GOBLET
Jeddie B. Clark, Dunkirk, Ind., assignor to Indiana Glass Company, Dunkirk, Ind., a corporation of Indiana
Application October 16, 1935, Serial No. 59,663
Term of patent 7 years

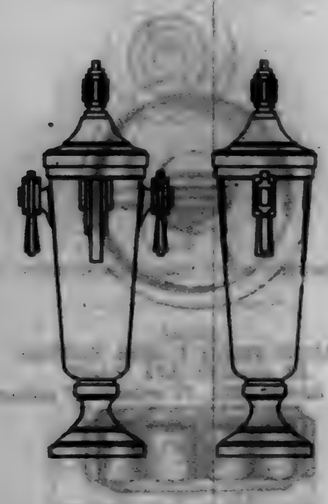
The ornamental design for a goblet, as shown and described.

96,237
DESIGN FOR A CANDY BOX OR THE LIKE
Samuel A. Odom, Bridgeton, Miss.
Application May 27, 1935, Serial No. 57,455
Term of patent 7 years



The ornamental design for a candy box or the like, substantially as shown.

96,238
DESIGN FOR AN ASH TRAY
R. Guy Cowan, Syracuse, N. Y., assignor to Onondaga Pottery Company, Syracuse, N. Y., a corporation of New York
Application October 7, 1935, Serial No. 58,869
Term of patent 14 years

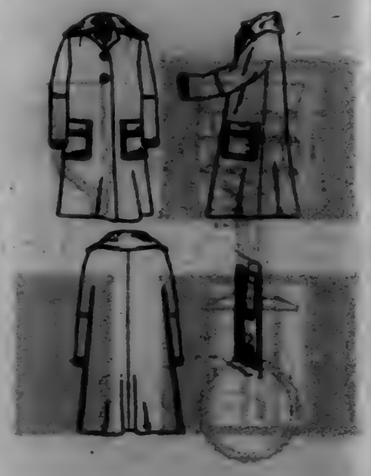


The ornamental design for an ash tray substantially as shown.

96,239
DESIGN FOR A COAT
Milton H. Davis, New York, N. Y.
Application December 17, 1935, Serial No. 60,119
Term of patent 3½ years

The ornamental design for a coat, substantially as shown.

98,240
DESIGN FOR A TROPHY CUP
George O. De Hart, Los Angeles, Calif.
Application October 19, 1935, Serial No. 39,140
Term of patent 3½ years



The ornamental design for a trophy cup, substantially as shown.

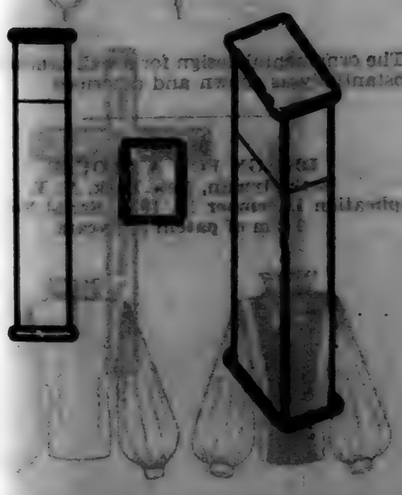
98,241
DESIGN FOR A SHOE
Walter R. Ebling, Rochester, N. Y., assignor to R. P. Reed & Co., Rochester, N. Y., a corporation of New York
Application December 7, 1935, Serial No. 39,355
Term of patent 7 years

The ornamental design for a shoe, as shown.

98,242
DESIGN FOR A COAT
Jacob H. Hunt, New York, N. Y.
Application December 14, 1935, Serial No. 39,577
Term of patent 3½ years

The ornamental design for a coat, as shown and described.

98,243
DESIGN FOR A COMBINED MANICURE STAND AND CONTAINERS THEREFOR
Alfred A. Fleisher, Bronx, N. Y.
Application November 23, 1935, Serial No. 39,172
Term of patent 7 years

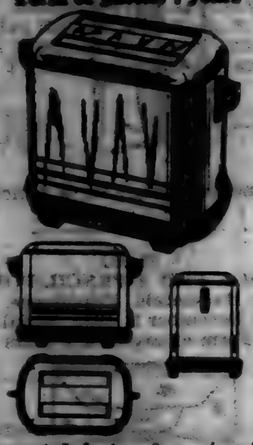


The ornamental design for a combined manicure stand and containers therefor, substantially as shown and described.

98,244
DESIGN FOR A JEWELRY DISPLAY CASE
Leo Elias, New York, N. Y.
Application November 18, 1935, Serial No. 39,035
Term of patent 7 years

The ornamental design for a jewelry display case, substantially as shown.

98,245
DESIGN FOR A CIGARETTE AND CIGAR LIGHTER
Irving Fleeman, New York, N. Y.
Application September 14, 1935, Serial No. 38,582
Term of patent 14 years



The ornamental design for a cigarette and cigar lighter as shown and described.

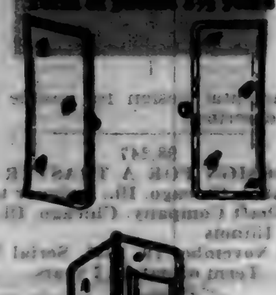
98,246
DESIGN FOR A TEXTILE FABRIC
Curt Erwin Hesselmann, Montclair, N. J.
Application March 11, 1935, Serial No. 35,231
Term of patent 14 years

The ornamental design for textile fabric as shown and described.

98,247
DESIGN FOR A TOASTER
Alfred F. Fabal, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application November 18, 1935, Serial No. 39,685
Term of patent 7 years

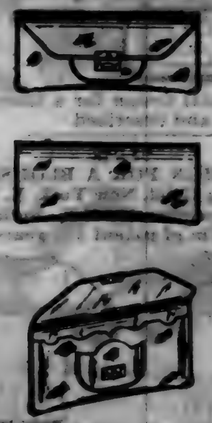
The ornamental design for a toaster, substantially as shown and described.

98,248
DESIGN FOR A BLOUSE
Irving Geist, New York, N. Y.
Application December 17, 1935, Serial No. 40,120
Term of patent 3½ years



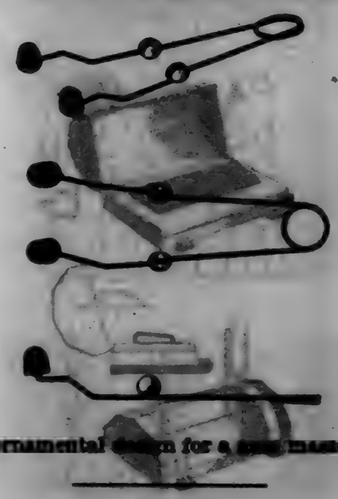
The ornamental design for a blouse, substantially as shown.

98,248
DESIGN FOR A WATCH CRYSTAL
Joseph Goldblatt, Brooklyn, N. Y.
Application November 23, 1935, Serial No. 59,718
Term of patent 14 years



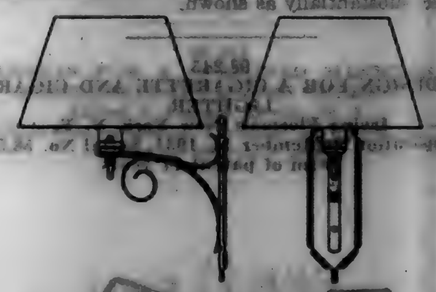
The ornamental design for a watch crystal, as shown.

98,250
DESIGN FOR A PENCIL POUCH
Henry Hanenfeld, Providence, R. I.
Application December 2, 1935, Serial No. 59,832
Term of patent 3½ years



The ornamental design for a pencil pouch, as shown.

98,251
DESIGN FOR A PENCIL POUCH
Henry Hanenfeld, Providence, R. I.
Application December 2, 1935, Serial No. 59,965
Term of patent 3½ years



The ornamental design for a pencil pouch, as shown.

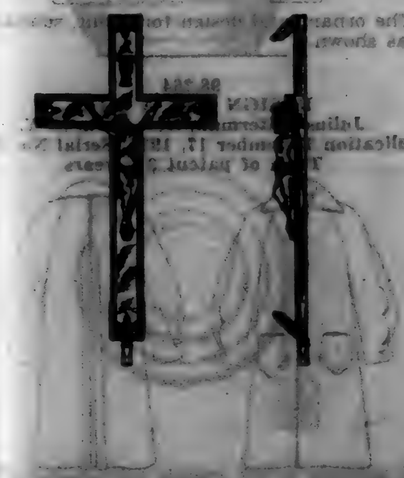
98,252
DESIGN FOR A GUM MASSAGER
Paul L. Hamp, Rochester, Minn.
Application September 23, 1935, Serial No. 58,918
Term of patent 14 years

The ornamental design for a gum massager, as shown.

98,253
DESIGN FOR A WALL BRACKET LAMP
Otto G. Hildebrand, Cleveland, Ohio
Application November 14, 1935, Serial No. 59,509
Term of patent 14 years

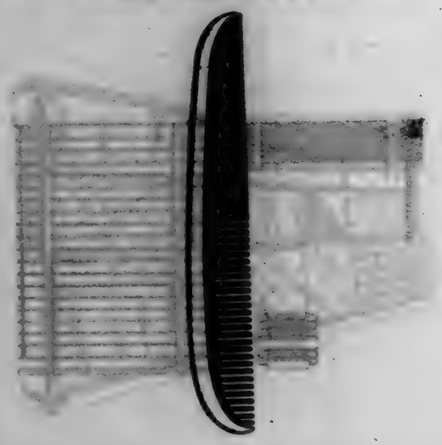
The ornamental design for a wall bracket lamp, substantially as shown and described.

98,254
DESIGN FOR A BLOUSE
Beth Hyman, New York, N. Y.
Application December 19, 1935, Serial No. 60,112
Term of patent 3½ years



The ornamental design for a blouse, substantially as shown.

98,255
DESIGN FOR A FOUNTAIN PEN AND PENCIL CLIP
David Kahn Weddell, N. J.
Application November 18, 1935, Serial No. 59,640
Term of patent 14 years



The ornamental design for a fountain pen and pencil clip, substantially as shown.

98,256
DESIGN FOR AN ILLUMINATED CRUCIFIX
Edward King, New York, N. Y.
Application December 14, 1935, Serial No. 60,067
Term of patent 3½ years

The ornamental design for an illuminated crucifix substantially as shown.

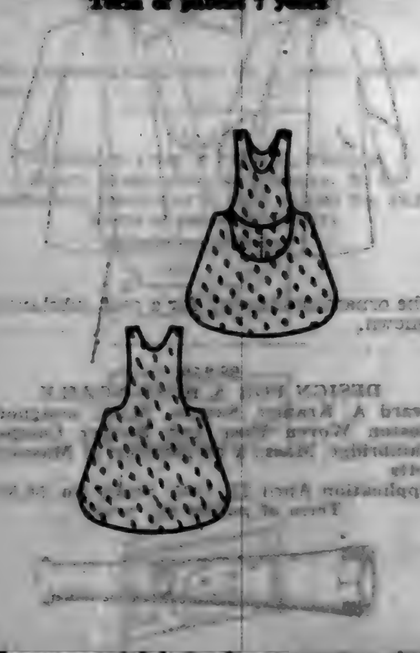
98,257
DESIGN FOR A COMB
John J. Eichmeyer, Butler, N. J., assignor to American Hard Rubber Company, New York, N. Y., a corporation of New York
Application November 29, 1935, Serial No. 59,819
Term of patent 7 years

The ornamental design for a comb as shown and described.

98,258
DESIGN FOR A COAT
Max Kolmer, New York, N. Y.
Application December 2, 1935, Serial No. 59,877
Term of patent 3½ years

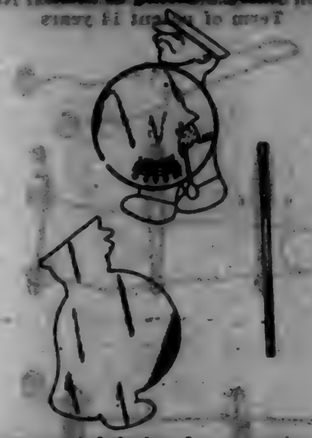
The ornamental design for a coat substantially as shown.

98,259
DESIGN FOR A HOSE NOZZLE
Howard A. Kramer, Saugus, Mass., assignor to Boston Woven Hose and Rubber Company, Cambridge, Mass., a corporation of Massachusetts
Application April 27, 1935, Serial No. 56,599
Term of patent 3½ years



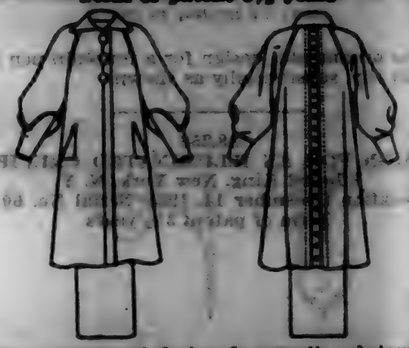
The ornamental design for a hose nozzle substantially as shown.

98,260
DESIGN FOR A COMBINED VENETIAN BLIND AND HOUSING THEREFOR
Peter H. Kuyper, Pella, Iowa, assignor to Reisoroom Company, Pella, Iowa, a corporation of Iowa
Application September 15, 1934, Serial No. 52,201
Term of patent 14 years



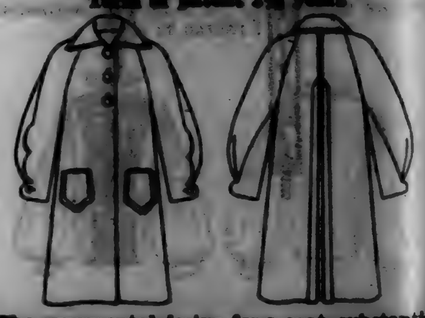
The ornamental design for a combined Venetian blind and housing therefor substantially as shown and described.

98,261
DESIGN FOR AN APRON OR SIMILAR ARTICLE
Katherine G. Langston, St. Louis, Mo.
Application May 23, 1935, Serial No. 56,906
Term of patent 7 years



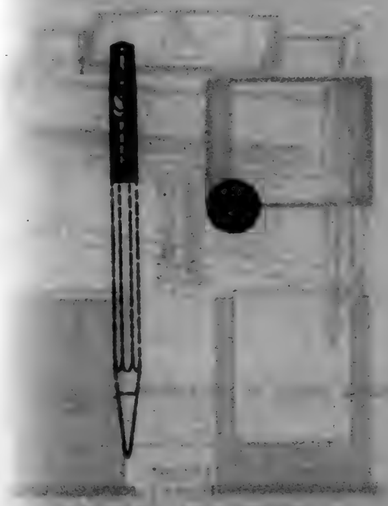
The ornamental design for an apron or similar article, substantially as shown and described.

98,262
DESIGN FOR A COASTER
Michael Leff, Buffalo, N. Y.
Application November 5, 1935, Serial No. 59,301
Term of patent 7 years



The ornamental design for a coaster, substantially as shown and described.

98,263
DESIGN FOR A SUIT
Julius Letterman, New York, N. Y.
Application December 6, 1935, Serial No. 59,934
Term of patent 3½ years

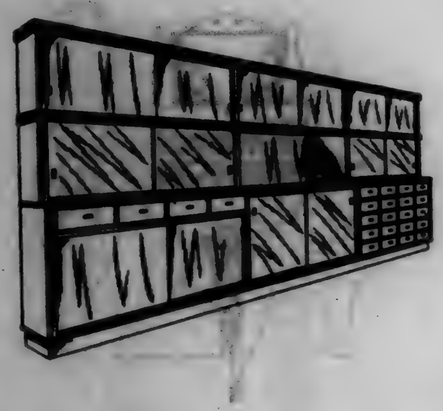


The ornamental design for a suit, substantially as shown.

98,264
DESIGN FOR A COAT
Julius Letterman, New York, N. Y.
Application December 17, 1935, Serial No. 60,111
Term of patent 3½ years

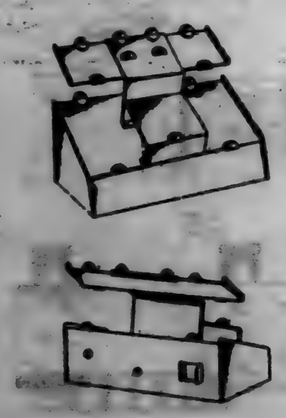
The ornamental design for a coat, substantially as shown.

98,265
DESIGN FOR A MECHANICAL PENCIL
John P. Lynn, Chicago, Ill., assignor of one-half to Carl Meyerman, Chicago, Ill.
Application December 9, 1935, Serial No. 59,558
Term of patent 7 years



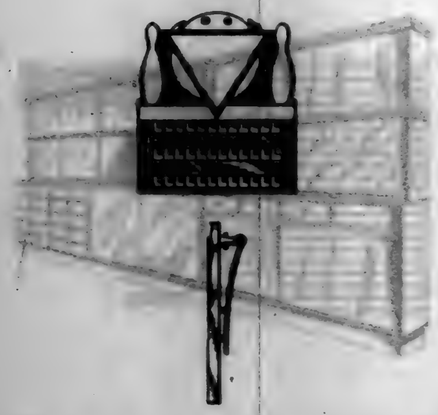
The ornamental design for a mechanical pencil substantially as shown.

98,266
DESIGN FOR A SHAVING BOWL
Jacques Manaska, New York, N. Y., assignor to Houbigant, Inc., New York, N. Y., a corporation of New York
Application November 25, 1935, Serial No. 59,321
Term of patent 14 years



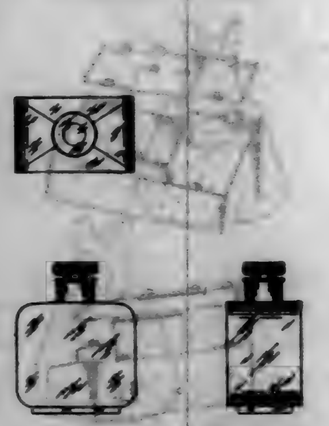
The ornamental design for a shaving bowl substantially as shown.

98,267
DESIGN FOR A SHOW CASE OR SIMILAR ARTICLE
Richard H. Marr, Detroit, Mich., assignor to Detroit Show Case Company, Detroit, Mich., a corporation of Michigan
Application May 27, 1935, Serial No. 57,632
Term of patent 7 years



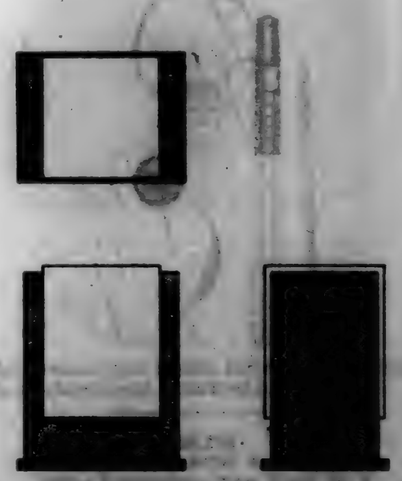
The ornamental design for a show case or similar article, as shown.

98,268
DESIGN FOR A COMBINATION DISPLAY STAND AND DISPENSING CABINET FOR GUMMED TAPE, STRING, AND ELASTIC BANDS
David A. McCowan, Toronto, Ontario, Canada
Application June 10, 1935, Serial No. 57,597
In Canada June 5, 1935
Term of patent 14 years



The ornamental design for a combination display stand and dispensing cabinet for gummed tape, string and elastic bands, as shown.

98,269
DESIGN FOR A MEDAL
Howard McCullough, Detroit, Mich., assignor to Wendell & Company, Chicago, Ill., a corporation of Illinois
Application October 30, 1935, Serial No. 59,273
Term of patent 3½ years

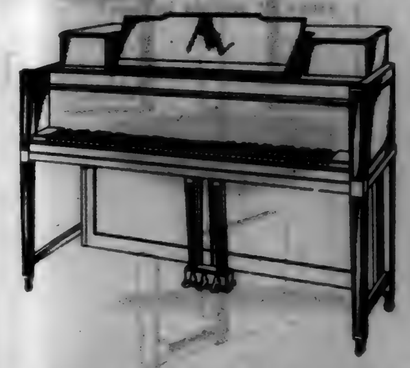


The ornamental design for a medal, substantially as shown and described.

98,270
DESIGN FOR A BOTTLE
Frank McIntosh, New York, N. Y., assignor to Lenthéric Incorporated, New York, N. Y., a corporation of New York
Application May 11, 1935, Serial No. 56,782
Term of patent 14 years

The ornamental design for a bottle substantially as shown.

98,271
DESIGN FOR A BOX
Frank McIntosh, New York, N. Y., assignor to Lenthéric Incorporated, New York, N. Y., a corporation of New York
Application May 11, 1935, Serial No. 56,784
Term of patent 14 years



The ornamental design for a box substantially as shown.

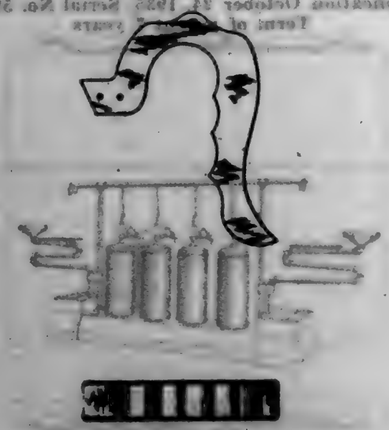
98,272
DESIGN FOR A PIANO
George Lawrence Miller, Philadelphia, Pa., assignor to Lester Piano Company, a corporation of Pennsylvania
Application November 16, 1935, Serial No. 59,433
Term of patent 7 years

The ornamental design for a piano, substantially as shown.

98,273
DESIGN FOR A PIANO
George Lawrence Miller, Philadelphia, Pa., assignor to Lester Piano Company, a corporation of Pennsylvania
Application November 16, 1935, Serial No. 59,431
Term of patent 7 years

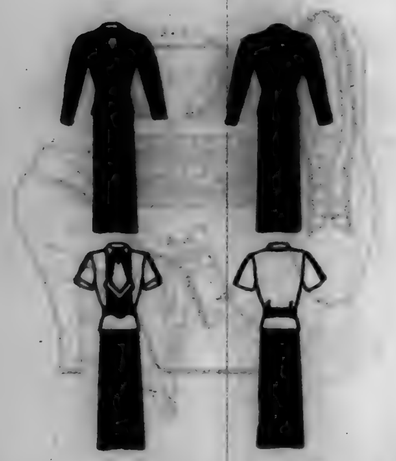
The ornamental design for a piano, substantially as shown.

98,274
DESIGN FOR A COMBINED WASHING MACHINE AND DRIER
Charles E. Marquisteru, Binghamton, N. Y., assignor to Nineteen Hundred Corporation, Binghamton, N. Y., a corporation of New York
Application September 5, 1935, Serial No. 58,423
Term of patent 14 years



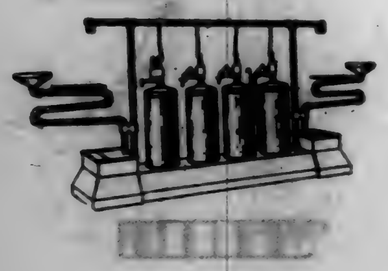
The ornamental design for a combined washing machine and drier, as shown.

98,275
DESIGN FOR A SHOE
Frederick W. Goltz, Boston, Mass., assignor to Louis H. Salvage Shoe Co. Incorporated, Manchester, N. H., a corporation of New Hampshire
Application August 17, 1935, Serial No. 58,181
Term of patent 3½ years



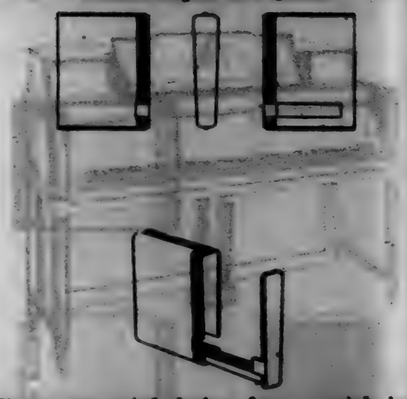
The ornamental design for a shoe substantially as shown.

98,276
DESIGN FOR A HANDLE FOR A POT OR THE LIKE
Isaac D. Rickhelmer and Joseph Misin, New York, N. Y., assignors to Tricolator Co. Inc., New York, N. Y., a corporation of New York
Application August 17, 1935, Serial No. 58,187
Term of patent 3½ years



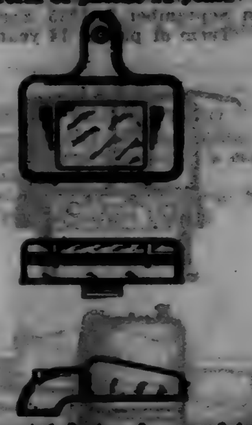
The ornamental design for a handle for a pot or the like, as shown.

96,277
DESIGN FOR AN ENSEMBLE DRESS
Emil Schwartz, New York, N. Y.
Application December 17, 1935, Serial No. 60,121
Term of patent 3½ years



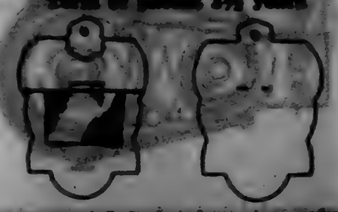
The ornamental design for an ensemble dress, substantially as shown, and described.

96,278
DESIGN FOR A LUBRICATING UNIT
Billy M. Stephens, Warren, Pa., assignor to Hyvis Oils, Inc., Warren, Pa., a corporation of Delaware
Application October 24, 1935, Serial No. 59,199
Term of patent 7 years



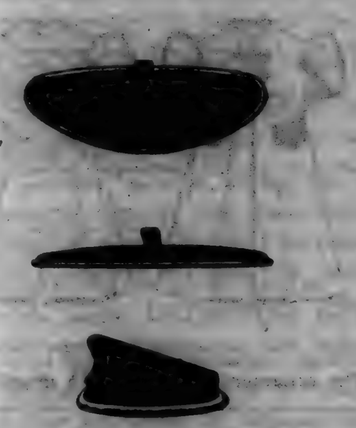
The ornamental design for a lubricating unit, as shown and described.

96,279
DESIGN FOR A MATCH BOX
Carl W. Sundberg, Detroit, Mich., assignor to Erie Resistor Corporation, Erie, Pa., a corporation of Pennsylvania
Application November 16, 1935, Serial No. 59,631
Term of patent 7 years



The ornamental design for a match box as shown and described.

96,280
DESIGN FOR A SAFETY SHIELD FOR TOOL GRINDERS OR SIMILAR ARTICLE
Herbert R. Towle, Milwaukee, Wis., assignor to The Dolan Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 16, 1935, Serial No. 59,634
Term of patent 14 years

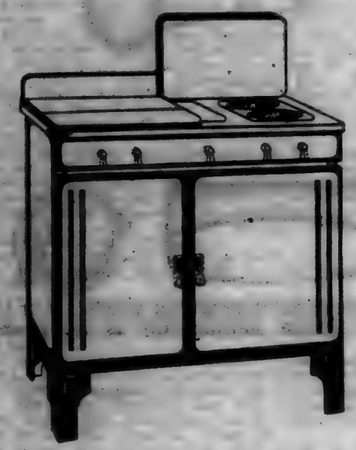


The ornamental design for a safety shield for tool grinders or similar article, as shown.

96,281
DESIGN FOR A TAG
Alice H. Thorsen, New York, N. Y.
Application December 11, 1935, Serial No. 60,001
Term of patent 3½ years

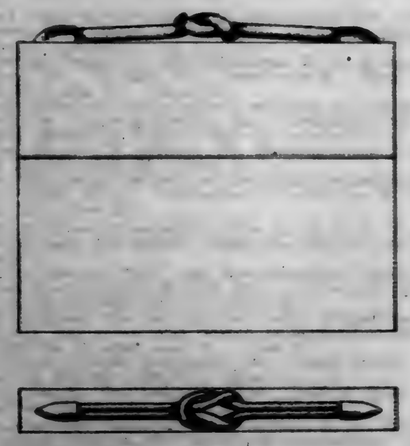
The ornamental design for a tag, substantially as shown, and described.

96,282
DESIGN FOR A COMBINED FACE PANEL AND BEZEL FOR ASH RECEIVERS
John Visser, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a corporation of Michigan
Application July 17, 1935, Serial No. 57,677
Term of patent 14 years



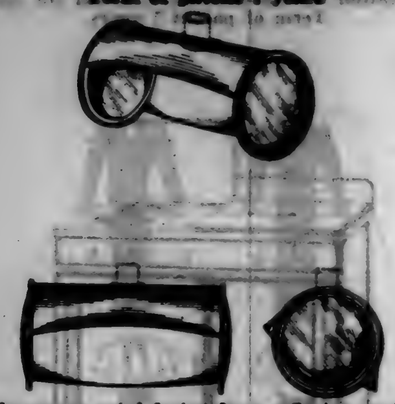
The ornamental design for a combined face panel and bezel for ash receivers, as shown.

96,283
DESIGN FOR A COMBINED FACE PANEL AND BEZEL FOR ASH RECEIVERS
John Visser, Grand Rapids, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a corporation of Michigan
Application July 17, 1935, Serial No. 57,678
Term of patent 14 years



The ornamental design for a combined face panel and bezel for ash receivers, as shown.

96,284
DESIGN FOR A STOVE
Anlen K. Weidtfeld, Baltimore, Md., assignor to Harry C. Weidtfeld Co., Inc., Baltimore, Md., a corporation of Maryland
Application December 3, 1935, Serial No. 59,894
Term of patent 7 years

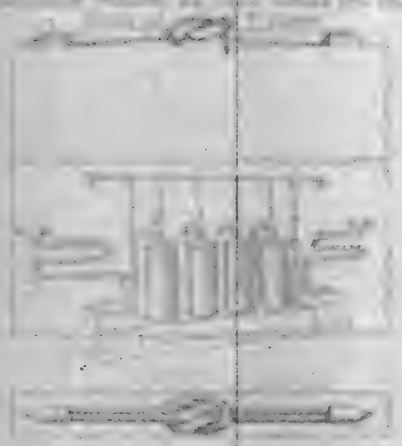


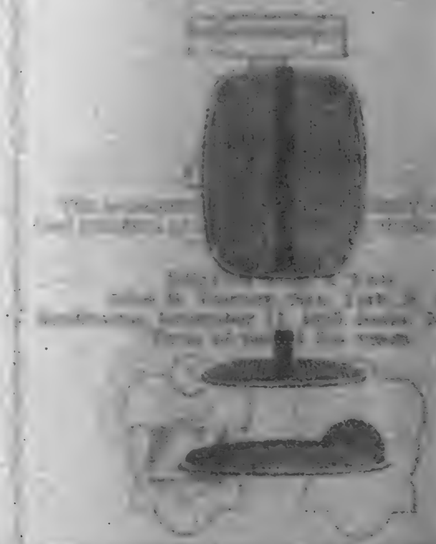
The ornamental design for a stove substantially as shown and described.

96,285
DESIGN FOR A HANDBAG
Morris White, New York, N. Y.
Application December 17, 1935, Serial No. 60,135
Term of patent 14 years

The ornamental design for a handbag, substantially as shown and described.

98,286
DESIGN FOR A REFLECTOR OR SIMILAR LIGHTING FIXTURE
Wesley Wilson, Chicago, Ill.
Application August 30, 1934, Serial No. 53,119
Term of patent 7 years





The ornamental design for a reflector or similar lighting fixture, substantially as shown and described.

98,287
DESIGN FOR A DRESS
Mary Muldoon, Philadelphia, Pa., assignor to Rosman Bros. Inc., Philadelphia, Pa., a corporation of Pennsylvania.
Application November 30, 1935, Serial No. 58,110
Term of patent 3½ years

The ornamental design for a dress as shown.

Coal. Red Jacket Coal Company. 331,745; Jan. 21; Serial No. 369,665; published Nov. 12, 1935.

Kid and glazed kid. Ruby Kid Company. 110,267; renewed May 5, 1936.

Leathers. Lucius Beebe & Sons, Inc. 331,759; Jan. 21; Serial No. 367,154; published Nov. 12, 1935.

Peat. E. Dyckerhoff. 106,584; renewed Oct. 28, 1935.

Skins and parts thereof. Fur. Breecker Bros., Inc. 331,767; Jan. 21; Serial No. 365,595; published Nov. 5, 1935.

CLASS 2

Buckets, water pails, garbage cans, etc., Galvanized steel well. Simmons Hardware Company. 331,806; Jan. 21; Serial No. 368,461; published Nov. 19, 1935.

Cartons, Fiber cracker. Empire Box Corporation of Delaware. 331,783; Jan. 21; Serial No. 369,914; published Nov. 12, 1935.

Containers of casein, celluloid, etc., Empty cosmetic. A. J. & K. Company. 331,728; Jan. 21; Serial No. 335,800; published Nov. 19, 1935.

Vaults, mausoleums and casket containers, Burial. Edwin F. Nichol, Inc. 331,884; Jan. 21; Serial No. 369,370; published Nov. 19, 1935.

CLASS 3

Key retainers. J. J. Sindler. 331,795; Jan. 21; Serial No. 369,142; published Nov. 12, 1935.

Luggage, suit cases, hat boxes, etc., Hand. R. H. Macy & Co. 331,812; Jan. 21; Serial No. 368,181; published Nov. 5, 1935.

CLASS 4

Abrasive and polishing composition. J. J. Kennedy. 331,780; Jan. 21; Serial No. 367,606; published Nov. 12, 1935.

Abrasive material and abrasive wheels, paper and cloth. John W. Hierman Company. 331,875-6; Jan. 21; Serial Nos. 361,939-40; published Nov. 12, 1935.

Abrasive wheels. United States Rubber Company. 331,894; Jan. 21; Serial No. 358,191; published Nov. 12, 1935.

Cleaning compound, Powdered. Nu Way Laboratories. 331,702; Jan. 21; Serial No. 369,093; published Nov. 12, 1935.

Cleaning solution, Window. Great Stuff Products Co. 331,920; Jan. 21.

Cloth for polishing glasses. Kleeno-Glass-Kloth Mfg. Co. 105,981; renewed Sept. 7, 1935.

Detergent compound. Lever Brothers Company. 331,884; Jan. 21; Serial No. 369,816; published Nov. 12, 1935.

Soap which cools as it cleanses. D. Seman. 331,769; Jan. 21; Serial No. 364,701; published Nov. 12, 1935.

CLASS 5

Gasket shellac compound. Permatex Company. 331,744; Jan. 21; Serial No. 369,662; published Nov. 12, 1935.

CLASS 6

Antiseptic solution and antiseptic jelly. Sharp & Dohme, Incorporated. 331,719; Jan. 21; Serial No. 369,746; published Nov. 12, 1935.

Catarrhal jelly. Bert Sewell & Co. 107,206; renewed Nov. 16, 1935.

Chemical preparations for the treatment of athlete's foot, etc. G. W. Charlton. 331,803; Jan. 21; Serial No. 369,004; published Nov. 12, 1935.

Hair tonic, shampoo, hair oil, etc. Medaka Co. 331,831; Jan. 21; Serial No. 368,893; published Nov. 12, 1935.

Herb beverage and herb salve, Medicinal. M. J. Mancerwicz. 331,845; Jan. 21; Serial No. 369,751; published Nov. 12, 1935.

Insecticides and rodent-poisons. John Opitz, Inc. 107,357; renewed Dec. 25, 1935.

Insecticides and rodent-poisons. John Opitz, Inc. 107,358; renewed Nov. 22, 1935.

Laxative preparation. Allan & Company. 331,828; Jan. 21; Serial No. 369,840; published Nov. 12, 1935.

Medicine. Cobbe Pharmaceutical Co. 331,918; Jan. 21.

Oils, oils used in disinfectants, wood-acids, and pine-creosote. Florida Wood Products Co. 109,007; renewed Apr. 11, 1936.

Perfumes, toilet waters, face powders, etc. Societe Anonyme Parfumerie F. Millot. 331,797; Jan. 21; Serial No. 369,171; published Nov. 12, 1935.

Preparation for securing dental plates in place. Fasteeth Incorporated. 331,872; Jan. 21; Serial No. 369,764; published Nov. 12, 1935.

Shampoo, Soapless. A. Dahmen. 331,817; Jan. 21; Serial No. 367,993; published Nov. 12, 1935.

Stain remover, Tobacco. H. E. Muecke. 331,791; Jan. 21; Serial No. 369,089; published Nov. 12, 1935.

Toilet preparations. John Wanamaker Philadelphia. 331,704; Jan. 21; Serial No. 369,426; published Nov. 12, 1935.

CLASS 9

Caps in rolls for toy pistols, Paper. Kilgore Manufacturing Company. 331,706; Jan. 21; Serial No. 369,491; published Nov. 12, 1935.

CLASS 12

Lumber, wallboards, plywood, etc. Bishop Lumber Company. 331,849; Jan. 21; Serial No. 368,655; published Nov. 12, 1935.

Moldings for structural purposes. Colonial Sales Corporation. 331,729; Jan. 21; Serial No. 369,217; published Nov. 12, 1935.

Mortar, Plastic refractory. Quigley Company. 331,626; Jan. 21; Serial No. 362,963; published Nov. 12, 1935.
Partitions, Sheet-metal. R. F. Carpenter. 110,230; renewed May 9, 1936.
Plastic compound for waterproofing surfaces. Arco Company. 108,734; renewed Feb. 21, 1936.
Roof coating and plastic roof cement. Liquid asbestos. Panther Oil & Grease Mfg. Co. 331,770; Jan. 21; Serial No. 367,631; published Nov. 12, 1935.
Wooden posts. Creosett Lumber Company. 331,733; Jan. 21; Serial No. 369,267; published Nov. 12, 1935.

CLASS 13

Coffee making apparatus. Glass Coffee Brewer Corp. 331,919; Jan. 21.
Joints and fittings, Insertable plumbing. Reading Foundry & Supply Company. 331,800; Jan. 21; Serial No. 369,204; published Nov. 12, 1935.
Spikes and calks, Shoe. North & Pfeiffer Mfg. Co. 331,787; Jan. 21; Serial No. 369,060; published Nov. 12, 1935.
Strapping, Iron and steel. Acme Steel Company. 331,891; Jan. 21; Serial No. 359,568; published Nov. 12, 1935.
Strapping, Iron and steel. Acme Steel Company. 331,892; Jan. 21; Serial No. 359,559; published Nov. 12, 1935.

CLASS 14

Forgings, Metal. J. H. Williams & Co. 331,758; Jan. 21; Serial No. 367,515; published Nov. 12, 1935.
Metal, Babbit. Woodward, Wight & Co. 107,760; renewed Dec. 28, 1935.
Plates, and photo-engravers' copper and zinc, Engraver's. W. F. Malloy. 109,679; renewed Apr. 11, 1936.
Steel. Timken Steel and Tube Company. 331,731; Jan. 21; Serial No. 369,251; published Nov. 5, 1935.
Steel, Tool. Ziv Steel & Wire Co. 331,701; Jan. 21; Serial No. 369,389; published Nov. 5, 1935.

CLASS 16

Fuels and chemically treated lubricating compositions, Hydrocarbon. Lubri-Zol Corporation. 331,823; Jan. 21; Serial No. 364,586; published June 25, 1935.
Oils and greases, hydraulic brake oils, etc. Lubricating. L. Frank. 331,784; Jan. 21; Serial No. 369,128; published Nov. 5, 1935.
Oils and greases, Lubricating. American Pride Oil Co. 331,886; Jan. 21; Serial No. 369,320; published Nov. 12, 1935.
Oils and greases, Lubricating. Fiske Brothers Refining Co. 331,805; Jan. 21; Serial No. 368,478; published Nov. 5, 1935.

CLASS 18

Paint enamels. Hancock Paint & Varnish Co. 331,906; Jan. 21.
Paint enamels and varnishes. Berry Brothers. 331,776; Jan. 21; Serial No. 368,553; published Nov. 12, 1935.
Paint, Industrial priming. Harrington Paint Co. 331,740; Jan. 21; Serial No. 369,011; published Nov. 12, 1935.
Paint, paint enamels, reducing oil, etc. Asphalt. American Asphalt Paint Company. 331,732; Jan. 21; Serial No. 369,263; published Nov. 12, 1935.
Paint, Water color. Ace Color Corporation. 331,702; Jan. 21; Serial No. 369,260; published Nov. 19, 1935.
Paints. D. Rosenson. 331,790; Jan. 21; Serial No. 369,064; published Nov. 12, 1935.
Paints and paint enamels, Ready mixed. Illinois Farm Supply Company. 331,916; Jan. 21.
Polish. L. Goodman. 331,820; Jan. 21; Serial No. 367,859; published Nov. 12, 1935.
Polish, Furniture and automobile. Wilbert Products Co. 331,877; Jan. 21; Serial No. 362,863; published Nov. 19, 1935.
Polish, Furniture, floor, and automobile. Mirrolike Mfg. Co. 108,723; renewed Feb. 22, 1936.
Zinc sulphide for use as a paint pigment. American Zinc Sales Company. 331,850; Jan. 21; Serial No. 364,948; published Nov. 12, 1935.

CLASS 17

Cigars. Antonio Company. 331,720; Jan. 21; Serial No. 369,790; published Nov. 12, 1935.
Cigars. M. Odence. 331,711; Jan. 21; Serial No. 369,545; published Nov. 12, 1935.

CLASS 19

Bicycles. Westfield Manufacturing Company. 331,890-7; Jan. 21; Serial Nos. 367,290-7; published Nov. 12, 1935.

CLASS 21

Electric signs. Biolite, Inc. 331,843; Jan. 21; Serial No. 368,797; published Nov. 12, 1935.
Electrically operated food preparing devices and parts thereof and attachments therefor. P. A. Geier Company. 331,783; Jan. 21; Serial No. 341,246; published Nov. 12, 1935.
Engine accessories, Internal combustion. J. D. Curtis Corp. 331,754; Jan. 21; Serial No. 361,516; published Nov. 12, 1935.
Lighting fixtures, side wall brackets, etc. Gleason-Tiebout Glass Company. 331,748; Jan. 21; Serial No. 369,695; published Nov. 12, 1935.
Radio receiving sets. Strawbridge & Clothier. 331,811; Jan. 21.

CLASS 23

Amusement apparatus, Coin controlled. Genco, Inc. 331,860; Jan. 21; Serial No. 370,254; published Nov. 19, 1935.
Archer's release. G. Fiary. 331,808; Jan. 21; Serial No. 368,331; published Nov. 12, 1935.
Board games. Parker Brothers, Inc. 331,872; Jan. 21; Serial No. 370,014; published Nov. 12, 1935.
Card games. El Dorado Operating Corporation. 331,747; Jan. 21; Serial No. 369,698; published Nov. 12, 1935.

Forstmann, Curt R., Montclair, N. J. Textile fabric. 98,246; Jan. 21.
Fukal, Alfred F., assignor to Chicago Flexible Shaft Company, Chicago, Ill. Toaster. 98,247; Jan. 21.
Galbert, Inc., The. (See Brumbaugh, George B., assignor.)
Geist, Irving, New York, N. Y. Blouse. 98,248; Jan. 21.
Goldblatt, Joseph, Brooklyn, N. Y. Watch crystal. 98,249; Jan. 21.
Grand Rapids Metalcraft Corporation. (See Visser, John, assignor.)
Hasenfeld, Henry, Providence, R. I. Pencil pouch. 98,250; Jan. 21.
Hasenfeld, Henry, Providence, R. I. Pencil pouch. 98,251; Jan. 21.
Hemp, Paul L., Rochester, Minn. Gum massager. 98,252; Jan. 21.
Hildebrand, Otto G., Cleveland, Ohio. Wall bracket lamp. 98,253; Jan. 21.
Houbigant, Inc. (See Manoba, Jacques, assignor.)
Hyman, Beth, New York, N. Y. Blouse. 98,254; Jan. 21.
Hyvis Oils, Inc. (See Stephens, Billy M., assignor.)
Indiana Glass Company. (See Clark, Jeddie R., assignor.)
Kahn, David, Woodcliff, N. J. Fountain pen and pencil clip. 98,255; Jan. 21.
King, Edward, New York, N. Y. Illuminated crucifix. 98,256; Jan. 21.
Kohlmeyer, John J., Butler, N. J., assignor to American Hard Rubber Company, New York, N. Y. Comb. 98,257; Jan. 21.
Kolmer, Max, New York, N. Y. Coat. 98,258; Jan. 21.
Kramer, Howard A., Saugus, Mass., assignor to Boston Woven Hose and Rubber Company, Cambridge, Mass. Hose nozzle. 98,259; Jan. 21.
Kuyper, Peter H., assignor to Rolscreen Company, Pella, Iowa. Combined Venetian blind and housing therefor. 98,260; Jan. 21.
Langston, Katherine G., St. Louis, Mo. Apron or similar article. 98,261; Jan. 21.
Leff, Michael, Buffalo, N. Y. Coaster. 98,262; Jan. 21.
Leiterman, Julius, New York, N. Y. Suit. 98,263; Jan. 21.
Leiterman, Julius, New York, N. Y. Coat. 98,264; Jan. 21.
Leutheric Incorporated. (See McIntosh, Frank, assignor.)
Lester Piano Company. (See Miller, George L., assignor.)
Lyon, John P., assignor of one-half to C. Merryman, Chicago, Ill. Mechanical pencil. 98,265; Jan. 21.
Manning, Bowman & Co. (See Ackerman, Arban J., assignor.)
Manoba, Jacques, assignor to Houbigant, Inc., New York, N. Y. Shaving bowl. 98,266; Jan. 21.
Marr, Richard H., assignor to Detroit Show Case Company, Detroit, Mich. Show case or similar article. 98,267; Jan. 21.
Masin, Joseph. (See Reichsdigest, I. D., and Masin.)
McCowan, David J., Toronto, Ontario, Canada. Combination display stand and dispensing cabinet for gummed tape, string, and elastic pads. 98,268; Jan. 21.
McCullough, Howard, Detroit, Mich., assignor to Wendell & Company, Chicago, Ill. Model. 98,269; Jan. 21.
McIntosh, Frank, assignor to Leutheric Incorporated, New York, N. Y. Bottle. 98,270; Jan. 21.
McIntosh, Frank, assignor to Leutheric Incorporated, New York, N. Y. Box. 98,271; Jan. 21.
Merryman, Carl. (See Lyon, John P., assignor.)
Miller, George L., Philadelphia, Pa., assignor to Lester Piano Company. Piano. 98,272; Jan. 21.
Miller, George L., Philadelphia, Pa., assignor to Lester Piano Company. Piano. 98,273; Jan. 21.
Morgenstern, Charles R., assignor to Nineteen Hundred Corporation, Binghamton, N. Y. Combined washing machine and drier. 98,274; Jan. 21.
Morimura Bros. Inc. (See Bums, Yukio, assignor.)
Mullen, Mary, assignor to Rosenau Bros. Inc., Philadelphia, Pa. Dress. 98,287; Jan. 21.
Nineteen Hundred Corporation. (See Morgenstern, Charles R., assignor.)
Ochs, Frederick W., Boston, Mass., assignor to Louis H. Salvage Shoe Co. Incorporated, Manchester, N. H. Shoe. 98,276; Jan. 21.
Onondaga Pottery Company. (See Cowan, H. Guy, assignor.)
Patent Button Company, The. (See Carley, Leonard R., assignor.)
Reed, E. P., & Co. (See Ebling, Walter E., assignor.)
Reichsdigest, Isaac D., and J. Masin, assignors to Tricolator Co. Inc., New York, N. Y. Handle for a pot or the like. 98,276; Jan. 21.
Rolscreen Company. (See Kuyper, Peter H., assignor.)
Rosenau Bros. Inc. (See Mullen, Mary, assignor.)
Salvage, Louis H., Shoe Co. Incorporated. (See Ochs, Frederick W., assignor.)
Schwartz, Emil, New York, N. Y. Ensemble dress. 98,277; Jan. 21.
Stephens, Billy M., assignor to Hyvis Oils, Inc., Warren, Pa. Lubricating unit. 98,278; Jan. 21.
Sundberg, Carl W., Detroit, Mich., assignor to Erie Register Corporation, Erie, Pa. Match box. 98,279; Jan. 21.
Tautz, Herbert R., assignor to The Delta Manufacturing Company, Milwaukee, Wis. Safety shield for tool grinders or similar article. 98,280; Jan. 21.
Thorsen, Alice H., New York, N. Y. Tag. 98,281; Jan. 21.
Tricolator Co. (See Reichsdigest, I. D., and Masin, assignors.)
Visser, John, assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich. Combined face panel and bezel for ash receivers. 98,282; Jan. 21.
Visser, John, assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich. Combined face panel and bezel for ash receivers. 98,283; Jan. 21.
Weiskittel, Anton K., assignor to Harry C. W. Weiskittel Co., Inc., Baltimore, Md. Stove. 98,284; Jan. 21.
Weiskittel, Harry C., Co. (See Weiskittel, Anton K., assignor.)
Wendell & Company. (See McCullough, Howard, assignor.)
White, Morris, New York, N. Y. Handbag. 98,285; Jan. 21.
Wilson, Wesley, Chicago, Ill. Reflector or similar lighting fixture. 98,286; Jan. 21.
Yardley & Co. Limited. (See Capey, Rees, assignor.)

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21st DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott, Edward J., assignor to Abbott Machine Company, Wilton, N. H. Winding machine. 2,028,140; Jan. 21.
Abbott Machine Company. (See Abbott, Edward J., assignor.)
Ackermann, Fritz, Ebmingen, near Basel, assignor to the firm of Society of Chemical Industry in Basle, Basel, Switzerland. Dyeing or coloring cellulose esters and cellulose ethers. 2,028,141; Jan. 21.
Acme Air Appliance Company. (See Carlton, Albert R., assignor.)
Adams, John H., Seattle, Wash. Spring closing device. 2,028,309; Jan. 21.
Akins, Randall P., Denver, Colo. Flotation machine. 2,028,170; Jan. 21.
Aktiengesellschaft Brown Boveri & Cie. (See Keel, Hyvis, assignor.)
Aktiebolaget Spontan. (See Wettstedt, Fritz A., assignor.)
Albers, Clement, San Francisco, Calif. Flashlight device. 2,028,423; Jan. 21.
Alco Products Incorporated. (See Barton, Paul D., assignor.)
Alco Products Incorporated. (See Patent, H. F., and Krieg, assignors.)
Alco Products, Incorporated. (See Willis, J. B., and deBenoe, assignors.)
Allerton, Warren E., Easton Harbor, Md. Holder for Christmas tree or other objects. 2,028,329; Jan. 21.
All Steel Products Manufacturing Company, The. (See Cardwell, Harland W., assignor.)
All Steel Products Manufacturing Company, The. (See Guier, William C., assignor.)
All Steel Products Manufacturing Company, The. (See Guier, W. C., and Brown, assignors.)
All-Steel-Equip Company. (See Knoll, John, assignor.)
American Blower Corporation. (See O'Brien, James H., assignor.)
American Brake Company, The. (See Redford, John B., assignor.)
American Brass Company, The. (See Butterbaugh, Homer W., assignor.)
American Cyanamid Company. (See Chart, Cyril B., assignor.)
American Foundation for the Blind, Inc. (See Miller, G. J., and Yarllman, assignors.)
American Hard Rubber Company. (See Chinon, Gerald B., assignor.)
American Locomotive Company. (See Robinson, Garland P., assignor.)
American Rolling Mill Company. (See Warren, Jay F., assignor.)
American Smelting and Refining Company. (See Palmer, Sidney L., assignor.)
American Telephone and Telegraph Company. (See Brown, J. R., and Strausbach, assignors.)
American Telephone and Telegraph Company. (See Garnett, D. K., and Lewis, assignors.)
American Telephone and Telegraph Company. (See Lewis, Benjamin F., assignor.)
American Telephone and Telegraph Company. (See Schmidt, Frederic R., assignor.)
American Tool and Machine Company. (See Thiel, John F., assignor.)
American Vitrik Contact Co. (See Lang, Richard T., assignor.)
American Zinc, Lead & Smelting Company. (See Mack, R. H., and Rose, assignors.)
Anderson Company, The. (See Smaldi, Theodore J., assignor.)
Anderson, Gordon R., Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Torque testing apparatus. 2,028,374; Jan. 21.
Anderson, Richard D., Baton Rouge, La., assignor to Standard Oil Development Company. Apparatus for filling receptacles. 2,028,266; Jan. 21.
Andre, Gustaf R., Richmond, Ind., assignor to Bodine Manufacturing Company, Chicago, Ill. Electric plug connector. 2,028,275; Jan. 21.
Andrews, Dana R. (See Schamer, J., and Andrews.)
Andrews, Edward F., Chicago, Ill. Fluoroscope. 2,028,130; Jan. 21.
Andrews, Edward F., Evanston, assignor to The Andrews-Hammond Corp., Chicago, Ill. Radio receiving device with distant control. 2,028,429; Jan. 21.
Andrews-Hammond Corp., The. (See Andrews, Edward F., assignor.)
Angelus Paper Box Co. (See Evans, Edward R., assignor.)
Archibald, Francis M., and C. M. Roemer, Elizabeth, N. J., assignors to Standard Alcohol Company. Manufacturing antiseptic. 2,028,367; Jan. 21.
Arden, Thomas R., Baldwin, N. Y. assignor to Buckley "L" Manufacturing Company, East Chatham, Ill. Toy mechanical shovel. 2,028,532; Jan. 21.
Arnold, Harold D., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic materials. 2,028,180; Jan. 21.
Aronson, Jerome B. (See Goodman, Harry B., assignor.)
Art Metal Construction Company. (See Shar, John G. L., assignor.)
Arter Grinding Machine Company. (See Arter, William and Harry, assignors.)
Arter, Harry. (See Arter, William and Harry.)
Arter, William and H., assignors to Arter Grinding Machine Company, Worcester, Mass. Grinding machine. 2,028,042; Jan. 21.
Asbridge, Henry M., Ashton-on-Mersey, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Manchester, England. Spindle bearing. 2,028,497; Jan. 21.
Associated Electric Laboratories, Inc. (See Guhorst, Fernand F., assignor.)
Associated Electric Laboratories, Inc. (See Lesh, Laurence J., assignor.)
Associated Electric Laboratories, Inc. (See Woodruff, L. F., and Nelson, assignors.)
Associated Telephone and Telegraph Company. (See Saxby, Robert N., assignor.)
Atlantic Refining Company, The. (See Petertin, Albert G., Jr., assignor.)
Autopoint Company. (See Dell, Frank C., assignor.)
Avery, William L., Thorley, Bishop's Stortford, England. Brake. 2,028,468; Jan. 21.
Babcock & Wilcox Company, The. (See Kerr, Howard J., assignor.)
Baddorf, William A., and E. M. Detmler, Harrisburg, Pa. Oil tank inspection device. 2,028,430; Jan. 21.
Bakelite Corporation. (See Swan, H., and Higgins.)
Baker, William, Toledo, Ohio. Closure. 2,028,489; Jan. 21.
Baker, William, Toledo, Ohio. Closure. 2,028,490; Jan. 21.
Balstad, Johan R., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Crusher. 2,028,643; Jan. 21.
Beaver, William, Brooklyn, N. Y. Hand bag. 2,028,376; Jan. 21.
Barber, William R., Camas, Wash., assignor to Crown Willamette Paper Company, San Francisco, Calif. Compressing compressible material into a solid pack. 2,028,431; Jan. 21.
Bard, Francis N., Highland Park, Ill., assignor to Walworth Patents, Inc., Boston, Mass. Plug valve. 2,028,161; Jan. 21.
Barnickel, Ford, Jr., Tulsa, Okla. Coupling. 2,028,162; Jan. 21.
Barrett, Burton A., Tuckahoe, and G. E. Perreault, Bronxville, N. Y. Brake mechanism. 2,028,491; Jan. 21.
Bartholomew, Frank J., Westfield, N. J., assignor to Chemical Construction Corporation, New York, N. Y. Production of SO_2 from acid sludge. 2,028,713; Jan. 21.
Barton, Paul D., Scarsdale, assignor to Alco Products Incorporated, New York, N. Y. Combined rectification and refrigeration process. 2,028,432; Jan. 21.
Bassick Company, The. (See Herold, Walter F., assignor.)
Beach, Ray. (See Stolzbach, Harry, assignor.)
Beamer, Clayton M. (See Archibald, F. M., and Beamer.)
Bebie, Edwin W., Hawthorne, N. J., assignor to International Paper Company, New York, N. Y. Core adapter. 2,028,492; Jan. 21.
Beckman, William O., Chicago, Ill., assignor to International Harvester Company. Engine. 2,028,810; Jan. 21.
Becker, Alan L., East Orange, N. J. Electrical contact receptacle. 2,028,294; Jan. 21.
Beckwith, Clinton H., Geneva, assignor to Crane Co., Chicago, Ill. Valve operating nail. 2,028,696; Jan. 21.
Behncke, Hermann. (See Bredemeier, K., Behncke, and Kortum.)
Belden Manufacturing Company. (See Andre, Gustaf R., assignor.)
Belden Manufacturing Company. (See Wermine, Hugo H., assignor.)
Bell & Howell Company, The. (See Howell, Albert S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Arnold, Harold D., assignor.)
Bell Telephone Laboratories, Incorporated. (See Burns, Robert, assignor.)

Bell Telephone Laboratories, Incorporated. (See Corwin, Thomas L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Dimond, Thomas L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Harvey, William H., assignor.)

Bell Telephone Laboratories, Incorporated. (See Heising, Raymond A., assignor.)

Bell Telephone Laboratories, Incorporated. (See Miller, Ralph L., assignor.)

Bell Telephone Laboratories, Incorporated. (See Och, Henry G., assignor.)

Bell Telephone Laboratories, Incorporated. (See Shann, Oscar A., assignor.)

Bender Warrick Corporation. (See Warrick, Charles F., assignor.)

Bendix Aviation Corporation. (See Blake, K. R., and Hill, assignors.)

Bendix Aviation Corporation. (See LaBrie, Ledger E., assignor.)

Bendix Aviation Corporation. (See Roemer, Adolph, assignor.)

Bendix Brake Company. (See Bendix, V., and LaBrie, assignors.)

Bendix Brake Company. (See Nosten, Raymond J., assignor.)

Bendix, Vincent, Chicago, Ill., and L. E. LaBrie, assignors to Bendix Brake Company, South Bend, Ind. Brake. 2,028,583; Jan. 21.

Benner, Raymond C., and W. G. Soley, assignors to The Carborundum Company, Niagara Falls, N. Y. Abrasive wheel and making the same. 2,028,183; Jan. 21.

Benroth, Julius S., et al. (See Sweet, William O., assignors.)

Bernhelt, Fred R., Minneapolis, Minn. Automobile. 2,028,184; Jan. 21.

Bergmann, Ernst R., assignor to Goodman Manufacturing Company, Chicago, Ill. Shaker conveyer. 2,028,493; Jan. 21.

Bernard, Auguste L. R., deceased, late of Rueil-Malmaison, by Renée Bernard, née Bourmonville, Paris, France, executor. Device for effectively dissipating heat from machine parts. 2,028,434; Jan. 21.

Bernard, Renée (née Bourmonville) executrix. (See Bernard, Auguste L. R.)

Bernardeau, Adolphe, Rosebank, Richmond, N. Y., assignor to C. F. Mueller Company, Jersey City, N. J. Toy menagerie cage. 2,028,577; Jan. 21.

Bernstein, Samuel S., Los Angeles, Calif. Web clamping unit for articles of furniture. 2,028,463; Jan. 21.

Berry, Joseph C., Seattle, Wash., assignor to Utility Electric and Machine Works, Inc., Wheeler, Oreg. Fishing reel. 2,028,311; Jan. 21.

Berry, Paul F., Columbus, Ohio. Valve construction. 2,028,151; Jan. 21.

Bienenstock, Moritz, Budapest, Hungary. Recovering pure germinal substance from seed kernels. 2,028,132; Jan. 21.

Bird, John C., Elizabeth, N. J., assignor to Standard Oil Development Company. Obtaining valuable products from acid sludge. 2,028,185; Jan. 21.

Bishop & Babcock Manufacturing Company, The. (See Grant, William H., assignor.)

Bishop, Storrs M., Schenectady, N. Y. Attachment for chasing devices. 2,028,289; Jan. 21.

Bixler, Harley H., Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,028,594; Jan. 21.

Blacha Matczak. (See Kubina, John, assignor.)

Black & Decker Manufacturing Company, The. (See Decker, Alonzo G., assignor.)

Blake, Kenneth R., and R. H. Hill, Anderson, assignors to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,028,585; Jan. 21.

Blanchet, Paul, and G. Tillie, Paris, assignor to Société Anonyme; F. A. C. A., Neuilly, France. Machine for making finishing welts. 2,028,494; Jan. 21.

Bleasdale, Albert. (See Connor, K. W., and Bleasdale.)

Blizard, John, Garden City, assignor to Foster Wheeler Corporation, New York, N. Y. Armor block for water walls and the like. 2,028,142; Jan. 21.

Boeger, Henry F. (See Dreyer, Charles B., assignor.)

Boldéus Gravaktiebolag. (See Ståhlhane, Johan B., assignor.)

Booth, Harry T., Detroit, Mich., assignor to Lubrication Control Corporation, Chicago Ill. Viscosity-responsive device. 2,028,186; Jan. 21.

Booth, Harry T., Detroit, Mich., assignor to Lubrication Control Corporation, Chicago, Ill. Viscosity-responsive device. 2,028,187; Jan. 21.

Booth, Harry T., Detroit, Mich., assignor to Lubrication Control Corporation, Chicago, Ill. Viscosimeter. 2,028,188; Jan. 21.

Bornhauser, Oscar, Strasbourg, France, assignor to Société d'Electrochimie, d'Electrometallurgie et des Aciéries Electriques d'Ugine, Paris, France. Electroplating of aluminium. 2,028,312; Jan. 21.

Bowen, George W., Jr. (See Masterson, I., (and Dorman, assignor.)

Bowers, Townes L., Waco, Tex. Hand truck. 2,028,183; Jan. 21.

Bowlby, Walter D., assignor to Hercules Powder Company, Wilmington, Del. Undercoat for lacquers and lacquered material. 2,028,189; Jan. 21.

Bowser, Percy L. (See Flammang, J., Bowser, and Ernst.)

Braasch, Frederick W., assignor to Sheboygan Chair Company, Sheboygan, Wis. Chair structure. 2,028,129; Jan. 21.

Bragg, Caleb S., Palm Beach, Fla., and V. W. Kliesrath, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Brake mechanism for automotive vehicles. 2,028,502; Jan. 21.

Bragg-Kliesrath Corporation. (See Bragg, C. S., and Kliesrath, assignors.)

Brand, William T., and R. J. Fairweather, Dundee, Angus, Scotland. Apparatus for simultaneously twisting and winding yarns or threads into cops. 2,028,644; Jan. 21.

Brandenburger, Leo. (See Schleicher, M., and Brandenburger.)

Braunsdorf, Otto. (See Eckert, W., and Braunsdorf.)

Breen, John E., Derrmont, and A. S. Strausbach, Castle Shannon, Pa., assignors to American Telephone and Telegraph Company, Lock. 2,028,495; Jan. 21.

Brentwood, Charles H., Narberth, Pa., assignor to Valley Forge Cement Company. Manufacture of cement. 2,028,114; Jan. 21.

Brennan, Thomas A., Washington, D. C. Mail blocking and storing device. 2,028,270; Jan. 21.

Bristol Tramways & Carriage Company Limited, The. (See Nevatt, Christopher G., assignor.)

Broderson, Karl and H. Behncke, Dessau-in-Anhalt, and E. Korten, Frankfort-on-the-Main, Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Manufacture of para-xylidinesulphonic. 2,028,271; Jan. 21.

Brogdex Company. (See Barwick, Lloyd W., assignor.)

Brown, Carl D., assignor to Draper Corporation, Hopedale, Mass. Loom protection mechanism. 2,028,731; Jan. 21

Brown, Carl D., assignor to Draper Corporation, Hopedale, Mass. Shuttle check. 2,028,732; Jan. 21.

Brown, Gerald G. (See Quier, W. C., and Brown.)

Brown, Joseph D., New York, N. Y., assignor to Rayite Trading Company, Inc. Switch-type plug attachment device. 2,028,314; Jan. 21.

Brubaker, John T., Wilkinsburg, Pa. Mechanism for mechanical measurements. 2,028,184; Jan. 21.

Brühl, Paul, and F. Neugart, Berlin, Germany, drinking machine. 2,028,315; Jan. 21.

Brunner, Albert, assignor to Wagner Electric Corporation, St. Louis, Mo. Hose fitting. 2,028,316; Jan. 21.

Brustlein, Jean, assignor to Georges Gaveret & Cie, Paris, France. Multiple switch. 2,028,587; Jan. 21.

Bryan, Harry F. (See Johnston, E. A., Bryan and Turner.)

Budd, Edward G., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Pneumatic tire. 2,028,135; Jan. 21.

Budd, Edward G., Manufacturing Company. (See Budd, Edward G., assignor.)

Budd Wheel Company. (See Stanerson, Caroline L., assignor.)

Buddy "L" Manufacturing Company. (See Arbe, Thomas R., assignor.)

Buder, Charles G. (See Cross, W. M., Jr., Buder and Norquist.)

Burgess, C. F., Laboratories, Inc. (See Burgess, Charles F., assignor.)

Burgess, C. F., Laboratories, Inc. (See Killoch, Max E., assignor.)

Burgess, Charles F., Roberts, Fla., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis. Sound absorbing construction. 2,028,272; Jan. 21.

Burgster, Nathan G., Chicago, Ill. Fountain pen. 2,028,645; Jan. 21.

Burns, Furel R., Neptune, Ind. Device for glazing doughnuts. 2,028,495; Jan. 21.

Burns, Robert, Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Impact printing device and method. 2,028,190; Jan. 21.

Burwick, Lloyd W., Pomona, Calif., assignor to Brogdex Company, Winter Haven, Fla. Fastener. 2,028,716; Jan. 21.

Butler Manufacturing Company, et al. (See Cross, W. M., Jr., Buder and Norquist, assignors.)

Butterbaugh, Homer W., Kenosha, Wis., assignor to The American Brass Company, Waterbury, Conn., Welding rod alloy. 2,028,317; Jan. 21.

Cady, George H., assignor to United States Finishing Company, Providence, R. I. Jig for treating material. 2,028,436; Jan. 21.

Calame, Charles H. (See Rehder, H. H., and Calame.)

California Orchard Heater Company. (See Harper, Wayne A. S., assignor.)

Carbide and Carbon Chemicals Corporation. (See Shoemaker, Milton J., assignor.)

Carborundum Company, The. (See Benner, R. C., and Soley, assignors.)

Carswell, Harland W., assignor to The All Steel Products Manufacturing Company, Wichita, Kans. Well spudding apparatus. 1,028,697; Jan. 21.

Carlisa, Albert E., Floral Park, assignor to Acme Air Appliance Company, Inc., Brooklyn, N. Y. Fan. 1,028,437; Jan. 21.

Carlisa, Albert E., Floral Park, assignor to Acme Air Appliance Company, Inc., Brooklyn, N. Y. Forming fins. 2,028,435; Jan. 21.

Carr, Raymond L., Boston, Mass. Vehicle body. 2,028,143; Jan. 21.

Carson, Oswald B., Scarsdale, assignor to American Hard Rubber Company, New York, N. Y. Comb. 1,028,559; Jan. 21.

Carter, Bernard M., Montclair, N. J., assignor to General Chemical Company, New York, N. Y. Purification of gases. 2,028,318; Jan. 21.

Cavanagh, John F., Providence, R. I. Thread splicing device. 2,028,144; Jan. 21.

Central Records, Inc. (See Woodruff, L. F., assignor, and Nelson.)

Chemical Construction Corporation. (See Bartholomew, Frank J., assignor.)

Chemical Construction Corporation. (See Rumple, James M., assignor.)

Cheston, Avery B., Detroit, Mich., assignor to E. A. Evans & Sons Company. Alternating current to direct current converter. 2,028,191; Jan. 21.

Cherry, George L., Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Die casting machine. 2,028,192; Jan. 21.

Chiti, Aroldo, Turin, Italy. Moving and changing sign. 2,028,496; Jan. 21.

Christmann, Friedrich. (See Pier, M., and Christmann.)

Churchill Machine Tool Company Limited, The. (See Ashbridge, Harry H., assignor.)

Claff, Chester S., Rudolph, Mont. Saw and sawing the same. 2,028,126; Jan. 21.

Clark, Cyril E., Scarsdale, assignor to American Cyanamid Company, New York, N. Y. Production of sulphuric acid by the contact process. 2,028,193; Jan. 21.

Clark, Frank M., Pittsfield, Mass., assignor to General Electric Company. Electrical apparatus. 2,028,589; Jan. 21.

Clark, Frank M., and R. A. Ruscetta, Pittsfield, Mass., assignors to General Electric Company. Electric capacitor and method of fabrication. 2,028,590; Jan. 21.

Claude Neon Electrical Products Corporation, Ltd. (See Erickson, Elite O., assignor.)

Clausen, Ingard M., Phoenix, Ariz. Flow measuring device. 2,028,278; Jan. 21.

Clausing, Leroy M. E., Chicago, Ill., and J. E. Smith, Jr., Gary, Ind. Radio signaling system. 2,028,497; Jan. 21.

Clavier, André G., Glen Ridge, assignor to International Communications Laboratories, Inc., Newark, N. J. Antenna system for microray signaling. 2,028,498; Jan. 21.

Clayton and Lambert Manufacturing Company. (See Lambert, Charles F., assignor.)

Cleveland Graphite Bronze Company, The. (See Swinton, David R., assignor.)

Cleveland Rock Drill Company, The. (See Curtis, John C., assignor.)

Clingestein, Heinrich, Cologne-on-the-Rhine, and H. Boos and C. Heusner, Leverkusen, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Diazodyestuffs. 2,028,499; Jan. 21.

Clouse, William L., assignor to National Machinery Co., Tiffin, Ohio. Producing belts and the like. 2,028,319; Jan. 21.

Cohn, Leo, Los Angeles, Calif. Change receiver and advertising device. 2,028,591; Jan. 21.

Cole, Amos G., Burnham, Pa. Composite locomotive driving wheel. 2,028,646; Jan. 21.

Cole, Clarence W., Los Angeles, Calif. Light baffling screen. 2,028,499; Jan. 21.

Collins, Virgil D., Colwich, N. J. Tuning arrangement for radio receiving sets. 2,028,127; Jan. 21.

Collot, Jules H., Paris, France. Flushing apparatus. 2,028,193; Jan. 21.

Colt, Samuel S., Orange, N. J. Form attaching supporting means. 2,028,647; Jan. 21.

Conlon, Thomas A. (See Gurney, D. A., and Conlon.)

Connor, Kirke W., and A. Bleasdale, Detroit, Mich., assignors to Micromatic Hone Corporation. Honing tool. 2,028,648; Jan. 21.

Conroy, James P., East Orange, N. J. Broiler. 2,028,649; Jan. 21.

Cook, Stanley S., and L. M. Douglas, assignors to The Parsons Marine Steam Turbine Company, Limited Company, Wallsend-on-Tyne, England. Power-transmission coupling. 2,028,500; Jan. 21.

Corwin, Thomas L., Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Printing telegraph system. 2,028,194; Jan. 21.

Cotton-Wood Products, Inc. (See Gerard, August, and G. A., assignors.)

Coty, Thomas E., Watertown, N. Y. Tuber. 2,028,145; Jan. 21.

Coulling, Harry M., assignor of one-fourth to B. Pierpont, Baltimore, Md. Internal combustion engine valve mechanism. 2,028,198; Jan. 21.

Cowan, Rich, Comyn, Tex. Electric gauge. 2,028,501; Jan. 21.

Cox, William A. (See John, Frank B., assignor.)

Cramp, Benjamin. (See Cramp, Richard, R. G. W., and B.)

Cramp, Richard G. W. (See Cramp, Richard, R. G. W., and B.)

Cramp, Richard, R. G. W., and B., Bartlingside, Ilford, England. Toy and game apparatus. 2,028,139; Jan. 21.

Crane Co. (See Beckwith, Clinton H., assignor.)

Crane Co. (See Zinkil, Roy H., assignor.)

Crane, Paul W., Montclair, and R. T. Fields, Arlington, N. J., assignors to DuPont Viscoloid Company, Wilmington, Del. Seasoning plastic. 2,028,502; Jan. 21.

Cribben & Sexton Company. (See Wilkinson, G. D., and Pelletin, assignors.)

Cross, Walter M., Jr., C. G. Buder, and V. C. Norquist, assignors of one-half to Mid-Continent Investment Company, and one-half to Butler Manufacturing Company, Kansas City, Mo. Coal stoker. 2,028,274; Jan. 21.

Crowley, Alfred, assignor to Johnson Laboratories, Inc., Chicago, Ill. Variable-selectivity radio receiver. 2,028,534; Jan. 21.

Crowley, John C., Cleveland Heights, assignor to The Dill Manufacturing Company, Cleveland, Ohio. Valve stem. 2,028,321; Jan. 21.

Crown Willamette Paper Company. (See Barber, William H., assignor.)

Crum, Anna May. (See Crum, Hiel E. and A. M.)

Crum, Hiel E. and A. M., Indianapolis, Ind. Etheric vibrator. 2,028,278; Jan. 21.

Cunningham, Terence P., assignor, by mesne assignments, to Deech-Kircher Organization, Inc., Chicago, Ill. Advertising folder. 2,028,650; Jan. 21.

Curley, Robert S., Lowell, and W. Shaw, Needham, Mass., assignors to Saco-Lowell Shops, Boston, Mass. Cotton picking system. 2,028,698; Jan. 21.

Curtis, John C., Garfield Heights, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Rock drill supporting frame. 2,028,320; Jan. 21.

Curtis, Kenneth L., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y. Method of and apparatus for feeding tape and projecting images therefrom. 1,028,145; Jan. 21.

Custer, Ernest B. (See Jephson, A. C., and Custer.)

Dagnall, Reginald F., Guildford, and J. G. Lambert, Leicester, England. Release mechanism for pressure fluid reservoirs. 2,028,651; Jan. 21.

Dairymple, William H., Bruce field, Ontario, Canada. Tire spreader. 2,028,440; Jan. 21.

Dankhoff, William, deceased, late of Falls Creek, Pa., by L. C. Frey, Grafton, W. Va., administrator. Micrometric compass. 2,028,147; Jan. 21.

Davis, Ernest, assignor to The Prosperity Company Inc., Syracuse, N. Y. Control means for garment or ironing presses. 2,028,279; Jan. 21.

Dayton Rubber Mfg. Company, The. (See Kremer, Edward H., assignor.)

De Bence, Stephen B. (See Wallis, J. S., and de Bence.)

Decker, Alonzo G., Baltimore, Md., assignor to The Black & Decker Manufacturing Company. Clutch release for portable electric wrenches. 2,028,441; Jan. 21.

Deere & Company. (See Wangelin, Donald A., assignor.)

Deimler, Roy E. (See Baddorf, W. A., and Deimler.)

Delaney, Myron E., Bloomfield, N. J., assignor to Halowax Corporation, New York, N. Y. Fire resistant electrical conductor. 2,028,716; Jan. 21.

Dell, Frank C., assignor to Autopoint Company, Chicago, Ill. Pencil. 2,028,380; Jan. 21.

De Long Hook and Eye Company, The. (See Upham, Gilbert R., assignor.)

De Mulatier, Jean, Sainte-Foy-les-Lyon, France. Drawing of wires. 2,028,652; Jan. 21.

Denny, Joseph F., Jr. (See Pinkenburg, Heinrich F., assignor.)

De Rose, Ralph, New York, N. Y. Ornament. 2,028,593; Jan. 21.

Deutsche Gold- und Silber Scheidemstalt vormals Roessler. (See Pohl, Walter, assignor.)

Devine, J. P., Manufacturing Co. (See Pratt, Clifton J., assignor.)

Dewey and Almey Chemical Company. (See Tucker, George E., assignor.)

De Witt, William P., Auburndale, Mass. Saliva ejector. 2,028,381; Jan. 21.

Dill Manufacturing Company, The. (See Crowley, John C., assignor.)

Dimond, Thomas L., Boonton, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,028,195; Jan. 21.

Doherty, Walter G., New York, N. Y. Measuring apparatus. 2,028,503; Jan. 21.

Dopp, Frank B., St. Louis, Mo., assignor to Perma Corporation. Machine for inserting fasteners and forming the heel area of a sole. 2,028,382; Jan. 21.

Dorman, Harry. (See Masterson, I., and Dorman.)

Dormer, Jay B., St. Joseph, Mich. Load handling device. 2,028,442; Jan. 21.

Dormer, Jay B., St. Joseph, Mich. Mold apparatus. 2,028,443; Jan. 21.

Dorrill, Frank. (See Tucker, C. W., and Dorrill.)

Deech-Kircher Organization, Inc. (See Cunningham, Terence P., assignor.)

Douglas, Louis M. (See Cook, S. S., and Douglas.)

Dow, Harry E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Thermostatic wax pot. 2,028,385; Jan. 21.

Draper Corporation. (See Brown, Carl D., assignor.)

Draper Corporation. (See Erhard, Emile H., assignor.)

Draper Corporation. (See Marsh, Harold, assignor.)

Draper Corporation. (See Northrup, Jones, assignor.)
Dreyer, Charles B., assignor of one-half to H. F. Beeger, Los Angeles, Calif. Motion picture film and method of photography. 2,028,278; Jan. 21.
Drug Products Co. Inc., The. (See Torigian, John, assignor.)
Du Brie, Stanley R., Detroit, Mich. Switch. 2,028,196; Jan. 21.
Dunn, Michael K., Forest Hills, New York. Shoe reshaping device. 2,028,331; Jan. 21.
Dunning, Orville M., East Orange, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Phonographic recorder. 2,028,197; Jan. 21.
Du Pont, E. I., de Nemours & Company. (See Tucker, C. W., and Dorrell, assignors.)
Du Pont, E. I., de Nemours & Company. (See Waddell, James, assignor.)
Du Pont Viscoloid Company. (See Crane, P. W., and Fields, assignors.)
Durant Manufacturing Co. (See Hennessy, Mark M., assignor.)
Durant Manufacturing Co. (See Pearl, Frank R., assignor.)
Dvornikoff, Michael N., St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo. Chlorination of phthalic anhydride. 2,028,533; Jan. 21.
Eckert, Wilhelm and O. Baumandorf, Frankfort-on-the-Main, Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Vat dyestuffs of the anthracene series. 2,028,224; Jan. 21.
Eden, James A., Jr., assignor to Moore Drop Forging Company, Springfield, Mass. Making hinge leaves. 2,028,535; Jan. 21.
Edison, Thomas A., Incorporated. (See Dunning, Orville M., assignor.)
Edison, Thomas A., Incorporated. (See Langley, Sam G., assignee.)
Edwards, David F. (See Starr, J. V., and Edwards.)
Egloff, Hans C., assignor to the firm of Sulzer Freres Societe Anonyme, Winterthur, Switzerland. Steam generator of the once through type. 2,028,504; Jan. 21.
Eitner, August D., Rockville Center, assignor to News Projection Corporation, New York, N. Y. Lamp and lens housing for projectors. 2,028,505; Jan. 21.
Elkind, Carl B. (See Tobin, K. J., and Elkind.)
Ekman, Olof I. H., assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden. Fire alarm system. 2,028,534; Jan. 21.
Ellengren, Carolus L., Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Wheel rim. 2,028,536; Jan. 21.
Elbel, Eberhard, assignor to Henkel & Cie, G. m. b. H., Duesseldorf, Germany. Preparation of ethers having at least 8 carbon atoms in the molecule. 2,028,654; Jan. 21.
Elberts, Frank V., Lake Orion, Mich. Arcuate pitch cone gearing. 2,028,148; Jan. 21.
Electrolux Corporation. (See Heuberger, Joseph F., assignor.)
Elliott, Harold F., Palo Alto, Calif. Automatic clutch control. 2,028,198; Jan. 21.
Engelke, Henry. (See Nathiel H., and Engelke.)
Enoch, Walter, New York, N. Y. Window display device. 2,028,506; Jan. 21.
Erbard, Emile H., Dedham, assignor to Draper Corporation, Hopedale, Mass. Spinning spindle. 2,028,537; Jan. 21.
Erickson, Ellis O., Pasadena, Calif., assignor to Claude Neon Electrical Products Corporation, Ltd., Wilmington, Del. Starting circuit for gaseous discharge lamps. 2,028,538; Jan. 21.
Ernst, Herman. (See Flammang, J., Bowser, and Ernst.)
Evans, R. S., & Sons Company. (See Cheraton, Avery, R., assignor.)
Evans, Edward R., assignor to Angelus Paper Box Co., Los Angeles, Calif. Box. 2,028,276; Jan. 21.
Evans Products Company. (See Tobin, K. J., and Elkind, assignors.)
Fabriques d'Ebauches Venus S. A. (See Hofer, Henri, assignor.)
Fabry, Herman, Evanston, Ill. Apparatus for displaying photographs. 2,028,199; Jan. 21.
Factor, Max & Co. (See Hall, William A., assignor.)
Fairbanks, Morse & Co. (See Andersen, Gordon H., assignor.)
Fairbanks, Morse & Company. (See Reis, Curt F., assignor.)
Fairbanks, Morse & Co. (See Schneider, Heinrich, assignor.)
Fairweather, Eric J. (See Brand, W. T., and Fairweather.)
Feigl, Anton, Astoria, N. Y. (Self-winding watch. 2,028,594; Jan. 21.
Feldermann, William, South Orange, N. J. Humidifier. 2,028,444; Jan. 21.
Fields, Reuben T. (See Crane, P. W., and Fields.)
Finfrock, John O., assignor to National Postal Meter Company, Los Angeles, Calif. Envelope flap opening and moistening device. 2,028,277; Jan. 21.
Finkeldey, Fritz A. B., New York, N. Y. High office cement. 2,028,586; Jan. 21.
Firestone Tire & Rubber Company, The. (See Hale, James R., assignor.)
Firestone Tire & Rubber Company, The. (See Smith, Clifford D., assignor.)
Firestone Tire & Rubber Company, The. (See Stevens, Horace D., assignor.)
Fisher, Arthur W., Forest Hills, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway train switch controlling apparatus. 2,028,539; Jan. 21.
Fitzke, Marcia W., San Francisco, Calif. Present material dispensing device. 2,028,655; Jan. 21.
Flammang, John, University City, P. L. Bowser, St. Louis, and H. Ernst, Pine Lawn, Mo., assignors to The Sterling Corporation, St. Louis, Mo. Composite plates. 2,028,332; Jan. 21.
Flegel, Frederick W., Racine, Wis. Drink mill. 2,028,506; Jan. 21.
Food Machinery Corporation. (See Stockdale, Harry C., assignor.)
Forman, Paris R., Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y. Valve. 2,028,397; Jan. 21.
Foster, Lillian H. (See Scott, W. L., and Foster.)
Foster-Verney Corporation. (See Verney, Sergius, assignor.)
Foster Wheel Corporation. (See Hilliard, John, assignor.)
Franklin, Charles S., and S. J. Witt, London, England, assignors to Radio Corporation of America. Oscillation circuit. 2,028,526; Jan. 21.
Free use of the Public, Dedicated to the. (See Hunt, W. M., and Humphries, assignors.)
Frese, Joseph F., Baltimore, assignor to Monitor Controller Company, Baltimore, Md. Train lighting system. 2,028,734; Jan. 21.
Frey, Laurel C., administrator. (See Dankhoff, William, assignor.)
Freyermuth, George H. (See Hanke, W. V., Freyermuth, and Potts.)
Friden, Carl M. F., Piedmont, assignor to Marchant Calculating Machine Company, Emeryville, Calif. Calculating machine. 2,028,548; Jan. 21.
Fuchs, Henry. (See Gürler, R., and Fuchs.)
Fuller, Everett W. (See Story, R. W., and Fuller.)
Gabrielson, Carl, assignor to L. C. Smith & Corona Typewriters, Inc., Syracuse, N. Y. Typewriting machine. 2,028,200; Jan. 21.
Gail, George W., Buxton, Md. Fastening and securing means. 2,028,597; Jan. 21.
Gangwisch, Robert L., Beaver, assignor to Pittsburgh Tube Company, Pittsburgh, Pa. Butt-weld pipe. 2,028,201; Jan. 21.
Gannett, Danforth R., Jackson Heights, and E. F. Lovis, Flushing, N. Y., assignors to American Telephone and Telegraph Company. Vacuum tube testing system. 2,028,278; Jan. 21.
Gasper, Edm., Berlin, Germany. Photographic material. 2,028,279; Jan. 21.
Gauthier, Emile N., Frankford, Maine. Machine for unsealing can tops. 2,028,202; Jan. 21.
Gavoret Georges & Cie. (See Brunelin, Jean, assignor.)
Gelbman, Lewis, Yonkers, N. Y. Brake for foot [illegible] vehicles. 2,028,445; Jan. 21.
Gelino, Felix R., G. C. Rodrigues, and R. Suarez de Deu Zapata, Madrid, Spain. Apparatus for effecting hypodermic injections. 2,028,449; Jan. 21.
General Aniline Works, Inc. (See Broderson, K., Schade, and Korten, assignors.)
General Aniline Works, Inc. (See Clingestein, H., Boss, and Heusser, assignors.)
General Aniline Works, Inc. (See Eckert, W., and Braundorf, assignors.)
General Aniline Works, Inc. (See Neumeister, W., and Morschel, assignors.)
General Aniline Works, Inc. (See Silbner, Richard, assignor.)
General Aniline Works, Inc. (See Strecker, A., and Seidenfaden, assignors.)
General Chemical Company. (See Carter, Bernard M., assignor.)
General Chemical Company. (See Wisley, Charles F., assignor.)
General Chemical Company. (See Taylor, George B., assignor.)
General Conveyors Limited. (See Mann, Walter J., assignor.)
General Conveyors Limited. (See Needham, John T., assignor.)
General Electric Company. (See Dixter, Harley H., assignor.)
General Electric Company. (See Clark, Frank M., assignor.)
General Electric Company. (See Clark, F. M., and Bacetta, assignors.)
General Electric Company. (See Herrmann, Alfred, assignor.)
General Electric Company. (See Stark, Julius H., assignor.)
General Fire Extinguisher Company. (See Williams, James H., assignor.)
General Steel Castings Corporation. (See Rogers, Harry E., assignor.)
Gerard, August and G. A., assignors to Cotton-Wool Products Inc., Reading, Mass. Method and machine for making cushion pads. 2,028,203; Jan. 21.
Gerard, George A. (See Gerard, August, and G. A.)
Gibson, Alfred H., Cleveland Heights, assignor to The Wellman Engineering Company, Cleveland, Ohio. Bag filter basket. 2,028,595; Jan. 21.
Gilson, Robert M., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for automatic regulation of rectifiers. 2,028,541; Jan. 21.
Globe Oil Tools Company. (See Wright, Jesse C., assignor.)
Gluhareff, Michael M., Stratford, Conn., assignor, by mesne assignments, to United Aircraft Corporation. Windshield construction. 2,028,542; Jan. 21.
Gohorel, Fernand P., Paris, France, assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Automatic telephone system. 2,028,656; Jan. 21.
Goldberg, Max, New York, N. Y. Filling machine. 2,028,657; Jan. 21.
Goldberg, Max L. (See Goldberg, Victor, and M. L.)
Goldberg, Victor, and M. L., Baltimore, Md. Toy boat. 2,028,543; Jan. 21.
Goldsmith, Lester M., Philadelphia, Pa. Safety device. 2,028,149; Jan. 21.
Goodman, Harry E., assignor to J. B. Arstrom, Chicago, Ill. Savings bank attachment. 2,028,323; Jan. 21.
Goodman, Lillian, Brooklyn, N. Y., assignor to Mitchell Brothers, Inc., Bridgewater, Conn. Undergarment for women. 2,028,590; Jan. 21.
Goodman Manufacturing Company. (See Bergmann, Ernst R., assignor.)
Goodwin, George L., Detroit, Mich. Chuck. 2,028,589; Jan. 21.
Gürler, Ernst, and H. Fuchs, Berlin, Germany. Visual signaling device. 2,028,203; Jan. 21.
Granat, Nels B., et al. (See McDowell, John, J. F., and B., assignors.)
Grant, William H., assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio. Means for corrugating tubes. 2,028,130; Jan. 21.
Grant, William H., assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio. Method of corrugating tubes. 2,028,131; Jan. 21.
Graves, Herbert C., Jr., East Brandywine Township, Chester County, assignor to I.T.E. Circuit Breaker Company, Philadelphia, Pa. Electric circuit interrupter. 2,028,204; Jan. 21.
Gray, Deckard J., Ware Shoals, S. C., assignor to Riegel Textile Corporation, New York, N. Y. Shirt. 2,028,605; Jan. 21.
Gray, Edward, Detroit, Mich. Hydraulic transmission. 2,028,152; Jan. 21.
Great Western Fuse Company. (See La Mar, Frank C., assignor.)
Green, James L., Sr., Birmingham, Ala. Hand tool for cutting grass, weeds, and the like. 2,028,650; Jan. 21.
Greene, William M., and F. S. Luther, assignors to Laminite Products Corporation, Salamanca, N. Y. Apparatus for making prism rollers and the like. 2,028,699; Jan. 21.
Griffin, Hugh P., and E. P., Richardson, Reidsville, N. C. Shoe polish. 2,028,324; Jan. 21.
Griffin, Timothy C., Yonkers, N. Y. Well point. 2,028,447; Jan. 21.
Grossman, Elias R., Chicago, Ill. Pencil sharpener. 2,028,600; Jan. 21.
Guarnaschelli, Stephen, Brooklyn, assignor to Fitchburg Metal Products Corporation, New York, N. Y. Flexible tubing. 2,028,600; Jan. 21.
Guier, William C., assignor to The All Steel Products Manufacturing Company, Wichita, Kans. Traction operated winch with drive transmission. 2,028,700; Jan. 21.
Guier, William C., and G. G. Breyer, assignors to The All Steel Products Manufacturing Company, Wichita, Kans. Oil field sand pinch. 2,028,701; Jan. 21.
Gunderman, Lester R., Pittsburgh, Pa. Pipe thread protector. 2,028,329; Jan. 21.
Gunn, Ross, Washington, D. C. Radiation detector. 2,028,153; Jan. 21.
Gurney, Dayton A., Cass, Mich., and T. A. Coates, Silver Spring, Md. Cart. 2,028,154; Jan. 21.
Gustafson, Carl E., and R. R. Holbrook, Attleboro, assignors to The Hasen Box Company, Attleboro Falls, Mass. Box fastener. 2,028,661; Jan. 21.
Hahn, Clair P., Alliance, Ohio. Automatic automobile brake. 2,028,206; Jan. 21.
Hale, James R., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Vehicle wheel. 2,028,702; Jan. 21.
Hall, Eric R., Chicago, Ill. Tire and rim construction. 2,028,601; Jan. 21.
Hall, William A., assignor to Max Factor & Co., Los Angeles, Calif. Powder. 2,028,702; Jan. 21.
Halowax Corporation. (See Delaney, Myron R., assignor.)
Halowax Corporation. (See Hanson, Ernest R., assignor.)
Hamilton, Alexander C., Pleasant Ridge, assignor, by mesne assignments, to Harris Laboratories, Inc., Detroit, Mich. Wheel and brake therefor. 2,028,207; Jan. 21.
Hamilton Bench Manufacturing Company. (See Mason, Edward, assignor.)
Hamlin, George R. (See Shaffer, Samuel H., assignor.)
Hancock, Alfred R., Rumble, Tex. Burner. 2,028,721; Jan. 21.
Handley, George F., Glendale, assignor to Royal Typewriter Company, Inc., New York, N. Y. Typewriting machine. 2,028,280; Jan. 21.
Haney, Lewis H., Los Angeles, Calif. Hydrocarbon engine fuel pump. 2,028,208; Jan. 21.
Hanke, William V., Baton Rouge, La., G. H. Freyermuth, Elizabeth, and G. Potts, Hillside, N. J., assignors to Standard Oil Development Company. Apparatus for the production of hydrogen. 2,028,326; Jan. 21.
Hanaman, John, Chicago, Ill. Simulating motion and apparatus therefor. 2,028,662; Jan. 21.
Hansen, Ernest H., Bloomfield, N. J., assignor to Halowax Corporation, New York, N. Y. Fire resistant composition. 2,028,718; Jan. 21.
Hanson, Helen M., Argyle, Wis., assignor to Martin Brothers Company, Minneapolis, Minn. Diaper garment. 2,028,592; Jan. 21.
Hanson, Miles G., Flint, Mich. Producing the alkali metals. 2,028,380; Jan. 21.
Harmon, Wayne A. S., assignor, by mesne assignments, to California Orchard Heater Company, Los Angeles, Calif. Orchard heater. 2,028,327; Jan. 21.
Harnischfeger Corporation. (See Harnischfeger, Henry, assignor.)
Harnischfeger, Henry, assignor to Harnischfeger Corporation, Milwaukee, Wis. Garage. 2,028,591; Jan. 21.
Harrod, John W., Youngstown, Ohio. Apparatus for stringing tennis rackets. 2,028,663; Jan. 21.
Hart, Lawrence F. C., Ottawa, Ontario, Canada. Removable hood for the rumble seat of automobiles. 2,028,209; Jan. 21.
Hartmann Trunk Company. (See Ritter, Julius, Jr., assignor.)
Harvey, William H., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coin collecting apparatus. 2,028,210; Jan. 21.
Harwood, Geo. S. & Son. (See Howe, Joseph R., assignor.)
Harza, Leroy F., Ravinia, Ill. Hydraulic turbine. 2,028,448; Jan. 21.
Hatch, Charles W., Brighton, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Cap member for fasteners. 2,028,703; Jan. 21.
Haworth, Mack E., Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company. Field stream control. 2,028,211; Jan. 21.
Hayden, Elsie G., executrix. (See Hayden, Harold E.)
Hayden, Harold E., Brooklyn, N. Y., Elsie G. Hayden, executrix of said Harold E. Hayden, deceased. Vacuum tube system and container. 2,028,717; Jan. 21.
Hayden, Lester N., Arlington, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Fastener attaching machine. 2,028,704; Jan. 21.
Hayes Industries, Inc. (See Hamilton, Alexander C., assignor.)
Hazeltine Corporation. (See Lewis, Harold M., assignor.)
Heise, Hermann, assignor to E. Leitz, Optische Werke, Wetzlar, Germany. Ball-bearing for scientific instruments. 2,028,718; Jan. 21.
Heinemann, Rudolf, Berlin, Germany. Vehicle direction indicator. 2,028,604; Jan. 21.
Heinrich, William F., North Bergen, N. J. Type form tie. 2,028,440; Jan. 21.
Heinze Development Company. (See Heinze, John O., assignor.)
Heinze, John O., Detroit, Mich., assignor to Heinze Development Company. Turbo air compressor. 2,028,603; Jan. 21.
Heising, Raymond A., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio transmitting system. 2,028,212; Jan. 21.
Hemphill, Arthur E., Egg Harbor City, N. J. Heat exchanger or cooler. 2,028,213; Jan. 21.
Henderson, Edward O. (See Henderson, Herbert B. and H. O.)
Henderson, Herbert B. and H. O., New Brighton, Pa. Pyrometric device. 2,028,607; Jan. 21.
Henkel & Cie. G. m. b. H. (See Elbel, Eberhard, assignor.)
Hennessy, Mark M., Wauwatosa, assignor to Durant Manufacturing Co., Milwaukee, Wis. Soap ejecting spray head. 2,028,214; Jan. 21.
Henry, Charles P., Cranston, assignor to J. N. Henry, Providence, R. I. Curtain support. 2,028,605; Jan. 21.
Henry, Charles P., Cranston, assignor to J. N. Henry, Providence, R. I. Curtain support. 2,028,606; Jan. 21.
Henry, Charles P., Cranston, assignor to J. N. Henry, Providence, R. I. Curtain support. 2,028,607; Jan. 21.
Henry James M. (See Henry, Charles P., assignor.)
Hercules Powder Company. (See Bowlby, Walter D., assignor.)
Hercules Powder Company. (See Sperry, Luke H., assignor.)
Hermanni, Alfred, Berlin-Frohnau, Germany, assignor to General Electric Company. Electric heater. 2,028,604; Jan. 21.
Herold, Walter F., assignor to The Bassick Company, Bridgeport, Conn. Expansion insert or caster socket for tubular legs or the like. 2,028,328; Jan. 21.
Heuberger, Joseph F., Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del. Vacuum cleaner. 2,028,715; Jan. 21.
Heusser, Carl. (See Clingestein, H., Boss, and Heusser.)
Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Signal valve device. 2,028,605; Jan. 21.
Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Pedestal brake valve device. 2,028,606; Jan. 21.

Hewett, William S., Kimhurst Ill. Joint for concrete pipes. 2,028,008; Jan. 21.

Hiering, William C., assignor to The J. E. Mergott Company, Newark, N. J. Bag frame. 2,028,216; Jan. 21.

Higgins, Sigfried. (See Swan, H., and Higgins.)

Hill, Robert H. (See Blake, K. E., and Hill.)

Hilyard, Albert, Salinas, Calif. Plant thinning implement. 2,028,450; Jan. 21.

Hiscock, Thory, Seattle, Wash., assignor, by mesne assignments, to United Air Lines Transport Corporation, Chicago, Ill. Ice removing means. 2,028,600; Jan. 21.

Hitt, Parker, assignor to International Communications Laboratories, Inc., New York, N. Y. Ciphering apparatus. 2,028,506; Jan. 21.

Hodge, Edwin T. (See McDougall, George F., assignor.)

Hodge, Edwin T., and G. F. McDougall, Portland, Oreg.; said McDougall assignor to said Hodge. Auxiliary hydraulic steering mechanism. 2,028,451; Jan. 21.

Hodson, Walter D., Chicago, Ill. Wire rope lubrication. 2,028,158; Jan. 21.

Hodson, Walter D., Chicago, Ill. Wire rope. 2,028,156; Jan. 21.

Hodson, Walter D., Chicago, Ill. Wire rope. 2,028,157; Jan. 21.

Hodson, Walter D., Beverly Hills, Ill. Incorporating extremely viscous lubricants in rope material. 2,028,159; Jan. 21.

Hoe, Robert, Hyde Park, N. Y. Power unit. 2,028,382; Jan. 21.

Hefer, Henri, Geneva, Switzerland, assignor to firm Fabrique D'Ebauches Venus S. A. Moutier, Switzerland. Stop watch. 2,028,483; Jan. 21.

Hoffman, Herbert, Jackson Heights, N. Y. Illuminating apparatus. 2,028,453; Jan. 21.

Holbrook, Harry E. (See Gustafson, C. E., and Holbrook.)

Holloway, Isaiah S. (See Moore, L., and Holloway.)

Holt, James L., Newfoundland, N. J. Reeling. 2,028,667; Jan. 21.

Hosking, Richard T. Wilmette, Ill. Reenforced light-transmitting sheet. 2,028,670; Jan. 21.

Houde Engineering Corporation. (See Poe, Ralph F., assignor.)

Houston, Claude M., Pittsburgh, Pa. Coupling for tubular joints of the expansion joint type. 2,028,539; Jan. 21.

Howard, Jules, New Rochelle, N. Y., and S. B. Richeson, Jersey City, N. J. Foam controlling hose faucet. 2,028,363; Jan. 21.

Howe, Joseph B., Worcester, assignor to Geo. S. Harwood & Son, Boston, Mass. Automatic weighing machine. 2,028,544; Jan. 21.

Howe, Joseph B. Worcester, assignor to Geo. S. Harwood & Son, Boston, Mass. Weighing mechanism. 2,028,545; Jan. 21.

Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Motion picture camera and the like. 2,028,608; Jan. 21.

Hudson, David W., Green Bay, Wis. Ventilated and humidified storage receptacle. 2,028,220; Jan. 21.

Huffman, Otto V., Bedford Hills, N. Y. Antiparasitic agent and agency. 2,028,217; Jan. 21.

Hughes-Mitchell Processes Incorporated. (See Mitchell, T. A., and Sessions, assignors.)

Humphries, Walter R. (See Hurst, W. M., and Humphries.)

Hunt, Franklin B., assignor to The Liquid Carbonic Corporation, Chicago Ill. Refrigerating system. 2,028,735; Jan. 21.

Hurliman, Julius. (See Miller, G. J., and Hurliman.)

Hurst, Wilbur M., Washington, D. C., and W. R. Humphries, Silver Spring, Md., dedicated to the free use of the Public. Dry material feeding device. 2,028,719; Jan. 21.

Hygrade Sylvania Corporation. (See Le Bel, Clarence J., assignor.)

Hygrade Sylvania Corporation. (See Rusel, Joseph, assignor.)

Hyslop, Samuel, Newton, Mass. Thread clearer. 2,028,392; Jan. 21.

I. G. Farbenindustrie Aktiengesellschaft. (See Pier, M., and Christmann, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Rabe, Hans, assignor.)

I. G. Farbenindustrie Aktiengesellschaft. (See Wilke, W., Stadler, and Lappe, assignors.)

I T E Circuit Breaker Company. (See Graves, Herbert C., Jr., assignor.)

Ingersoll Milling Machine Company, The. (See Perry, R. S., Johnson and Oberhoffken, assignors.)

Ingersoll-Rand Company. (See Slater, Fred M., assignor.)

Inland Lime and Stone Company. (See Wygal, Clyde D., assignor.)

International Communications Laboratories, Inc. (See Clavier, André G., assignor.)

International Communications Laboratories, Inc. (See Hitt, Parker, assignor.)

International Communications Laboratories Incorporated. (See Smith, Clyde assignor.)

International Harvester Company. (See Beckman, William O., assignor.)

International Harvester Company. (See Johnson, Arnold E. W., assignor.)

International Harvester Company. (See Johnston, E. A., Bryan, and Turner, assignors.)

International Harvester Company. (See Mitchell, Melville J., assignor.)

International Harvester Company. (See Pinnegrass, Herman O., assignor.)

International Paper Company. (See Bobbe, Edwin W., assignor.)

Intertype Corporation. (See Klingberg, Elmer G., assignor.)

Irwin, Clifford R., Los Angeles, Calif. Locking-head. 2,028,009; Jan. 21.

Isaacs, Moses H., executor, et al. (See Molina, Walter R.)

Iverson Tool Company. (See Smith, J. C., and Taylor, assignors.)

Jackson, Sarah, London England. Gem or like setting in jewelery. 2,028,284; Jan. 21.

Jacoel, Isidore, Norfolk, Va. Cable splicer. 2,028,510; Jan. 21.

Jänicke, Hermann, Dessau, assignor to H. Junkers, Dynamisch-Zell, Oberbayern, Germany. Free piston engine compressor. 2,028,281; Jan. 21.

Jeffrey Manufacturing Company, The. (See Bakstad, Johan B., assignor.)

Jeffrey Manufacturing Company, The. (See Haworth, Mack H., assignor.)

Jephson, Allen C., and E. B. Custer, Johnstown, Pa., assignors to National Radiator Corporation. Cathode for electrolytic cells. 2,028,385; Jan. 21.

Johansson, Carl E., Detroit, Mich. Precision measuring instrument. 2,028,611; Jan. 21.

John, Frank B., assignor of one-half to W. A. Cox, Nashville, Tenn. Screw driver. 2,028,546; Jan. 21.

Johnson, Arnold E. W., Chicago, Ill. assignor to International Harvester Company. Side delivery rake. 2,028,333; Jan. 21.

Johnson, Audrey M., St. Joseph, Mo. Buttstub cover. 2,028,454; Jan. 21.

Johnson, Earle W., Dallas, Tex., assignor to Western Geophysical Company, Tulsa, Okla. Seismic surveying. 2,028,286; Jan. 21.

Johnson, Gustav, West Roxbury, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Collar fastener. 2,028,705; Jan. 21.

Johnson, Jesse C., Oakland, Calif. Apparatus for feeding fuel oil to burners for boilers and similar installations. 2,028,393; Jan. 21.

Johnson, John A., Woodhaven, N. Y. Feeding means for sealing pads for receptacle closure caps. 2,028,318; Jan. 21.

Johnson, John A., Woodhaven, N. Y. Feeding means for sealing pads for receptacle closure caps. 2,028,319; Jan. 21.

Johnson, John E. (See Perry, R. S., Johnson, and Oberhoffken.)

Johnson Laboratories, Inc. (See Crowley, Alfred, assignee.)

Johnston, Edward A., H. F. Bryan, and W. H. Turner, Chicago, Ill., assignors to International Harvester Company. Heavy fuel vaporizer. 2,028,329; Jan. 21.

Jones & Laughlin Steel Corporation. (See Weibel, A. B., and Jones, assignors.)

Jones, William. (See Weibel, A. B., and Jones.)

Judd, Irving H., Detroit, assignor to Whitehead & Kales Company, River Rouge, Mich. Automobile transport. 2,028,547; Jan. 21.

Junkers, Hugo. (See Jänicke, Hermann, assignor.)

Junto-Display Corporation. (See Rice, Alexander, assignor.)

Kalichevsky, Vladimir, Elizabeth, N. J., assignor to Standard Oil Development Company, Desulphurizing a petroleum oil distillate. 2,028,245; Jan. 21.

Karmazin Engineering Company. (See Karmazin, John, assignor.)

Karmazin, John, Huntington, Ind., assignor to Karmazin Engineering Company. Header construction. 2,028,458; Jan. 21.

Karmazin, John, Huntington, Ind., assignor to Karmazin Engineering Company. Refrigerating apparatus. 2,028,456; Jan. 21.

Karmazin, John, Huntington, Ind., assignor to Karmazin Engineering Company. Refrigerating apparatus. 2,028,457; Jan. 21.

Karmazin, John, Huntington, Ind., assignor to Karmazin Engineering Company. Refrigerating apparatus. 2,028,458; Jan. 21.

Katzinger, Edward, Company. (See Kaufman, Jacob, assignor.)

Kaufman, Harry. (See Levine, A., and Kaufman.)

Kay-Brunner Products Inc. (See Kay, Lloyd D., assignor.)

Kay, Lloyd D., San Mateo, Calif., assignor to Kay-Brunner Steel Products, Inc. Axle. 2,028,204; Jan. 21.

Keech, Fred G., Newark, and A. Markowitz, Bloomfield, N. J. Sand distributor for automobiles. 2,028,234; Jan. 21.

Kelly, Timothy J., assignor to Southern Bolting Mills, Shannon, Ga. Seed bed cover. 2,028,220; Jan. 21.

Kelsey-Hayes Wheel Company. (See Mein, Frank L., assignor.)

Kemp, Caroline, Clayton, N. Y. Toaster for canapés for hors d' oeuvres. 2,028,180; Jan. 21.

Keoughan, Laurence M., Berwyn, Ill. Apparatus for drying sludge. 2,028,325; Jan. 21.

Kern, Erwin, Beromünster, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Electron discharge device control system. 2,028,706; Jan. 21.

Kerr, Howard J., Westfield, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Protective covering for tubes. 2,028,190; Jan. 21.

Kiaz, Edward F., Cranston, R. I. Cloth board. 2,028,396; Jan. 21.

Kirsten, Kurt F. J., Seattle, Wash., assignor to Kirsten Lighting Corporation. Low voltage gas arc lamp. 2,028,548; Jan. 21.

Kirsten Lighting Corporation. (See Kirsten, Kurt F. J., assignor.)

Kiser, Viggo A., Copenhagen, Denmark. Device for reducing torsional vibrations in shafts. 2,028,489; Jan. 21.

Klessig, Arthur L., Manitowoc County, Wis. Automatic hitch. 2,028,221; Jan. 21.

Kilefoth, Max H., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis. Rubber dispersion in alkali silicates. 2,028,397; Jan. 21.

Kliesrath, Victor W. (See Bragg, C. S., and Kliesrath.)

Klingberg, Elmer G., Long Island City, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y. Vise for slug casting machines. 2,028,750; Jan. 21.

Knell, John, assignor to All-Steel-Equip Company, Aurora, Ill. Electrical receptacle. 2,028,509; Jan. 21.

Kollman, Jacob, assignor to Edward Katzinger Company, Chicago, Ill. Cube gun. 2,028,671; Jan. 21.

Korten, Ernst. (See Brockerhoff, K., Bohnstedt, and Korten.)

Kosvich, Bess, New York, N. Y. Bird cage seed guard frame. 2,028,612; Jan. 21.

Kramar, Ernst, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Transmitter for electromagnetic waves. 2,028,510; Jan. 21.

Kremer, Edward H., assignor to The Dayton Rubber Mfg. Company, Dayton, Ohio. Belt connecter. 2,028,598; Jan. 21.

Krieg, John L. (See Parent, E. J., and Krieg.)

Krissiep, Max, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa. Braiding carrier. 2,028,222; Jan. 21.

Kroenig, Walter. (See Pier, M., Simon, and Kroenig.)

Kubina, John, Brantford, assignor of one-half to M. Blachs, Brantford, Ontario, Canada. Combined lock and latch. 2,028,672; Jan. 21.

Kuhl, Paul R., Elizabeth, N. J., assignor to Standard Oil Development Company. Carrying out chemical reactions. 2,028,836; Jan. 21.

Kyrides, Lucas P., Webster Groves, Mo., assignor, by mesne assignments, to Monsanto Chemical Company. Plastic compositions and making the same. 2,028,390; Jan. 21.

La Brie, Ludger R. (See Bendix, V., and La Brie.)

La Brie, Ludger R., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,028,612; Jan. 21.

La Brie, Ludger R., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,028,614; Jan. 21.

La Mar, Frank C., assignor to Great Western Fuse Company, New York, N. Y. Fusible link. 2,028,720; Jan. 21.

La Mar, Frank C., assignor to Great Western Fuse Company, New York, N. Y. Fusible link. 2,028,721; Jan. 21.

Lambert, Charles F., Grosse Pointe Farms, assignor to Clayton and Lambert Manufacturing Company, Detroit, Mich. Cover lock. 2,028,228; Jan. 21.

Lambert, James G. (See Dagnall, R. F., and Lambert.)

Land, Charles H., and W. H. Wilson, Detroit, Mich., said Land assignor to said Wilson. Tractor-trailer vehicle. 2,028,400; Jan. 21.

Landauer, Kurt, Stuttgart, Germany. Holder for match packages. 2,028,459; Jan. 21.

Lane, Jens P., Seattle, Wash. Holder for umbrellas. 2,028,237; Jan. 21.

Lang, Richard T., Heidenheim on the Brenz, Germany, assignor to American Voith Contact Co., Inc., New York, N. Y. Stock inlet control for paper making machines. 2,028,673; Jan. 21.

Langley, Sam G., Maplewood, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Phonograph. 2,028,224; Jan. 21.

Lappe, Franz. (See Wilke, W., Stadler, and Lappe.)

Larson, Albin E., Webster, S. Dak. Claw guard. 2,028,674; Jan. 21.

Larson, Homer W., Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Welding apparatus. 2,028,225; Jan. 21.

Laverone, Jean, Paris, assignor to The Society Compagnie de Chauffage Central par la Vide, Neuilly-sur-Seine, France. Expansion valve for steam. 2,028,676; Jan. 21.

Le Baron, Robert P., New York, N. Y., assignor, by mesne assignments, to Standard Alcohol Company, Wilmington, Del. Sulphating oiadnes. 2,028,226; Jan. 21.

Le Bel, Clarence J., Lynn, assignor to Hygrade Sylvania Corporation, Salem, Mass. Electrical apparatus. 2,028,388; Jan. 21.

Leeper, Victor, et al. (See McDowell, John, J. F., and E., assignees.)

Lees, Arthur W. (See Szukalski, C. J., and Lees.)

Leicester, William F., Hackensack, N. J., Making glued up plywood. 2,028,287; Jan. 21.

Leitz, Ernst, Optische Werke. (See Heine, Hermann, assignor.)

Lenz, George H., Elmhurst, assignor of one-half to J. J. Ohle, Oak Park, Ill. Glazing structure. 2,028,615; Jan. 21.

Lenz, Edward H., Valders, Wis. Cross-chain coupling. 2,028,288; Jan. 21.

Lesh, Lawrence J., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Airport control and signaling system. 2,028,723; Jan. 21.

Levine, Abraham, Elizabeth, and H. Kaufman, West Orange, N. J. Baggage. 2,028,330; Jan. 21.

Lewis, Benjamin F. (See Gannett, D. K., and Lewis.)

Lewis, Benjamin F., Flushing, assignor to American Telephone and Telegraph Company. Time announcement system. 2,028,289; Jan. 21.

Lewis, Harold M., Douglaston, N. Y., assignor to Haseltine Corporation. Tone control. 2,028,511; Jan. 21.

Lewis, Robert J., Baltimore, Md. Motor truck. 2,028,227; Jan. 21.

Lewis, Warren K., Newton, Mass., assignor to Standard Oil Development Company. Distillation of easily decomposable materials. 2,028,340; Jan. 21.

Light, Harry, Atlantic City, N. J. Amusement device. 1,197,678; Jan. 21.

Linde Air Products Company, The. (See Wagner, Noah E., assignor.)

Lindsey, Lerkin C., Grady, N. Mex. Swimming glove. 2,028,461; Jan. 21.

Lime Material Company. (See Steinmayer, Alwin G., assignor.)

Liquid Carbonic Corporation, The. (See Hunt, Franklin B. assignor.)

Locomotive Finished Material Company, The. (See Muchale, Henry E., assignor.)

Loetscher, Emil C., Dubuque, Iowa. Apparatus for the manufacture of a composite building material. 2,028,610; Jan. 21.

Loftus, Fred H., Mount Lebanon, Pa. Nonreversing open-hearth furnace. 2,028,290; Jan. 21.

Logan Gear Company, The. (See Sprink, Isaac W., assignor.)

Lonza Elektrizitätswerke und Chemische Fabriken Aktiengesellschaft (Gampel). (See Lascher, Emil, assignor.)

Lord, Hugh C., Erie, Pa. Mounting. 2,028,549; Jan. 21.

Lord, Hugh C., Erie, Pa. Mounting. 2,028,550; Jan. 21.

Lord, Hugh C., Erie, Pa. Mounting and joints therefor. 2,028,551; Jan. 21.

Lord, Mathew A., Blackpool, England. Railway line. 2,028,401; Jan. 21.

Lorenz, C., Aktiengesellschaft. (See Kramar, Ernst, assignor.)

Low, Albert H., Denver, assignor of one-fourth to C. Whitehead and A. L. Vogl, Denver, Colo. Cigarette. 2,028,552; Jan. 21.

Lubin, Harry E., Spokane, Wash. Dispensing apparatus. 2,028,553; Jan. 21.

Lubrication Control Corporation. (See Booth, Harry T., assignor.)

Ludowici, Wilhelm, Jockgrim/Pfalz, Germany. Roofing tile. 2,028,228; Jan. 21.

Luhn, Hans P., New York, N. Y. Miniature building structure. 2,028,229; Jan. 21.

Luminite Products Corporation. (See Greene, W. M., and Luther, assignors.)

Lupton, Elmer H., Dchester, Md. Locking means for paper board boxes. 2,028,677; Jan. 21.

Lupton, Elmer H., Dchester, Md. Locking and reenforcing means for paper board boxes. 2,028,678; Jan. 21.

Lascher, Emil, Basel, assignor to Lonza Elektrizitätswerke und Chemische Fabriken Aktiengesellschaft (Gampel), Basel, Switzerland. Production of concentrated nitric acid. 2,028,402; Jan. 21.

Lutz, Carl, Hammond, Ind., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,028,617; Jan. 21.

Luther, Paul E. (See Greene, W. M., and Luther.)

Lyden, Frank J., St. Louis, Mo. Condenser motor. 1,028,730; Jan. 21.

Macbeth, Colin, Birmingham, England. Vulcanizing press. 2,028,619; Jan. 21.

MacPherson, Albert A., Five Dock, near Sydney, New South Wales, Australia. Implement handle. 2,028,291; Jan. 21.

Magnesium Development Corporation. (See Michel, Josef M., assignor.)

Magnetic Analysis Corporation. (See Zuschlag, Theodor, assignor.)

Maier, Albert, Friedrichshafen, assignor to Zahnradfabrik Friedrichshafen Aktiengesellschaft, Friedrichshafen Bodensee, Germany. Freewheeling device for motor vehicles. 2,028,512; Jan. 21.

Main, Frank L., Birmingham, assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Structural element. 2,028,554; Jan. 21.

Malcom, Robert, Chicago, Ill. Mask. 2,028,462; Jan. 21.

Mann, Robert, Memphis, Tenn. Syringe for blood transfusions. 2,028,161; Jan. 21.

Mann, Walter J., Plainfield, N. J., assignor to General Conveyors Limited, Montreal, Quebec, Canada. Belt conveyor. 2,028,281; Jan. 21.

Marchant Calculating Machine Company. (See Friden, Carl M. F., assignor.)

Marcroft, William, South Chatham, Mass. Winding machine. 2,028,679; Jan. 21.

Marco, Joseph R., St. Louis, assignor to Monsanto Chemical Company, St. Louis, Mo. Plastic compositions of matter. 2,028,408; Jan. 21.

Markowitz, Adolph. (See Keoch, F. G., and Markowitz.)

Marlow, Frederick W. (See Peterkin, J. P., and Marlow.)

Marsh, Harold, Pawtucket, R. I., assignor to Draper Corporation, Hopedale, Mass. Warp stop motion. 2,028,723; Jan. 21.

Marten, Thomas H., Toronto, Ontario, Canada. Davit mechanism device for launching lifeboats. 2,028,513; Jan. 21.

Martin Brothers Company. (See Hansen, Helen M., assignor.)

Mason Box Company, The. (See Gustafson, C. E., and Holbrook, assignors.)

Master Electric Company, The. (See Phelps, Clyde H., assignor.)

Masterench Corporation. (See Mead, Homer A., assignor.)

Masterson, Isobel, Seattle, Wash., and H. Dorman, Portland, Oreg., said Dorman assignor to C. W. Bowen, Jr., Seattle, Wash. Series envelope. 2,028,341; Jan. 21.

Matchette, Louis D. (See Surtees, Robert E., assignor.)

Mathar, Josef, Aachen, assignor of one-half to Schumag Schumacher Metallwerke Aktiengesellschaft für Prüfeinrichtungen, Aachen, Germany. Determining the stresses in structural elements and in completed constructions. 2,028,514; Jan. 21.

Matronoff, Ivan, Leningrad, Union of Socialist Soviet Republics. Railway brake. 2,028,404; Jan. 21.

Matthews, Tom, et al. (See McDowell, John, J. F., and E., assignors.)

Maurer, August F. (See Murphy, John N., assignor.)

Mayeda, Mikuo, and Yoshiguro Okamoto, Waialua, Hawaii. Digger. 2,028,680; Jan. 21.

McCarthy, Justin J., Boston, Mass. Obtaining finger prints. 2,028,619; Jan. 21.

McClanahan, Frederick C., Homer, La. Mechanism for locking gas tank cover. 2,028,515; Jan. 21.

McDougall, George F. (See Hodge, E. T., and McDougall.)

McDougall, George F., assignor to E. T. Hodge, Portland, Oreg. Change pitch propeller. 2,028,483; Jan. 21.

McDowell, Earl. (See McDowell, John, J. F., and E.)

McDowell, James F. (See McDowell, John, J. F., and E.)

McDowell, John, J. F., and E., Palisade, Colo., assignors of seven and one-half per cent to C. W. Tharp, five per cent to O. Thompson, two and one-half per cent to Jack Nerve, two and one-half per cent to V. L. Looper, three per cent to T. Matthews, two per cent to J. W. Ward, and five per cent to N. B. Grant. Sprinkling attachment for hose. 2,028,558; Jan. 21.

McGeorge, William T., et al. (See Sweet, William O., assignor.)

McGowan, Michael E., Bloomfield, N. J., assignor to Westinghouse Lamp Company. Butt-sealing incandescent electric lamps. 2,028,342; Jan. 21.

McLauthlin, Martin E., Malden, Mass. Elevator apparatus. 2,028,406; Jan. 21.

Mead, Homer A., Turlock, assignor to Masterench Corporation, Turlock, Calif. Double jaw wrench. 2,028,496; Jan. 21.

Meehan, Daniel B. (See Sergeant, A. M., and Meehan.)

Meffink, Charles F., Toledo, Ohio. Security depository. 2,028,464; Jan. 21.

Mergott, J. B., Company, The. (See Ehering, William C., assignor.)

Merrell, Wm. S., Company, The. (See Rider, T. H., and Shelton, assignors.)

Michel, Josef M., Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation. Protecting magnesium and magnesium alloys. 2,028,543; Jan. 21.

Microsmatic Hose Corporation. (See Connor, K. W., and Ringdale, assignors.)

Mid-Continent Investment Company, et al. (See Cross, W. M., Jr., Ruder, and Norquist, assignors.)

Middleton, Leslie H., Adrian, assignor to Schwarze Electric Company, Adrian, Mich. Sound signaling. 2,028,465; Jan. 21.

Miller, Francis, Brooklyn, N. Y. One-way elevator system. 2,028,520; Jan. 21.

Miller, George J., and J. Hurliman, assignors to American Foundation for the Blind, Inc., New York, N. Y. Braille writer. 2,028,516; Jan. 21.

Miller, Ralph L., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Submultiple frequency generator. 2,028,232; Jan. 21.

Mitchell Brothers, Inc. (See Goodman, Lillian, assignor.)

Mitchell, Melville J., Moline, Ill., assignor to International Harvester Company. Shield for toothed separator elements. 2,028,344; Jan. 21.

Mitchell, Thomas A., and E. L. Seamons, assignors, by mesne assignments, to Hughes-Mitchell Processes Incorporated, Denver, Colo. Making zinc sulphide. 2,028,162; Jan. 21.

Moineau, René J. L., Paris, France. Gear mechanism. 2,028,407; Jan. 21.

Molina, Harold E., executor, et al. (See Molina, Walter E.)

Molina, Walter E., Deptford, London, England, H. E. Molina, and M. H. Isaacs, executors of said W. E. Molina, deceased. Grinding of rotating eccentric knives. 2,028,681; Jan. 21.

Monitor Controller Company. (See Frese, Joseph F., assignor.)

Monk, Reginald H., and A. E. Rose, Montreal, Quebec, Canada, assignors to American Zinc, Lead & Smelting Company, St. Louis, Mo. Making titanium oxide. 2,028,262; Jan. 21.

Monsanto Chemical Company. (See Drennan, Michael N., assignor.)

Monsanto Chemical Company. (See Kyrides, Lucas P., assignor.)

Monsanto Chemical Company. (See Marco, Joseph R., assignor.)

Montrose-Ostertag, Louis B.-W., Karlsbad, Czechoslovakia. Multiple unit control system. 2,028,582; Jan. 21.

Moore Company, The. (See Wunderlich, William E., assignor.)

Moore Drop Forging Company. (See Eden, James A., Jr., assignor.)

Moore, George L., and J. B. Steel, Owego, N. Y. Lubricating device. 2,028,517; Jan. 21.

Moore, Lewis, Joliet, Ill., and I. B. Holloway, La Fayette, Ind. Stove door. 2,028,345; Jan. 21.

Moran, Matthew F., Kansas City, Mo. Filter bed. 2,028,466; Jan. 21.

Morschel, Heinrich. (See Heylandt, W., and Morschel.)

Moses, Edward, assignor to Hamilton-Beach Manufacturing Company, Racine, Wis. Food mixer. 2,028,468; Jan. 21.

Mschaie, Henry E., assignor to The Locomotive Finished Material Company, Attleboro, Mass. Return head. 2,028,467; Jan. 21.

Mueller, C. F., Company. (See Bernasconi, Adolphe, assignor.)

Murdock, Arthur J., San Francisco, Calif. Adjustable bearing. 2,028,668; Jan. 21.

Murphy, John N., assignor of one-half to A. F. Maurer, Springfield, Ill. Water closet construction. 2,028,461; Jan. 21.

Nafder, Maurice, Paris, France. Welding. 2,028,272; Jan. 21.

Nerve, Jack, et al. (See McDowell, John, J. F., and E., assignors.)

National Equipment Company. (See Ragnarda, Edward D., assignor.)

National Machinery Co. (See Clouse, William L., assignor.)

National Maytinery Company, The. (See Rae, Walter H., assignor.)

National Pneumatic Company. (See Forman, Paris E., assignor.)

National Postal Meter Company. (See Pfaffrock, John Q., assignor.)

National Postal Meter Company. (See Ryan, Commodore D., assignor.)

National Radiator Corporation. (See Jephson, A. C., and Custer, assignors.)

National-Standard Company. (See Pierce, Robert C., assignor.)

Nathiel, H., and H. Engelke, New York, N. Y. Hair curler. 2,028,544; Jan. 21.

Needham, John T., North Plainfield, N. J. Belt conveyer. 2,028,596; Jan. 21.

Needham, John T., North Plainfield, N. J., assignor to General Conveyors Limited, Montreal, Quebec, Canada. Belt conveyer system. 2,028,595; Jan. 21.

Neelmeier, Wilhelm, Leverkusen-Wetedorf, and H. Morschel, Cologne-Deutz, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Water-insoluble azoic stuffs derived from hydroxynaphthoic acids. 2,028,435; Jan. 21.

Nelson, Martin L. (See Wendorf, H. P., and Nelson.)

Neugart, Franz. (See Brühl, P., and Neugart.)

Newell, Christopher G., assignor to The Bristol Tramways & Carriage Company Limited, Bristol, England. Swivel type engine. 2,028,507; Jan. 21.

News Projection Corporation. (See Bitzer, August D., assignor.)

Nietzel, John A., Hinsdeth, and S. Tsoplitis, Irvington, N. J. Double lever side cutting implement. 2,028,558; Jan. 21.

Norsby, Emil, Hamar, Norway. Rolling machine. 2,028,470; Jan. 21.

Norquist, Victor C. (See Cross, W. M., Jr., Ruder, and Norquist.)

Northrup, James, assignor to Draper Corporation, Hopedale, Mass. Loom. 2,028,550; Jan. 21.

Northrup, James, assignor to Draper Corporation, Hopedale, Mass. Parter operating means for looms. 2,028,560; Jan. 21.

Norton, Raymond T., Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind. Brake operator. 2,028,031; Jan. 21.

Novick, Abraham, Flushing, N. Y., assignor to United States Envelope Company, Springfield, Mass. Process and apparatus for manufacturing paper cups. 2,028,189; Jan. 21.

Oberhoffken, Alexander. (See Perry, R. S., Johnson, and Oberhoffken.)

O'Brien, James H., Chicago, Ill., assignor to American Blower Corporation, Detroit, Mich. Modifying room atmospheric conditions. 2,028,682; Jan. 21.

O'Brien, John J. and M. W., South Bend, Ind. Undercutting attachment for lathes. 2,028,598; Jan. 21.

O'Brien, Miss W. (See O'Brien, John J., and M. W.)

Och, Henry G., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y. Locating device. 2,028,237; Jan. 21.

Ohlis, Julius J. (See Leake, George H., assignor.)

Okamoto, Yoshinguro. (See Mayeda, M., and Okamoto.)

Okonite Company, The. (See Wiseman, Robert J., assignor.)

Oliver, Florence M., Youngstown, Ohio. Colostomy girdle and support. 2,028,286; Jan. 21.

Oppenheim, René, assignor to Société Anonyme le Carbone, Gennevilliers, France. Cell of the solid electrolyte type. 2,028,518; Jan. 21.

Otis, Peter J., West Haven, Conn. Carver for grapefruit, etc. 2,028,288; Jan. 21.

Packless Metal Products Corporation. (See Grannemann, Stephen, assignor.)

Palmer, Sidney E., San Francisco, Calif., assignor to American Smelting and Refining Company, New York, N. Y. Metallic packing and producing the same. 2,028,240; Jan. 21.

Palmros, Alexander. (See Enge, W. E., and Palmros.)

Pantegrau, Norman O., Chicago, Ill., assignor to International Harvester Company. Sheet plate for truck shoes. 2,028,346; Jan. 21.

Parent, Emile J., Bloomfield, N. J., and J. L. Krieg, Hollis, assignors to Alco Products Incorporated, New York, N. Y. Apparatus for reclaiming waste heat. 2,028,471; Jan. 21.

Parker, William P., Troup, Tex., assignor to Sinclair Prairie Oil Company, Tulsa, Okla. Oil well pumping apparatus. 2,028,409; Jan. 21.

Parsons Marine Steam Turbine Company. (See Cook, H. R., and Douglas, assignors.)

Patent Engineering Corporation. (See Rockwell, Edward A., assignor.)

Paul, John E., Newark, N. J., assignor to United States Radium Corporation, New York, N. Y. Making self-luminous element. 2,028,241; Jan. 21.

Pearl, Frank B., Neenah, assignor to Durant Manufacturing Co., Milwaukee, Wis. Soap ejecting spray head. 2,028,242; Jan. 21.

Pellegrin, Elmer D. (See Wilkinson, G. D., and Pellegrin.)

Pelosi, John M., Brockton, Mass. Heated boot. 2,028,347; Jan. 21.

Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,028,164; Jan. 21.

Perma Corporation. (See Dopp, Frank E., assignee.)

Perreault, George E. (See Barrett, E. A., and Perreault.)

Perry, John E., Youngstown, and W. H. Ramage, Girard, assignors to Valley Mould and Iron Corporation, Hubbard, Ohio. Ingot mould for steel ingots. 2,028,243; Jan. 21.

Perry, John E., Youngstown, and W. H. Ramage, Girard, assignors to Valley Mould and Iron Corporation, Hubbard, Ohio. Steel ingot. 2,028,244; Jan. 21.

Perry, Raymond S., John R. Johnson, and A. Oberhoffken, assignors to The Ingersoll Milling Machine Company, Rockford, Ill. Construction of machine tools. 2,028,727; Jan. 21.

Peterkin, Albert G., Jr., Bryn Mawr, assignor to The Atlantic Refining Company, Philadelphia, Pa. Oil cranking system. 2,028,728; Jan. 21.

Peterkin, Jessie E., and F. W. Marlow, Toronto, Ontario, Canada. Toothbrush spoon. 2,028,519; Jan. 21.

Petroleum Processes Corporation, The. (See Tears, Claude F., assignor.)

Phelps, Clyde H., Mount Vernon, N. Y., assignor, by mesne assignments, to The Master Electric Company, Dayton, Ohio. Apparatus for calculating the angularity of steering wheels. 2,028,632; Jan. 21.

Phillips, Howard D., Vancouver, Wash. Strainer. 2,028,520; Jan. 21.

Pier, Mathias, Heidelberg, W. Simon, and W. Kressig, Ludwigshafen-on-the-Rhine, Germany, assignors to Standard-I. G. Company, Linden, N. J., both representing distillable carbonaceous materials. 2,028,233; Jan. 21.

Pier, Mathias, Heidelberg, and F. Carlsmann, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Lubricant and cooling mixt. 2,028,349; Jan. 21.

Pierce, Robert C., assignor to National-Standard Company, Niles, Mich. Tire and making the same. 2,028,165; Jan. 21.

Pierpont, Benjamin. (See Coulling, Harry M., assignor.)

Pilger, Emil W., assignor to Snap-On Tools, Inc., Kenosha, Wis. Wrench handle. 2,028,562; Jan. 21.

Pinkenburg, Heinrich E., Sewickley Heights, Pa., assignor to J. G. Duncan, Jr. Coke controlled apparatus. 2,028,729; Jan. 21.

Pittsburgh Tube Company. (See Gangwisch, Robert L., assignor.)

Pohl, Walter, Ernsthausen/Kreis Siegen, Germany, by mesne assignments, to the firm Deutsche Gold- und Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany. Method of and an apparatus for subjecting a flowing medium to a continuous operation to a reaction. 2,028,684; Jan. 21.

Polzer, Friedrich Sooth Norwalk, Conn. Pile type stapling machine. 2,028,380; Jan. 21.

Porter, Herbert H., et al. (See Swock, William O., assignor.)

Porter, Stephen C., New York, N. Y. Microphone transmitter. 2,028,685; Jan. 21.

Potts, George. (See Hanks, W. V., Fregenuth, and Potts.)

"Pouring Spouts Inc." (See Read, Arthur, assignor.)

Pratt, Carlos J., St. Louis, Mo., assignor, by mesne assignments to J. P. Devine Manufacturing Co., Inc., Vernon, Ill. Apparatus for coking liquid residuums. 2,028,166; Jan. 21.

Premier-Waters Products Co. (See Yeager, Anton J., assignor.)

Prestage, Edwin, London, England. Plate heat exchanger. 2,028,543; Jan. 21.

Prodromou, George, and M. Prodromou, Winston-Salem, N. C. Trimmer. 2,028,686; Jan. 21.

Prodromou, Marcus. (See Prodromou, George and M.)

Prosperity Company Inc., The. (See Davis, Ernest, assignor.)

Pusey, John R. (See Todd, Guy A., assignor.)

Pym, Arthur F., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping shoe uppers. 2,028,147; Jan. 21.

Pym, Arthur F., Swampscott, and W. B. Scarlett, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J. Machine for shaping uppers over lasts. 2,028,351; Jan. 21.

Pym, Arthur F., executor. (See Pym, Charles F.)

Pym, Charles F., deceased, Beverly, Mass., by A. F. Pym, Swampscott, Mass., executor, assignor to United Shoe Machinery Corporation, Paterson, N. J. Manufacture of shoes. 2,028,245; Jan. 21.

Quickthe (1928) Limited. (See Thomas, Sydney H., assignor.)

Rabe, Hans, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Fluorescent substance. 2,028,472; Jan. 21.

Radio Corporation of America. (See Franklin, C. S., and Witt, assignors.)

Radio Corporation of America. (See Snow, Harold A., assignor.)

Ramage, William H. (See Perry, J. E., and Ramage.)

Ragnarda, Edward D., Agawam, assignor to National Equipment Company, Springfield, Mass. Method and apparatus for handling starch in confectionery manufacture. 2,028,410; Jan. 21.

Rastridge, Edward A., Lebanon, Pa. Bung. 2,028,352; Jan. 21.

Raylite Trading Company. (See Brown, Joseph D., assignor.)

Read, Arthur, assignor to "Pouring Spouts Inc.," Portland, Oreg. Carton. 2,028,687; Jan. 21.

Redford, John H., Florissant, assignor to The American Brake Company, St. Louis, Mo. Brake rigging. 2,028,823; Jan. 21.

Rehder, Henry E. and C. H. Crame, Denver, Colo. Child's toilet seat. 2,028,568; Jan. 21.

Reilly, Frank C., New York, N. Y. Electric sign controller. 2,028,521; Jan. 21.

Reis, Curt P., Beloit, Wis., assignor to Fairbanks, Morse & Company, Chicago, Ill. Laminated structure. 2,028,417; Jan. 21.

Rice, Alexander, Brooklyn, assignor to Juxto-Display Corporation, New York, N. Y. Display device. 2,028,522; Jan. 21.

Rich, Paul C., assignor to Vapor Treating Processes Inc., Los Angeles, Calif. Treating metallic salt solutions. 2,028,473; Jan. 21.

Richardson, Robert P. (See Griffin, H. F., and Richardson.)

Richeson, Sanford E. (See Howard, J., and Richeson.)

Rider, Theodore H., and H. Shelton, Marlemont, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Preparing benzoyl peroxide. 2,028,246; Jan. 21.

Riegel Textile Corporation. (See Gray, Deckard J., assignor.)

Ritchie, William S., Winnipeg, Manitoba, Canada. Collapsible bridge table. 2,028,726; Jan. 21.

Ritter, Julius, Jr., assignor to Hartman Truck Company, Racine, Wis. Man's hat box for wardrobe trunks. 2,028,247; Jan. 21.

Roberge, Charles, Williamsburg, Mass. Bubbler tip. 2,028,417; Jan. 21.

Roberts, Eugene, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah. Grid lining for centrifugal baskets. 2,028,166; Jan. 21.

Roberts, William W., assignor of one-half to C. J. Seebach, Baltimore, Md. Frame corner structure. 2,028,353; Jan. 21.

Roberts, William T. H., Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Lasting machines. 2,028,249; Jan. 21.

Robinson, Garland P., Glen Ridge, N. J., assignor to American Locomotive Company, New York, N. Y. Flexible staybolt construction for boilers. 2,028,474; Jan. 21.

Robinson, Preston and C. Shagg, assignors to Sprague Specialties Co., North Adams, Mass. Electrolytic device. 2,028,544; Jan. 21.

Rockwell, Edward A., Chicago, Ill., assignor to Patent Engineering Corporation. Light conversion system. 2,028,475; Jan. 21.

Rodrigues, Gabriel C. (See Geline, F. S., Rodrigues, and Soares de Dona Rapeta.)

Roe, Walter H., assignor to The National Machinery Company, Tiffin, Ohio. Adjustable die holder. 2,028,554; Jan. 21.

Rogers, George H., Moreton, England. Apparatus for the manufacture of bricks or the like. 2,028,523; Jan. 21.

Rogers, Harry R., Wynnewood, Pa., assignor to General Steel Castings Corporation, Granite City, Ill. Apparatus for making castings. 2,028,634; Jan. 21.

Rose, Jacques, and K. Rubenstein, Paris, France. Garage for automobiles and the like. 2,028,476; Jan. 21.

Ross, Hans. (See Clingestein, H., Ross, and Heusner.)

Rosner, Adolph, Rockton, Ill., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,028,625; Jan. 21.

Ross, Archibald S. (See Monk, R. H., and Ross.)

Ross, George H., Brooklyn, N. Y. Damper control system. 2,028,249; Jan. 21.

Rössner, Alois, Brunn, Czechoslovakia, assignor to Ruths International Accumulators Limited, London, England. Soot blower. 2,028,250; Jan. 21.

Royal Typewriter Company. (See Handley, George F., assignor.)

Rubinstein, Kurt. (See Rosse, J., and Rubinstein.)

Rugg, Walter S., Pittsburgh, and A. Palmros, Zelienople, Pa. Ballast cleaning apparatus. 2,028,686; Jan. 21.

Rumple, James M., St. Louis, Mo., assignor to Chemical Construction Corporation, New York, N. Y. Production of SO_3 from acid sludge. 2,028,725; Jan. 21.

Rupp, Raymond C., Kendallville, Ind. Hook holder for fish poles. 2,028,477; Jan. 21.

Ruppricht, Siegfried, New York, N. Y. Refrigerating system. 2,028,566; Jan. 21.

Ruscetta, Ralph A. (See Clark, F. M., and Ruscetta.)

Rust, Joseph, Peabody, assignor to Hygrade Sylvania Corporation, Salem, Mass. Bulb spraying device. 2,028,253; Jan. 21.

Ruths International Accumulators Limited. (See Rossner, Alois, assignor.)

Ryan, Commodore D., assignor to National Postal Meter Company, Los Angeles, Calif. Printing machine. 2,028,294; Jan. 21.

Sackett, Augustus J., Anne Arundel County, Md. Aerating apparatus for fertiliser and the like. 2,028,413; Jan. 21.

Saco-Lowell Shops. (See Curley, R. S., and Shaw, assignors.)

Sahlberg, Ralf K. O., New York, N. Y. Composite beam. 2,028,169; Jan. 21.

Sauli, Louis, Brooklyn, N. Y. Needle guard attachment for sewing machines. 2,028,524; Jan. 21.

Saunders, James A., et al. (See Sweek, William O., assignor.)

Saxby, Robert N., Liverpool, England, assignor to Associated Telephone and Telegraph Company, Chicago, Ill. Automatic switch for use in telephone or like systems. 2,028,680; Jan. 21.

Scarlett, William E. (See Pym, A. F., and Scarlett.)

Schaaner, Joseph and D. B. Andrews, Kankakee, Wis. Washer for mugs, glasses, etc. 2,028,690; Jan. 21.

Schenk, Bernard H., assignor to The Viking Corporation, Chicago, Ill. Packaging artificial sausage casings and product. 2,028,691; Jan. 21.

Schleicher, Manfred, Berlin-Charlottenburg, and L. Brandenburger, Berlin-Halensee, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Remote control device. 2,028,626; Jan. 21.

Schmidt, Frederic E., Crestwood, N. Y., assignor to American Telephone and Telegraph Company. Lock. 2,028,525; Jan. 21.

Schneider, Heinrich, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Fluid displacement device. 2,028,414; Jan. 21.

Schrader, Lee W., Elizabeth, N. J., assignor to Standard Oil Development Company. Foam retarding tube. 2,028,295; Jan. 21.

Schreier, Max L., Brooklyn, N. Y. Convertible garment. 2,028,356; Jan. 21.

Schroeder, Levyn R., St. Louis, Mo. Rotary drilling apparatus. 2,028,478; Jan. 21.

Schulman, Henry, Pangbourne, England. Rotary internal combustion engine. 2,028,520; Jan. 21.

Schumag Schumacher Metallwerke Aktiengesellschaft für Präzisionsmechanik. (See Mather, Josef, assignor.)

Schwartz, Edward J., Wilkinsburg, Pa. Fruit jar holder. 2,028,415; Jan. 21.

Schwarze Electric Company. (See Middleton, Leslie H., assignor.)

Scott, Walter I. and L. H. Foster, New Orleans, La. Spark plug scraper. 2,028,170; Jan. 21.

Seebach, Charles J. (See Roberts, William F., assignor.)

Seidenfaden, Wilhelm. (See Eitscher, A., and Seidenfaden.)

Seipel, Harry C. and P. A. Yerger, Easton, Pa. Cup holder. 2,028,500; Jan. 21.

Sergeson, Allan M., Philadelphia, and D. B. Meehan, Aston Mills, Pa. Yarn tensiom for automatic shuttles. 2,028,693; Jan. 21.

Sessions, Royal L. (See Mitchell, T. A., and Sessions.)

Shann, Oscar A., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Lock. 2,028,171; Jan. 21.

Sharp, John A., Marshall, Tex. Automatic release valve. 2,028,693; Jan. 21.

Shaw William. (See Curley, R. S., and Shaw.)

Sheboygan Chair Company. (See Braasch, Frederick W., assignor.)

Sheller, Samuel H., Marion, Pa., assignor of one-half to George R. Hamlin, Washington, D. C. Cap for fruit basket covers. 2,028,567; Jan. 21.

Shelton, Robert. (See Rider, T. H., and Shelton.)

Sherman, John Q. Dayton, Ohio. Paper feed for typewriter billing machines. 2,028,387; Jan. 21.

Sherron, Percival H., Jamaica, N. Y. Telephone booth. 2,028,627; Jan. 21.

Sherron, Percival H., Jamaica, N. Y. Telephone booth. 2,028,628; Jan. 21.

Sherzer, Allen F., Ann Arbor, Mich. Pump. 2,028,389; Jan. 21.

Sherzer, Allen F., Ann Arbor, Mich. Pump. 2,065,389; Jan. 21.

Shoemaker, Milton J. Madison, Wis., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, New York, N. Y. Removing water of solution. 2,028,396; Jan. 21.

Shoonard, Harold W., Montclair, N. J. Handrail for moving stairways. 2,028,336; Jan. 21.

Shugg, Carleton. (See Robinson, P., and Shugg.)

Siemens & Halske Aktiengesellschaft. (See Schleicher, M., and Brandenbruger, assignors.)

Silsby, Charles F., White Plains, assignor to General Chemical Company, New York, N. Y. Manufacture of sulphuric acid. 2,028,418; Jan. 21.

Simmen, Oscar, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Internal combustion engine in which the fuel is produced. 2,028,577; Jan. 21.

Simon, Walter. (See Pier, M., Simon, and Kroenig.)

Sinclair Prairie Oil Company. (See Parker, William F., assignor.)

Sine, George, Columbus, Ohio. Wrapping tape. 2,028,281; Jan. 21.

Sipe, Harry E., New York, N. Y. Metal fastener. 2,028,528; Jan. 21.

Skar, John O. L., assignor to Art Metal Construction Company, Jamestown, N. Y. Shelf. 2,028,417; Jan. 21.

Slater, Fred M., Beacon, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Rotation mechanism. 2,028,251; Jan. 21.

Smith, Clifford D., Fairlawn, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Wheel for railcars. 2,028,707; Jan. 21.

Smith, Clyde, near Hopkinsville, Ky., assignor to International Communications Laboratories Incorporated, New York, N. Y. Calculating mechanism. 2,028,15; Jan. 21.

Smith, James C., and J. S. Taylor assignors to Ivanse Tool Company, Tulsa, Okla. Well cleanout tool. 2,028,418; Jan. 21.

Smith, Joseph E., Jr. (See Channing, L. H. E., and Smith, Jr.)

Smith, L. C., & Corona Typewriters, Inc. (See Christenson, Carl, assignor.)

Smith, Stanton T., Detroit, Mich. Automatic locking device. 2,028,629; Jan. 21.

Smulski, Theodore J., assignor to The Anderson Company, Gary, Ind. Electric control system. 2,028,570; Jan. 21.

Smulski, Theodore J., assignor to The Anderson Company, Gary, Ind. Electric control system. 2,028,571; Jan. 21.

Snap-on Tools, Inc. (See Stiger, Emil F. assignor.)

Snow, Harold A., Mountain Lakes, N. J., assignor to Radio Corporation of America. Automatic volume control circuits. 2,028,362; Jan. 21.

Société Anonyme, F. A. C. A. (See Blanchet, P., and Tillie, assignors.)

Societe Anonyme Le Carbone. (See Oppenheim, René, assignor.)

Société d'Electrochimie, d'Electrometallurgie et des Aciéries Electriques d'Ugine. (See Bornhauser, Oscar, assignor.)

Society Compagnie de Chauffage Central par le Vide. (See Lavergne, Jean, assignor.)

Society of Chemical Industry in Basle. (See Ackermann, Franz, assignor.)

Socony-Vacuum Corporation. (See Story, B. W., and Fuller, assignors.)

Soley, William G. (See Bonner, R. G., and Soley.)

Southern Brighton Mills. (See Kelly, Timothy J., assignor.)

Spafford, Allan L., Cloquet, assignor to The Wood Conversion Company, Cloquet, Minn. Insulation pad and construction. 2,028,353; Jan. 21.

Sperry, Lute H., Hopewell City, Va., assignor to Hercules Powder Company, Wilmington, Del. Apparatus for the continuous treatment of fibrous materials. 2,028,47; Jan. 21.

Spicer, Clarence W., Toledo, Ohio. Conveyor for heat treating furnaces. 2,028,479; Jan. 21.

Spinks, Joseph M., Atlanta, Ga. Holder for toilet articles. 2,028,624; Jan. 21.

Sprague Specialties Co. (See Robinson, P., and Shugg, assignors.)

Sprint, Isaac W., Whitehouse, assignor to The Logan Gear Company, Toledo, Ohio. Pump. 2,028,360; Jan. 21.

Square D Company. (See Van Valkenburg, Harmon L., assignor.)

Squires, John, Hagerstown, Md. Apparatus for balancing propeller blades. 2,028,254; Jan. 21.

Stadler, Robert. (See Wilke, W., Stadler, and Lappe.)

Stålhane, Johan B., Stockholm, assignor to Bolidens Gruvaktiebolag, Stockholm, Sweden. Arsenate cement or cement mixture. 2,028,429; Jan. 21.

Standard Alcohol Company. (See Archibald, F. M., and Beamer, assignors.)

Standard Alcohol Company. (See Le Barre, Robert F., assignor.)

Standard-I. G., Company. (See Pier, M., Simon, and Kroenig, assignors.)

Standard Oil Development Company. (See Anderson, Richard D., assignor.)

Standard Oil Development Company. (See Bird, John C., assignor.)

Standard Oil Development Company. (See Hanks, W. V., Freyermuth, and Potts, assignors.)

Standard Oil Development Company. (See Kalichevsky, Vladimir, assignor.)

Standard Oil Development Company. (See Kuhl, Paul E., assignor.)

Standard Oil Development Company. (See Lewis, Warren K., assignor.)

Standard Oil Development Company. (See Schrader, Lee W., assignor.)

Standard Oil Development Company. (See Starr, J. V., and Edwards, assignors.)

Standard Oil Development Company. (See Turner, Luther B., assignor.)

Standard Oil Development Company. (See Wiesevich, Peter J., assignor.)

Stark, Julian H., Fort Wayne, Ind., assignor to General Electric Company. Coin time switch system. 2,028,630; Jan. 21.

Starr, John V., and D. F. Edwards, Elizabeth, N. J., assignors to Standard Oil Development Company. Producing lubricating oils. 2,028,261; Jan. 21.

Steele, James R. (See Moore, C. L., and Steele.)

Steinbach, Harry, Sunnyside, assignor to Rex Beach, New York, N. Y. Self-fertilising flowerpot. 2,028,256; Jan. 21.

Steiner, Leo, Budapest, Hungary. Clamping buckle. 2,028,530; Jan. 21.

Steinmayer, Alwin O., Milwaukee, assignor to Line Material Company, South Milwaukee, Wis. Single insulator fuse mounting. 2,028,421; Jan. 21.

Sterling Corporation, The. (See Flamming, J., Bowyer and Ernst, assignors.)

Stevens, Daniel E., and R. S. Wolf, Chicago, Ill. Sterilising device. 2,028,256; Jan. 21.

Stevens, Horace D., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Method and apparatus for shaping tires and mounting expansible cores therein. 2,028,696; Jan. 21.

Stevens, Roy E., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,028,551; Jan. 21.

Stewart, Carlton D., Berkeley, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Trip cock device. 2,028,736; Jan. 21.

Stockdale, Harry C., Ravenna, Ohio, assignor to Food Machinery Corporation, San Jose, Calif. Apparatus for bagging rollable articles. 2,028,297; Jan. 21.

Story, Bertrand W., Paulsboro, and E. W. Fuller, Woodbury, N. J., assignors to Socony-Vacuum Corporation, New York, N. Y. Mineral oil composition. 2,028,297; Jan. 21.

Strausbach, Arlington S. (See Brown, J. E., and Strausbach.)

Strong, Harry H., Toledo, Ohio. Arc regulator. 2,028,572; Jan. 21.

Stuebing, William, Jr., Cincinnati, Ohio, assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Multiple stage lifting truck. 2,028,708; Jan. 21.

Stüsser, Richard, Cologne-Deutz, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Water-insoluble azodyestuffs. 2,028,480; Jan. 21.

Suarez de Deza Zapata, Rafael. (See Celso, F. A., Rodrigues and Suarez de Deza Zapata.)

Submarine Signal Company. (See Turner, Edwin E., Jr., assignor.)

Sucharski, Chester J., South Milwaukee, and A. W. Lee, Racine, Wis. Radiator. 2,028,298; Jan. 21.

Sulzer Frères Société Anonyme. (See Egloff, Hans C., assignee.)

Sulzer Frères, Société Anonyme. (See Simmen, Oscar, assignor.)

Surmann, Johannes R., Berlin-Schlachtensee, Germany. Device for storing eggs or the like. 2,028,258; Jan. 21.

Sutteer, Robert E., Riverside, Ill., assignor of one-half to L. D. Matchette, Milwaukee, Wis. Liner for a brake drum and making the drum. 2,028,979; Jan. 21.

Swan, Hylton, Upper Montclair, and S. Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y. Printing plate. 2,028,709; Jan. 21.

Swan, Hylton, Upper Montclair, and S. Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y. Printing plate. 2,028,710; Jan. 21.

Swan, Hylton, Upper Montclair, and S. Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y. Printing plate. 2,028,711; Jan. 21.

Swan, Hylton, Upper Montclair, and S. Higgins, Verona, N. J., assignors to Bakelite Corporation, New York, N. Y. Printing plate. 2,028,712; Jan. 21.

Sweek, William O., Phoenix, assignor of one-fifth to W. T. McGeorge, Tucson, one-fifth to J. S. Benroth, Phoenix, Ariz., one-fifth to J. A. Saunders, Washington, D. C., and one-fifth to H. H. Porter, Clarendon, Va. Irrigating and fertilising plants. 2,028,172; Jan. 21.

Swinton, David S., Detroit, Mich., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Spring leaf spacer. 2,028,290; Jan. 21.

Synchrome Corporation. (See Wright, Walter L., assignor.)

Talbot, Howard H., assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Reel. 2,028,423; Jan. 21.

Taylor, Charles L., Biglerville, Pa. Apple packing device. 2,028,800; Jan. 21.

Taylor, Charles L., Biglerville, Pa. Shipping crate. 2,028,801; Jan. 21.

Taylor, George E., Westfield, N. J., assignor to General Chemical Company, New York, N. Y. Manufacture of phosphates. 2,028,632; Jan. 21.

Taylor, James S. (See Smith, J. C., and Taylor.)

Taylor, James S., Tulsa, Okla. Oil well tubing wrench. 2,028,787; Jan. 21.

Tears, Claude F., Mountain Lakes, N. J., assignor to The Petroleum Processes Corporation, Wichita, Kans. Pump for compressed liquefied gases. 2,028,531; Jan. 21.

Telefonaktiebolaget L. M. Ericsson. (See Ekman, Olof I. H., assignor.)

Telergister Corporation, The. (See Whitney, Charles S., assignor.)

Teletype Corporation. (See Zenner, Walter J., assignor.)

Tesaky, Karl, Esslingen, Germany. Automatic lathe. 2,028,362; Jan. 21.

Textile Machine Works. (See Krismer, Max, assignor.)

Tharp, Charles W., et al. (See McDowell, John, J. F., and E., assignors.)

Theil, John F., Needham, assignor to American Tool and Machine Company, Hyde Park, Mass. Steady bearing for centrifugal separators. 2,028,780; Jan. 21.

Thomas, Eva E., executrix. (See Thomas, Sydney E.)

Thomas, Lurielle A. (See Thomas, Richard H., assignor.)

Thomas, Richard H., assignor to Lurielle A. Thomas, Oak Park, Ill. Control for radiators. 2,028,178; Jan. 21.

Thomas, Sydney E., deceased, late of Hounslow, England, by E. E. Thomas, Hounslow, England, executrix, assignor to Quickthe (1923) Limited, Wandsworth, England. Seat. 2,028,683; Jan. 21.

Thomson, John, Buffalo, N. Y. Liquid dispensing apparatus. 2,028,302; Jan. 21.

Thompson, Oscar, et al. (See McDowell, John, J. F., and E., assignors.)

Tillie, Gaston. (See Blanchet, P., and Tillie.)

Timm, Paul C. and W. P., Lincoln, Nebr. Automatic furnace heat regulator. 2,028,363; Jan. 21.

Timm, William P. (See Timm, Paul C. and W. P.)

Tobin, Kenneth J., and C. E. Hilind, Chicago, Ill., assignors, by mesne assignments, to Evans Products Company, Detroit, Mich. Railway freight car construction. 2,028,574; Jan. 21.

Toeplitz, Richard. (See Nietzel, J. A., and Toeplitz.)

Torigian, John, Queens Village, assignor to The Drug Products Co. Inc., Long Island City, N. Y. Colloidal copper solution. 2,028,575; Jan. 21.

Trans-Lux Daylight Picture Screen Corporation. (See Curtis, Kenneth L., assignor.)

Trelogger, Wilfred C., Breckenhurst, England. Cable and rope winding appliances such as winches and hoists. 2,028,532; Jan. 21.

Tucker, Carl W., and F. Derrill, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del. Method of distillation. 2,028,481; Jan. 21.

Tucker, George R., North Andover, assignor to Dewey and Almy Chemical Company, North Cambridge, Mass. Sulphur dispersion. 2,028,482; Jan. 21.

Turner, Edwin E., Jr., West Roxbury, Mass., assignor to Submarine Signal Company, Boston, Mass. Distance and depth finding. 2,028,174; Jan. 21.

Turner, Harold H. (See Johnston, E. A., Bryan, and Turner.)

Turner, Luther B., Elizabeth, N. J., assignor to Standard Oil Development Company. Production of organic disulphides. 2,028,308; Jan. 21.

Union Switch & Signal Company, The. (See Fisher, Arthur W., assignor.)

Union Switch & Signal Company, The. (See Gilson, Robert M., assignor.)

Union Switch & Signal Company, The. (See Williamson, Arba G., assignor.)

United Aircraft Corporation. (See Gluhareff, Michael E., assignor.)

United Air Lines Transport Corporation. (See Hiscock, Thorp, assignor.)

United-Carr Fastener Corporation. (See Hatch, Charles W., assignor.)

United-Carr Fastener Corporation. (See Hayden, Lester N., assignor.)

United-Carr Fastener Corporation. (See Johnson, Gustav, W., assignor.)

United Engineering & Foundry Company. (See Talbot, Howard H., assignor.)

United Shoe Machinery Corporation. (See Dow, Harry E., assignor.)

United Shoe Machinery Corporation. (See Pym, Arthur F., assignor.)

United Shoe Machinery Corporation. (See Pym, Charles F., assignor.)

United Shoe Machinery Corporation. (See Pym, A. F., and Scarlett, assignors.)

United Shoe Machinery Corporation. (See Roberts, William T. B., assignor.)
United States Envelope Company. (See Nevitt, Abraham, assignor.)
United States Finishing Company. (See Cady, George H., assignor.)
United States Rattan Corporation. (See Paul, John R., assignor.)
Upham, Gilbert R., Churchville, Pa., assignor to The DeLong Hook and Eye Company. Nonseparable fastener. 2,028,423; Jan. 21.
Utility Electric and Machine Works, Inc. (See Berry, Joseph C., assignor.)
Valley Forge Cement Company. (See Brazerwood, Charles H., assignor.)
Valley Mould and Iron Corporation. (See Perry, J. E., and Ramage, assignors.)
Van Dillen, Albert, Amsterdam, Netherlands. Door-closing device. 2,028,624; Jan. 21.
Van Dyke, John W., Philadelphia, Pa. Pipe section protection. 2,028,570; Jan. 21.
Van Valkenburg, Hermon E., Wauwatosa, Wis., assignor to Square D Company, Detroit, Mich. Automatic control system for electric motors. 2,028,520; Jan. 21.
Van Yahres, George, Westbury, N. Y. Turf tool. 2,028,483; Jan. 21.
Vapor Treating Processes, Inc. (See Rich, Paul C., assignor.)
Vernet, Sergius, Brooklyn, N. Y., assignor to Foster-Vernay Corporation, Pittsburgh, Pa. Car heater. 2,028,260; Jan. 21.
Vernet, Sergius, Brooklyn, N. Y., assignor to Foster-Vernay Corporation, Pittsburgh, Pa. Automatic control for vapor heating systems. 2,028,261; Jan. 21.
Vines, Antonius J., Manhasset, N. Y. Film holder and hanger. 2,028,242; Jan. 21.
Vincenzoni, Alvaro, Rome, Italy. Speed transmission mechanism. 2,028,577; Jan. 21.
Visiting Corporation, The. (See Schenk, Bernard H., assignor.)
Vogl, Albert L., et al. (See Low, Albert H., assignor.)
Vuccino, Albert A., New York, N. Y. Ash tray. 2,028,204; Jan. 21.
Waddell, James, Metuchen, N. J., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing anthrachitic substances. 2,028,364; Jan. 21.
Wagner Electric Corporation. (See Brunner, Albert, assignor.)
Wagner, Noah E., Tulsa, Okla., assignor to The Linde Air Products Company. Method and apparatus for cutting metals. 2,028,425; Jan. 21.
Waite, Sheridan C., Springville, N. Y. Dispensing tube. 2,028,178; Jan. 21.
Walker, Brooks, Oakland, Calif. Fluid pump packing. 2,028,634; Jan. 21.
Wallis, John S., and S. B. de Bence, assignors to Alco Products, Incorporated, New York, N. Y. Tube still and furnace construction. 2,028,306; Jan. 21.
Walworth Patents, Inc. (See Baird, Francis N., assignor.)
Wangelin, Donald A., Rock Island, assignor to Deere & Company, Moline, Ill. Rotary hoe. 2,028,365; Jan. 21.
Wappler, Frederick C., New York, N. Y. Fumigated surgical instrument. 2,028,635; Jan. 21.
Ward, Jake W., et al. (See McDowell, John, J. F., and E., assignors.)
Warren, Jay F., Detroit, Mich., assignor to The American Rolling Mill Company, Middletown, Ohio. Leveling and shipping sheet metal. 2,028,368; Jan. 21.
Warrick, Charles F., assignor to Bender Warrick Corporation, Detroit, Mich. Electrical indicating device. 2,028,243; Jan. 21.
Weibel, Alexander R., and W. Jones, Aliquippa, assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Tin pot feeder. 2,028,806; Jan. 21.
Wellman Engineering Company, The. (See Gibson, Alfred E., assignor.)
Wernicke, Hugo H., Villa Park, assignor to Belden Manufacturing Company, Chicago, Ill. Electric connector. 2,028,387; Jan. 21.
Western Electric Company. (See Cherry, George L., assignor.)
Western Electric Company. (See Lawson, Homer W., assignor.)
Western Geophysical Company. (See Johnson, Earle W., assignor.)
Western States Machine Company, The. (See Roberts, Eugene, assignor.)
Westinghouse Air Brake Company, The. (See Hewitt, Ellis E., assignor.)
Westinghouse Air Brake Company, The. (See Stevens, Roy E., assignor.)
Westinghouse Air Brake Company, The. (See Stewart, Charlton D., assignor.)
Westinghouse Lamp Company. (See McGowan, Michael E., assignor.)
Wettstein, Fritz A., Lidingo, assignor to Aktiebolaget Spontan, Stockholm, Sweden. Turbine blade. 2,028,553; Jan. 21.
White, William M., Milwaukee, Wis. Hydraulic turbine. 2,028,505; Jan. 21.
White, William M., Milwaukee, Wis. Impulse turbine bucket. 2,028,506; Jan. 21.
Whitehead, Owen, et al. (See Lear, Albert H., assignor.)
Whitehead & Kales Company. (See Judd, Irving H., assignor.)
Whiteside, Howard A., New York, N. Y. Scrub rigging and end cap assembly for surgical sutures and the like. 2,028,178; Jan. 21.
Whitney, Charles S., Brooklyn, assignor to The Telautograph Corporation, New York, N. Y. Perforator. 2,028,364; Jan. 21.
Wiedeke, Gustav, Oakwood, assignor to Gustav Wiedeke Company, Dayton, Ohio. Tube cutter. 2,028,018; Jan. 21.
Wiedeke, Gustav, Company. (See Wiedeke, Gustav, assignor.)
Wiesevich, Peter J., Elizabeth, N. J., assignor to Standard Oil Development Company. Preparing cumene. 2,028,397; Jan. 21.
Wilke, Wilhelm, Mannheim, E. Stadler, Hegenheimer, and F. Lappe, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Fuel for Diesel engines. 2,028,308; Jan. 21.
Wilkinson, George D., Chicago, and E. D. Fellowgis, Des Plaines, Ill., assignors to Cribben & Sexton Company, Chicago, Ill. Range. 2,028,426; Jan. 21.
Williams, James H., assignor to General Fire Extinguisher Company, Providence, R. I. Valve or drain plug. 2,028,177; Jan. 21.
Williamson, Arba G., Carnegie, assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of highway crossing signals. 2,028,370; Jan. 21.
Wilson, James C., Pawnee, Ill. Reversible mounting for trolley wheels. 2,028,637; Jan. 21.
Wilson, William H. (See Land, C. H., and Wilson.)
Wilton, Sumner, Dearborn, Mich. Fuel pump. 2,028,371; Jan. 21.
Winans, Frederick W., Cleveland, Ohio. Fluid pressure spray appliance. 2,028,205; Jan. 21.
Wiseman, Robert J., Patterson, assignor to the Ozonia Company, Passaic, N. J. Electric cable. 2,028,179; Jan. 21.
Witt, Bertram J. (See Franklin, C. S., and Witt.)
Wolf, Robert H. (See Sterrett, F. S., and Wolf.)
Wood Conversion Company, The. (See Spafford, Allen L., assignor.)
Woodruff, Lewis F., Brighton, Mass., and M. L. Nelson, Park Ridge, Ill., said Nelson assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., and said Woodruff assignor to General Records Inc., Chicago, Ill. Means for controlling sheet perforating machines. 2,028,635; Jan. 21.
Wright, Jesse C., Los Angeles, assignor to Globe Oil Tools Company, Los Nietos, Calif. Well drilling tool. 2,028,570; Jan. 21.
Wright, Walter L., assignor to Synchromy Corporation, Santa Monica, Calif. Motion picture projector. 2,028,484; Jan. 21.
Wright, Walter L., assignor to Synchromy Corporation, Santa Monica, Calif. Optical system and automatic control for the same. 2,028,485; Jan. 21.
Wunderlich, William R., assignor to The Moore Company, Muncie, Ind. Bed davenport. 2,028,426; Jan. 21.
Wyant, Clyde D., Manistique, Mich., assignor to Inland Lime and Stone Company. Desulphidization of magnesian dolomites. 2,028,638; Jan. 21.
Yale & Towne Manufacturing Company, The. (See Stebing, William, Jr., assignor.)
Yeager, Anton J., assignor to Preston-Wabers Products Co., Wisconsin Rapids, Wis. Vapor stove construction. 2,028,272; Jan. 21.
Yodd, Guy A., assignor of one-half to J. R. Furey, Oakland, Calif. Suction nozzle. 2,028,530; Jan. 21.
Yerger, Paul A. (See Bridel, H. C., and Yerger.)
Youngstown Steel Door Company, The. (See Lois, Carl, assignor.)
Zahnradfabrik Friedrichshafen Aktiengesellschaft. (See Maier, Albert, assignor.)
Zaiger, Louis, Lynn, Mass. Suction cup. 2,028,640; Jan. 21.
Zenner, Walter J., Des Plaines, assignor to Teletype Corporation, Chicago, Ill. Motor control. 2,028,641; Jan. 21.
Zimdars, Emil, Green Bay, Wis. Safety signal. 2,028,457; Jan. 21.
Zinkil, Roy H., Oak Park, assignor to Crane Co., Chicago, Ill. Valve. 2,028,581; Jan. 21.
Zitscher, Arthur and W. Seidenfaden, Offenbach-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Manufacture of 4-aminodiphenylamine derivatives and intermediates obtained thereby. 2,028,873; Jan. 21.
Zworykin, Vladimir, Haddonfield, N. J., assignor to Hazeltine Analysis Corporation, Long Island City, N. Y. Magnetic analysis. 2,028,486; Jan. 21.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Belt, Sanitary napkin. R. B. Stotter. 19,830; Jan. 21.
Car, Drop side container. O. C. Woodruff. 19,831; Jan. 21.
Chamber heating device, Combustion. M. S. Hall. 19,835; Jan. 21.
Engines, Attachment for internal combustion. L. H. Monsinger, Jr., and A. L. Riker. 19,836; Jan. 21.
Knitting machine. W. Lawton. 19,837; Jan. 21.
Pump. M. D. Abramstein. 19,838; Jan. 21.
Slicing machine. C. T. Walter. 19,850; Jan. 21.
Vehicle provided with four independent wheels, Motor. R. J. Devillers. 19,852; Jan. 21.
Wireless transmission system. J. H. Rubenstein. 19,894; Jan. 21.

LIST OF PLANT INVENTIONS

Cherry variety, M. Gerber. 104; Jan. 21.
Rose. A. F. Watkins. 102–3; Jan. 21.

LIST OF DESIGN INVENTIONS

Apron or similar article. E. O. Langston. 98,261; Jan. 21.
Blind and housing therefor, Combined Venetian. P. H. Kuyper. 98,260; Jan. 21.
Blouse. L. Geist. 98,245; Jan. 21.
Blouse. B. Hyman. 98,264; Jan. 21.
Bottle. F. McIntosh. 98,270; Jan. 21.
Bowl, Shaving. J. Manolas. 98,266; Jan. 21.
Box. F. McIntosh. 98,271; Jan. 21.
Box, Match. G. W. Sandberg. 98,279; Jan. 21.
Box or the like, Candy. E. A. Cohen. 98,267; Jan. 21.
Building. G. B. Brumbaugh. 98,210; Jan. 21.
Button. L. B. Carley. 98,221; Jan. 21.
Cap or analogous closure for bottles. R. Capey. 98,220; Jan. 21.
Cap, Sheet metal soap fastener. M. S. Blanchard. 98,200; Jan. 21.
Case, Jewelry display. L. Flier. 98,244; Jan. 21.
Case or similar article, Show. R. H. Marr. 98,267; Jan. 21.
Clip, Fountain pen and pencil. D. Kahn. 98,258; Jan. 21.
Coaster. M. Lee. 98,262; Jan. 21.
Coat. M. E. Davis. 98,229; Jan. 21.
Coat. J. N. Feuer. 98,242; Jan. 21.
Coat. M. Kolmer. 98,259; Jan. 21.
Coat. J. Lefterman. 98,264; Jan. 21.
Comb. J. J. Kohlmeyer. 98,257; Jan. 21.
Crucifix, Illuminated. R. King. 98,256; Jan. 21.
Cup, Trophy. G. C. De Hart. 98,240; Jan. 21.
Dress. M. Muller. 98,287; Jan. 21.
Dress, Ensemble. H. Schwartz. 98,277; Jan. 21.
Fabric, Textile. C. R. Forstman. 98,246; Jan. 21.
Game board. T. C. Chi. 98,232; Jan. 21.
Goblet. J. B. Clark. 98,236; Jan. 21.
Gum massager. P. L. Hemp. 98,252; Jan. 21.
Hair drier apparatus, Multiple service. C. W. Reesten. 98,208; Jan. 21.
Handbag. M. White. 98,285; Jan. 21.
Handle for a pot or the like. I. D. Richheimer and J. Magin. 98,276; Jan. 21.
Lamp, Wall bracket. O. G. Hildebrand. 98,253; Jan. 21.
Lid for a container. R. Capey. 98,229; Jan. 21.
Lighter, Cigarette and cigar. I. Fierman. 98,245; Jan. 21.
Lubricating unit. B. M. Stephens. 98,278; Jan. 21.
Medal. H. McCullough. 98,209; Jan. 21.
Nozzle, Hose. H. A. Kramer. 98,250; Jan. 21.
Panel and bezel for ash receivers, Combined face. J. Visser. 98,282–3; Jan. 21.
Pencil, Mechanical. J. P. Lynn. 98,265; Jan. 21.
Piano. G. L. Miller. 98,272–3; Jan. 21.
Plate or similar article. Y. Buma. 98,211–26; Jan. 21.
Pouch, Pencil. H. Hassenfeld. 98,250–1; Jan. 21.
Radiocabinet. R. L. Chipman, Jr. 98,232–5; Jan. 21.
Reflector or similar lighting fixture. W. Wilson. 98,286; Jan. 21.
Shield for tool grinders or similar article, Safety. R. E. Tuntz. 98,280; Jan. 21.
Shoe. W. H. Ebling. 98,241; Jan. 21.
Shoe. F. W. Ochs. 98,275; Jan. 21.
Stand and containers therefor, Combined manicure. A. A. Finster. 98,243; Jan. 21.
Stand and dispensing cabinet for gummed tape, string, and elastic bands, Combination display. D. A. McCowan. 98,268; Jan. 21.
Stove. A. K. Weishittel. 98,284; Jan. 21.
Suit. J. Lefterman. 98,263; Jan. 21.
Tag. A. H. Thorwes. 98,281; Jan. 21.
Toaster. A. F. Fuksl. 98,247; Jan. 21.
Tray, Ash. R. G. Cowan. 98,238; Jan. 21.
Tray or similar article, Ash. A. J. Ackerman. 98,207; Jan. 21.
Washing machine and drier, Combined. C. F. Morgenstern. 98,274; Jan. 21.
Washstand. J. A. Callahan. 98,227–8; Jan. 21.
Watch crystal. J. Goldblatt. 98,249; Jan. 21.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21st DAY OF JANUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive wheel and making the same. R. C. Benner and W. G. Soley. 2,028,183; Jan. 21.
Acid by the contact process, Production of sulphuric. C. R. Clark. 2,028,723; Jan. 21.
Acid, Manufacture of sulphuric. C. F. Slibby. 2,028,416; Jan. 21.
Acid, Production of concentrated nitric. E. Lilacher. 2,028,402; Jan. 21.
Acoustic materials. H. D. Arnold. 2,028,180; Jan. 21.
Adjustable bearing. A. I. Murdock. 2,028,554; Jan. 21.
Adjustable die holder. W. H. Roe. 2,028,354; Jan. 21.
Aerating apparatus for fertiliser and the like. A. J. Sackett. 2,028,418; Jan. 21.
Airport control and signaling system. L. J. Leuh. 2,028,722; Jan. 21.
Alloy, Welding rod. H. W. Butterbaugh. 2,028,317; Jan. 21.
Aluminium, Electroplating of. O. Bornhauser. 2,028,312; Jan. 21.
Amusement device. H. Light. 2,028,676; Jan. 21.
Antenna system for microray signaling. A. G. Clavier. 2,028,498; Jan. 21.
Antiparasitic agent and agency. O. V. Huffman. 2,028,217; Jan. 21.
Antirachitic substances, Producing. J. Waddell. 2,028,264; Jan. 21.
Apple packing device. C. L. Taylor. 2,028,300; Jan. 21.
Arc regulator. H. H. Strong. 2,028,572; Jan. 21.
Armor block for water walls and the like. J. Blizard. 2,028,142; Jan. 21.
Articles, Apparatus for bagging rollable. H. C. Stockdale. 2,028,297; Jan. 21.
Atmospheric conditions, Modifying room. J. H. O'Brien. 2,028,682; Jan. 21.
Attachment for closing devices. S. M. Bishop. 2,028,269; Jan. 21.
Automatic release valve. J. A. Sharp. 2,028,693; Jan. 21.
Automobile. F. B. Bergholt. 2,028,184; Jan. 21.
Automobile brake, Automatic. C. F. Hahn. 2,028,305; Jan. 21.
Automobile transport. I. H. Judd. 2,028,547; Jan. 21.
Axle. L. D. Kay. 2,028,394; Jan. 21.

Illuminating apparatus. H. Hoffman. 2,028,453; Jan. 21.
Impact testing device and method. R. Burns. 2,028,190; Jan. 21.
Implement handle. A. A. MacPherson. 2,028,291; Jan. 21.
Indicator: *See*—
Vehicle direction indicator
Ingot mold for steel ingots. J. E. Perry and W. H. Ramage. 2,028,243; Jan. 21.
Insulation pad and construction. A. L. Spafford. 2,028,253; Jan. 21.
Internal combustion engine, Rotary. H. Schulman. 2,028,526; Jan. 21.
Jig for treating material. G. H. Cady. 2,028,436; Jan. 21.
Joint for concrete pipes. W. S. Hewett. 2,028,669; Jan. 21.
Ketones, Manufacturing. F. M. Archibald and C. M. Beaner. 2,028,267; Jan. 21.
Knives, Grinding of rotating eccentric. W. E. Mellen. 2,028,681; Jan. 21.
Laminated structure. C. F. Rein. 2,028,411; Jan. 21.
Lamp: *See*—
Gas arc lamp.
Lamps, Butt-sealing incandescent electric. M. E. McGowan. 2,028,342; Jan. 21.
Lasting machine. W. T. R. Roberts. 2,028,246; Jan. 21.
Lathe, Automatic. E. Tomky. 2,028,262; Jan. 21.
Light baffling screen. C. W. Cole. 2,028,469; Jan. 21.
Light conversion system. H. A. Rockwell. 2,028,471; Jan. 21.
Light-transmitting sheet, Reinforced. E. T. Hesting. 2,028,679; Jan. 21.
Liner for a brake drum and making the drum. R. R. Surtees. 2,028,673; Jan. 21.
Lining for centrifugal baskets, Grid. E. Roberts. 2,028,168; Jan. 21.
Link, Flexible. F. C. La Mar. 2,028,720–1; Jan. 21.
Liquid dispensing apparatus. J. Thomson. 2,028,302; Jan. 21.
Liquid resistances, Apparatus for cooling. C. J. Pratt. 2,028,166; Jan. 21.
Load handling device. J. H. Danner. 2,028,462; Jan. 21.
Lock: *See*—
Cover lock.
Lock. J. R. Brose and A. S. Strassbach. 2,028,495; Jan. 21.
Lock. F. H. Schmidt. 2,028,525; Jan. 21.
Lock. O. A. Shaan. 2,028,171; Jan. 21.
Lock and latch, Combined. J. Rubino. 2,028,672; Jan. 21.
Locking and reinforcing means for paper board boxes. E. H. Lampen. 2,028,279; Jan. 21.
Locking-band. C. R. Irwin. 2,028,689; Jan. 21.
Locking device. H. G. Ock. 2,028,287; Jan. 21.
Locking device, Automatic. S. T. Smith. 2,028,523; Jan. 21.
Locking gas tank covers, Mechanism for. F. C. McClanahan. 2,028,515; Jan. 21.
Locking means for paper board boxes. E. H. Lampen. 2,028,677; Jan. 21.
Locomotive driving wheel Composite. A. G. Ock. 2,028,646; Jan. 21.
Loom. J. Northrop. 2,028,580; Jan. 21.
Loom protection mechanism. C. D. Brown. 2,028,731; Jan. 21.
Lubricant and making same. M. Pier and F. Christmann. 2,028,240; Jan. 21.
Lubricants in rope material, Incorporating extremely viscous. W. D. Modeen. 2,028,158; Jan. 21.
Lubricating device. G. L. Moore and L. R. Stone. 2,028,517; Jan. 21.
Machine for inserting fasteners and forming the bed area of a sole. F. E. Depp. 2,028,252; Jan. 21.
Machine for making finishing welts. P. Diamboni and G. Tillie. 2,028,494; Jan. 21.
Machine for shaping shoe uppers. A. F. Pym. 2,028,187; Jan. 21.
Machine for shaping uppers over lasts. A. F. Pym and W. E. Scarlett. 2,028,351; Jan. 21.
Machine for unseaming can tops. E. H. Gauthier. 2,028,502; Jan. 21.
Magnesium and magnesium alloys, Protecting. J. M. Michel. 2,028,243; Jan. 21.
Magnesium dolomites, Decalcification of. C. D. Wyatt. 2,028,690; Jan. 21.
Magnetic analysis. T. Haschka. 2,028,486; Jan. 21.
Mask. R. Malcom. 2,028,462; Jan. 21.
Material dispensing device, Pivoted. M. W. Fitzsimmons. 2,028,655; Jan. 21.
Material feeding device, Dry. W. M. Hurst and W. R. Humphries. 2,028,710; Jan. 21.
Material into a solid mass, Compressing compressible. W. E. Barber. 2,028,481; Jan. 21.
Materials, Distilling of easily decomposable. W. E. Lewis. 2,028,540; Jan. 21.
Measurements, Mechanism for mechanical. J. T. Brubaker. 2,028,134; Jan. 21.
Measuring apparatus. W. G. Doherty. 2,028,563; Jan. 21.
Medium in a continuous operation to a reaction, Method of and an apparatus for subjecting a flowing. W. Pohl. 2,028,664; Jan. 21.
Metal fastener. E. R. Hipe. 2,028,528; Jan. 21.
Metal, Loading and shipping sheet. J. F. Warren. 2,028,206; Jan. 21.
Metals, Method and apparatus for cutting. M. E. Weaver. 2,028,626; Jan. 21.
Metals, Producing the alkali. M. G. Hansen. 2,028,209; Jan. 21.
Microphone transmitter. R. C. Forbes. 2,028,685; Jan. 21.
Mill: *See*—
Drink mill.
Mixer: *See*—
Feed mixer.
Mold apparatus. J. B. Dorner. 2,028,443; Jan. 21.
Motion and apparatus therefor, Simulating. J. Hansen. 2,028,623; Jan. 21.
Motor: *See*—
Condenser motor.
Motor control. W. J. Seaver. 2,028,541; Jan. 21.

Nozzle, Suction. G. A. Feld. 2,028,560; Jan. 21.
Oil compositions, Mineral. R. W. Story and R. W. Fuller, 2,028,257; Jan. 21.
Oil cracking system. A. G. Peterkin, Jr. 2,028,726; Jan. 21.
Oil tank inspection device. W. A. Baldorf and R. R. Deimler. 2,028,420; Jan. 21.
Oil to burners for boilers and similar installation, Apparatus for feeding fuel. J. C. Johnson. 2,028,293; Jan. 21.
Oil well pumping apparatus. W. F. Parker. 2,028,409; Jan. 21.
Oil well tubing wrench. J. S. Taylor. 2,028,737; Jan. 21.
Oils, Producing lubricating. J. V. Starr and D. F. Edwards. 2,028,261; Jan. 21.
Olefines, Sulphating. R. P. Le Baron. 2,028,226; Jan. 21.
Open-hearth furnace, Maneuvering. F. H. Loftus. 2,028,200; Jan. 21.
Optical system and automatic control for the same. W. L. Wright. 2,028,485; Jan. 21.
Orchard heater. W. A. S. Harmon. 2,028,227; Jan. 21.
Ornament. E. Da Rosa. 2,028,593; Jan. 21.
Packing and producing the same, Metallic. S. L. Palmer. 2,028,240; Jan. 21.
Packing, Fluid pump. S. Walker. 2,028,624; Jan. 21.
Pan, Cake. J. Kollman. 2,028,671; Jan. 21.
Paper feed for typewriter billing machines. J. Q. Sherman. 2,028,587; Jan. 21.
Para-cyclohexylphenols, Manufacture of. K. Brodersen, H. Behncke and R. Korten. 2,028,271; Jan. 21.
Parter operating means for looms. J. Northrop. 2,028,580; Jan. 21.
Pen, Fountain. H. G. Burgeter. 2,028,645; Jan. 21.
Pencil. F. C. Dell. 2,028,586; Jan. 21.
Perforator. C. G. Whitney. 2,028,264; Jan. 21.
Petroleum oil distillate, Desulphurizing a. V. Kalichevsky. 2,028,535; Jan. 21.
Phonograph. R. P. Andrews. 2,028,130; Jan. 21.
Phonograph. E. G. Langley. 2,028,294; Jan. 21.
Phonographic recorder. O. M. Dunning. 2,028,197; Jan. 21.
Phosphates, Manufacture of. G. B. Taylor. 2,028,632; Jan. 21.
Photographic material. B. Gaspar. 2,028,270; Jan. 21.
Photographs, Apparatus for displaying. H. Fabry. 2,028,190; Jan. 21.
Phthalic anhydride, Chlorination of. M. N. Dyorailoff. 2,028,383; Jan. 21.
Picture projector, Motion. W. L. Wright. 2,028,484; Jan. 21.
Pipe: *See*—
Butt-weld pipe.
Pipe section protection. J. W. Van Dyke. 2,028,576; Jan. 21.
Pipe thread protector. L. S. Gundermann. 2,028,689; Jan. 21.
Piston, Composite. J. Flammang, P. L. Bowser, and H. Ernst. 2,028,522; Jan. 21.
Pitch propeller, Change. G. F. McDougall. 2,028,468; Jan. 21.
Plant thinning implement. A. Hilyard. 2,028,490; Jan. 21.
Plants, Irrigating and fertilizing. W. O. Swank. 2,028,172; Jan. 21.
Plastic compositions and making the same. L. F. Kyrides. 2,028,399; Jan. 21.
Plastic compositions of matter. J. R. Mares. 2,028,403; Jan. 21.
Plastic, Seasoning. P. W. Crane and R. T. Fields. 2,028,502; Jan. 21.
Plate heat exchanger. E. Prestage. 2,028,662; Jan. 21.
Flow measuring device. I. M. Clausen. 2,028,278; Jan. 21.
Plug: *See*—
Valve or drain plug.
Plug attachment device, Switch-type. J. D. Brown. 2,028,314; Jan. 21.
Plug valve. F. N. Bard. 2,028,181; Jan. 21.
Plywood, Making glued up. W. F. Leicester. 2,028,297; Jan. 21.
Polish, Shoe. E. P. Griffin and R. P. Richardson. 2,028,334; Jan. 21.
Pot, Thermostatic vent. H. H. Dow. 2,028,535; Jan. 21.
Power-transmission coupling. E. S. Cook and L. M. Douglas. 2,028,580; Jan. 21.
Power unit. E. Hoe. 2,028,283; Jan. 21.
Precision measuring instrument. C. E. Johansson. 2,028,611; Jan. 21.
Press: *See*—
Vulcanizing press.
Print rollers and the like, Apparatus for making. W. M. Greene and P. E. Luther. 1,028,908; Jan. 21.
Printing machine. C. D. Ryan. 2,028,381; Jan. 21.
Printing plate. H. Swan and S. Higgins. 2,028,709–12; Jan. 21.
Printing telegraph system. T. L. Corwin. 2,028,194; Jan. 21.

Propeller blades, Apparatus for balancing. J. Squires. 2,028,264; Jan. 21.
Protector: *See*—
Pipe thread protector.
Pump: *See*—
Engine fuel pump. Fuel pump.
Pump. A. F. Sherar. 2,028,668–9; Jan. 21.
Pump. I. W. Sprink. 2,028,360; Jan. 21.
Pump for compressed liquefied gases. C. F. Tears. 2,028,581; Jan. 21.
Pyrometric device. H. H. and B. O. Henderson. 2,028,507; Jan. 21.
Radiation detector. R. Gunn. 2,028,153; Jan. 21.
Radiator. C. J. Backstrom and A. W. Lees. 2,028,398; Jan. 21.
Radio receiver, Variable-selectivity. A. Crossley. 2,028,534; Jan. 21.
Radio receiving device with distant control. H. F. Andrews. 2,028,489; Jan. 21.
Radio signaling system. L. M. H. Clausing and J. R. Smith, Jr. 2,028,497; Jan. 21.
Radio transmitting system. R. A. Heising. 2,028,212; Jan. 21.
Railway brake. I. Matrosoff. 2,028,404; Jan. 21.
Railway line. M. A. Long. 2,028,401; Jan. 21.
Rake, Side delivery. A. E. W. Johnson. 2,028,383; Jan. 21.
Range. G. D. Wilkinson and R. D. Pellegrin. 2,028,636; Jan. 21.
Receptacle: *See*—
Electrical contact receptacle. Electrical receptacle.
Storage receptacle.
Receptacles, Apparatus for filling. R. D. Anderson. 2,028,266; Jan. 21.
Recorder: *See*—
Phonographic recorder.
Rectification and refrigeration process, Combined. P. D. Barton. 2,028,482; Jan. 21.
Rectifiers, Apparatus for automatic regulation of. E. M. Ollver. 2,028,541; Jan. 21.
Reel: *See*—
Fishing reel.
Reel. H. H. Talbot. 2,028,422; Jan. 21.
Refrigerating apparatus. J. Karmazin. 2,028,456–8; Jan. 21.
Refrigerating machine. H. H. Rixler. 2,028,684; Jan. 21.
Refrigerating system. F. B. Hunt. 2,028,735; Jan. 21.
Refrigerating system. H. Ruppricht. 2,028,566; Jan. 21.
Regulator: *See*—
Arc regulator. Furnace heat regulator.

Traffic lighting system. J. F. Dunn. 2,028,784; Jan. 21.
Transmission, Hydraulic. M. Gray. 2,028,152; Jan. 21.
Transmitter for electromagnetic waves. E. Kramar. 2,028,510; Jan. 21.
Tray, Ash. A. A. Vecchia. 2,028,804; Jan. 21.
Trimmer. G. and M. Prodromou. 2,028,698; Jan. 21.
Truck, Hand. T. L. Bowers. 2,028,188; Jan. 21.
Truck, Motor. E. J. Lewis. 2,028,227; Jan. 21.
Truck, Multiple stage lifting. W. Dunlap, Jr. 2,028,709; Jan. 21.
Tube: *See*—
Dispensing tube. Foam retarding tube.
Tube cutter. G. Windeke. 2,028,578; Jan. 21.
Tuber. T. E. Coty. 2,028,145; Jan. 21.
Tubes, Means for corrugating. W. H. Grant. 2,028,150; Jan. 21.
Tubes, Method of corrugating. W. H. Grant. 2,028,151; Jan. 21.
Tubing, Flexible. S. Guarnaschelli. 2,028,600; Jan. 21.
Tuning arrangement for radio receiving sets. V. D. Collins. 2,028,127; Jan. 21.
Turbine blade. F. A. Wettstein. 2,028,538; Jan. 21.
Turbine, Hydraulic. L. F. Harza. 2,028,448; Jan. 21.
Turbine, Hydraulic. W. M. White. 2,028,585; Jan. 21.
Turbo-air compressor. J. O. Heinze. 2,028,602; Jan. 21.
Turf tool. G. Van Yahres. 2,028,453; Jan. 21.
Typewriting machine. C. Gabrielson. 2,028,200; Jan. 21.
Typewriting machine. G. F. Handley. 2,028,250; Jan. 21.
Undercoat for lacquers and lacquered material. W. D. Bewley. 2,028,158; Jan. 21.
Undercutting attachment for lathes. J. J. and M. W. O'Brien. 2,028,593; Jan. 21.
Undergarment for women. L. Goodman. 2,028,586; Jan. 21.
Unit control system, Multiple. L. E-W. Mantrem-Oster. 2,028,663; Jan. 21.
Vacuum cleaner. J. F. Hemberger. 2,028,215; Jan. 21.
Vacuum tube system and container. H. R. Hayden. 2,028,717; Jan. 21.
Vacuum tube testing system. D. K. Gannett and R. F. Lewis. 2,028,278; Jan. 21.
Valuable products from acid sludge, Obtaining. J. C. Bird. 2,028,186; Jan. 21.
Valve: *See*—
Plug valve.
Valve. F. S. Furnas. 2,028,257; Jan. 21.
Valve. R. H. Sinkil. 2,028,581; Jan. 21.
Valve construction. F. F. Beary. 2,028,131; Jan. 21.
Valve for steam, Expansion. J. Lavergne. 2,028,675; Jan. 21.
Valve mechanism, Internal combustion engine. H. M. Conlins. 2,028,158; Jan. 21.
Valve or drain plug. J. H. Williams. 2,028,177; Jan. 21.
Valve operating unit. C. H. Beckwith. 2,028,806; Jan. 21.
Valve stem. J. C. Crowley. 2,028,582; Jan. 21.
Vaporizer, Heavy fuel. E. A. Johnston, H. F. Bryan, and H. H. Turner. 2,028,233; Jan. 21.
Vehicle body. R. L. Carr. 2,028,143; Jan. 21.
Vehicle direction indicator. E. Heinemann. 2,028,664; Jan. 21.
Vehicle, Tractor-trailer. C. H. Land and W. H. Wilson. 2,028,600; Jan. 21.
Vehicle wheel. J. E. Hale. 2,028,702; Jan. 21.
Vibrations in shafts, Device for reducing torsional. V. A. Kjaer. 2,028,459; Jan. 21.
Vibrator, Etheric. H. E. and A. M. Crum. 2,028,373; Jan. 21.
Viscosimeter. H. T. Booth. 2,028,188; Jan. 21.
Viscosity-responsive device. H. T. Booth. 2,028,184-7; Jan. 21.
Vise for slug casting machines. R. G. Klingler. 2,028,786; Jan. 21.
Visual signaling device. R. Glöier and H. Fuss. 2,028,208; Jan. 21.
Vulcanizing press. C. Macbeth. 2,028,634; Jan. 21.
Warp stop motion. H. Marsh. 2,028,725; Jan. 21.
Washer for nuts, glasses, etc. J. Schamet and H. E. Andrews. 2,028,658; Jan. 21.
Watch, Self-winding. A. Priuzi. 2,028,584; Jan. 21.
Watch, Stop. H. Hofer. 2,028,452; Jan. 21.
Water closet construction. J. N. Murphy. 2,028,488; Jan. 21.
Water of crystallization, Removing. M. J. Shoemaker. 2,028,396; Jan. 21.
Web plumbing unit for articles of furniture. A. S. Bartels. 2,028,432; Jan. 21.
Weighing machine, Automatic. J. B. Howe. 2,028,544; Jan. 21.
Weighing mechanism. J. B. Howe. 2,028,545; Jan. 21.

Welding. M. Nadder. 2,028,232; Jan. 21.
Welding apparatus. H. W. Larson. 2,028,235; Jan. 21.
Well cleanout tool. J. C. Smith and J. S. Taylor. 2,028,418; Jan. 21.
Well drilling tool. J. C. Wright. 2,028,579; Jan. 21.
Well point. T. C. Griffin. 2,028,447; Jan. 21.
Well spudding apparatus. H. W. Cardwell. 2,028,697; Jan. 21.
Wheel: *See*—
Locomotive driving wheel.
Wheel and brake therefor. A. C. Hamilton. 2,028,307; Jan. 21.
Wheel for rail cars. C. D. Smith. 2,028,707; Jan. 21.
Wheel rim. C. L. Ekserdjian. 2,028,596; Jan. 21.
Wheels, Apparatus for calculating the angularity of steering. C. H. Phelps. 2,028,622; Jan. 21.
Winch, Oil field skid. W. C. Guier and G. G. Brown. 2,028,701; Jan. 21.
Winch with drive transmission Tractor mounted. W. C. Guier. 2,028,700; Jan. 21.
Winding machine. E. J. Abbott. 2,028,140; Jan. 21.
Winding machine. W. Marcroft. 2,028,679; Jan. 21.
Windshield construction. M. E. Gluhareff. 2,028,542; Jan. 21.
Window display device. W. Enoch. 2,028,506; Jan. 21.
Wires, Drawing of. J. de Mulatier. 2,028,652; Jan. 21.
Wrench: *See*—
Double jaw wrench. Oil well tubing wrench.
Wrench handle. E. F. Pilger. 2,028,561; Jan. 21.
Yarn tension for automatic shuttles. A. M. Sergeson and D. E. Meehan. 2,028,692; Jan. 21.
Yarns or threads into cops, Apparatus for simultaneously twisting and winding. W. T. Brand and E. J. Fairweather. 2,028,644; Jan. 21.
Zinc sulphide, Making. T. A. Mitchell and R. L. Sessions. 2,028,163; Jan. 21.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 21, 1936

Key—First number—class, second number—subclass, third number—patent number

U. S. GOVERNMENT PRINTING OFFICE: 1936

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 466—No. 4 TUESDAY, JANUARY 26, 1936 Price—$10 per year

The OFFICIAL GAZETTE is issued under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum, including annual Index; $10.75; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,854,441, A. Alsaker, W. O. Hampton and C. A. Koerner, Vertical break disconnecting switch, decided January 6, 1936, claim 7.

Pat. 1,988,381, W. H. Mosney and J. R. Rudolph, Wildell hopper car, decided January 7, 1936, claims 1, 2, 6, and 16.

Pat. 1,992,672, H. N. Stevenson, Adjustable springboard, decided January 4, 1936, claims 1 and 2.

Pat. 1,912,841, D. W. Griffith and O. S. Beattie, Automatic control for carburetor choke valves, decided November 18, 1933, claim 7.

Pat. 1,961,852, R. B. Flanders, Hydraulically operated feed mechanism for high speed stitchers, decided January 4, 1936, claims 2, 4, and 5.

Pat. 1,989,823, Francis Mohler, Control system, decided January 4, 1936, claim 5.

Cancellation of Entry of Disclaimer

2,008,482.—*Eugene G. Carroll*, South Bend, Ind. HYDRAULIC BRAKE. Patent dated July 30, 1935.

The entry on the records of the Patent Office of an alleged disclaimer filed by *Eugene G. Carroll*, November 11, 1935 (see 461 O. G. 14), ordered cancelled since the assignment records of the Patent Office show that *Eugene G. Carroll* owned no interest in the patent.

Notice of Cancellation

U. S. PATENT OFFICE, Washington, Jan. 15, 1936.

A. G. Morse Co., its assignee or legal representatives take notice:

An application for cancellation having been filed in this Office by Lovell and Covel Company, Cambridge, Mass., to effect the cancellation of trade-mark registration of A. G. Morse Co., 210–220 N. Halstead Street, Chicago, Ill., No. 138,676, dated January 4, 1921, and the notice of such proceeding sent by registered mail to said A. G. Morse Co., at the said address having been returned by the post office undelivered, notice is hereby given that unless said A. G. Morse Co., its assignee or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Applicant's Address

The requirement of Rule 32, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

Rule 72

RULE 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the papers which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy as heretofore filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 88.) Substitute drawings will not be admitted in any case unless required by the Office.

Condition of Applications Under Examination at Close of Business January 11, 1926

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 32,916; Trade-Mark Division, 1,245. Oldest new case, September 14, 1925; oldest amended, September 14, 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action		No. of applications awaiting action
		New	Amended	
6024	1. LOEFFLER, F. A., Bibbs and Chucks; Sprockets; Domestic Cooking Vessels; Disease Prevention; Fences; Gates; Tillage.	Nov. 23	Nov. 23	250

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

McKee v. Stevens

No. 3,355. Decided November 26, 1928.

1. INTERFERENCE—EVIDENCE TO PRACTICE—TESTS UNDER WORKING CONDITIONS REQUIRED.

Construction of a meter connecting device and shop tests of the same for leaks and accuracy of machine work, without a test under actual working conditions, *Held* not to constitute reduction to practice, in view of the nature of the device coupled with its use in connection with inflammable and poisonous gases.

2. SAME—PRIORITY—EVIDENCE.

Record reviewed and *Held* that McK., the junior party, who was the first to conceive, had not established diligence during the critical period from immediately prior to the date of the senior party's entry into the field to the date of McK's. filing and that priority was properly awarded to the senior party.

BLAND, *J.*, Concurring.

APPEAL from the Patent Office. Affirmed.

Mr. Fred Gerlach and *Mr. Norman H. Gerlach* for McKee.

Messrs. Kerr, Hudson & Kent, and *Mr. A. J. Hudson* for Stevens.

GRAHAM, *P. J.*:

The present proceeding is an appeal from the decision of the Board of Appeals of the United States Patent Office in an interference proceeding, awarding priority to the appellee, Stevens. The appellant, Garnet W. McKee, filed his application in said office on May 7, 1930, seeking a patent upon an improvement in meter connecting devices. The appellee, Charles W. Stevens, filed an application for a patent for a similar invention in said office on March 19, 1930.

The counts of the interference were five in number. The first count is deemed to be sufficient for purposes of illustration, and is as follows:

1. Means for spacing the two service pipes of a meter comprising a rigid one-piece bar having at one end thereof means for engaging one of the service pipes and having at the other end thereof a conical opening forming a seat, a conical sleeve to fit in said seat and rotatably mounted therein, said sleeve having a screw thread in its larger end for connection with the other service pipe and a screw thread for connection with the meter pipe.

The Examiner of Interferences, after the interference had been redeclared, and after the parties had taken testimony, held that the burden of proof was upon McKee, as the junior party. It appearing that the junior party had abandoned counts 2, 4, and 5 of the interference, priority was awarded to Stevens as to said counts. No appeal has been prosecuted to this court as to the same. The only issues of the interference relate to counts 1 and 3.

The Examiner of Interferences further held that the party Stevens had conceived and reduced the invention defined in said counts to practice "at least by October, 1929."

The Examiner further held that there was evidence as to the party McKee having conceived and constructed some of the devices the subject of the interference in June, 1928, but that there was no evidence sufficient to show that he reduced the invention to practice at that time; that the evidence introduced by him as to the testing of the device was insufficient to prove reduction to practice; that "at the time" Stevens entered the field, McKee was not shown to have been exercising diligence, and that, therefore, the appellant was not entitled to priority, which was awarded to the party Stevens.

The Board of Appeals followed much the same line of reasoning. It came to the conclusion that it was "satisfactorily established that McKee did conceive a structure within the terms of counts 1 and 3 in June, 1928, and that one or two connector bars corresponding to the same counts were made shortly thereafter." However, the Board was of opinion that this device was not so tested as to constitute reduction to practice, and that, therefore, the invention was not complete. The Board was also of the opinion that in view of McKee's delays until 1930, before filing his application, his work in 1928 constituted merely an abandoned experiment, and that if this could not be so considered, then McKee was shown by the record to have shown an intention to suppress this particular construction. Therefore, priority was awarded to the party Stevens.

The issues are simple, and not difficult to determine. Considerable testimony was taken by the parties, as to their activity during the period involved in producing this invention. McKee was connected with the Eclipse Fuel Engineering Company, of Rockford, Illinois, and Lake Geneva, Wisconsin, as the engineer of the company. His company, in June, 1928, was engaged in the sale of connectors for gas meters. During June, 1928, the company was making and selling a type of connector with a cylindrical sleeve union outlet. This was a straight sleeve. At that time, McKee conceived and disclosed the subject matter of the issue here, namely, a tapered sleeve construction for these meter connectors. In this conception and disclosure, he is sustained by the testimony of several of those who worked with him in the Eclipse Fuel Engineering Company, and there seems to be no doubt that he has proved conception at that time. It is further shown that, shortly after this time, at least one of these connectors was made, according to the directions of McKee. The witness Statler, who was a machinist in the Eclipse Fuel Engineering plant, states that before delivering the connector with the tapered sleeve and nut connection on the bottom, to one Olsen, manager of the company, he, Statler, tested the new connector, the testimony being as follows:

Q. 31. Before delivering that bar with the tapered sleeve and nut on the bottom to Mr. Olsen did you make any tests?

A. Yes. All gas fittings are tested. First for leaks and then for machine accuracy.

Q. 32. What was the result of that test?

A. Apparently there were no leaks and the machine work was all right, because it was accepted by Mr. Olsen as being O. K.

The witness Olsen testified:

Q. 29. What was done with the meter bar which was made by Mr. Statler and delivered to you which embodied the tapered bushing?

A. It was examined and tested by me.

There is no further testimony in the record as to what further, if anything, was done as to the testing of this device by McKee. On the one hand it is argued by McKee that the test was sufficient to constitute reduction to practice; that this device was of simple character, and that it did not require a test by use under actual working conditions. On the other hand, it is contended by the appellee, and was so held by the tribunals below, that a test in actual use was required. Upon this feature, the result of the case largely depends. If such evidence is sufficient to prove a proper test, then the invention of McKee seems to have been reduced in practice prior to the date of Stevens' entry into the field. On the other hand, if it does not prove reduction to practice, other questions as to the actions and diligence of McKee must be considered.

The burden of proof was upon the appellant McKee to establish that he had reduced the invention to practice, if he is to be awarded priority on the ground that he conceived and reduced the invention to practice before Stevens entered the field.

[1] If this was a device which required a test under actual working conditions to reduce it to practice, then the burden was also upon McKee to establish that it was so tested. We are inclined to the belief that he did not maintain this burden. To prove by the testimony of witnesses that a device was tested, does not prove that it was tested under usual working conditions. It is argued by counsel for McKee that he did not need to do so because, on the strength of *Brydle* v. *Honigbaum*, 19 C. C. P. A. (Patents) 773, 54 F.(2d) 147, 415 O. G. 756, if a device was a familiar one, and had been long known to the art, a simple modification thereof need not be necessarily tested under actual working conditions. It is not shown, however, by the testimony, that the use of sleeves in these connecting devices was well known in the art prior to June, 1928, nor does it appear that McKee was so conversant with the use of such connectors, at that time, that he might be said to come within the rule of the decision in the case of *Brydle* v. *Honigbaum*, supra. Certainly, there is nothing in the record to show that the use of tapered sleeves and conical-shaped connections was known at that time, or that persons working on the device were able to test the same without trial thereof under usual working conditions. It would have been a comparatively easy thing for McKee to attach his connector to a meter in operation, and to have thus tested the connector. We may assume, however, in the absence of proof to the contrary, that this was not done, and that some shop tests only were applied, the nature and sufficiency of which are not disclosed, and that McKee chose to rest the matter on this. An inventer intent upon securing the benefit of his invention ought not to disregard such necessary precautions. If he does so, it is at his own peril. The nature of the device in issue here, coupled with its use in connection with inflammable and poisonous gases, seems to the court to plainly indicate that it should have been tested in such a way as to show that it would operate successfully under actual working conditions. It is not of the simple character of the device in question in the case of *Olson* v. *Thompson*, 22 C. C. P. A. (Patents) 1212, 77 F.(2d) 104, 460 O. G. 249, where lock washers were involved, and *Sachs* v. *Wadsworth*, 18 C. C. P. A. (Patents) 1284, 48 F.(2d) 926, 411 O. G. 545, where a lid to a switch box was in issue. This subject is exhaustively discussed by us in *Payne* v. *Hurley*, 21 C. C. P. A. (Patents) 1144, 71 F.(2d) 208, 448 O. G. 8, followed by *Urschel* v. *Crawford*, 22 C. C. P. A. (Patents) 727, 73 F.(2d) 510, 451 O. G. 258, and further discussion here is deemed unnecessary.

It being the conclusion of the court that there has been a failure to prove a sufficient test of the device in 1928, and no other proof of reduction to practice prior to the filing of Stevens' application being offered by the appellant, it follows that appellant must establish diligence on his part during the period from just prior to appellee's entry into the field to the date of appellant's filing, to be entitled to an award of priority.

The appellee Stevens was the vice-president and general manager of the Lattimer-Stevens Company, of Columbus, Ohio, a company which was engaged in the manufacture of gas meter connections, stopcocks, and supplies during the year 1928, and following. It seems, from the testimony, that Stevens conceived the invention involved here in the first part of August, 1928, and that disclosure to others was made during the same year. By the fall of 1929, several orders of considerable size had been taken by this company for the tapered sleeve connection, and the product was commercialized and fully advertised to the trade. From that time until the filing of Stevens application in March, 1930, production was continued and many orders filled. Whether the appellant, McKee, was advised of the commercialization of this product is not shown by the record. However, it was not until May, 1930, that the appellant filed his application for a patent, several months after the Stevens product was for sale on the market. After producing his samples in June, 1928, the record does not show any activity on the part of McKee. Evidently neither he nor his company were making any attempt to commercialize this tapered union construction during 1928 or 1929. McKee's company made no effort to produce any tapered plugs on a commercial scale prior to the fall of 1929, the reason therefor being given by the witness Olsen, as follows:

Q. 61. When did you first have occasion to make any meter bars with tapered plugs on a commercial scale?

A. In the year 1929.

Q. 62. Prior to that was there any demand for a bar with a tapered plug?

A. We had learned of no demand for them prior to that time.

On cross-examination, the witness Olsen, in giving a further reason why the tapered sleeve construction was not pressed, stated:

We wanted to make the bar shown on Exhibit 1 and not the bar with the tapered sleeves.

The bar known as Exhibit 1 was the old straight sleeve connector.

[2] While we are not prepared to agree that this record shows a concealment and suppression of McKee's invention under the doctrine announced in *Mason* v. *Hepburn*, 13 App. D. C. 86, 84 O. G. 147, we are in agreement with the conclusion of the Patent Office tribunals that McKee has not established what he must establish to be successful here, namely, diligence during the critical period from immediately prior to the date of Stevens' entry into the field to his date of filing. This being our conclusion, he cannot be awarded priority.

The decision of the Board of Appeals is, therefore, affirmed.

AFFIRMED.

BLAND, *J.*, concurring.

I concur in the above conclusion for the reason assigned by the Board that upon the record what McKee did amounted only to an abandoned experiment.

U. S. Court of Customs and Patent Appeals

IN RE EASTMAN KODAK COMPANY

No. 4,388. Decided November 25, 1935

TRADE-MARKS—AFFIXING MARK TO THE GOODS.

Trade-mark "Twindar" for photographic lenses, which mark is etched on the plate mounted on the camera carrying the lens *Held* not affixed to the goods within the meaning of the Trade-Mark Act and registration thereof *Held* properly refused on this ground.

APPEAL from the Patent Office. Affirmed.

Mr. Newton M. Perrins and *Mr. George A. Gillette, Jr.* for Eastman Kodak Co.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

The appellant, Eastman Kodak Company, made application in the United States Patent Office for registration of its trade-mark "Twindar" for photographic lenses on May 12, 1933. The application recites that the applicant has adopted and used the trade-mark shown in the accompanying drawing "for Photographic Lens, in Class 26." The application further states: "The trade-mark is applied by being etched on a metal plate on the camera carrying the lens." Both tribunals in the Patent Office denied registration, both holding that no trade-mark use of the word "Twindar" upon the lens by the appellant had been shown. The appellant appeals, contending that this holding was erroneous, and that the use of the word, as the name was practiced by the appellant, was a trade-mark use of the name within the meaning of the statutory provisions.

Section 1 of the Trade-mark Act of February 20, 1905, as amended, U. S. Code, title 15, section 81, states that, in making application for the registration of a trade-mark, the owner shall, among other things, give

"a statement of the mode in which the same is applied and affixed to goods, and the length of time during which the trade-mark has been used; * * *."

In section 29 of said act, U. S. Code, title 15, section 106, it is provided:

Sec. 29. That in construing this act the following rules must be observed, except where the contrary intent is plainly apparent from the context thereof: * * * a trade-mark shall be deemed to be "affixed" to an article when it is placed in any manner in or upon either the article itself or the receptacle or package or upon the envelope or other thing in, by, or with which the goods are packed or inclosed or otherwise prepared for sale or distribution.

Samples were before the court, showing the method of affixing the trade-mark. This method is illustrated below:

In our opinion, no trade-mark use within the provisions of the law above quoted has been shown, which would entitle the appellant to registration of his said mark. The name "Twindar" has not been used upon the lens itself, which is "the goods" to which the mark should have been "affixed." Whether the glass lens be considered as the goods, or the glass lens with its mounting, which might be commercially known as the lens, is immaterial, for the name was not affixed to either, but to a plate of metal on the front of the camera, and which composed a part of the camera.

The words "receptacle," "package," and "envelope" are thus defined by Webster's New International Dictionary, 1932:

receptacle, 1. That which serves, or is used, for receiving and containing something; a repository.

package, 5. That in which anything is packed; a box, case, barrel, crate, etc., in which goods are packed.

envelope, 1. That which envelops; a wrapper; an inclosing cover; esp., the cover or wrapper of a document, as of a letter.

The statute gives to the user of a trade-mark his choice, as a condition of registration, to either use the trade-mark upon the article itself, or to place it upon the receptacle, package, envelope, or other thing in, by, or with which the article is prepared for sale or distribution. It cannot properly be contended that the camera, of which this lens was a part, constituted the receptacle, or package, or envelope, or other thing in, by, or with which the lens was packed or inclosed, or otherwise prepared for sale or distribution.

It is true that the lens was prepared for sale or distribution with the other parts of the camera, but the camera constituted no part of the inclosure of the lens any more than a house may be considered to be the receptacle, or package, or envelope, in which the windows and doors of the house are enclosed.

It is argued that the placing of the mark in the case at bar was in conformity with that portion of said section 29, reading:

"* * * placed in any manner in or upon * * * the * * * other thing * * * with which the goods are packed or inclosed or otherwise prepared for sale or distribution."

We are not in harmony with this view. If, for instance, the "goods" upon which the registration of a trade-mark was sought was a rubber eraser, it would hardly seem enough to put the trade-mark upon the pencil to which it was attached, and with which it was sold. In such a case, the observer would have difficulty in knowing whether the trade-mark was that of the pencil or the eraser. The office of a trade-mark is to indicate or designate the origin of the goods to which the mark is to be applied. *Elgin Nat. Watch Co.* v. *Illinois Watch Case Co.*, 179 U. S. 665, 94 O. G. 703.

In our opinion, the language of the section quoted above may refer to such objects as the papers containing needles or pins, or the cards upon which such objects as buttons or some kinds of jewelry are mounted, and others of the same class, but certainly can not be held to include the camera here involved.

Some discussion has arisen in the case as to the possible application of the provision of the patent act, section 4900, R. S., U. S. Code, title 35, section 49, to the affixing of the trade-mark under the said trade-mark act. We are unable to see wherein any application of said patent act is permissible here. The acts are independent, and the provisions of one cannot be applied in administering the other, except where the statute, by terms, so directs.

Without approving all that is said by the Commissioner in his decision, we are of opinion that registration of this trade-mark was properly denied. The decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

ABELL v. BEATRICE CREAMERY COMPANY

No. 3,536. Decided November 25, 1935

(79 F.(2d) 751)

TRADE-MARKS—SIMILARITY—"OLD MEADOW" AND "MEADOW GOLD".

Registration of the mark "Old Meadow" *Held* properly refused as being confusingly similar to the previously registered mark "Meadow Gold", used on goods of the same descriptive properties, from which it differs only in the arrangement of the words and the omission of the letter "G".

APPEAL from the Patent Office. Affirmed.

Messrs. Hawgood & Van Horn, Mr. Harvey R. Hawgood, and *Mr. Raymond Jones* for Abell.

Mr. Edward H. Merritt and *Mr. James Atkins* for Beatrice Creamery Co.

GARRETT, *J.*:

Appellant brings before us for review the decision of the Commissioner of Patents, in an opposition proceeding arising in the United States Patent Office, affirming the decision of the Examiner of Interferences sustaining the opposition and denying the registration sought.

Appellant sought to register the words "Old Meadow" for use as a trade-mark for milk, cream, butter, buttermilk, cottage cheese, and other dairy products, alleging continuous use thereof "since about September 1, 1924."

Appellee made formal opposition based upon registrations and prior use by it of the words "Meadow Gold" as a trade-mark for identical goods.

It is not disputed that a predecessor of appellee registered the mark "Meadow Gold" for butter long prior to appellant's claimed use of "Old Meadow", nor is appellee's title to the registration questioned. Neither is there any question as to appellee's prior use of its mark upon dairy products generally.

Upon this state of facts, the tribunals of the Patent Office concurred in holding that the only question to be considered (save a contention of estoppel interposed by appellant to which we shall later make reference) was that of the similarity of the opposing marks, and they concurred in finding the similarity to be so striking as that confusion in trade would be likely.

It seems obvious to us that this conclusion is sound. The marks, except in the arrangement of the words and the absence of the letter "G" in appellant's mark, are identical. The likelihood of confusion here is certainly as strong, if not stronger, than in the case of *Butter Packing Co.* v. *Piggly Wiggly Corp.*, 20 C. C. P. A. (Patents) 1069, 64 F.(2d) 1006, 488 O. G. 1063, where the opposing marks were "Slices O'Gold" and "Sunset Gold", applied to canned fruits and the like.

Upon the question of estoppel it is unnecessary to say more than that, under the rule announced with great definiteness in our decision in the case of *Skookum Packers Association* v. *Pacific Northwest Canning Co.*, 18 C. C. P. A. (Patents) 782, 45 F.(2d) 912, 408 O. G. 515, the question of estoppel has no place in this opposition proceeding.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Changes in Classification

(ORDER NO. 3,337)

U. S. PATENT OFFICE, *Washington, Jan. 11, 1936.*

The following transfers, to take effect Monday, January 13, 1936, are hereby ordered:

Class 260, Chemistry, Carbon Compounds, subclasses 167 to 171, inclusive, from Division 6 to Division 31; subclasses 27 to 54, inclusive, from Division 6 to Division 59.

RICHARD SPENCER,
First Assistant Commissioner.

Changes in Classification

Order No. 3,339, January 14, 1936, directs:

In class 126, Stoves and Furnaces (Division 19), change the title of subclass 204, Foot warmers, to read:

204 Body warmers,

this change to apply to each of the indented subclasses; and add to the definition the following notes:

Search Classes—
126—SURGERY, subclass 254, and indented subclasses, for devices for modifying the temperature of the body combined with means for applying medicinal treatment.
150—CLOTH, LEATHER, AND RUBBER RECEPTACLES, subclass 2.1, and indented subclasses, for receptacles of such materials known in the art as hot-water and ice bags.
215—BOTTLES AND JARS, appropriate subclasses, for receptacles of glass, ceramic or similar material for retaining a heating or cooling medium.
219—ELECTRIC HEATING, subclass 12, and indented subclasses, particularly subclass 46, for electrically heated devices for applying heat to the body.
220—METALLIC RECEPTACLES, subclass 3.1, for metallic receptacles similar to hot-water and ice bags.
237—HEAT EXCHANGE, subclass 12, for devices for exchanging heat with the body where the combination with the heating or the refrigerating means is not claimed;

and in the definitions of subclasses 206, 207, 208, and 209, change the word "Foot" in line 1 to ready *Body*.

In class 128, *Cloth, Leather, and Rubber Receptacles* (Division 29), establish the following subclasses and definitions:

Page
2.1 Thermal material
2.2 Article or member inclosing
2.3 Head or face,
2.4 Limb,
2.5 Multi-compartment,
2.6 With attaching means,
2.7 Internal bag spreaders.

2.1. Bags designed to hold a hot or cold material, usually water or ice, of the type known as hot-water bottles or ice bags.

Search Classes—
126—SURGERY, subclass 254, and indented subclasses, for devices for modifying the temperature of the body combined with means for applying medicinal treatment.
215—BOTTLES AND JARS, appropriate subclasses, for receptacles of glass, ceramic or similar material for retaining a heating or cooling material.
220—METALLIC RECEPTACLES, subclass 3.1, for metallic receptacles similar to hot-water and ice bags.

2.2. Bags under subclass 2.1 which surround or inclose partially or wholly the article or body part to which they are applied.

Search Class—
126—SURGERY, subclass 209.

2.3. Bags under subclass 2.2 which are to be applied to the head or face.

2.4. Bags under subclass 2.2 which are to be applied to a limb.

2.5. Bags under subclass 2.1 which have a plurality of compartments for retaining the material.

2.6. Bags under subclass 2.1 which have means for attaching the bags in position on the article or body part.

2.7. Bags under subclass 2.1 having means within the bag to hold the walls of the bag apart.

The patents contained in these subclasses have been taken for the most part from class 128, Surgery, subclasses 206, 207, 208, and 209, and from class 150, Cloth, Leather, and Rubber Receptacles, subclass 1.

In class 220, *Metallic Receptacles* (Division 40), establish the following subclass and definition:

3.1 Thermal material.

3.1. Receptacles within the class definition which are designed to hold hot or cold material and to be used in the manner of hot-water bottles or ice bags.

Search Classes—
126—SURGERY, subclass 254, and indented subclasses, for devices for modifying the temperature of the body combined with means for applying medicinal treatment.
150—CLOTH, LEATHER, AND RUBBER RECEPTACLES, subclass 2.1, and indented subclasses, for receptacles of such materials of the type known as hot-water and ice bags.
215—BOTTLES AND JARS, appropriate subclasses, for receptacles of glass, ceramic or similar material for retaining a heating or cooling material.
251—DISPENSING, subclass 25, for canteens and flasks.

The patents contained in this subclass have been taken for the most part from class 128, Surgery, subclass 254, and from class 126, Stoves and Furnaces, subclass 204.

In class 65, *Refrigeration* (Division 44), add to the definition of subclass 9 the following notes under "Search Class":

126—SURGERY, subclass 206, and indented subclasses, for devices for modifying the temperature of the body combined with means for applying medicinal treatment.
150—CLOTH, LEATHER, AND RUBBER RECEPTACLES, subclass 2.1 and indented subclasses; 215, BOTTLES AND JARS, appropriate subclasses, and 220, METALLIC RECEPTACLES, subclass 3.1, for more receptacles of the type known as hot water or ice bags, etc.

In class 60, *Surgery* (Division 50), add to the definition of subclass 254 the following notes:

Note.—For more receptacles of the type known as hot-water or ice bags, etc., search classes 150, CLOTH, LEATHER, AND RUBBER RECEPTACLES, subclass 2.1, and indented subclasses; 215, BOTTLES AND JARS, appropriate subclasses, and 220, METALLIC RECEPTACLES, subclass 3.1.

Note.—For body warmers combined with heating means, see class 219, ELECTRIC HEATING, subclass 46, when the heating means is electrical, and class 126, STOVES AND FURNACES, subclass 204, and indented subclasses, for other heating means.

Note.—For body coolers combined with refrigerating means, see class 62, REFRIGERATION, particularly subclass 9.

Note.—For devices for exchanging heat with the body where the combination with the heating or refrigerating means is not claimed, see class 237, HEAT EXCHANGE, subclass 12.

In class 126, *Stoves and Furnaces* (Division 56), add to the definition of subclass 1 the following notes:

Note.—Devices for modifying the temperature of the body combined with means for applying medicinal treatment are in class 128, SURGERY, subclass 254, and indented subclasses.

Note.—Other devices known as hot-water or ice bags, bottles, etc., are in classes 150, CLOTH, LEATHER, AND RUBBER RECEPTACLES, subclass 2.1, and indented subclasses, and 220, METALLIC RECEPTACLES, subclass 3.1.

In class 165, *Heat Exchange* (Division 21), add to the definition of subclass 12 the following notes:

Note.—For more receptacles for containing heated or cooled material, see classes 150, CLOTH, LEATHER, AND RUBBER RECEPTACLES, subclass 2.1, and indented subclasses; 215, BOTTLES AND JARS, appropriate subclasses, and 220, METALLIC RECEPTACLES, subclass 3.1.

Search Classes—
62—REFRIGERATION, particularly subclass 9, for body cooling devices combined with refrigerating means.
126—STOVES AND FURNACES, subclass 204, and indented subclasses, for body warmers combined with heating means, except where such heating means is electrical, for which see class 219, ELECTRIC HEATING, subclass 46, and indented subclasses, particularly subclass 46;
128—SURGERY, subclass 254, and indented subclasses, for devices for modifying the temperature of the body combined with means for applying medicinal treatment.

and cancel the references to classes 126, Stoves and Furnaces, and 128, Surgery.

In class 219, *Electric Heating* (Division 49), add to the definition of subclass 12 the following notes:

Note.—For other devices for heating bodies, see class 126, STOVES AND FURNACES, subclass 204, and indented subclasses, when combined with non-electrical heating means, and class 237, HEAT EXCHANGE, particularly subclass 12, where the heating device is not claimed in the combination, and appropriate receptacle classes where a mere receptacle for heated material is claimed.

Search Class—
126—SURGERY, subclass 254, and indented subclasses, for devices for modifying the temperature of the body combined with means for applying medicinal treatment.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS, LABELS, AND PRINTS

RENDERED DURING DECEMBER, 1935

In THE POPSICLE CORPORATION OF THE UNITED STATES v. ALFRED BERNS, Opposition No. 13,364, decision rendered December 4, 1935, (159 Ms. Dec. 506), *Assistant Commissioner Frazer* held that Alfred Berns, of Gallport, Miss., who had sought to register the words "ALASKA TWISTS" as a trade-mark for frozen confections and after an opposition had been filed to the registration by The Popsicle Corporation of the United States, of New York, N. Y., filed a disclaimer of the word "Alaska" apart from the mark, could not, after the opposition was sustained by the Examiner of Interferences, cancel that disclaimer.

In his decision the Assistant Commissioner said:

"While Patent Office procedure is of course less formal than that which prevails in the courts, we must nevertheless observe enough of the basic rules to insure some degree of regularity and order. To permit an appellant in an opposition proceeding to change the record upon which the decision appealed from is predicated would not only require a radical departure from the fundamental theory of appellate procedure, but would inevitably result in uncertainty and confusion.

"The disclaimer here involved was voluntarily made, and the mere fact that it failed to accomplish what applicant evidently hoped it would is not considered a sufficient reason to warrant its withdrawal at this late date."

In JULIUS SCHMID, INC., v. RALPH G. A. BECK, Opposition No. 13,396, decision rendered December 6, 1935, (159 Ms. Dec. 507), *First Assistant Commissioner Spencer* held that the opposition filed by Julius Schmid, Inc., of New York, N. Y., to the registration by Ralph G. A. Beck, of Montreal, Quebec, Canada, of a trade-mark for nursing bottle nipples, described as consisting of a pink band placed around the collar of the nipple, was properly dismissed, but also held the mark unregistrable on the ground that the band was merely a physical part of the nipple.

In his decision the First Assistant Commissioner stated that the opposition was based on the alleged use of a mark consisting of a band placed around the collar of the nipple and that no color was indicated in the drawing; that the brief filed by the opposer was not sufficient answer to the order to show cause why the opposition should not be dismissed for failure to take proof and that this was not a case where the opposer had pleaded a prior trade-mark registration which would speak for itself nor a case where applicant had filed a demurrer or failed to answer, but a case where the allegation of the opposition had been denied and the opposer had not established by competent proof that he had acquired the right to use the mark prior to applicant's use or that probable damage would occur.

With respect to applicant's right to register the mark, he said:

"Applicant's pink band extends over practically the entire width of the collar of the nipple, and the collar constitutes a substantial portion of the nipple, under which condition the pink ring or band is not registrable as a trade-mark. The cases distinctive to hand in the following decisions: *Re parte The B. F. Goodrich Co.*, 120 Ms. D. 130; 6 T. M. Rep. 287; *Goodyear Tire & Rubber Co. v. Firestone Tire & Rubber Co.*, 240 O. G. 641; 122 Ms. D. 62; 7 T. M. Rep. 400. In the former, a red band on automobile tires was held to be a proper trade-mark; not, in the latter, the tread or side walls of an automobile tire being of a different color from the remainder, was held to be not a valid trade-mark. The red band, in the former case, was not a substantial portion of the tire, whereas the tread or side wall portion of a tire constitutes a substantial portion thereof."

In ROSEMOOR HOSIERY CO. v. JOSEPH S. LERNER, Opposition No. 13,022, decision rendered December 9, 1935, (159 Ms. Dec. 517), *First Assistant Commissioner Spencer* held that the opposition of Holeproof Hosiery Co., of Milwaukee, Wis., to the registration by Joseph S. Lerner, of Kansas City, Mo., of a trade-mark for hosiery consisting of the word "JANUARY" and the words "This Month" was properly sustained.

The ground of the decision is that such a mark was descriptive and no one had a right to register it and the opposer had shown that it would be damaged.

In his decision the First Assistant Commissioner noted that the case was one of a series in which the applicant sought to register the notation of one of the months and the words "This Month" and that the opposer had used the notation "JANUARY" in advertising its product. He then discussed the question as to whether the term "JANUARY" was descriptive of hosiery, calling attention to the evidence establishing that different styles of hosiery were advertised at different times of the year and it had long been customary, on the part of the opposer, to feature and describe hosiery with reference to the particular month for which the use of the hosiery was intended.

He then said:

"In my opinion the names of the months have so long been used in conjunction with the sale of hosiery that they have become descriptive and no one is entitled to appropriate them exclusively under the doctrine of *Re parte Pillsbury Flour Mills Company*, 23 O. G. Pat. Q. 165; 24 T. M. Rep. 553; 480 O. G. 4. Also it would seem that when used in the manner herein contemplated, they constitute grade marks and as such are not registrable under well established doctrines governing the registration of trade-marks."

IN RE PARTE INTERNATIONAL HARVESTER COMPANY, Serial No. 335,902, decision rendered December 9, 1935, (159 Ms. Dec. 516), *First Assistant Commissioner Spencer* held that International Harvester Company, of Chicago, Ill., is not entitled to register, under the Act of 1920, the notation "TracTracTor", in view of the prior registration by another of the term "TRUCTRACTOR", registration No. 161,512, on substantially the same goods.

The ground of the decision is that the marks are substantially the same and therefore are confusingly similar.

With reference to the goods, the First Assistant Commissioner noted that applicant uses the mark on track-laying tractors, whereas the registered mark was used on wheeled tractors, and stated that these goods were believed to be of the same descriptive properties since a prospective purchaser could reasonably assume that both types of tractors emanated from a single source of manufacture.

With reference to the marks themselves, he said:

"Coming to the words themselves, they are identical except for the third letter in each. In the applicant's notation the third letter is an 'a,' whereas in the prior registration it is a 'u.' From the standpoint of similarity in both sound and appearance as well as in meaning, the words are substantially the same. It is true, as the applicant points out, that in its notation the tail portion of the cross bar on each letter 'T' is extended to overlie the letters next adjacent but, obviously, the petitioner has a poor case if such minute differences must be relied on in order to distinguish the two marks. How, for example, is a prospective purchaser to remember which mark has the extended 'T'? The answer is that the purchaser cannot remember, nor should he be expected to."

In EX PARTE DAVIS PAINT COMPANY, Serial No. 357,544, decision rendered December 9, 1935, (159 Ms. Dec. 510), *First Assistant Commissioner Spencer* held that Davis Paint Company, of No. Kansas City, Mo., is not entitled to register, under the Act of 1905, the term "MANCHESTER" as a trade-mark for oils and paints.

The ground of the decision is that the term is merely geographical.

In his decision, after stating that it is well established that the word is geographical and noting the places having that name, the First Assistant Commissioner referred to applicant's argument as to other meanings of the word which were not primarily geographical, and said:

"All the meanings or definitions upon which the applicant relies in seeking to establish the fact that the word 'MANCHESTER' is not geographical are remote and incidental. Certainly, the primary meaning of the word 'MANCHESTER' is purely geographical and few, if any, members of the purchasing public would give it any other significance."

Then, after referring to applicant's citation of the decision in *In re* Plymouth Motor Corp., 46 F.(2d) 211; 404 O. G. 269; 18 C. C. P. A. 838, and his argument that the word "MANCHESTER" had acquired a secondary meaning, he said:

"In conclusion, it is held, first, that the word 'MANCHESTER' is predominantly and clearly geographical; second, that any secondary meaning is so insignificant as to be negligible; third, that under the decision of this tribunal in the Canada Dry case, (159 Ms. D. 487; 28 U. S. Pat. Q. 544; 28 T. M. Rep. 374) the mark, even if it has acquired a secondary meaning, must be refused registration."

In SEARS, ROEBUCK AND CO. *v.* VILAS, Opposition No. 12,881, decision rendered December 9, 1935, (159 Ms. Dec. 510), *First Assistant Commissioner Spencer* held that Malcolm B. Vilas (The Coast-2-Coast Oil Co., assignee, substituted), of Cleveland, Ohio, is entitled to register as a trade-mark for lubricating oils, the words "COAST-2-COAST", notwithstanding the prior use by Sears, Roebuck and Co., of Chicago, Ill., of the words "CROSS COUNTRY" as a trade-mark for the same goods.

In his decision the First Assistant Commissioner said:

"In appearance and in sound the notations 'CROSS COUNTRY' and 'COAST-2-COAST' are dissimilar. In meaning there is some remote similarity; however, comparing the points of difference with those of similarity, I am constrained to hold that the marks are not confusingly similar and that the applicant therefore is entitled to the registration which it seeks."

In JAMES MARTIN & CO., LTD., *v.* V. CASANZA & BRO., Opposition No. 13,208, decision rendered December 9, 1935, (159 Ms. Dec. 512), *First Assistant Commissioner Spencer* held that an opposition by James Martin & Co., Ltd., of Leith, Scotland, to the registration by V. Casanza & Bro., of New York, N. Y., of the term "Royal George," as a trade-mark for Scotch whisky, was properly sustained.

The First Assistant Commissioner pointed out in his decision that the opposer had been selling whisky in the United States under the said trade-mark prior to prohibition and thereafter had sold to the applicant 5,000 cases of "Royal George" whisky, the applicant holding a permit from the Government to sell whisky to wholesale druggists; that there was correspondence between the opposer and the applicant with reference to the question of opposer's interest in the trade-mark and that without notifying the opposer, the applicant had copyrighted, in its own name, the label used and had filed its application for registration of the trade-mark.

After stating the facts as above, he said:

"A manufacturer who by the passage of the National Prohibition Act was compelled to cease use of its mark in the United States cannot properly be said to have abandoned its mark in this country. Abandonment is a matter of intention and is exceedingly non-quo cannot be defined as an intentional non-user. Another way of saying the same thing is that abandonment must be voluntary and not involuntary. It is accordingly concluded that, entirely apart from the relationship between the parties during Prohibition, the opposer had not lost its title to the mark by reason of its alleged non-use during that period but, on the contrary, was entitled to its sole and exclusive use upon the repeal of Prohibition provided, of course, that it could show it was so entitled at the time Prohibition went into effect."

After stating that the applicant had the right to use the name "Royal George" only by virtue of the fact that it was the exclusive sales agent of the opposer in the United States, he further said:

"Even if the applicant's name alone had been used upon the product during this time, which of course it had not, it would not have had the right upon the termination of the contract to continue to use the name. *Swinton & Tavelscope Co. v. Adolphus Furnace Co.*, 258 Ky. 673; 81 S. W. (2d) 1 (1935) and cases there cited. The license to use the mark together with the sale of the product cannot properly be held to constitute an abandonment."

He then noted the argument on behalf of the applicant that in order to succeed the opposer must be using the mark at the time of bringing the opposition proceeding and that the present opposer was not using the mark at the time this opposition was filed and had not used it since 1921, and said:

"There are two answers to this. In the first place, the use of the mark by the applicant was, through principles of agency, the use of the mark by the opposer, the latter standing in the position of principal and the former in the position of agent; and so it can fairly be said that throughout the period in question the opposer was indeed using the mark and that it is the applicant who has in fact never used it in its own right. The second answer is that the opposer's so-called non-use can be traced to the wrongful acts of the applicant for if the applicant had initially, following repeal of Prohibition, made clear its intent to claim the mark for itself, the opposer would undoubtedly have established other connections and commenced its use in this country."

In EX PARTE W. C. KALASH, Serial No. 345,236, decision rendered December 18, 1935, (159 Ms. Dec. 521), *First Assistant Commissioner Spencer* held that W. C. Kalash, of Omaha, Nebr., is not entitled to register, under the Act of March, 1920, the notation "LORD'S" as a trade-mark for aspirin tablets, in view of the prior registration of the signature "L. S. Lord" with the fanciful notation "NERVONEVE," as a trade-mark for a preparation for the treatment of neuralgia, toothache, etc.

The ground of the decision is that the marks are confusingly similar.

In his decision, after stating that the goods of the two parties are of the same descriptive properties, the First Assistant Commissioner said, with reference to the mark:

"That the marks are confusingly similar is clear, because, in the registered mark, the notation 'L. S. Lord' is distinctively displayed as the signature of the inventor of the preparation, and the notation 'Lord' is therefore a prominent and essential feature of the registered mark. There can be no doubt but that 'Lord' and 'LORD'S' are confusingly similar, and it is not permissible to extract a prominent feature from a mark belonging to another and register it alone."

In EX PARTE KINGAN & CO., INCORPORATED, Serial No. 354,752, decision rendered December 14, 1935, (159 Ms. Dec. 522), *First Assistant Commissioner Spencer* held that Kingan & Co., Incorporated, of Indianapolis, Ind., is not entitled to register, under the Act of 1905, as a trade-mark for sliced bacon, etc., a mark consisting of two rectangles, the groups being widely separated and symmetrically disposed with reference to vertical and horizontal axes.

The ground of the decision is that, as shown by the specimens, the alleged mark is not a trade-mark but a mere part of what applicant actually uses.

In his decision, after stating that the rectangles comprise lateral border portions of the labels and form a setting for the picture of a skipper at the wheel of his vessel, surrounded by narrow yellow panels for the reception of descriptive matter, the First Assistant Commissioner said:

"Since it does not appear that the rectangles shown on the drawing have ever been used otherwise than in connection with the other features as shown in the specimens submitted, it is evident that the applicant seeks to register only a fragmentary part of the mark as used. To register mutilated marks, leaving off features just as prominent as those presented for registration, would lead to erratic results and endless confusion. There is no authority for registering a part of a mark, and to permit it to be done would be to falsify the record and mislead the public as to the mark actually in use."

He further held that the description given of the mark was indefinite by reason of the statement that the trade-mark comprises "Two laterally spaced groups," etc., and that the drawing is "lined for contrast."

In this connection he said:

"To relate that the mark 'comprises' certain features is not sufficient. The description must completely and clearly describe the mark and must be unequivocal and definite. To relate that certain features are 'of contrasting color' or that certain of the features are 'at present' of a particular color is too indefinite, conveys no adequate impression of the mark and cannot be permitted. If the applicant does not claim color, it should specifically say so, and, if color is claimed, the particular color or colors should be definitely recited."

In HERSHEY CHOCOLATE CORPORATION *v.* COMMERCIAL MILLING COMPANY, Opposition No. 13,335, decision rendered December 14, 1935, (159 Ms. Dec. 525), *First Assistant Commissioner Spencer* held that Commercial Milling Company, of Detroit, Mich., is not entitled to register a mark including the notation "QUIKMIX" for use on biscuit flour, since that notation is merely descriptive of the goods.

In his decision the First Assistant Commissioner noted that the opposer, the Hershey Chocolate Corporation, of Hershey, Pa., did not appeal from the decision of the Examiner of Interferences dismissing the opposition and that the refusal to register was made by the Examiner, and the case was before the First Assistant Commissioner as an *ex parte* case.

With reference to the descriptiveness of the mark, after noting that the word "QUIKMIX" is the dominant feature of the mark considered as a whole, because it is the only spoken word and that, if it is descriptive and must be disclaimed, nothing is left of the mark, he said:

"Indeed, it might be said at this point that the case is closed because there is a disclaimer of this word, but here, on appeal, the applicant seeks to withdraw the disclaimer and substitute for it another one in which, in view of my decision in *Ex parte Pillsbury Flour Mills Company*, 28 U. S. Pat. Q. 168; 24 T. M. Rep. 558; 450 O. G. 3, the word 'QUIK' is disclaimed apart from the word 'MIX' and the word 'MIX' apart from the word 'QUIK.' This procedure, as an appellate one, cannot be permitted in view of the decision recently handed down in the case of *The Popsicle Corporation of the United States v. Alfred Bereia*, 159 Ms. D. 506. Thus the applicant cannot on appeal amend its disclaimer and thereby obtain registration of the mark."

Then, after referring to and quoting from the decision in *Ex parte Pillsbury Flour Mills Company*, *supra*, and noting that the applicant was allowed to disclaim each of the words of the compound word "MINITMIX", he said:

"Applying the above-quoted extract to the term at bar, namely, 'QUIKMIX,' I am of the opinion that the latter is descriptive and cannot properly be said to fall within the rule of the Pillsbury case. I have repeatedly said that the difficulty of distinguishing between suggestive and descriptive notations is that they shade gradually, almost imperceptively, from one type to the other. A single decision leads invitingly to a decision going a little farther afield, that one to another a little more remote, and so on, until one suddenly realizes, generally with dismay, that he has traveled far from the starting point, and that the path which once seemed so clear has become thoroughly cluttered and obscured, preventing return to the point of departure. Although to progress beyond the 'MINITMIX' case and hold that 'QUIKMIX' is not descriptive might appear to the applicant to be but a small step to take, it should not in my opinion, be taken.

* * * * * * *

"The outstanding characteristic of the prepared mixture is that it may be quickly or speedily prepared. The meaning of the term 'mix' or 'mixture' is too clear and well-known to require any discussion here. It is obviously thoroughly and wholly descriptive of the applicant's product. The term 'QUIK' is likewise used in a normal and natural manner to describe the applicant's goods which are capable of being, and mainly intended to be, quickly prepared."

In GENERAL MILLS, INC., *v.* COMMERCIAL MILLING COMPANY, Opposition No. 13,347, decision rendered December 14, 1935, (159 Ms. Dec. 534), *First Assistant Commissioner Spencer* held that the notation "QUIKMIX" for use on biscuit flour is not confusingly similar to the notation "BISQUICK" on the same goods, but that the mark "QUIKMIX" is not

registrable to the applicant since it is merely descriptive of the goods.

With reference to the similarity of the marks, he said:

"Taking first upon the opposer's appeal, I am constrained to the view that there is no confusing similarity between the notations. It is true that each contains the descriptive word 'QUICK' although in the applicant's mark the word is phonetically spelled 'QUIK'. Beyond this, however, I am unable to distinguish any points of similarity. Certainly, the prefix 'BIS' and the suffix 'MIX' are dissimilar and, as used in the notations here involved, serve, in my opinion, to distinguish the terms from one another to the point of avoiding the likelihood of confusion. It is true that the opposer seeks to prove instances of actual confusion but it is my belief that these can be traced to the similar manner in which the parties conduct their premises campaigns rather than to any confusing similarity between the marks themselves."

And then, with respect to the descriptiveness, he said:

"The remaining question to be decided is whether the term 'QUIKMIX' is descriptive and on this point, for reasons fully set forth in opposition proceeding No. 13,236 between *Harvey Chocolate Corporation* v. *Quikmix Milling Company*, decided on this same date, I am of the belief that the notation is descriptive and must for that reason be refused registration."

In BUSHMILL WINE & PRODUCTS COMPANY, INC., v. THE OVERBROOK COMPANY, INC., Trade-Mark Interference No. 2954, decision rendered December 17, 1935, (159 Ms. Dec. 529), *First Assistant Commissioner Spencer* held that priority of adoption and use of the term "Overbrook" for use on whiskey was properly awarded to Bushmill Wine & Products Company, Inc., of Scranton, Pa.

In his decision, after stating that the evidence showed that the first alleged interstate shipment of the goods by The Overbrook Company, Inc., of Baltimore, Md., was on December 21, 1933, the First Assistant Commissioner stated that the testimony showed that the Bushmill Company made a shipment in interstate commerce on January 19, 1934, but had made a sale in intrastate commerce on December 12, 1933, and said:

"It must accordingly be held that for all practical purposes the intrastate sale by Weinberger in the early part of December, 1933, has the full force and effect that it would have had, had it been made by Bushmill itself. It has previously been held that oral evidence of a transfer of business is sufficient if not objected to. *American West Indian Cigar Co.* v. *Grimsfelder Co.*, 4 T. M. Rep. 181; 110 Ms. D. 78."

He then, after stating that the only question to be decided was whether the Bushmill intrastate sale followed by the interstate transaction, established priority of adoption and use of the mark, said:

"The right to register a trade-mark depends upon ownership of that mark and ownership of a mark depends upon priority of adoption and use. Under the circumstances, it must be held that the Bushmill Company acquired ownership of the mark by virtue of having made the intrastate sale on December 12, 1933 and, although this sale itself did not entitle Bushmill to register the mark, for it had not at that time been used in interstate commerce, the subsequent shipment in January, 1934 placed Bushmill in a position to register the mark, ownership of which it had previously acquired."

In EX PARTE LANGBROOK, INC., Serial No. 351,020, decision rendered December 17, 1935, (159 Ms. Dec. 528), *First Assistant Commissioner Spencer* held that Langbrook, Inc., of New York City, N. Y., is not entitled to register, under the Act of 1905, as a trade-mark for clothing, the word "Langbrook", in view of the prior registration by another (Registration No. 190,197) of the word "Langrock" on the same goods.

In his decision, after stating that applicant's mark included other features, the First Assistant Commissioner said:

"In my mind, the predominant part or salient feature of each mark is the name. In glancing at the marks, people are more likely to observe and remember the word than the background which is merely incidental. Also, in calling for the goods or speaking of them, only the word feature can be used. The question therefore to be considered is whether the words 'Langbrook' and 'Langrock' are confusingly similar and when we put the marks in action. They are clearly of confusingly similarity. In both sound and appearance they are very much alike and I am convinced that the use of both on the same goods would tend to produce confusion."

In STANCO INCORPORATED v. BECKER PRODUCTS CORPORATION, Opposition No. 12,662, decision rendered December 23, 1935, (159 Ms. Dec. 531), *First Assistant Commissioner Spencer* held that Becker Products Corporation, (Kotodam Corporation of America, by change of name) of South Bend, Ind., is entitled to registration of the notation "KoToFoam" as a trade-mark for a fabric cleaner, notwithstanding the prior adoption and use by Stanco Incorporated, of New York City, N. Y., of the term "Kote" as a trade-mark for white mineral oil and lubricating oil.

The ground of the decision is that the goods are not of the same descriptive properties.

In his decision the First Assistant Commissioner referred to his holding in *Meredith Publishing Company* v. *O. M. Scott & Sons Co.*, 458 O. G. 2, where it was held that if the goods of the respective parties are not of the same descriptive properties, the opposition must be dismissed, and said:

"* * * I am constrained to disagree with the Examiner and to hold that a liquid cleaning compound suitable for use on fabrics, on the one hand, and white mineral oil and lubricating oil, on the other, are goods of different descriptive properties. The applicant's cleaner is adapted for use on rugs, carpets, upholstery, chairs, sofas, portieres, drapes, table covers, divans, lounges, rockers, automobile interiors, wearing apparel, office, store, and hotel furnishings. The opposer's product is a concentrated liquid adapted to be mixed with the fuel of internal combustion engines in order to lubricate the upper motor parts such as the pistons and cylinder walls."

He further said:

"So far as I can see, the only instance where the goods would ever find any common field of employment would be in conjunction with automobiles and the mere fact that two products can both be used on an article as large and complex as an automobile is not, to my mind, any reason for concluding that they are of the same descriptive properties. I do not see how it is logical to form a general definition for liquid cleaners for fabrics and lubricating oil for motors and, therefore, I do not see how, under controlling decisions, some of which follow, they are possess the same descriptive properties."

In SEARS, ROEBUCK AND CO. v. ALLIED BATTERY CORPORATION, Opposition No. 12,502, decision rendered December 24, 1935, (159 Ms. Dec. 532), *First Assistant Commissioner Spencer* held that Allied Battery Corporation, of Dayton, Ohio, is entitled to register a trade-mark consisting of the word "Allied" with an outline map of the United States in the background and the expression "COAST TO COAST" thereabeneath, notwithstanding the prior use by Sears, Roebuck and Co., of Chicago, Ill., of the words "CROSS COUNTRY" alone and in combination with an outline map of the United States, if applicant would disclaim the outline map.

In his decision the First Assistant Commissioner said:

"If the outline map is disclaimed from the applicant's first notation, as it is proposed to do, the remaining indicia comprise the word 'Allied' and the expression 'COAST TO COAST'. In my opinion, there is no confusing similarity between this remaining notation and either of the opposer's marks. In my recent decision in the case of *Sears, Roebuck and Co.* v. *Malcolm E. Wiles*, 159 Ms. D. 510, I held that the notations 'CROSS COUNTRY' and 'COAST-2-COAST' are dissimilar. I see no reason for departing from this holding in the instant case. With respect to the marks 'COAST TO COAST' and 'ALLSTATE' I find them even more dissimilar than the others, and therefore I am compelled to conclude that there is no similarity in either instance."

In GENERAL BAKING COMPANY v. MAYFLOWER MILLS, Opposition No. 12,151, decision rendered December 26, 1935, (159 Ms. Dec. 533), *Assistant Commissioner Fraser* held that Mayflower Mills, of Fort Wayne, Ind., is not entitled to register the words "Bond Brand Whole Wheat Flour," with the words other than "Bond" disclaimed.

In his decision he set out the proceedings in which it appears that applicant had sought to place its mark under the ten-year proviso and after some proceedings the Examiner of Interferences had sustained the opposition, based upon the use by General Baking Company, of New York City, N. Y., of the word "Bond" as a trade-mark for bread.

He then, after noting the arguments relating to the question of jurisdiction of the appeal, said:

"In the instant case, however, there is a reason to which neither the opposer nor the Examiner has referred that is in my opinion a conclusive bar to the registration of applicant's mark, so far as the present proceeding is concerned, under any provision of the Act. In the application as originally filed use of the mark in applicant's business was alleged to have been continuous since January 1, 1894. When the amendment was filed, as previously noted, this statement was canceled, and all that then remained was a claim of use 'for ten years next preceding February 20, 1905.' Hence the application as it now stands seeks registration of a trade-mark concerning which no present use is alleged, nor any use since February 20, 1905. It seems too obvious for discussion that even in the absence of opposition such an application is fatally defective, and that upon this ground alone registration must necessarily be denied."

He further said:

"Upon the merits the Examiner of trade-mark interferences held in his first decision that applicant had failed to establish a technical trade-mark use of its mark at any time prior to opposer's date of first use, and from that decision there was no appeal. In his second decision, from which this appeal is taken, he held that applicant could not qualify under the ten-year proviso of the Trade-Mark Act; and for the reasons clearly and fully set forth in the decision, I think that holding is amply warranted."

In HYVIS OILS, INC., v. PETROLEUM PRODUCTS STORAGE COMPANY, Cancellation No. 2,746, decision rendered December 30, 1935, (159 Ms. Dec. 536), *First Assistant Commissioner Spencer* held that Petroleum Products Storage Company, of New South Memphis, Tenn., was not entitled to register, under the Act of 1905, the term "HIGHTIRES" as a trade-mark for oils and greases, in view of the prior adoption and use by Hyvis Oils, Inc., of Warren, Pa., of the term "HyVis" as a trade-mark for the same goods and that the registration which the former had obtained should be cancelled.

In his decision, after referring to a disclaimer filed in connection with the registration of the term "HyVis" in which it was stated that it was not intended that the registration of the mark "HyVis" should cover any established commercial term, the First Assistant Commissioner said:

"In my opinion the Examiner erred in considering that in view of this disclaimer the petitioner has no right to object to the registration of the notation 'HIGHTIRES'. In the first place, the petitioner merely disclaimed the use of established commercial terms and did not disclaim 'HIGHTIRES' the term here involved. In view of that fact I cannot see that the disclaimer is particularly relevant in this proceeding."

With reference to the similarity of the marks, he said:

"Turning to the marks themselves, 'HyVis' and 'HIGHTIRES' used on identical goods are to my mind confusingly similar. The goods involved are practically always bought by word of mouth and the similarity of sound between the two words is paramount importance. That 'HyVis' and 'HIGHTIRES' sound alike cannot be denied. Under the circumstances I believe that the petitioner has shown the kind and amount of damage required by the statutes, and that the relief prayed for should be granted."

In LEVER BROTHERS COMPANY v. BUTLER MANUFACTURING COMPANY, Opposition No. 13,859, decision rendered December 30, 1935, (159 Ms. Dec. 537), *First Assistant Commissioner Spencer* held that Butler Manufacturing Company, of Kansas City, Mo., is entitled to register the notation "Lustriux" for use on dry cleaning systems, notwithstanding the prior adoption and use by Lever Brothers Company, of Cambridge, Mass., of the term "LUX" as a trade-mark for soaps.

The ground of the decision is that the goods are not of the same descriptive properties.

With reference to that question the First Assistant Commissioner said:

"It is undoubtedly true that both goods are used for the same general purpose, which may be termed cleaning. Beyond this, however, I am unable to conceive any points of similarity between them. Physically they are totally unlike; in price there is no comparison; they are sold to different classes of purchasers; one is bought casually in the general store or the grocery by the housewife and the other is a costly installation bought only by a man who intends to enter or is already engaged in, the cleaning business. In view of these considerations, I cannot conceive any confusion resulting from the concurrent use of the same mark upon these respective goods. The possibility of any such confusion taking place is too remote, too conjectural to be dealt with in these proceedings."

He then, after noting that the Court of Customs and Patent Appeals had once held that if there was a likelihood of confusion arising from the concurrent sale of the goods of an applicant and the opposer the goods must necessarily be of the same descriptive properties, said:

"But in my decision in the case of *Meredith Publishing Co.* v. *O. M. Scott & Sons Co.*, 458 O. G. 3; 26 U. S. Pat. Q. 21; 28 T. M. Rep. 474, I endeavored to point out the inapplicability of a test of this kind when applied to a set of facts such as that here involved. In my opinion if the goods are not of the same descriptive properties an opposition must be dismissed regardless of confusion, likely or actual. Similarly, if the notations are not confusingly similar, an opposition must be dismissed irrespective of confusion."

In GENERAL MILLS, INC., v. RUDOLPH J. FREED, Opposition No. 13,847, decision rendered December 30, 1935, (159 Ms. Dec. 538), *First Assistant Commissioner Spencer* held that Rudolph J. Freed, of Los Angeles, Calif., is entitled to register the notation "SURE-DOU" as a trade-mark for dextrinized and gelatinized starches for retaining moisture in all bakery products, notwithstanding the registration

by General Mills, Inc., of Minneapolis, Minn., of a series of marks including the word "SURE", such as "SUREFAT" for poultry food, "SURELIVE" for baby chick food, etc.

The ground of the decision is that the goods of the respective parties are not of the same descriptive properties.

With reference to this question, the First Assistant Commissioner said:

"However, I am certainly not prepared to hold that all goods that can be traced to a single source of supply constitute goods of the same descriptive properties. It would be equally fallacious to say that all goods made of wood or of steel or of any other single substance are goods of the same descriptive properties. Beyond the fact that they come from the same raw material source, and that for such reason a member of the purchasing public with this knowledge at hand might conceivably be led to believe that they emanated from a single source of manufacture, I can see no ground for holding that they possess the same descriptive properties. I know of no general definition that properly includes a substance for retaining moisture in bakery products, on the one hand, and stock and poultry food on the other. To my mind they cannot properly be categorized together."

IN KELLOGG COMPANY v. GENERAL MILLS, INC., Cancellation No. 2,668, decision rendered December 31, 1935, (159 Ms. Dec. 640), *Assistant Commissioner Fraser* held that General Mills, Inc., of Minneapolis, Minn., is entitled to register the term "BISKIES" as a trade-mark for biscuit flour, notwithstanding the registration by Kellogg Company, of Battle Creek, Mich., of the mark containing the word "KRISPIES" as a trade-mark for cereal breakfast foods and that the petition to cancel the registration of the General Mills, Inc., was properly denied.

In his decision he noted that the registration pleaded in the petition for cancellation was not for the single word "KRISPIES" but for the composite mark "CORN KRISPIES" and it did not appear that petitioner had ever used the word "KRISPIES" alone as a trade-mark for any of its products.

He then said:

"The question then is, will the concurrent use of 'BISKIES' on biscuit flour, and 'CORN KRISPIES' on cereal breakfast food, confuse purchasers and thereby damage petitioner? I am clearly of the opinion that there is no reasonable likelihood of such confusion, and that the decision appealed from should be affirmed."

He then referred to the decision in *Yeastles Products, Inc.*, v. *General Mills, Inc.*, 77 Fed. (2d) 328, 22 C. C. P. A. 1215, in which the words "YEASTIES" and "WHEATIES" were held not confusingly similar, and, after quoting from that decision, said:

"So here, the only similarity between registrant's mark and petitioner's lies in the audio 'ies' and the vowel sound of the syllables 'kris' and 'bis.' Also the two marks, viewed in their entireties, convey wholly different meanings. 'CORN KRISPIES' clearly suggests a corn product having the quality of being crisp, while 'BISKIES,' especially when applied to a biscuit flour, just as clearly suggests biscuits. Moreover, assuming the two articles to possess the same descriptive properties, it is quite manifest that their specific differences are much greater than were those of the goods considered in the cited case, which fact must, of course, be given some weight in passing upon the question of probable confusion."

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 28, 1936

[Vol. 462. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 389,967. SOCIÉTÉ DES USINES CHIMIQUES RHONE-POULENC, Paris, France. Filed Jan. 8, 1935.

RHOSILLE

For Sheets Consisting Chiefly of Acetate of Cellulose, Which Upon Exposure to Heat Form a Plastic Material and Parts of Such Sheets.

Claims use since July 12, 1934.

CLASS 2

Receptacles

Ser. No. 389,359. HUPP, BARNES AND OPIE, INC., Pittsburgh, Pa. Filed Sept. 16, 1935.

VAL-U

For Paper Bags.

Claims use since July 1, 1933.

Ser. No. 372,295. CONTAINER CORPORATION OF AMERICA, Chicago, Ill. Filed Dec. 9, 1935.

The drawing is lined for brown.

For Paper Board Boxes and Shipping Cartons.

Claims use since Nov. 22, 1935.

Ser. No. 372,667. GRAY AND TERRY MANUFACTURING CO., Kansas City, Mo. Filed Dec. 16, 1935.

FOLDO

For Baskets Constructed of Canvas and Steel and Fashioned to Collapse to a Flat Condition When Not in Use.

Claims use since Nov. 16, 1935.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 368,127. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Aug. 9, 1935.

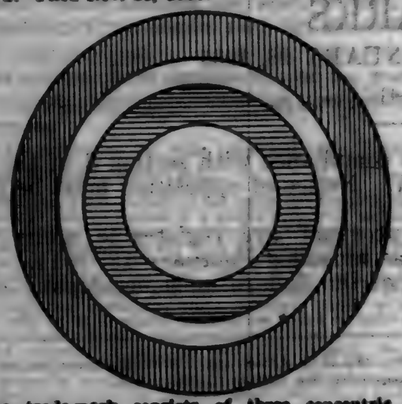
Lilac

IMPERIAL

No claim is made to the word "Lilac" apart from the mark.

For Toilet Soap.

Claims use since Jan. 31, 1910.



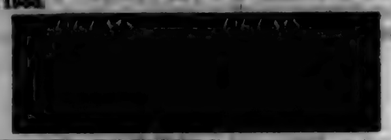
Ser. No. 370,013. ROYAL SOAP & CHEMICAL COMPANY, Los Angeles, Calif. Filed Oct. 4, 1935.

LOYAL

For Household Cleanser, Mechanic's Paste Soap, Metal and Glass Polish, and Mechanic's Soap for the Hands.

Claims use since July 16, 1931.

Ser. No. 371,887. COLUMBIAN RUBB COMPANY, Auburn, N. Y. Filed Nov. 15, 1935.



The trade-mark consists of three concentric bands colored red, white, and blue, the drawing being lined to denote these three colors.

For Bonded Buffers or Articles Composed Essentially of Vegetable Fibred Used for Buffing Purposes and for Supporting Abrasive Materials.

Claims use since May 5, 1935.

Ser. No. 372,000. DURMA, INC., Detroit, Mich. Filed Nov. 29, 1935.

The drawing is lined for red.

For Dry Cleaning Powder.

Claims use since June 1, 1935.

Ser. No. 372,413. GOLDEN GLINT CO., INC., doing business as Old Smoothie Company, Seattle, Wash. Filed Dec. 9, 1935.

OLD SMOOTHIE

For Brushless Shaving Cream.

Claims use since Nov. 20, 1935.

Ser. No. 372,429. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Dec. 9, 1935.

FLOROTONE

For Soap.

Claims use since Sept. 20, 1935.

Ser. No. 372,491. STANDARD OIL DEVELOPMENT COMPANY, Linden, N. J. Filed Dec. 10, 1935.

VISTANEX

For Waterless Cleaning Compound for Industrial and Household Uses.

Claims use since July 19, 1933.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 365,431. FOUR STAR LABORATORY, Chicago, Ill. Filed May 27, 1935.

FOUR

★ ★ ★ ★

STAR

IGNITION-DRY

No claim is made for the words "Ignition Dry" apart from the mark as shown.

For Coating Liquids for Protecting Ignition Wires, Spark Plugs, Distributor Caps and Coils.

Claims use since September, 1935.

Ser. No. 365,952. JOHN HEMMELGN, doing business as Jo-Ro Products, New York, N. Y. Filed July 5, 1935.

CHECK-FALL

For Liquid Hair and Scalp Preparations.

Claims use since June 1, 1915.

Ser. No. 367,888. COMMERCIAL LABORATORIES INC., Newark, N. Y. Filed July 31, 1935.

NEMO

For Cocoanut Oil Shampoo, Almond Cream, After-Shaving Lotion, Skin Freshener, Bay Rum, Cocoa Butter Cream, Cleansing Cold Cream, Liquefying Cold Cream, Turtle Oil Cream, Boiling Massage Cream, Vanishing Cream, Liquid Cleansing Cream, Tissue Cream, Dental Cream, Face Powder, Hair Dressing, Hair Tonic, Hair Curling Fluid, Hair Wave Powder, Rose Lotion, Cucumber Lotion, Lemon Lotion, Perfumes, Pomade, Face Cleanser, Lemon and Henna Rinse, Rose Oil, Toilet Water, Witch Hazel, and Talcum Powder.

Claims use since April, 1933.

Ser. No. 368,077. LYDIA O'LEARY, INC., doing business as Lydia O'Leary, New York, N. Y. Filed Aug. 7, 1935.

LIFE TONE

For Preparation Used by Morticians for Embalming Purposes.

Claims use since Apr. 20, 1933.

Ser. No. 369,737. PURE DRUG PRODUCTS, INC., Jacksonville, Fla. Filed Sept. 27, 1935.

CoLax

For Medicine for Use as a Treatment for Colds, Headaches, and Fevers.

Claims use since June 5, 1935.

Ser. No. 370,303. CHARLES ENTERPRISES, INC., Evansville, Ind. Filed Oct. 10, 1935.

Nyla COSMETICS

No claim is made to the word "Cosmetics" apart from the mark shown.

For Cosmetics—Namely, Cleansing Creams, Tissue Creams, Lotions, Rouges, Powders, and Face Creams.

Claims use since Oct. 12, 1934.

Ser. No. 371,598. HENRI HARRIS, INC., New York, N. Y. Filed Nov. 2, 1935.

ETOILE FILANTE

For Perfumes, Toilet Water, Sachet.

Claims use since Oct. 3, 1935.

Ser. No. 371,800. THE [illegible] COMPANY, Cincinnati, Ohio. Filed Nov. 14, 1935.

THEBITAL

For Preparation for the Treatment of Cardiac Ailments.

Claims use since Oct. 29, 1935.

Ser. No. 371,802. AMERICAN CHEMICAL & CHEMICAL CORPORATION, New York, N. Y. Filed Nov. 14, 1935.

NO-ODOROL

For [illegible] Finishing of Textiles.

Claims use since November, 1935.

462 O. G.—46

Ser. No. 371,831. NEW SCALP MEDICINE COMPANY, La Feliette, Tenn. Filed Nov. 21, 1935.

SCALF'S INDIAN RIVER

For Vegetable Compound Tonic for General Use, Liniment for External Use, Catarrh Balm, Hair Tonic and Dye, Complexion Compound—Namely, a Skin Lotion, Cough Syrup, Skin Ointment, Astringent Compound for Internal Use as a Medicine, Corn Salve, and Liquid Preparation for Venereal Diseases.

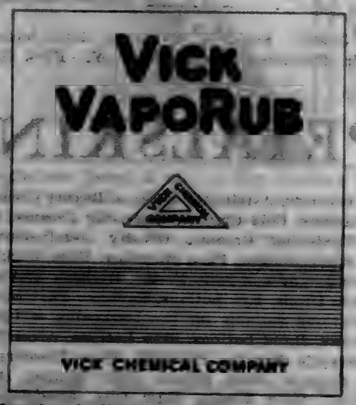
Claims use since 1905.

Ser. No. 371,866. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Nov. 23, 1935.

Zephiran

For Antiseptic and Disinfectant.

Claims use since Aug. 1, 1935.



Ser. No. 371,870. MARTIN SENNIS COMPANY, Newark, N. J. Filed Nov. 23, 1935.

ALBATAN

For Tannage for White Leather.

Claims use since June, 1904.

Ser. No. 371,895. VICK CHEMICAL COMPANY, Philadelphia, Pa. Filed Nov. 22, 1935.

[ACT OF MARCH 19, 1920, SEC. 1 (b)]

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION

332,055. (CLASS 31. FILTERS AND REFRIGERATORS.) THE DELCO MANUFACTURING COMPANY, Dayton, Ohio. Filed July 12, 1934. Serial No. 353,002.

Free-Cube

For Ice Trays Used as Refrigerating Units. Claims use since June 15, 1933.

332,056. (CLASS 42. THREAD AND YARN.) NORTH AMERICAN RAYON CORPORATION, New York, N. Y. Filed Aug. 3, 1934. Serial No. 354,628.

Foulardine

For Thread and/or Yarn of Regenerated Cellulose. Claims use since July 20, 1934.

332,007. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CELANESE CORPORATION OF AMERICA, New York, N. Y. Filed Oct. 31, 1934. Serial No. 357,708.

CELANO

For Piece Goods Made Wholly or Partially of Cellulose Derivatives.
Claims use since Oct. 29, 1934.

332,058. (CLASS 48. THREAD AND YARN.) BERNHARD HEMINWAY COMPANY, New York, N. Y. Filed Dec. 22, 1934. Serial No. 359,562.

Shanghai Shag

For Yarn.
Claims use since Dec. 18, 1934.

332,059. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) OLD BERGEN DISTILLERIES, INC., North Bergen, N. J. Filed Feb. 21, 1935. Serial No. 361,039.

OLD BERGEN

For Apple Jack.
Claims use since Dec. 14, 1934.

332,060. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) STEELCRAFT PISTON RING COMPANY, Detroit, Mich. Filed Mar. 30, 1935. Serial No. 362,241.

STEELCRAFT

For Piston Rings.
Claims use since July 1, 1932.

332,061. (CLASS 1. RAW OR PARTLY PREPARED MATERIALS.) LIEBMAN & MOLO, Dubuque, Iowa. Filed May 13, 1935. Serial No. 364,231.

MARQUETTE

For Coal.
Claims use since Oct. 18, 1934.

332,062. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) NAT D. GELBERMS, doing business as Sunset Distilling Company, Not Inc., Chicago, Ill. Filed June 12, 1935. Serial No. 366,062.

MANKATO CLUB

For Cordials, Sloe Gin, Liqueurs, Rum, Brandy, Kummel, and Whisky.
Claims use since Dec. 16, 1914.

332,063. (CLASS 12. CONSTRUCTION MATERIALS.) HOLSMAN & SON, Elkhart, Ind. Filed July 8, 1935. Serial No. 367,871.

LIK-ROK

For a Solution to Accelerate and Harden Ordinary Concrete.
Claims use since Oct. 15, 1934.

332,064. (CLASS 50. PRINTS AND PUBLICATIONS.) SANTA CLAUS, INCORPORATED, Chicago, Ill., and Santa Claus, Ind. Filed July 20, 1935. Serial No. 367,811.

SANTA CLAUS

For Printed and Embossed Greeting Cards, and Printed and Embossed Decorative Seals and Stamps to Be Used Upon Gift Packages and Envelopes.
Claims use since June 1, 1932.

332,065. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE F. GLEISCHITZ SONS CO., Cincinnati, Ohio. Filed Oct. 19, 1935. Serial No. 370,888.

Laceless

For Inflated Game Ball.
Claims use since June, 1926.

332,066. (CLASS 46. BEVERAGES, NONALCOHOLIC.) JOE L. TRAVER, Birmingham, Ala. Filed Nov. 8, 1935. Serial No. 371,224.

Triple Dry

For Nonalcoholic Maltless Beverage Sold as a Soft Drink, and Syrups and Extracts for Making the Same.
Claims use since Jan. 1, 1932.

332,067. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAMUEL HERMAN & CO., INC., New York, N. Y. Filed Nov. 14, 1935. Serial No. 371,541.

KrosnéLace

For Lace Piece Goods.
Claims use since March, 1934.

332,068. (CLASS 48. THREAD AND YARN.) BERNHARD ULMANN CO. INC., New York, N. Y. Filed Nov. 19, 1935. Serial No. 371,745.

STANDARD

For Yarns for Art Needlework.
Claims use since 1923.

332,069. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE GRIFFITH LABORATORIES, INC., Chicago, Ill. Filed Nov. 27, 1935. Serial No. 372,054.

"Savory"
MOCK CHICKEN LEG DRESSING

For Flavoring Composition and Dressing to Be Added to Ground Meats.
Claims use since August, 1934.

332,070. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) DEPERDUSSIN PERIODU, doing business as Scientific Model Airplane Co., Newark, N. J. Filed Dec. 5, 1935. Serial No. 372,276.

HI-FLYER

For Toys—Namely, Model Aeroplanes, Motorboats, and Automobiles.
Claims use since 1931.

332,071. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) KRAUS BROS. & CO., INC., New York, N. Y. Filed Dec. 14, 1935. Serial No. 372,906.

BROOKS
FINEST DISTILLED
LONDON DRY GIN

For Whiskies, Gins, and Alcoholic Cordials.
Claims use since March, 1934.

TRADE-MARK REGISTRATIONS RENEWED

106,274. VETERINARY REMEDIES FOR CERTAIN NAMED DISEASES. Registered October 13, 1915. WELLS MEDICINE COMPANY. Renewed October 13, 1935, to W. B. Wilson, doing business as Wells Medicine Company, La Fayette, Ind., successor.

107,337. RUBBER BOOTS AND SHOES, RUBBER OVERSHOES, AND SHOES COMPRISING FABRIC UPPERS VULCANIZED TO RUBBER SOLES. Registered November 30, 1915. HOOD RUBBER CO., Watertown, Mass. Renewed November 23, 1935, to Hood Rubber Company, Inc., Wilmington, Del., a corporation of Delaware, assignee.

107,456. A PREPARATION OF PARTICULAR SERVICE IN THE DIETETIC TREATMENT OF WASTING DISEASES. Registered November 30, 1915. SCHERING EMULSION COMPANY, New York, N. Y., a corporation of New York. Renewed November 30, 1935.

107,642. A PHARMACEUTICAL PRODUCT FOR USE IN CERTAIN NAMED AILMENTS. Registered December 14, 1915. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland, a corporation of Switzerland. Renewed December 14, 1935.

107,643. A PHARMACEUTICAL PRODUCT USED FOR CERTAIN NAMED AILMENTS. Registered December 14, 1915. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland, a corporation of Switzerland. Renewed December 14, 1935.

107,706. CONFECTIONERS' SUGAR. Registered December 21, 1915. THE FRANKLIN SUGAR REFINING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Renewed December 21, 1935.

107,778. PREPARATION FOR LUNG, THROAT, AND INTESTINAL DISEASES. Registered December 28, 1915. THE DELSON CHEMICAL CO., INC., New York, N. Y., a corporation of New York. Renewed December 28, 1935.

107,789. CHEWING-GUM. Registered December 28, 1915. L. P. LARSON JR. COMPANY. Renewed December 28, 1935, to Wm. Wrigley Jr. Company, Chicago, Ill., a corporation of Delaware, assignee by mesne assignments.

107,797. LUBRICATING-OILS. Registered December 28, 1915. UNION OIL COMPANY OF CALIFORNIA, San Francisco, Calif. Renewed December 28, 1935, to Union Oil Company of California, Los Angeles, Calif., a corporation of California.

107,872. PAPER-BOARD. Registered December 28, 1915. THE WEST JERSEY PAPER MANUFACTURING COMPANY, Camden, N. J., a corporation of New Jersey. Renewed December 28, 1935.

107,873. PAPER-BOARD. Registered December 28, 1915. THE WEST JERSEY PAPER MANUFACTURING COMPANY, Camden, N. J., a corporation of New Jersey. Renewed December 28, 1935.

107,881. MEDICINAL TONIC. Registered January 4, 1916. ADELIA G. DORSEY, Lockport, La. Renewed January 4, 1936.

107,930. OLIVE-OIL. Registered January 4, 1916. MARIACOS IMPORTING CO. Renewed January 4, 1936, to Mallars & Company, Chicago, Ill., a corporation of Illinois, assignee.

107,989. FLY-KILLERS OR HAND DEVICES FOR KILLING FLIES AND OTHER INSECTS. Registered January 4, 1916. UNITED STATES WIRE MAT COMPANY. Renewed January 4, 1936, to United States Manufacturing Corporation, Decatur, Ill., a corporation of Illinois, by change of name.

108,000. WOOL AND COTTON CRASH PIECE GOODS. Registered January 18, 1916. N. ERLANGER, BLUMGART & Co., New York, N. Y., a corporation of New York. Renewed January 18, 1936.

108,105. DISINFECTANTS AND INSECTICIDES. Registered January 18, 1916. WEST DISINFECTING COMPANY, New York, N. Y. Renewed January 18, 1936, to West Disinfecting Company, Long Island City, N. Y., a corporation of New York.

108,206. LEATHER BELTING. Registered January 25, 1916. GEORGE RAHMANN & Co. Renewed January 25, 1936, to Arthur H. Rahmann, doing business as Geo. Rahmann & Co., New York, N. Y., successor.

108,219. COTTON PIECE GOODS. Registered January 25, 1916. WILMERDING & BISSEL, New York, N. Y. Renewed January 25, 1936, to Pemona Manufacturing Company, Pemona, N. C., a corporation of North Carolina, assignee by mesne assignments.

108,328. PRINTING-PRESSES. Registered February 1, 1916. THE BABCOCK PRINTING PRESS MANUFACTURING COMPANY, New London, Conn., a corporation of Connecticut. Renewed February 1, 1936.

108,440. CERTAIN NAMED MEASURING AND SCIENTIFIC APPLIANCES. Registered February 8, 1916. NITSCHE & GÜNTHER OPTISCHE WERKE, Rathenow, Germany. Renewed February 8, 1936, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

108,519. READY-MIXED PAINT. Registered February 15, 1916. OLIVER JOHNSON & COMPANY, INC., Providence, R. I., a corporation of Rhode Island. Renewed February 15, 1936.

108,820. READY-MIXED PAINT. Registered February 15, 1916. OLIVER JOHNSON & COMPANY, INC., Providence, R. I., a corporation of Rhode Island. Renewed February 15, 1936.

108,825. BANDAGING MATERIAL. Registered February 15, 1916. ADOLPH LINDNER GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Berlin, Germany. Renewed February 15, 1936, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

108,832. WELDING-RODS. Registered February 15, 1916. OXWELD ACETYLENE COMPANY, Chicago, Ill. Renewed February 15, 1936, to Oxweld Acetylene Company, New York, N. Y., a corporation of West Virginia.

108,867. WATERPROOF AND WEATHERPROOF BUILDING AND ROOFING MATERIAL MADE OF PAPER OR FELT. Registered February 22, 1916. THE PARAFFINE PAINT COMPANY. Renewed February 22, 1936, to The Paraffine Paint Company, San Francisco, Calif., a corporation of Delaware, assignee by mesne assignments.

108,791. MECHANICAL CHECK-PROTECTORS. Registered February 29, 1916. THE HEDMAN MANUFACTURING COMPANY, Chicago, Ill., a corporation of Illinois. Renewed February 29, 1936.

108,865. THE ALLOYS AND ALLOYING METALS USED IN THE MANUFACTURE OF SPECIAL STEELS. Registered February 29, 1916. ELECTRO METALLURGICAL COMPANY, Glen Ferris, W. Va., and Niagara Falls, N. Y. Renewed February 29, 1936, to Electro Metallurgical Company, New York, N. Y., a corporation of West Virginia.

108,955. STOCKINGS. Registered March 7, 1916. THE SCHOLL MANUFACTURING COMPANY. Renewed March 7, 1936, to The Scholl Mfg. Co. Inc., Chicago, Ill., a corporation of New York, by change of name.

108,964. LEMONS, ORANGES, AND GRAPE-FRUIT. Registered March 14, 1916. CHARTER OAK CITRUS ASSOCIATION, Charter Oak, Calif., a corporation of California. Renewed March 14, 1936.

108,965. LEMONS, ORANGES, AND GRAPE-FRUIT. Registered March 14, 1916. CHARTER OAK CITRUS ASSOCIATION, Charter Oak, Calif., a corporation of California. Renewed March 14, 1936.

109,060. CANNED FISH AND CANNED SARDINES. Registered March 21, 1916. CHR. BJELLAND & CO., INC., New York, N. Y., a corporation of New York. Renewed March 21, 1936.

109,128. LEATHER BELTING. Registered March 21, 1916. GEO. RAHMANN & CO. Renewed March 21, 1936, to Arthur H. Rahmann, doing business as Geo. Rahmann & Co., New York, N. Y., successor.

109,160. A REMEDY FOR GOUTY AND RHEUMATIC DISEASES AND NEURALGIC AFFECTIONS. Registered March 21, 1916. FARBWERKE VORM. MEISTER LUCIUS & BRÜNING, Hochst-on-Main, Germany. Renewed March 21, 1936, to The Chemical Foundation, Incorporated, Wilmington, Del., and New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

109,202. LEMONS, ORANGES, AND GRAPE-FRUIT. Registered March 28, 1916. CHARTER OAK CITRUS ASSOCIATION, Charter Oak, Calif., a corporation of California. Renewed March 28, 1936.

109,307. IRON AND STEEL SHEETS AND PLATES AND TIN AND TERNE PLATES. Registered March 28, 1916. AMERICAN SHEET AND TIN PLATE COMPANY, Pittsburgh, Pa., a corporation of New Jersey. Renewed March 28, 1936.

108,349. HAIR-POMADE. Registered April 4, 1916. ROSELLE B. HAMILTON. Renewed April 4, 1936, to Wilhelmina L. D. Clarke, New York, N. Y., successor.

109,484. PORTLAND CEMENT. Registered April 11, 1916. SANTA CRUZ PORTLAND CEMENT COMPANY, San Francisco, Calif., a corporation of California. Renewed April 11, 1936.

109,538. TEXTILE HOSE. Registered April 11, 1916. A. & M. KARAGHEUSIAN. Renewed April 11, 1936, to A. & M. Karagheusian, Inc., New York, N. Y., a corporation of Delaware, successor.

109,621. SELF-RISING WHEAT-FLOUR. Registered April 11, 1916. THE TWIN FALLS MILLING & ELEVATOR CO., Twin Falls, Idaho, and Denver, Colo. Renewed April 11, 1936, to The Colorado Milling & Elevator Company, Denver, Colo., a corporation of Colorado, assignee.

109,623. WHEAT-FLOUR. Registered April 11, 1916. THE WILSON MILLING & ELEVATOR CO., Wilson, Kans., and Denver, Colo. Renewed April 11, 1936, to The Colorado Milling & Elevator Company, Denver, Colo., a corporation of Colorado, assignee.

109,624. WHEAT-FLOUR. Registered April 11, 1916. THE WILSON MILLING & ELEVATOR CO., Wilson, Kans., and Denver, Colo. Renewed April 11, 1936, to The Colorado Milling & Elevator Company, Denver, Colo., a corporation of Colorado, assignee.

109,627. WHITE WRITING-PAPER. Registered April 11, 1916. AMERICAN LITHOGRAPHING & PRINTING COMPANY, Des Moines, Iowa, a corporation of Iowa. Renewed April 11, 1936.

109,667. ROUGE. Registered April 11, 1916. RICHARD HUDNUT, New York, N. Y., a corporation of New York. Renewed April 11, 1936.

109,715. CERTAIN NAMED THREADS, IN SKEINS AND BALLS, FOR EMBROIDERY. Registered April 18, 1916. CAMPBELL, MEYERCORD & JACOBSON, New York, N. Y. Renewed April 18, 1936, to Peri-Lusta, Limited, Big Mill, Mill Street, Leek, England, a corporation of Great Britain, assignee.

109,843. LEATHER BELTING. Registered April 18, 1916. GEO. RAHMANN & CO. Renewed April 18, 1936, to Arthur H. Rahmann, doing business as Geo. Rahmann & Co., New York, N. Y., successor.

109,879. CERTAIN NAMED FOODS. Registered April 18, 1916. STROHMEYER & ARPE COMPANY, New York, N. Y., a corporation of New York. Renewed April 18, 1936.

109,896. TOBIES. Registered April 25, 1916. INDUSTRIAL CIGAR CO., Pittsburgh, Pa. Renewed April 25, 1936, to Industrial Cigar Company, Pittsburgh, Pa., and Barnesville, Ohio, a corporation of Pennsylvania.

110,028. COTTON, LINEN, SILK, AND WOOLEN PIECE GOODS. Registered May 2, 1916. NASHAWENA MILLS, New Bedford, Mass., a corporation of Massachusetts. Renewed May 2, 1936.

110,034. LOCKS AND LOCK-DIALS. Registered May 2, 1916. THE NYSSA BANK LOCK COMPANY, assignee of William T. Bepham, Norwood, Ohio. Renewed May 2, 1936, to The Mosler Lock Company, Covington, Ky., a corporation of Ohio, assignee by mesne assignments.

110,105. CERTAIN NAMED LEATHER GOODS. Registered May 2, 1916. AMITY LEATHER PRODUCTS CO., as assignee of Robert H. Rolfs. Renewed May 2, 1936, to Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin, assignee.

110,128. SELF-RISING WHEAT-FLOUR. Registered May 2, 1916. THE HUSLER MILLING & ELEVATOR CO., Salt Lake City, Utah. Renewed May 2, 1936, to The Colorado Milling & Elevator Company, Denver, Colo., a corporation of Colorado, assignee.

110,185. WHEAT FLOUR. Registered May 2, 1916. THE LOVELAND MILLING & ELEVATOR COMPANY, Loveland, Colo. Renewed May 2, 1936, to The Colorado Milling & Elevator Company, Denver, Colo., a corporation of Colorado, assignee.

110,210. A PREPARATION FOR CANCERS, ULCERS, AND TUMORS. Registered May 9, 1916. BENJAMIN H. GREEN, Rosemont, Ala. Renewed May 9, 1936.

110,219. PAPER TABLETS. Registered May 9, 1916. OSBORN PAPER COMPANY, Marion, Ind., a corporation of Indiana. Renewed May 9, 1936.

110,274. ORANGES, LEMONS, AND GRAPE-FRUIT. Registered May 9, 1916. CHARTER OAK CITRUS ASSOCIATION, Charter Oak, Calif., a corporation of California. Renewed May 9, 1936.

110,292. CORDUROY. Registered May 16, 1916. NEW YORK MILLS CORPORATION, New York Mills, N. Y. Renewed May 16, 1936, to New York Mills Corporation, New York, N. Y., a corporation of New York.

110,398. CERTAIN NAMED PAINTS AND PAINTERS' MATERIALS. Registered May 23, 1916. GREENSBORO-ERB BROS. Renewed May 23, 1936, to Napolin Co. Inc., New York, N. Y., a corporation of New York, by change of name.

110,410. OPTICAL LENSES. Registered May 23, 1916. THE WHITE-HAINES OPTICAL COMPANY, Columbus, Ohio, a corporation of Ohio. Renewed May 23, 1936.

110,441. CERTAIN NAMED WOVEN-WIRE FABRIC AND WIRE-CLOTH. Registered May 23, 1916. WRIGHT WIRE COMPANY, Worcester, Mass. Renewed May 23, 1936, to Wickwire Spencer Steel Company, New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

110,442. WIRE-MESH FABRIC. Registered May 23, 1916. WRIGHT WIRE COMPANY, Worcester, Mass. Renewed May 23, 1936, to Wickwire Spencer Steel Company, New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

110,468. CANNED FRUITS AND VEGETABLES. Registered May 23, 1916. THE MCCLINTOCK-TRUNKEY CO., Spokane, Wash., a corporation of Washington. Renewed May 23, 1936.

110,469. NIPPLES. Registered May 23, 1916. CHRISTIAN W. MEINECKE, New York, N. Y. Renewed May 23, 1936, to Davol Rubber Company, Providence, R. I., a corporation of Rhode Island, assignee.

110,508. TOILET-PAPER, TOWELING, AND WRAPPING-PAPER IN ROLLS AND INTERFOLDED PACKS. Registered May 30, 1916. NORTHERN PAPER MILLS, Green Bay, Wis., a corporation of Wisconsin. Renewed May 30, 1936.

110,534. COTTON DRESS FABRICS. Registered May 30, 1916. N. ERLANGER, BLUMGART & CO., New York, N. Y., a corporation of New York. Renewed May 30, 1936.

110,535. COTTON PIECE GOODS. Registered May 30, 1916. N. ERLANGER, BLUMGART & CO., New York, N. Y., a corporation of New York. Renewed May 30, 1936.

110,580. BED-SPRINGS. Registered May 30, 1916. MOORE MANUFACTURING COMPANY. Renewed May 30, 1936, to The Moore Company, Muncie, Ind., a corporation of Indiana, by change of name.

110,706. CERTAIN NAMED SEEDS. Registered June 6, 1916. WHITNEY-ECKSTEIN SEED CO., Buffalo, N. Y., a corporation of New York. Renewed June 6, 1936.

110,709. CERTAIN NAMED SEEDS. Registered June 6, 1916. WHITNEY-ECKSTEIN SEED CO., Buffalo, N. Y., a corporation of New York. Renewed June 6, 1936.

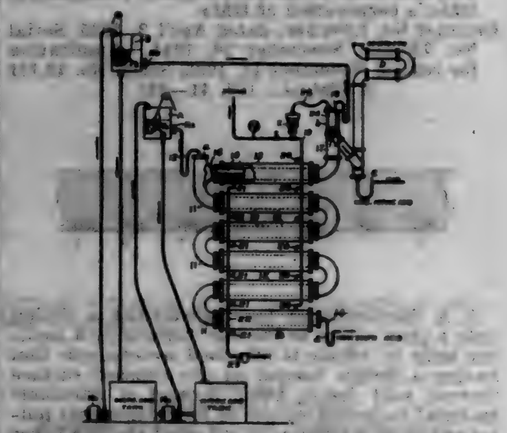
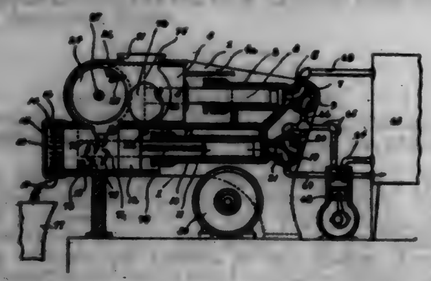
19,235
BRAKE MECHANISM
Walter H. Bacelt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Original No. 1,797,295, dated March 24, 1931, Serial No. 311,755, October 11, 1928. Application for reissue February 11, 1935, Serial No. 6,666
24 Claims. (Cl. 188—58)

1. In brake mechanism for railway trucks, the combination of a truck frame, truck brake levers, a brake cylinder carried by said frame, an equalizing lever operatively associated with said cylinder, a cylinder lever operatively connected to said equalizing lever and said brake levers, and a bracket carried by said frame upon which both said equalizing lever and said cylinder lever are movably supported.



19,236
ILLUMINATED ORNAMENTAL DEVICE FOR DECORATIVE PURPOSES
Elmer J. Graf, Roselle Park, N. J., assignor to G. B. G. Corporation, Newark, N. J., a corporation of New Jersey
Original No. 1,923,144, dated August 22, 1933, Serial No. 522,275, March 13, 1931. Application for reissue January 21, 1935, Serial No. 2,736
9 Claims. (Cl. 176—16)

1. A device of the character described, comprising a base of moldable material, a plurality of exhausted envelopes spaced apart and mechanically independent of each other and permanently embedded directly in said moldable material, filaments in said envelopes, and conductors connecting the filaments said conductors being embedded in the base.



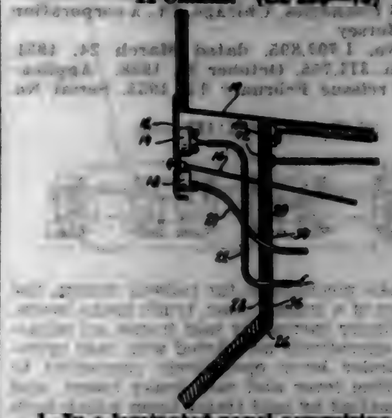
19,237
NITRIC ACID CONCENTRATION
Ingenuin Hechenbleikner, deceased, late of Charlotte, N. C., by Chemical Construction Corporation, New York, N. Y., a corporation of Delaware, assignee
Original No. 1,921,255, dated August 8, 1933, Serial No. 352,693, April 3, 1929. Application for reissue February 15, 1935, Serial No. 6,713
12 Claims. (Cl. 23—160)

8. The process of concentrating aqueous nitric acid which consists in admixing the same with a dehydrating agent in a retort chamber, in heating said retort chamber sufficiently to effect a driving-off of the nitric acid as nitric acid vapor, and of so regulating the heating of said retort chamber that the exit temperature of said nitric acid vapor has a predetermined value corresponding to the desired concentration.

24. The process of concentrating nitric acid which comprises passing a mixture of nitric acid and a dehydrating agent down through a dehydrating zone, driving off therefrom strong nitric acid vapors, passing the residual mixture still containing some nitric acid through a series of boiling vessels forming a cascade, vaporizing weak nitric acid in the cascade, and retaining all the weak nitric vapors from the boiling vessels in the system by returning them to the dehydrating zone.

19,238
FRUIT PRESS
Bruce L. McKinstry, Entiat, Wash.
Original No. 1,932,231, dated November 28, 1933, Serial No. 554,500, August 1, 1931. Application for reissue November 7, 1934, Serial No. 751,916
12 Claims. (Cl. 100—50)

4. In combination, a macerating chamber, a macerator therein, moving means for feeding fruit to said macerator, a pressing chamber com-



municating with said macerating chamber, a pressing member within said pressing chamber adapted to compress the macerated material to remove the juice therefrom, said pressing member being arranged to cut off communication between said pressing chamber and said macerating chamber during the final stages of pressing, and control means operatively interconnecting said feeding member with said pressing member.

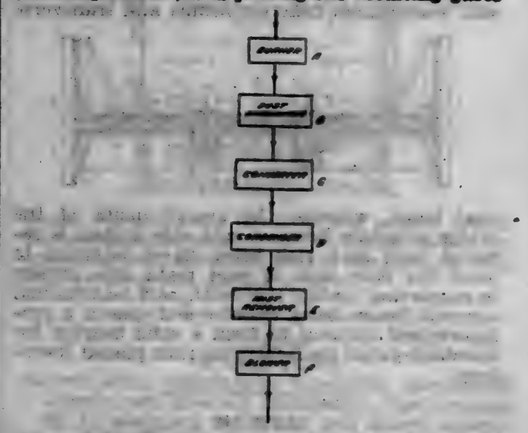
19,839
DECALCOMANIA
James F. McNutt, Cleveland, Ohio, assignor to The American Decal Corporation, Youngstown, Ohio, a corporation of Ohio
Original No. 1,996,549, dated April 2, 1935, Serial No. 755,317, November 30, 1934. Application for reissue November 12, 1935, Serial No. 49,431
8 Claims. (Cl. 41—33)

1. A decalcomania for transferring a design onto a glass object or the like comprising a backing strip to which is attached a cellulosic film having a design formed on the exposed surface thereof, said design being formed of vitrifiable material including as one of its components pulverized glass having a fusing point slightly lower than the fusing point of the surface to be decorated.

19,840
LAMINATED PANEL AND FABRICATION
Herbert J. Woodall, Detroit, Mich., assignor to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Original No. 1,945,717, dated February 6, 1934, Serial No. 535,599, January 11, 1932. Application for reissue June 10, 1935, Serial No. 25,846
11 Claims. (Cl. 20[illegible]—79)

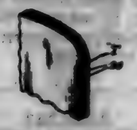
1. In a laminated panel comprising a plurality of plies secured to one another, an opening in an intermediate ply and substantially alined openings of smaller size extending through the remaining plies and a cushion insert disposed within the opening in the intermediate ply and having an opening therethrough alined with but of smaller size than the openings through the remaining plies.

PATENTS
GRANTED JANUARY 28, 1936



2,028,725
WINDOW CLEANING DEVICE
Clarence H. Caldwell, Oak Park, Ill.
Application July 21, 1933, Serial No. 681,004
3 Claims. (Cl. 15—232)

1. In a window cleaning device, a supporting block, a backing plate secured to said block, said plate having a projection on its top side, a window cleaning element adapted to be applied against the bottom side of said plate and having an end adapted for engagement with said projection, a locking member rockably carried by said device for hooking engagement with the other end of said cleaning element when rocked in one direction and when rocked in the opposite direction adapted to tension said cleaning element in position on said plate, a portion of said member being deflected out of the direction of the length thereof and between its ends to provide a handle, and a projection on said block engaged by said handle when said member is rocked to tension said element to prevent accidental release of said element.



2,028,729
SULPHURIC ACID MANUFACTURE
Cyril B. Clark, Scarsdale, N. Y., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
Application September 21, 1933, Serial No. 690,366
4 Claims. (Cl. 23—175)

2. A process of making sulphuric acid by the contact process which comprises burning sulphide ores containing relatively large amounts of impurities including halogens and arsenic under conditions such that a hot sulphur dioxide gas mixture is obtained containing gaseous halogen and arsenic compounds and iron oxide, maintaining the hot gas mixture so obtained at temperatures above 600° F. for a sufficient length of time to permit the gaseous impurities to react with suspended solid material including the iron oxide, subsequently removing dust, fume and non-volatile constituents without material reduction of gas temperature, and passing the resulting gases

through a catalyst of the vanadium type at reaction temperatures.

2,028,740
TRIMMING STRIP
Thomas Charles Devine, Bronxville, N. Y.
Application October 6, 1933, Serial No. 692,530
3 Claims. (Cl. 41—34)

1. As a new article of manufacture, a gimp for trimming furniture or other articles comprising an elongated strip of narrow flexible material, a plurality of decorative members simulating the decorative heads of upholstery tacks or nails arranged in a row on one side of the strip at predetermined intervals, and means permanently securing said members to the strip, the other side of the strip being substantially smooth to flushly engage against the surface to which the strip is to be applied, whereby said strip may be applied to furniture by relatively few and inconspicuous tacks or the like to present the same appearance as gimp attached by the usual tacks or nails having decorative heads.

2,028,741
BRIDGE CONSTRUCTION
Charles P. Disney, Toronto, Ontario, Canada
Application November 25, 1932, Serial No. 644,147
1 Claim. (Cl. 72—8)

A railway bridge structure comprising a pair of longitudinal steel side girders having deep web portions, transverse steel beams rigidly secured to the webs of said girders with the underside adjacent the bottom of said girders, a pair of longitudinal reinforced concrete beams extending between said transverse steel beams in a common horizontal plane therewith with the reinforcing members thereof terminating closely adjacent the steel cross beams, said trans-

verse steel beams having a casing of concrete forming an anchorage for the said ends of the reinforcing members of the longitudinal concrete beams, and a concrete deck slab integrally bonded with the concrete of the longitudinal beams and with the concrete casing of said transverse steel beams, said deck slab being mainly confined in a plane below the upper level of said longitudinal concrete beams and transverse

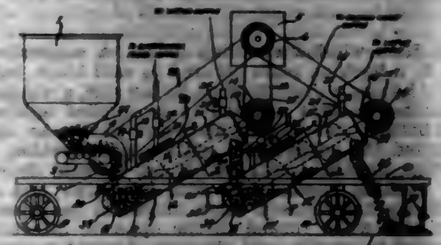
steel beam, whereby the overall depth of the bridge structure between said side girders is reduced, said deck slab being flared laterally to meet the deep web of said main side girders in supporting contact therewith, said longitudinal concrete beams being massive and spaced a predetermined distance to form a solid bearing for standard-gauge load-carrying rails placed thereover.

1,698,742
COAL FLOTATION PROCESS
Philip M. Frantz, Pueblo, Colo., assignor to The Colorado Fuel and Iron Company, Denver, Colo.
No Drawing. Application January 12, 1923, Serial No. 586,250
15 Claims. (Cl. 209—166)

1. The process of recovering coal from a coal-and-water pulp, by froth flotation, comprising adding to the coal pulp in the presence of agitation and aeration, a reagent consisting solely of a crude paraffin base petroleum oil-kerosene mixture and coal tar creosote.

1,698,743
TYPOGRAPHICAL MACHINE
Norbert Fucik, Chicago, Ill.
Application November 24, 1923, Serial No. 680,486
5 Claims. (Cl. 199—30)

1. In a typographical machine, the combination of a slide bracket, a slide bar reciprocally mounted on said bracket, a slide clamp mounted on said slide bar, a stop carried by said bracket located in the path of said clamp, and means whereby said stop may be moved out of the path of said clamp for extending the line.



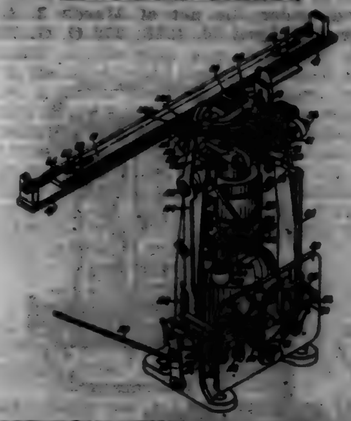
1,698,744
BRAIDING MACHINE CARRIER
Roger W. Hale, Rumford, R. I.
Application February 6, 1925, Serial No. 5,231
6 Claims. (Cl. 56—15)

1. A braiding carrier for braiding machines adapted to receive a rotatable thread package, a member having a toothed formation in fixed relation with said thread package, a single member adapted to engage said toothed formation either partially or completely, and acting, while in complete engagement therewith, to prevent movement of the thread package in either direction upon its axis and when in partial engage-

ment to permit rotation only in a direction of unwinding of the thread, and means whereby tension upon the thread moves said member to permit rotation of the thread package only in a direction of unwinding of the thread.

1,698,745
APPARATUS FOR BITUMINOUS MIXING
Wallace M. Hendrick, Great Neck, and Gustave Lockner, Jr., Flushing, N. Y.
Application April 1, 1922, Serial No. 549,272
9 Claims. (Cl. 94—41)

1. In combination in a machine for coating aggregate with a liquid vehicle bituminous binding agent: means for imparting a uniform surface moisture to the aggregate comprising aggregate surface super-saturating means, conveyor means for draining the aggregate while conveying the same from said super-saturating means, and aggregate agitating means included in said draining means; and means for applying the binding agent to the surface of the aggregate, said draining means being connected directly with said applying means for the discharge therefrom of surface moist aggregate.

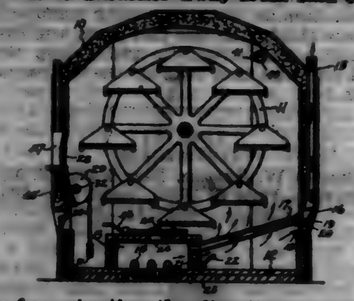


1,698,746
KNITTED LINING FOR RUBBER FOOTWEAR
Roger M. Holden and John F. Roberts, Worcester, Mass., assignors to Holden Knitting Co., Worcester, Mass., a corporation of Massachusetts
Original application April 11, 1926, Serial No. 441,252. Divided and this application February 17, 1923, Serial No. 627,226
2 Claims. (Cl. 66—178)

1. A one-piece fabric lining for formed rubber articles of foot wear knitted in tubular form to assume a shape closely approximating the shape of the last on which the article is formed, said lining comprising a toe portion having stitches of uniform length for a predetermined number of courses, a curved instep and heel portion having separate groups of stitches in each course thereof of different lengths for a predetermined number of successive courses, one group of

stitches corresponding in length to the stitches of said toe portion and the other group of stitches being longer and disposed on the side of the lining having a greater radius, and a leg portion having stitches in all of its courses of a uniform length greater than the length of the stitches of said toe portion.

1,698,747
ELECTRICALLY OPERATED PAPER CARRIAGE
Allen A. Horton, Plymouth, and Dwight F. Rowland, Detroit, Mich., assignors to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan
Application July 12, 1920, Serial No. 377,580
14 Claims. (Cl. 197—32)



1. In a machine of the class described, a paper carriage movable across the machine in one direction under the control of an escapement mechanism operable by keys and returnable across the machine in the opposite direction, an electric motor having driving connections for moving said carriage in both of said directions, a switch for controlling said motor, and manually manipulatable means which, when operated, disables said escapement mechanism and said driving connections and blocks said switch against being closed.

1,698,748
BAKE OVEN
Louis D. Hoults, Dallas, Tex.
Application March 8, 1923, Serial No. 623,473
19 Claims. (Cl. 107—56)

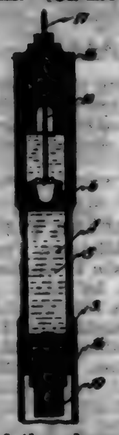
1. A baking oven comprising, a movable baking support within the baking chamber, a door to said chamber, a burner, means for diverting

the products of combustion from said burner into the baking chamber and for diverting said products from said burner away from said chamber,

means for actuating the diverting means, means for opening and closing the door, and means for operating said actuating means operated by said door opening and closing means.

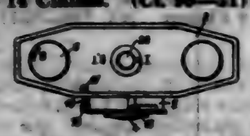
1,698,749
SPARK PLUG
Robert John, Middletown Township, Monmouth County, and Erwin F. Spellmeyer, East Orange, N. J., assignors, by direct and mesne assignments, to Carbex Chemical Co. of Illinois, Chicago, Ill., a corporation of Illinois
Application December 4, 1920, Serial No. 411,545
4 Claims. (Cl. 123—169)

1. In combination with a spark plug for internal combustion engines, a contact member containing palladium.



1,698,750
STREAMER LINE RAIL
Charles Edwin Ashton, Stockton, Calif.
Application January 14, 1925, Serial No. 1,635
2 Claims. (Cl. 238—217)

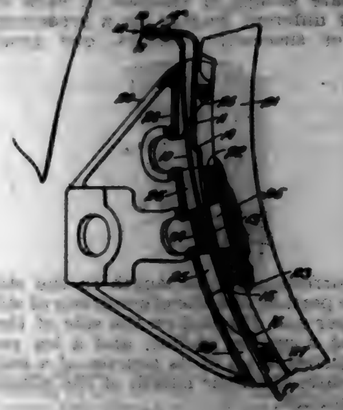
1. A rail joint structure comprising a pair of longitudinally alined rails formed at each end with a relatively long diagonal cut through the head and web and right angle cuts through the heads of the rails from the ends of the diagonal cuts on opposite sides to the adjacent sides of the heads; said right angle cuts of the adjacent ends of adjacent rails being spaced apart longitudinally of the rails and the diagonal cuts overlapping but being spaced apart transversely of the rails, a fish plate to engage the web of the



rail on one side, a rail-head portion on the fish plate fitting in the gap formed between the separated right-angle cuts of the rail-ends to provide a continuous wheel engaging surface, and a shim-plate rigid with the fish plate and disposed at an acute angle thereto and fitting the gap between the diagonal cuts of the corresponding rail ends.

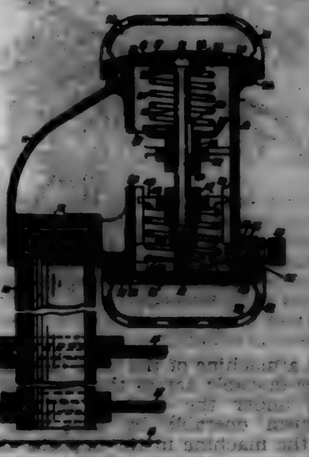
2,028,751
CONTAINER
Charles W. Barlow, New York, N. Y.
Application April 4, 1933, Serial No. 664,816
3 Claims. (Cl. 128—272)

1. In a device of the character described, an outer elongated container having one end open, an inner container slidable longitudinally in said outer container and guided and held in axial alinement by the inner walls thereof and having a compartment therein sealed by a thin puncturable wall, means for closing the open end of said outer container, and means operative upon the movement of inner container for puncturing said thin wall of the sealed compartment therein.



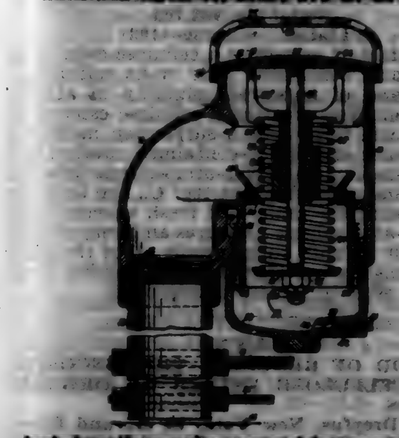
2,028,752
PHOTOGRAPHIC CAMERA
Michael Burger, Munich, Germany, assignor to Friedrich Deckel, Munich-Prinz Ludwigshohe, Germany
Application September 6, 1934, Serial No. 742,954
In Germany September 11, 1933
14 Claims. (Cl. 95—31)

1. A photographic camera comprising a shutter of the "set" type, means for feeding sensitised material, mechanism for automatically setting said shutter by operation of said feeding means, and means for rendering said mechanism inoperative.



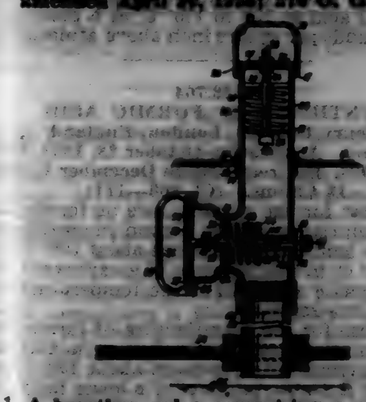
2,028,753
BRAKE SHOE KEY
Charles R. Busch, Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a corporation of New York
Application July 14, 1931, Serial No. 550,081
26 Claims. (Cl. 188—242)

20. A brake-shoe key, including two legs of leaf-spring metal and means connecting the spring legs and holding them breadthwise one in advance of the other, one of the leaf legs having



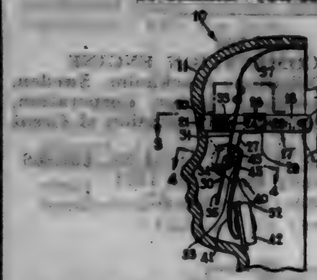
an outward shoulder located between the connecting means and the free end of such leg.

2,028,754
BREATHER VALVE
John D. Crecca, United States Navy, and Stephen M. Phillips, Westbury, N. Y.
Application October 18, 1934, Serial No. 748,243
6 Claims. (Cl. 277—81)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A breather valve comprising a valve body adapted to be secured to a vent pipe extending through a wall or deck, said breather valve comprising a gooseneck extension and a valve body proper, a circular inlet mouth located at the top of said valve proper, a trough formed at the bottom of said valve proper below said inlet mouth, an inlet valve seating within said inlet mouth, said inlet mouth discharging any entrained foreign matter in the air to said trough member, an outlet valve, a valve stem on said inlet valve, and a valve stem on said outlet valve, one of said valve stems being in the form of a sleeve adapted to slidably receive and guide the other of said valve stems.

2,028,755
BREATHER VALVE
John D. Crecca, United States Navy, and Stephen M. Phillips, Westbury, N. Y.
Application October 18, 1934, Serial No. 748,243
6 Claims. (Cl. 277—45)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A breather valve comprising a valve body adapted to be secured to a vent pipe extending through a wall or deck, said breather valve comprising a gooseneck extension and a valve body proper, a circular inlet mouth located at the top of said valve proper, a trough formed at the bottom of said valve proper below said inlet mouth, an inlet valve seating within said inlet mouth, said inlet mouth discharging any entrained foreign matter in the air to said trough member, an outlet valve, a valve stem on said inlet valve, a valve stem on said outlet valve, one of said valve stems being in the form of a sleeve adapted to slidably receive and guide the other of said valve stems, an inlet valve seat formed at the top of said valve body, said inlet valve seating against said valve seat, and an outlet valve seat formed in said inlet valve, said outlet valve seating against said seat in said inlet valve.

2,028,756
BREATHER VALVE
John D. Crecca, United States Navy, and Stephen M. Phillips, Westbury, N. Y.
Application October 18, 1934, Serial No. 748,244
9 Claims. (Cl. 277—81)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A breather valve comprising a valve body adapted to be secured through a wall or deck, an outlet valve in said valve body located without the deck or wall, and an inlet valve in said valve body located within said deck or wall, compression spring means pre-determining the pressure at which said valves will operate, and means accessible outside of said valve body for adjusting said pressure determining means, said pressure determining adjusting means comprising in the case of said outlet valve a valve stem threadedly secured at one end through said outlet valve, a tool cooperating means on said valve stem for adjusting said valve stem relative to said valve, a valve guide secured within said valve body, said valve stem slidably passing through said valve guide, a head formed on the other end of said valve stem, a spring seat on said valve stem resting against said head, said compression spring means being secured between said spring seat and said valve guide.

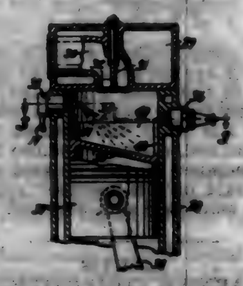
2,028,757
DOLL CONSTRUCTION
Matteo De Cesare, Newark, N. J., assignor to Samuel Kaiser and Karl Ohlhaus, New York, N. Y.
Application August 5, 1933, Serial No. 684,163
17 Claims. (Cl. 46—109)

1. In doll construction, a doll's head formed with a pair of eye sockets, a cross rod attached to the sides of the head, a member attached at one end thereof to the front of the head above the nose and at the other end thereof to the mid-portion of said rod, a transverse pin fixed to said member, a member pivoted on said pin, an axle mounted on said pivoted member, and doll's eyes mounted on said axle and received within said sockets.

2,028,758
VARNISH COMPOSITION
Joseph B. Dietz, Lansdowne, and Edmund F. Oeffinger, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 19, 1932, Serial No. 594,143
19 Claims. (Cl. 134—24)

3. Process of preparing a varnish comprising heating a mixture comprising Batu gum, limed rosin, and a relatively small amount of an oil from the group consisting of semi-drying and drying oils, at a temperature of 450–490° F., and then thinning said mixture with a varnish thinner.

2,028,759
TREATMENT WITH SOLVENTS
Clarence F. Dinley, Detroit, Mich., assignor to James H. Bell, Philadelphia, Pa.
Application September 30, 1931, Serial No. 566,893
26 Claims. (Cl. 87—6)



16. Apparatus of the character described, for treating things or work therein with volatile liquid

solvent whose vapor is heavier than air, comprising in combination a treating vessel or enclosure excluding air and retaining the solvent vapor, but having and open through an exit passage for the work extending and opening above the highest interior point of the enclosure; means for heating the work in said exit passage on its upward way

to the exit opening, and thereby vaporizing liquid solvent remaining on the work after treatment therewith in the enclosure; and means for condensing in the enclosure the solvent vapor thus evolved from the work, in such relation to the heating means as to prevent escape of this vapor at said exit opening and recover it as liquid.

2,028,760
INTERNAL COMBUSTION ENGINE
Torbjörn Viktor Dillström, Stockholm, Sweden, assignor to Hesselman Motor Corporation, Ltd., London, England, a corporation of Great Britain
Application March 24, 1933, Serial No. 662,606
In Germany March 26, 1932
4 Claims. (Cl. 123—32)

1. In an electrically ignited injection engine of the explosion type in which substantially all of the fuel for a given charge is injected prior to the time of ignition thereof to thereby substantially completely form the charge prior to ignition and in which the time of ignition is normally in advance of top dead center, cylinder and piston parts forming a generally cylindrical combustion chamber having a relatively deep portion at one side of the cylinder and a relatively shallow portion at the opposite side of the cylinder to compensate for the added combustion chamber volume resulting from said deeper portion and to thereby provide a suitable compression ratio, an upstanding peripheral flange on said piston forming the side wall of the deeper portion of said chamber when the piston is at top dead center, a timed ignition device providing a point of ignition in the deeper portion of said chamber, and a timed injection device located so as to provide a combustible fuel mixture in said relatively deep portion at the time of ignition.

2,028,761
METHOD OF TREATING CELLULOSE ESTERS OF ORGANIC ACIDS
Camille Dreyfus, New York, N. Y., and George Schneider, Meadowlands, N. J., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application June 26, 1933, Serial No. 677,702
6 Claims. (Cl. 260—151)

1. Method of preparing a cellulose ester of an organic acid containing little or no sulfur compounds and of improved solubility in acetone, which comprises treating a cellulose ester of an organic acid formed by a suspension method in the presence of a sulfur-containing catalyst with an aqueous liquid at super-atmospheric pressures and at temperatures above 100° C., and then further treating the same with fresh aqueous liquid at super-atmospheric pressures and temperatures above 100° C. until substantially all of the sulfur compounds are removed and the solubility of the cellulose ester in acetone is improved.

2,028,762
METHOD OF REDUCING THE VISCOSITY OF CELLULOSE ESTERS OF ORGANIC ACIDS
Camille Dreyfus, New York, N. Y., and George Schneider, Meadowlands, N. J., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application July 6, 1933, Serial No. 679,575
9 Claims. (Cl. 260—152)

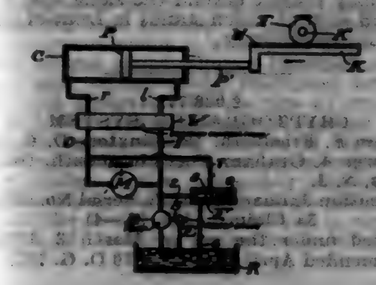
1. Method of reducing the viscosity of a cellulose ester of an organic acid which is free from combined sulfur comprising subjecting the cellulose ester to an aqueous liquid under super-atmospheric pressures and at temperatures above 100° C. until its viscosity is materially reduced.

2,028,763
METHOD OF TREATING ORGANIC ESTERS OF CELLULOSE
Camille Dreyfus, New York, N. Y., and George Schneider, Meadowlands, N. J., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application February 9, 1932, Serial No. 591,930
2 Claims. (Cl. 260—148)

1. Method of purifying cellulose acetate prepared in the presence of sulfuric acid as catalyst, comprising heating the cellulose acetate in solid form with water containing from .01 to .1% of mineral acid at 102 to 115° C. at a pressure of 5 to 10 pounds per square inch above atmospheric.

2,028,764
SYNTHESIS OF FORMIC ACID
Henry Dreyfus, London, England
No Drawing. Application October 28, 1933, Serial No. 695,894. In Great Britain December 1, 1931
12 Claims. (Cl. 260—514)

1. Process for the manufacture of formic acid which comprises reacting carbon monoxide and water at a temperature between about 100° C. and about 350° C. in the presence of a carboxylic acid which is stable and fluid at the temperature employed in the reaction.

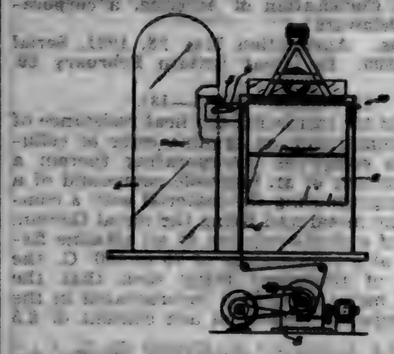


9. Process for the manufacture of formic acid which comprises reacting carbon monoxide and water at a temperature between about 102° C. and about 350° C. in the presence of a lower fatty acid and cuprous chloride.

2,028,765
SYNTHESIS OF FORMIC ACID
Henry Dreyfus, London, England
No Drawing. Original application October 28, 1933, Serial No. 695,894. Divided and this application November 1, 1935, Serial No. 48,125. In Great Britain December 1, 1931
13 Claims. (Cl. 260—514)

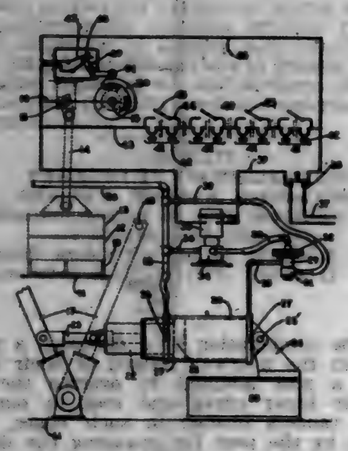
1. The process of manufacturing formic acid comprising reacting carbon monoxide with water at an elevated temperature in the presence of copper sulphate.

10. The process of manufacturing formic acid comprising reacting carbon monoxide with water in the presence of copper sulphate and sulphuric acid and a substance capable of absorbing carbon monoxide at a temperature between 100° and 350° C. and under super-atmospheric pressure.



2,028,766
UNIFORM FEED SYSTEM
Hans Ernst and Lester F. Nenninger, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application November 17, 1927, Serial No. 233,572
14 Claims. (Cl. 90—11.5)

9. An hydraulic system comprising tool and work carriers; a piston for propelling one of said carriers; an oil line leading from the forward side of said piston and embodying means for withdrawing oil at a selectively constant rate; a source of piston-urging oil leading to the rear side of said piston for continuously urging it forward to create a back-pressure in said oil line; a device adapted to vary the pressure of the piston-urging oil; and means responsive to resultant variations in the back and forward pressures and adapted forwards so to adjust said device as to effect changes in the pressure of the piston-urging oil corresponding to predetermined values.



2,028,767
TAPE GUIDE MECHANISM FOR QUOTATION PROJECTORS
August D. Eitzen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York
Application January 3, 1930, Serial No. 419,889
Renewed October 25, 1932
17 Claims. (Cl. 271—3.1)

1. For purposes described, belt and tape guide means comprising a guide member having belt guiding surfaces arranged at an angle to each other, and additional belt guiding formations, a continuous tape supporting belt arranged to pass over said surfaces and formations and to support and direct a tape which passes about said surfaces super-posed upon the belt, and additional belt guiding means for movably supporting and directing a portion of the belt remote from the first

named guide member and the tape so that only the portion of the belt passing around said first mentioned guide member will be maintained in engagement with the tape.

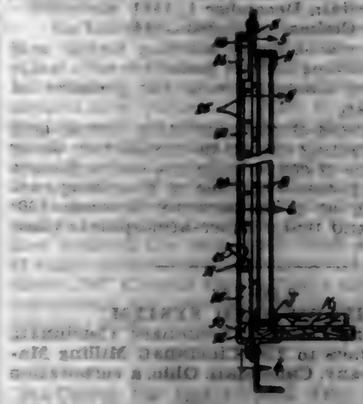
2,028,768
DIE PRESS SAFETY SYSTEM
Carsten L. Mygrgian, Detroit, Mich., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 25, 1930, Serial No. 469,784
7 Claims. (Cl. 192—131)

1. A safety system for power presses comprising a fluid actuated servo motor biased to inactive position, a differential pressure arrangement to actuate said motor, electrical means arranged to initiate said pressure means, a plurality of spaced switches in series circuit, arranged to energize said means, and a lock-in circuit arranged to maintain said electrical means energized during the extreme approach motion of the dies and during the retrograde motion of the dies only and independently of said manual means.

2,026,769
TREATMENT OF TEXTILE OR OTHER MATERIALS
George Holland Ellis and Ralph Charles Storey, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application May 28, 1931, Serial No. 540,990. In Great Britain February 26, 1931
12 Claims. (Cl. 8—13)

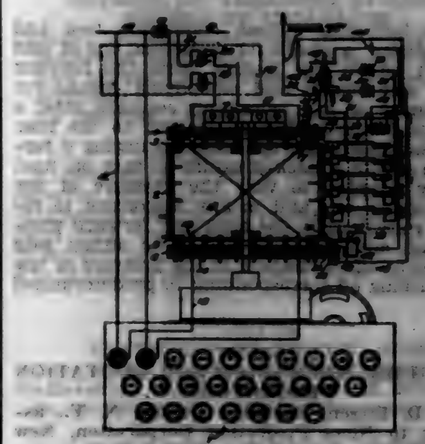
1. Process for increasing the heat resistance of materials comprising an organic ester of cellulose, which comprises incorporating therein a small proportion of an insoluble compound of a metal by impregnating the material with a compound of the metal and fixing the metal therein, by means of a dilute solution of an alkaline fixing agent, at a temperature of 75 to 100° C., the conditions of treatment being such that the amount of metal compound incorporated in the material imparts thereto an ash content of 0.5 to 2%.

11. Textile materials comprising organic derivatives of cellulose and containing a small proportion of an insoluble metallic compound in a form yielding on incineration a voluminous ash of 0.5 to 2%, and having a safe ironing point of at least 300° C.



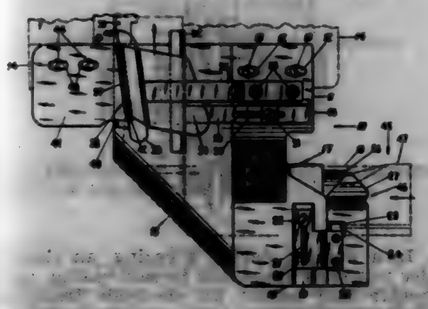
2,026,770
FREIGHT CONTAINER
Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware
Application July 29, 1932, Serial No. 625,977
10 Claims. (Cl. 189—46)

1. The combination of a doorway, a pair of doors in the doorway hinged at their distant edges, a post adapted to overlap the doors at their inner edges and seat in outwardly facing rabbets formed in such edges, means carried by the post for engaging the doorway at one end of the post and a vertically movable locking bolt within the post adapted to engage the doorway at the other end of the post.



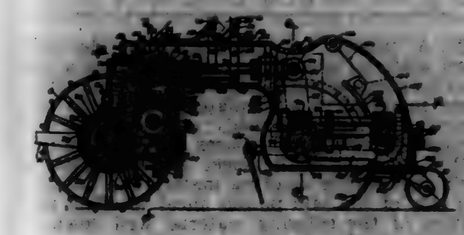
2,026,771
DOOR LOCKING DEVICE FOR DEMOUNTABLE BODIES
Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware
Application September 13, 1933, Serial No. 689,231
13 Claims. (Cl. 189—46)

1. The combination of a demountable automobile body having a pair of hinged doors, the free edges of which are adjacent when the doors are closed, combined with a removable door post adapted to overlap the edges of both doors, and



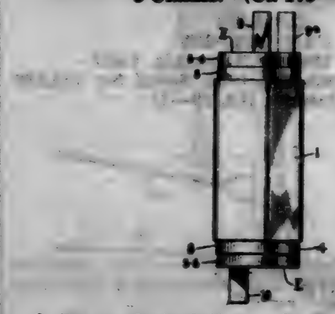
equipped with a pair of locking bolts, both of which may project beyond the same end of the post and each of which stands in front of one of the doors respectively.

2,026,772
CRYPTOGRAPHIC SYSTEM
William F. Friedman, Washington, D. C., and George A. Graham, Fort Monmouth, Oceanport, N. J.
Application January 28, 1932, Serial No. 589,241
24 Claims. (Cl. 35—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a cryptographic system adapted for use with a plural unit code transmitter; means comprising electrically operable elements for coordinating the transmitter with said system; and circuit means for interconnecting said elements for cryptographic purposes, said means comprising contact levers and paired contact points permutatively positioned and operative in series relation.

2,026,773
UNIVERSAL FOLDER FOR SEWING MACHINES
Joseph Galkin, New York, N. Y., assignor to Tronser Waist-Band Machine Co. Inc., New York, N. Y., a corporation of New York
Application August 21, 1934, Serial No. 740,226
4 Claims. (Cl. 112—147)



1. A folder for sewing machines designed for applying waistbands to trousers, comprising a supporting base member, a folding and guiding section for receiving a waistband which is composed of two strips stitched together along one edge, said section being positioned below said base and transverse to the line of stitching, a folding and guiding section positioned on said base and parallel with the line of stitching for receiving said waistband and an intermediate oblique folding section connecting said upper and lower sections into coacting relationship, said intermediate section being designed to reverse the position of the strips composing said waistband.

2,026,774
AUTOMATIC CULTIVATOR
George Hantzopoulos, New York, N. Y.
Application March 26, 1935, Serial No. 12,839
20 Claims. (Cl. 97—36)

1. A cultivator of the type having a housing case with one end mounted upon traction wheels and the other resting upon a spacing roller and in which a handle is provided on the case by which the end having the roller thereon may readily be raised about the traction wheels, two substantially horizontal eccentric shafts extending through the case, hoes mounted on the ends of said shafts on the sides of said case and adjacent the spacing roller end and means within the case by which said hoes may be operated.

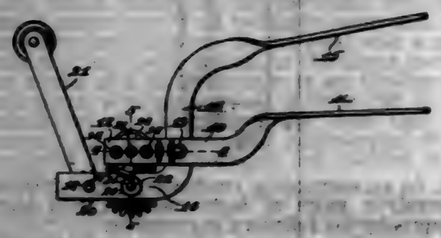
2,026,775
ELECTRICAL CONDENSER
Paul Hetenyi, New York, N. Y., assignor to Solar Manufacturing Corporation, a corporation of New York
Application May 25, 1932, Serial No. 613,396
5 Claims. (Cl. 175—315)

1. In an electrolytic condenser, a film-forming electrolytic paste of high viscosity, said paste comprising the following ingredients;

	Per cent by weight
Glycerine	36
Ammonium borate	56
Potato starch	7
Agar-agar	1

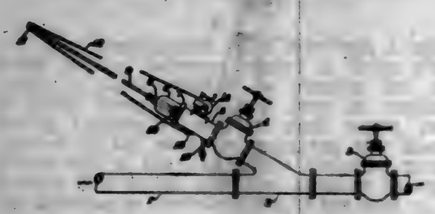
2,026,776
CELLULOSIC ARTICLES AND METHOD OF PREPARING THE SAME
Harold Hibbert, Montreal, Quebec, Canada, assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application April 23, 1932, Serial No. 607,229
10 Claims. (Cl. 91—70)

1. Method of rendering surfaces of non-metallic articles more impermeable, which comprises exposing surfaces of articles to vapors of a volatile polymerizable material selected from the group consisting of substantially unpolymerised vinyl compounds and glycides to deposit the polymerizable material on said surfaces, and then polymerizing said polymerizable material to form a surface coating.



2,026,777
PARACHUTE CONSTRUCTION
Edward L. Hoffman, Dayton, Ohio
Application August 24, 1932, Serial No. 630,235
7 Claims. (Cl. 244—31)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The combination with a main parachute and

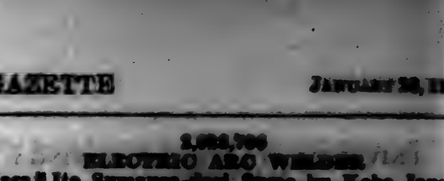


a pilot parachute fixedly secured to the apex of said main parachute, of frangible means for connecting said pilot parachute to said main parachute at points off-center with respect to the center of said main parachute.

2,028,778
CAN OPENER
Frank F. Hesmer, Glendale, Calif.
Application December 3, 1934, Serial No. 755,682
3 Claims. (Cl. 30—3)

1. A can opener, comprising a pair of pivotally connected handles, a double jaw on the forward end of one of said handles, said double jaw comprising spaced parallel members, a relatively short jaw on the forward end of the other handle, a shaft journaled in the members forming the double jaw, a gear wheel mounted on said shaft, a toothed wheel mounted on one end of said shaft, a second shaft journaled in the members forming the double jaw, a pinion carried by the second mentioned shaft, the teeth of which pinion mesh with the teeth of said gear wheel, a crank handle secured to said second mentioned shaft, a stud seated in the short jaw, a roller journaled on said stud and positioned above the toothed wheel on the first mentioned shaft and a pointed blade detachably secured to the short jaw adjacent said stud within the point of said blade overlying the face of said toothed wheel.

2,028,779
APPARATUS FOR CLEANING PIPE LINES
Ralph W. Howe, Dallas, Robert E. Love, Lufkin, and Joseph Harry Weed, Jr., Dallas, Tex., assignors to Atlantic Pipe Line Company, Dallas, Tex., a corporation of Maine
Application February 28, 1935, Serial No. 8,668
3 Claims. (Cl. 15—104.06)

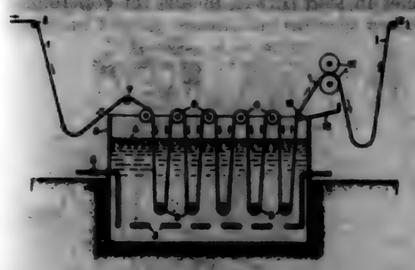


1. Means for inserting a cleaning device into a pipe line, which comprises a branch pipe connected to said pipe line and at an angle thereto, a valve connected to said branch pipe, a pipe nipple connected to said valve, a plug coupled to said nipple and means associated with said plug and nipple for forcing a cleaning device from said nipple into said pipe line.

2,028,780
ELECTRIC ARC WELDER
Masuji Ito, Sumaura-dori, Suma-ku, Kobe, Japan, assignor to Kabushiki Kaisha Kawasaki Zosensho (Kawasaki Dockyard Co. Ltd.), Kobe, Japan, a corporation of Japan
Application July 3, 1933, Serial No. 679,690
In Japan October 25, 1932
4 Claims. (Cl. 219—8)

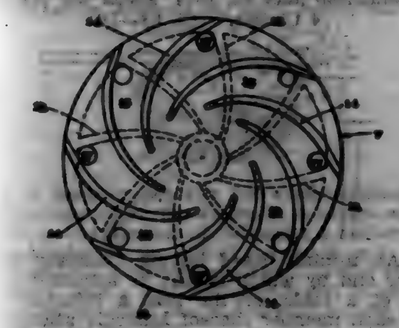
1. In a welding device, a casing, an electrode holder rotatably supported in said casing, means to rotate said holder, an electrode frictionally gripped by said holder, a gripper arranged to hold said electrode against movement in the holder, manually operable means for releasing said gripper, a second casing surrounding the first casing and having an open end arranged to form a hollow frusto-conical jet surrounding the active end of the electrode, and means to introduce steam under pressure between said casings.

2,028,781
PROCESS OF PRODUCING DECORATIVE SHEET MATERIAL
James J. Jackson, Woodbury, N. J., assignor to Sandura Company, Inc., Philadelphia, Pa., a corporation of New Jersey
Application March 2, 1933, Serial No. 659,133
21 Claims. (Cl. 91—68)



21. A process of manufacturing decorative sheet material which comprises applying a liquid backing composition to one side of a porous fibrous sheet material in a regulated amount to effect penetration into the body of the sheet while avoiding filling of the spaces between the fibers within the body of the sheet, and thereafter applying decorative coloring material to the opposite side of the said porous sheet to effect penetration of the coloring material well down into the body of the sheet.

2,028,782
DECORATIVE SHEET MATERIAL AND PROCESS OF MANUFACTURING THE SAME
James J. Jackson, Woodbury, N. J., assignor to Sandura Company, Inc., Philadelphia, Pa., a corporation of New Jersey
Application March 2, 1933, Serial No. 659,134
13 Claims. (Cl. 91—70)



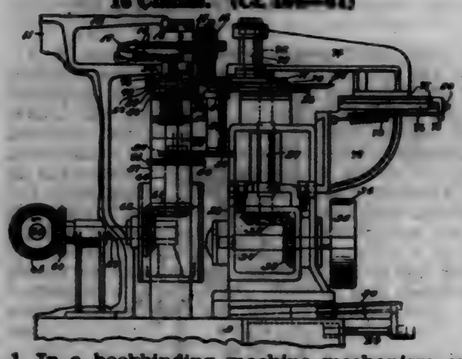
1. A process of manufacturing decorative coverings from porous fibrous sheet materials, which process comprises impregnating a porous fibrous

sheet with a molten saturant consisting of ester gum, China-wood oil and chlorinated naphtha-

lene to substantially completely fill the spaces in the body of the sheet.

2,028,783
CENTRIFUGAL PUMP
Oystein Jacobsen, Dayton, Ohio, assignor to The Durbrow Company, Inc., a corporation of New York
Application June 5, 1933, Serial No. 674,161
1 Claim. (Cl. 103—111)

In combination in a centrifugal pump, a casing having an inlet eye at one side and a volute around its periphery, a runner of the open type comprising a disc having on its side next to the eye a series of outwardly extending curved vanes, a sealing ring of substantially rectangular cross section around the periphery of the disc projecting to the rear of the body of the disc with its rear face in parallel with the side wall of the casing and in close proximity thereto, a second series of outwardly extending vanes on the rear side of the disc curved reversely of the vanes on the front side of the disc terminating at said ring and arranged so that the two sets of vanes cross intermediate their ends, and ports through the disc in the angles formed where the concave sides of the vanes of said second series join the sealing ring.

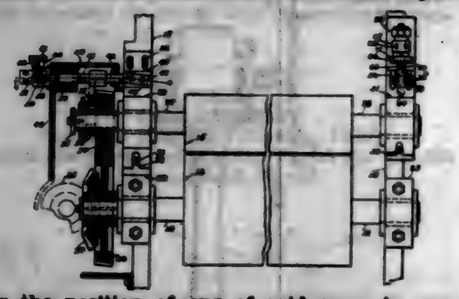


2,028,784
HEDGE CUTTER
Robert Jennett, Camden, N. J.
Application September 18, 1934, Serial No. 744,325
2 Claims. (Cl. 56—13.3)

1. The combination with a motor having an arbor, of a pair of discs carried centrally by the arbor, knives having one end inserted between the discs and the opposite end extending beyond the perimeters of the discs and angularly adjustable with relation thereto, means frictionally clamping the knives between the discs in such

positions, and a shield positioned to protect the user from engagement with the knives.

2,028,785
TRIMMING MECHANISM FOR BOOKBINDING MACHINES
Paul E. Kleinsteuber, Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a corporation of New York
Application April 2, 1934, Serial No. 718,774
16 Claims. (Cl. 164—61)



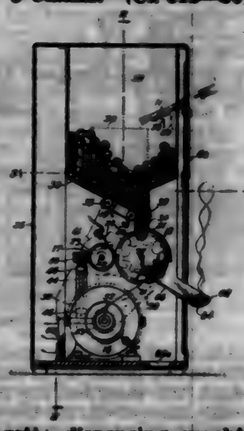
1. In a bookbinding machine mechanism operable upon successive books or groups advanced edgewise through the machine for progressively trimming an edge thereof during travel, comprising means for holding edgewise the books to be trimmed and advancing them past the trimming point, in combination with a sharp-edged rotary trimming disk mounted at one side of the book path of travel to intersect such travel path, and at the opposite side of the book path a non-cutting abutment extending at both sides of the cutting plane to support the book edge against the thrust of the disk during trimming, whereby the book edge is trimmed by a slicing action.

2,028,786
GEARING FOR ROTARY PRINTING MACHINE FOLDERS
Frederick Lamatsch, Grantwood, N. J., assignor to Irving Trust Company, permanent trustee for R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application April 26, 1934, Serial No. 722,576
18 Claims. (Cl. 74—371)

1. In a machine having two rotatable members supported with their axes in parallelism, a driving gear connected to one of said members, a driven gear meshing with the driving gear and

connected to the other member, means for adjusting the spacing between the axes of the rotatable members, and means for further adjusting the position of one of said gears to compensate for said axes spacing adjustment and thereby maintain a normal meshing relation between said gears.

2,028,787



CIGARETTE DISPENSING MACHINE

Donald Bruce Lane, Glen Cove, N. Y., assignor to Kinsselman & Lane Holding Co., Inc., New York, N. Y., a corporation of New York

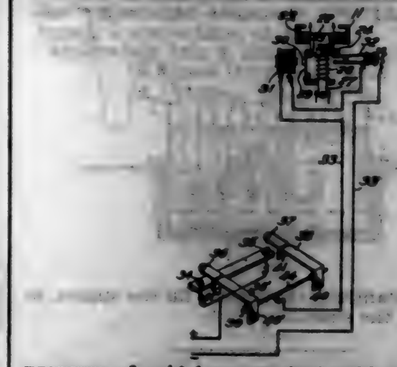
Application October 3, 1931, Serial No. 566,674

Renewed May 16, 1935

5 Claims. (Cl. 312—36)

1. A cigarette dispensing machine having a cigarette container, a cigarette dispensing tray, a cigarette discharging conveyance for carrying a cigarette from the container to the tray, an igniter between the container and the tray, an electrical circuit, a motor therein connected to motivate the conveyance characterised by the fact that the motor continuously operates when its circuit is closed and by mechanism for causing the conveyance driven from the motor to pause automatically when its cigarette comes into register with the igniter and after a pause to start on its way again.

2,028,788



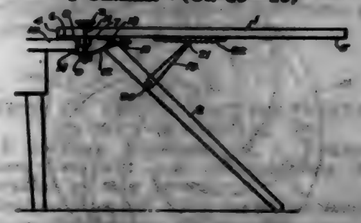
COIN CONTROLLED APPARATUS

Donald B. Lane, Brooklyn, N. Y., assignor to Kinselman & Lane Holding Co., Inc., New York, N. Y., a corporation of New York

Application May 2, 1933, Serial No. 668,997

2 Claims. (Cl. 194—1)

1. In a coin-controlled dispenser having a coin-slot, a container having a throat from which articles pass to be dispensed, a delivery mechanism for removing one article at a time from said container throat, a coin obstruction extendable into said slot, a lever normally pressed against articles in said throat, means for controlling the pressure of said lever against said articles, and means operable by the swinging of said lever for causing said obstruction to obstruct the passage of a coin through said slot.



2,028,789

IRONING BOARD

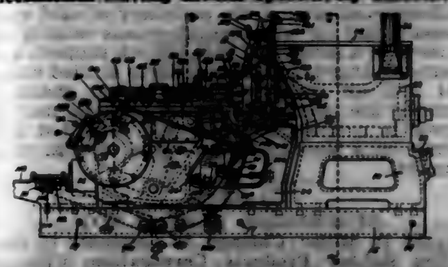
Carl J. Lindquist, Brooklyn, N. Y.

Application May 22, 1934, Serial No. 726,941

4 Claims. (Cl. 68—10)

1. An ironing board having clamping means at one end by which it may be attached to the edge of a table, or the like, a bifurcated leg with each member thereof hingedly attached to the lower side of the board and at points adjacent the sides thereof, an arm mounted in said leg with the sides thereof engaging the inner surfaces of the side members of the bifurcated leg and adapted to engage teeth, one at a time, in a rack on the under side of the board and in the longitudinal center thereof, said arm being held in an upright position by engagement of the sides thereof with the inner surfaces of the bifurcated leg and positioned adjacent the upper end of the leg with the upper end of said arm engaging the rack in a line extending lengthwise of the board and substantially midway between the sides thereof, said clamping means comprising two bars loosely attached to the under side of the board and adjacent the sides thereof, said bars being curved downward and extending toward the end of the board that is clamped to the table, the ends of said bars being curved upward to engage the under surface of the table, and means holding said bars upward in clamping position against the under side of the table.

2,028,790



CASTING MACHINE

Arthur D. Lund, Minneapolis, Minn.

Application November 9, 1932, Serial No. 641,525

7 Claims. (Cl. 22—67)

1. In a casting machine, the combination including a mold, a chamber adjacent the mold for containing molten metal, a movably mounted ladle for conveying molten metal from the chamber and to a point for delivery of the metal to the mold, a rotatable cam, a ladle reciprocating mechanism having means operatively associated with the cam so as to receive movement therefrom, and a ladle tilting mechanism having a member actuated by the cam, said cam having a projection for imparting a supplemental action to said tilting mechanism member.

2,028,791

WRIST WATCH BRACELET

Fred H. Lynds, North Attleboro, Mass., assignor to Harold E. Sweet, Attleboro, Mass., doing business as R. F. Simmons Company

Application January 12, 1935, Serial No. 2,410

14 Claims. (Cl. 224—4)

1. A band or bracelet for wrist-watches comprising opposite arms shaped to conform substantially to the contour of the wrist, a hollow bearing-member on the side of the watch-case, means for pivotally connecting an arm to the bearing-member, and a leaf-spring enclosed in said hollow member with one end acting on the arm to swing it on its pivot.

2,028,792

PREPARATION OF ALKOXY FATTY ACID ESTERS OF CELLULOSE

Carl J. Malm, Rochester, N. Y., and James D. Coleman, Columbus, Ohio, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

No Drawing. Application February 29, 1932, Serial No. 595,958

18 Claims. (Cl. 260—181)

1. The process of making cellulose derivatives containing an alkoxy-fatty acid group which comprises treating a cellulosic material having free and available hydroxyl groups with an esterifying bath substantially comprising an alkoxy-fatty acid anhydrid and a tertiary organic base as the catalyst.

2,028,793

INTERFERENCE PREVENTING CABLE

Joseph J. Mascuch, Newark, N. J.

Original application July 11, 1931, Serial No. 550,070. Divided and this application February 17, 1933, Serial No. 657,167

2 Claims. (Cl. 247—5)

1. A flexible conduit to protect and electrically shield electric wires comprising an inner sleeve formed of a continuous strip of metal wound spirally to provide interlocking flanges, packing impregnated with an electrically conductive agent between the flanges, a plurality of braided metallic coverings on the inner sleeve and a ferrule on each end of the conduit enclosing the ends of the component parts and electrically bonding the several layers.

2,028,794

METHOD OF CONSTRUCTING REVETMENTS

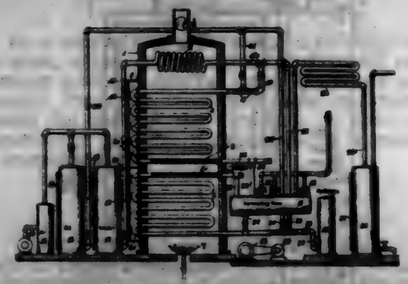
Gerard H. Matthes, Los Angeles, Calif.

Application March 13, 1934, Serial No. 715,332

2 Claims. (Cl. 61—37)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A method of constructing revetments for shores, banks, bottoms of rivers and the like consisting in forming a bed on the surface to be revetted, the bed being of sufficient thickness to preclude the passage therethrough of the finer materials of the revetted surface and composed of an aggregate, the permeability of which will permit equalization of the hydrostatic pressure exerted above and below the bed and then protecting the bed against erosion by depositing thereon a series of blocks shaped to provide a multiplicity of angular projections, the latter functioning to dissipate wave impacts and decelerate water currents in immediate contact with the bed.



2,028,795

PROCESS FOR CONVERSION AND HYDROGENATION OF HEAVY PETROLEUM OILS AND APPARATUS

Ralph H. McKee, New York, N. Y., assignor to U. S. Hydrogenation Corporation, a corporation of Nevada

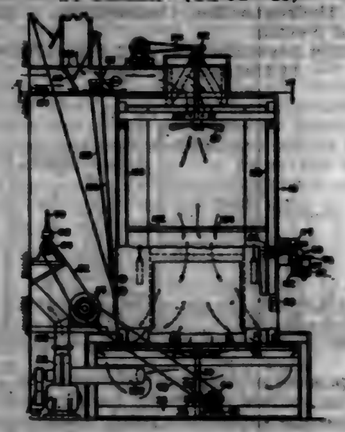
Application September 22, 1932, Serial No. 634,581

11 Claims. (Cl. 196—53)

1. A process of treating petroleum oil for the conversion thereof into motor fuel, by hydrogenation below the saturation point, which comprises passing co-mingled petroleum oil and water through a primary conversion zone subjected to a

temperature sufficient to vaporize and crack a substantial part of said petroleum oil, the water being in proportion sufficient to retard polymerization of the oil during its said heat treatment, passing the resulting vapor and entrained liquid products to a separating zone wherein liquid is separated from the vapors, leading said liquid from said separating zone directly to a secondary conversion zone subjected to heat higher than that of the primary zone and below that required for conversion of a substantial proportion of said residue into fixed gas, said treatment being under pressure below 20 atmospheres, mixing the resulting products from both conversion zones in said separating zone, removing the lighter vapors of both conversion zones together from the separating zone, and recycling residues from the two conversion zones, with hydrogenous material such as water, through the more highly heated secondary conversion zone.

8. Apparatus for producing hydrocarbons of low boiling point which comprises a heat chamber having a burner at its lower end, a primary conversion coil in said chamber at the upper portion thereof, means for injecting co-mingled oil and water into said primary conversion coil, a separating and expanding chamber of controlled temperature having communication with the outlet end of the primary conversion coil, a secondary conversion coil disposed at the lower portion of the heated chamber and exposed to heat of greater intensity and having its outlet at the top, and its inlet at the bottom, so that the outlet sections of the primary and secondary coils lie substantially in the same heat receiving zone within the heated chamber, catalyzing agents disposed within the outlet sections of the conversion coils, a flow connection communicating the base of the separating chamber with the inlet of the secondary conversion coil, means for discharging from the secondary conversion coil into the separating chamber, and means for removing from the separating and expanding chamber the lighter products received from said coils.



2,028,796

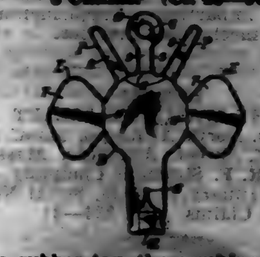
APPLICATION OF FINELY DIVIDED MATERIAL TO ARTICLES OF MANUFACTURE

Matthew M. Merritt, Middleton, Mass., assignor to The Tanning Process Company, Boston, Mass., a corporation of Massachusetts

Application May 14, 1932, Serial No. 611,416

27 Claims. (Cl. 91—65)

4. In an apparatus for treating pieces of work, such as sheet material, a chamber having an inlet at one end thereof and an outlet at another end thereof, a substantially circular work support located at the outlet end of the chamber transversely of said outlet, means located beyond the work support to withdraw air from the chamber uniformly all around the periphery of said work support, said air-withdrawing means causing air to move in a direct line to said work support, and means arranged to introduce finely divided material into air traveling through said chamber, whereby the said finely divided material may be moved in a straight line to and deposited uniformly on a piece of work on said circular work support.



2,028,797

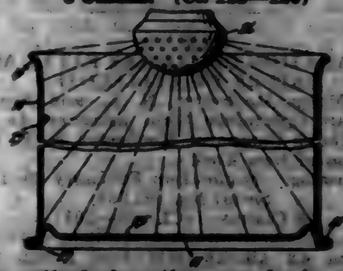
SUSPENSION RUBBER TOY

Layard D. Miller, Chicago, Ill., assignor to Lee-Tex Rubber Products Corporation, Chicago, Ill., a corporation of Delaware

Application December 8, 1934, Serial No. 756,287

3 Claims. (Cl. 46—90)

1. In a rubber toy, the combination of a main inflatable body, a tubular external protuberance in the form of an eye integral with the body and in communication therewith, and a core piece confined within the tubular protuberance and extending through the loop to restrain inflation thereof.



2,028,798

METHOD OF LINING THE ENDS OF CANS

John H. Marsh, East Orange, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application November 7, 1932, Serial No. 642,975

3 Claims. (Cl. 113—120)

1. A method of coating cans for beer and the like, which comprises providing a can body with a substantially vertical tubular wall and a can end with a flange and an annular wall disposed inside of and adjacent to said can body wall and spaced away and at an angle to said can body wall, leaving an annular space between said adjacent walls, assembling said body and end in a loose connection by curling said end flange against the exterior of said body wall, applying a coating material between said angularly disposed body and end walls and also on the inside of the assembled body and end, thereby completely covering the adjacent body and end walls and completing said connection and bringing said walls together by forming a closed seam.

2,028,799

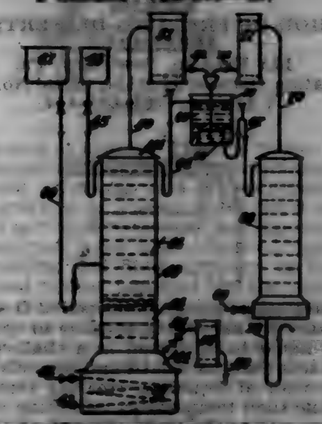
PISTON

Raymond L. O'Connor, Oakland, Calif.

Application January 29, 1934, Serial No. 708,965

1 Claim. (Cl. 309—15)

A piston comprising a cylindrical skirt section having a central embossment with an axially threaded bore, a cylindrical head section fitting upon the skirt section peripherally and carrying piston rings, and a screw supported axially in the head section and being held against axial movement with respect to the head section, said screw being removably received in the bore for holding the two sections together, said screw when being removed from the bore, lifting the head section from the skirt section.



2,028,800

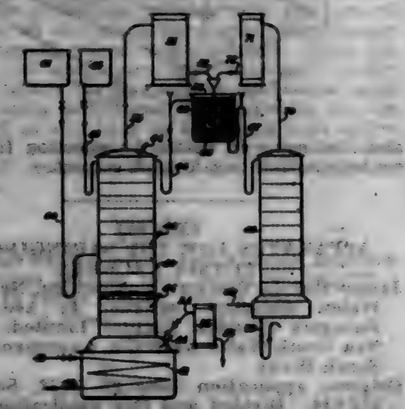
PROCESS FOR CONCENTRATING ACETIC ACID

Donald F. Othmer, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

Application February 6, 1931, Serial No. 513,929

3 Claims. (Cl. 202—42)

1. The continuous process of concentrating aqueous acetic acid to produce a concentrated acid free of withdrawing agent which comprises charging a still with a mixture of aqueous acetic acid and just the right amount of a water-withdrawing agent, selected from the group consisting of normal-propyl acetate, iso-propyl acetate and propylene chloride, to form an azeotropic mixture with the water in the aqueous acetic acid, distilling water and withdrawing agent from the mixture, condensing the distillate and substantially separating the withdrawing agent from the water therein, returning the separated withdrawing agent substantially continuously to the still, and supplying further aqueous acetic acid substantially continuously to the still, the withdrawing agent being returned to the still at a rate just right to form an azeotropic mixture with the water contained in the aqueous acetic acid being supplied to the still.



2,028,801

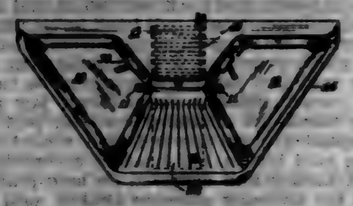
PROCESS FOR CONCENTRATING ACETIC ACID

Donald F. Othmer, Brooklyn, N. Y.

Original application February 6, 1931, Serial No. 513,929. Divided and this application April 12, 1935, Serial No. 16,061

10 Claims. (Cl. 202—42)

1. In the process of dehydrating aqueous acetic acid, the step of supplying aqueous acetic acid to a distilling column, during distillation therein adding at least one halogen containing compound from the group consisting of iso-propyl iodide, dichlorobrommethane, iso-butyl bromide, dibrommethane, iso-amyl chloride, normal-butyl bromide, and allyl iodide at the upper part of the column and removing from the top of the column a constant boiling mixture of water and halogen compound.



2,028,802

SINK STRUCTURE

Robert L. Ottin, Fox Chapel Manor, Pa., assignor to Standard Sanitary Manufacturing Company, a corporation of New Jersey

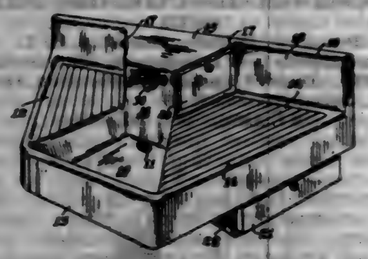
Application December 4, 1934, Serial No. 756,585

12 Claims. (Cl. 4—187)

1. In a sink structure having a suitable surface area, a pair of oppositely-positioned compartment portions having outer bounding sides generally inclining outwardly and backwardly towards the back of the structure, so that said compartment portions may be readily accessible to a number of persons.

2,028,803

BALANCED SINK STRUCTURE



Robert L. Ottin, Fox Chapel Manor, Pa., assignor to Standard Sanitary Manufacturing Company, a corporation of New Jersey

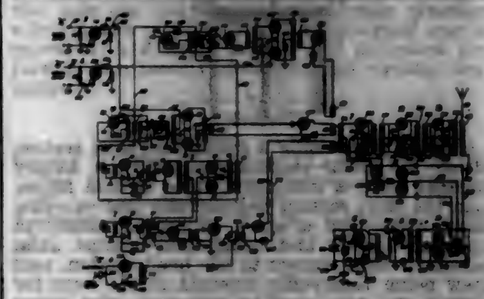
Application December 8, 1934, Serial No. 756,866

11 Claims. (Cl. 4—187)

1. In a sink structure having a suitable surface area which includes a back portion, a central por-

tion, and adjacent portions extending backwardly

and increasing in outward projection from said central portion to said back portion.

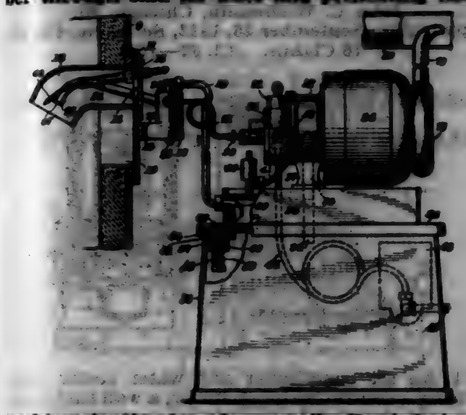


2,028,284
APPARATUS FOR THE STRINGING OF TENNIS RACKETS
James Hutton Procter, Northbridge, New South Wales, Australia, assignor to Ace Racket Stringers (Foreign Rights) Limited, Sydney, New South Wales, Australia, a company of New South Wales
Original application June 22, 1932, Serial No. 618,744. Divided and this application March 28, 1934, Serial No. 717,854. In Australia, New Zealand, and Great Britain July 16, 1931
1 Claim. (Cl. 265—1)

A racket string tensioning tool of the dynamometer class comprising in combination a pull head, a helical spring, a tubular metal sleeve loosely encasing said spring, a tubular handle grip in which said sleeved spring is slidingly accommodated, a bridle connecting the outer end of said spring with the remote end of the handle grip, a tensioning bridle connecting both the inner end of the tubular sleeve and the inner end of said spring with said pull head, said pull head being disposed in alinement with said spring beyond that end thereof which is bridled to the handle grip, a bitt fixed on said pull head and adapted to carry a turn of racket string, a fixed pinch jaw and a movable pinch-jaw mounted on said pull head and adapted to grip the fall of a racket string led from said bitt, a self-holding eccentric cam having a handle and centered on said pull head adapted for applying pressure against said movable jaw to force it towards said fixed jaw, and means for gauging the distortion of said spring to indicate the tension applied to a string in the stringing operation.

2,028,365
MULTIPLEX TRANSMISSION
Richard Howland Ranger, Newark, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 5, 1933, Serial No. 650,815
7 Claims. (Cl. 250—6)

1. In a multiplex transmission system the method which comprises generating a plurality of carriers of intermediate frequency, producing from the generated carrier frequencies side band frequencies corresponding to the upper and lower side band produced, producing intermediate frequency carrier energy stabilized by the produced side band frequencies modulating each produced side band stabilized frequency and at least one generated carrier frequency independently by signals representative of the intelligence to be communicated, generating a transmission carrier frequency, modulating the transmission carrier by each of the modulated intermediate carrier frequencies, suppressing one side band frequency produced by the modulation of the carrier frequency by each modulated intermediate carrier, amplifying the modulated transmission carrier frequency, tuning the amplifying system sharply to the selected side band frequency produced by modulation, and transmitting the modulated carrier frequency representative of the intelligence signals supplied to all channels of the multiplex system.



2,028,396
METHOD OF FREEZING DESSERTS, AND APPARATUS
Ida Ecchlin, Sewickley, Pa.
Application October 17, 1934, Serial No. 748,646
7 Claims. (Cl. 62—114)

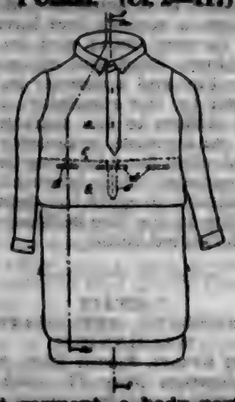
1. The method herein described of freezing ice-cream and the like which consists in spreading a body of liquid to be frozen in a shallow pool of a depth less than its length and breadth, subjecting the pool of liquid to freezing temperature, and, while such temperature condition continues, setting up within the body of liquid and throughout all its extent an oscillatory movement in the direction of its depth.

2,028,397
OIL BURNER
William F. Reibold, Irvington, N. J., assignor of sixty percent to K. L. Cluley, Montclair, N. J.
Application February 5, 1935, Serial No. 5,020
9 Claims. (Cl. 158—73)

1. In an oil burner, a heat conducting base plate for application to a furnace opening, an inwardly projecting air induction and air preheating hood at the furnace side of said base plate, a preheating and mixing chamber supported by and spaced from the outer face of said base plate and heated thereby, said base plate having a free air inlet opening extending therethrough into said hood and a burner tube projecting from said preheating and mixing chamber through said air inlet and preheating hood

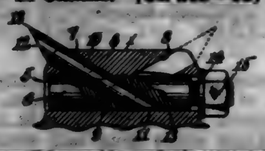
and terminating in a downwardly directed atomizing nozzle.

2,028,566
RUBBER ARTICLE AND METHOD OF MAKING THE SAME
Levi M. Rosenthal, New York, N. Y.; Annie Rosenthal, New York, N. Y., executrix of said Levi M. Rosenthal, deceased
Application July 1, 1933, Serial No. 678,571
11 Claims. (Cl. 18—58)



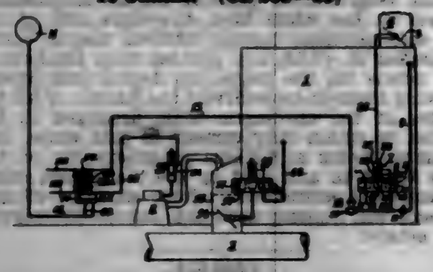
2. A method of forming a hollow rubber article which consists in spreading the unvulcanized rubber material in viscous and self-adherent form upon the surfaces of a plurality of mold sections which are provided with lips, said unvulcanized rubber material being also deposited upon said lips, assembling said mold members so that the unvulcanised rubber material has the conformation of the desired article and the lip portions of said unvulcanized rubber material contact with each other, and then vulcanizing said rubber material by heat while said mold members are held in said relative position, the vulcanization being completed before the rubber material has lost its adherence to the mold sections.

2,028,569
PIANO KEYBOARD CHART
Ray A. Shannon, Kansas City, Mo.
Application July 5, 1933, Serial No. 679,845
3 Claims. (Cl. 84—471)



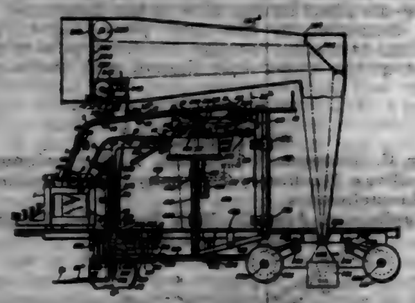
1. A piano key board chart comprising a resilient sheet member having two portions normally diverging at an acute angle requiring their compression toward each other for insertion between and to have pressing engagement respectively with the front wall of the piano case and the black keys of the piano, said member being adapted for support on its longitudinal edges on the white keys, the outer side of one of said portions having defined spaces corresponding in width and number with the keys of an octave on the piano key board, said spaces having thereon respectively the names of all the notes of the chromatic scale arranged in the order in which they appear in said scale, said member being adjustable longitudinally on the key board to and held by the black keys under tension in positions in which any one of said spaces will register with any one of the keys in an octave.

2,028,810
SHIRT
John Lodge Shaw, Crouch End, London, England
Application July 23, 1934, Serial No. 737,372
In Great Britain July 31, 1933
1 Claim. (Cl. 2—117)



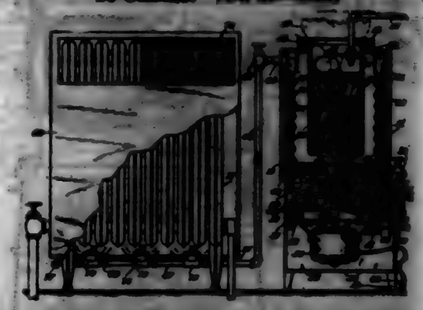
In a shirt garment, a body portion having a three-ply transverse pleat formed in the material of and at the waist of said body portion, said three-ply pleat having slits in the innermost ply and concealed by the outer plies thereof, and stitches extending through the three plies of said pleat at the upper fold thereof and above said slits.

2,028,811
CUTTER CHAIN
Leon E. Simmons, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application June 27, 1933, Serial No. 677,581
18 Claims. (Cl. 262—33)



7. A reversible cutter chain comprising a bit block, and bit holding means rotatably mounted in said bit block and rotatable into one position to hold the bit in a position to cut in one direction and into another position to hold the bit in a position to cut in the reverse direction, said bit holding means operative in said first-mentioned position to hold the bit in position to cut in the first-mentioned direction only, and when in the second-mentioned position to hold the bit in position to cut in the reverse direction only.

2,028,812
CONTROL SYSTEM FOR BOILER FURNACES
George W. Smith, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont, Pa.
Application May 25, 1934, Serial No. 727,473
16 Claims. (Cl. 236—15)



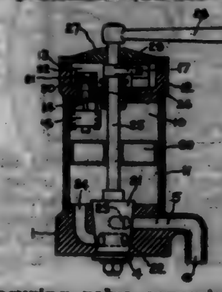
1. In combination, a regulator having a suction responsive element adjusted for equilibrium at a predetermined value of suction for causing the regulator to move in one direction or another in response to a departure of the suction from said value, a suction line having one end connected to furnace outlet and the other open to the atmosphere, fixed and adjustable orifices in the suction line and a damper in the furnace outlet operated by the regulator, a connection between said orifices to the suction element of the regulator, and means responsive to a condition to be controlled for adjusting the adjustable orifice, said regulator being operated in response to such adjustment to shift the damper and restore the suction in the line between said orifices to said predetermined value.

2,028,813
SHEET FEEDING AND DELIVERING MECHANISM
Robert Stuart, Forest Hills, N. Y.
Original application May 27, 1933, Serial No. 673,389. Divided and this application August 6, 1934, Serial No. 738,669
10 Claims. (Cl. 197—136)

9. The combination with a typewriter having a platen roll, of a sheet-supply station, a control, means rendered operative by said control for transferring one sheet from said station to said platen roll each time said control is actuated, a feed stop adjacent said platen roll and normally out of sheet-arresting position, means rendered operative by said control for moving said sheet stop into sheet-arresting position to arrest the transferred sheet and for thereafter moving said sheet stop out of sheet-arresting position, and means rendered operative by said control for cooperating with said platen roll in displacing the transferred sheet thereon from its arrested position.

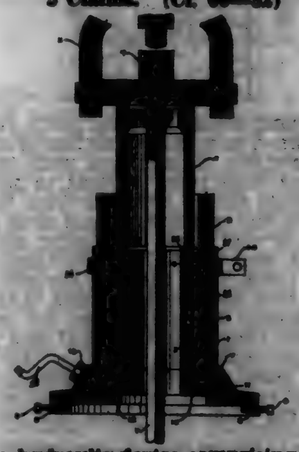
2,028,814
AIR CONDITIONER
John C. Wiekmann, Chicago, Ill.
Application September 26, 1933, Serial No. 690,371
16 Claims. (Cl. 62—256)

1. An air conditioner and water cooler comprising a central water chamber, a wall surrounding said chamber to provide an annular air conducting chamber, a horizontally disposed fan positioned beneath the water chamber, water nozzles positioned in said air conducting chamber, a conduit for conducting water from the water chamber to said nozzles and to the top of said fan, said fan being positioned to spray such water by centrifugal force into the path of the air from the fan into said annular chamber, and a valve for feeding water from the water chamber to said nozzles and onto said fan during rotation of the latter.



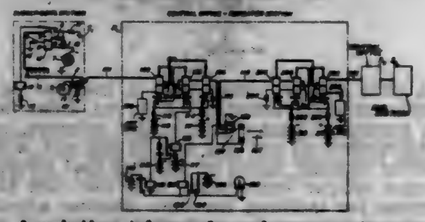
2,028,815
VALVE
John Midgley Wood, Cranston, R. I., assignor to Franklin Process Company, Providence, R. I., a corporation of Rhode Island
Application June 1, 1934, Serial No. 728,544
6 Claims. (Cl. 251—40)

6. In a valve, the combination of a housing having inlet and outlet openings, a detachable seat-member having an annular rim, means for attaching the seat-member to the housing with the annular rim extending into one of said openings, a closure cooperating with the rim of said seat to close the opening, a stem extending through the housing and slidable therein, a standard, and means for actuating the stem to move the closure to open and close the valve, said actuating means including a member engaging the stem and longitudinally adjustable on the standard whereby to vary the range of movement



of the closure to insure its engagement with the annular rim of the seat after the latter has been resurfaced by grinding the rim.

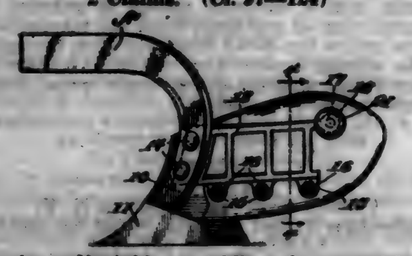
2,028,816
MEASURING VALVE
Howard C. Allen, Vancouver, British Columbia, Canada
Application October 23, 1934, Serial No. 749,585
5 Claims. (Cl. 225—9)



1. A measuring valve comprising a chamber having a base and side walls, said base having an inlet connection and a discharge outlet, a float valve for admitting liquid to a predetermined level in the chamber from the inlet connection, a bye-pass valve from the inlet connection to the chamber adapted when open to relieve the pressure of the liquid supply and open the float valve, and a valve for discharging the liquid from the chamber through the outlet.

2,028,817
HYDRAULIC JACK
Frank Anguish, Wewoka, Okla., assignor of one-half to Phillips Petroleum Company, a corporation of Delaware
Application March 14, 1934, Serial No. 715,567
5 Claims. (Cl. 60—53)

1. In a hydraulic device comprising a base element supporting two concentric piston chambers about an open space extending throughout the length of the device and which contain a pressure transmitting fluid, a first conduit connecting the said chambers, a check valve in said conduit, a second conduit connecting the said chambers, a valve in said second conduit, two annular pistons provided with packing rings mounted in said piston chambers in contact with said fluid, manually operated means connected to the outer one of said pistons for forcing the piston to apply pressure to said fluid and manually operated means for operating the valve in second conduit adapted to release said fluid and permit the return of both pistons to a balanced position.



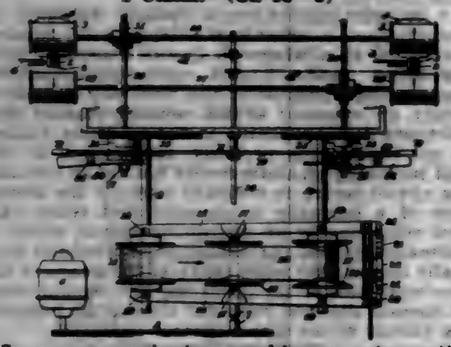
2,028,818
PRINTING TELEGRAPH SYSTEM
Russell Jacob Anspach, Roselle, and Jackson Webster Harrison, Westfield, N. J., assignors to American Telephone and Telegraph Company, a corporation of New York
Application June 21, 1934, Serial No. 731,740
10 Claims. (Cl. 178—69)

1. A printing telegraph exchange system comprising in combination a plurality of telegraph lines connected to a plurality of printing telegraph central office repeater stations, a plurality of subscribers' printing telegraph stations connected to the central office repeater stations by the telegraph lines, and instrumentalities for enabling a subscriber to warn an attendant at only one central office repeater station of the improper functioning of teletypewriter apparatus located at that particular subscriber's station, said instrumentalities including a normally closed circuit extending from a subscriber's station to the nearest central office and a cam at the subscriber's station for opening said circuit for a preassigned time interval.

5. A printing telegraph system including in combination a receiving teletypewriter station connected by a telegraph line to a sending teletypewriter station, and a calling-in circuit for enabling an operator at the receiving station to notify an operator at the sending station that teletypewriter apparatus at the receiving station is not functioning properly, said calling-in circuit including an alarm device having an energizing circuit which is normally open at the armature of a normally unoperated first relay, said first relay having an energizing circuit which is normally open at the armature of a second normally unoperated relay, and control means at the receiving station for operating the second relay to operate the first relay for closing the energizing circuit of the alarm device.

2,028,819
BREAKING PLOW
Ray E. Atkinson, Fowler, Ind.
Application April 10, 1935, Serial No. 15,688
2 Claims. (Cl. 97—124)

1. An adjustable mouldboard, comprising a strut for fixed engagement to a leg of a plow



beam, a springy mouldboard section carried by the strut and connected therewith at the lower portion of said section, and means on the strut and active upon the mouldboard section to flex the same.

2,028,520
CHIN SUPPORT
Will J. Betharum, Franklin, Texas.
Application August 21, 1934, Serial No. 740,849
1 Claim. (Cl. 27—25)

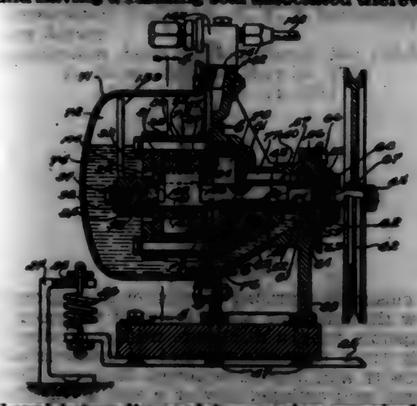
A chin support comprising a member to be positioned in the nostrils of a person, a flat faced rod having a head carrying said member, rack teeth formed on one flat face of the rod, a chin bearing slidably fitted on the rod and having a ratchet tongue engagable with the rack teeth thereon for latching the chin bearing adjusted on the rod when the said chin bearing is subjected to weight and means on the head and chin bearing for engagement by the fingers of a person for effecting the ratcheting action of the chin bearing on the rod.

2,028,521
SPINNING MACHINE FOR RAYON OR OTHER SYNTHETIC MATERIAL
Julius Brenninger, Fairfield, Conn., assignor to The Max Ams Chemical Engineering Corporation, Bridgeport, Conn., a corporation of Connecticut
Application October 1, 1930, Serial No. 485,626
1 Claim. (Cl. 18—3)

In a rayon spinning machine, a spinnerette, two spools either one of which can receive the thread produced by the spinnerette, change-speed transmission means to drive the spools, means to connect or disconnect either spool from the transmission means, latching means to prevent the disconnecting of one spool from the transmission means unless the other spool has been connected to the driving means, and means to reverse the action of the change-speed means when releasing the latch.

2,028,522
PISTON
Charles S. Brown, Syracuse, N. Y.
Application August 28, 1931, Serial No. 560,965
2 Claims. (Cl. 309—15)

1. A piston for internal combustion engines comprising a head formed with a circumferential groove and a skirt comprising a split sleeve having an internal annular flange located in the groove and slidably engaging the walls thereof, the head having pin bosses depending into the upper end of the skirt and the skirt being formed with openings opposite the pin bosses for permitting the insertion of the piston pins, said skirt being shiftable about the head to bring said openings into alignment with the bearings of the pin bosses and out of alignment therewith to hold the pins from displacement, and snap catch means for normally holding the skirt from turning about the head.



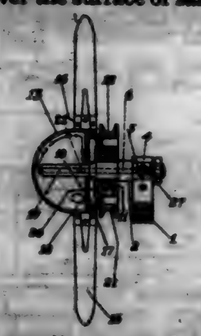
2,028,523
CHAIR
Bernard George Bruening, Evansville, Ind.
Application August 25, 1933, Serial No. 686,325
1 Claim. (Cl. 155—1)

A chair comprising two front posts, two rearwardly declined skids projecting rearwardly from the lower portions of said front posts, the front ends of said skids being secured to said front posts at points spaced upwardly from the lower ends thereof, the rear ends of said skids and the lower ends of said front posts being adapted to rest upon a floor or the like, two relatively tall rear posts rising from the rear portions of said skids, said rear posts being secured to said skids at points spaced forwardly from the rear ends of said skids, rungs securing all of said posts in rigid relation with each other, a seat spaced above said skids and extending from said front posts to said rear posts, and back-forming means secured to the upper portions of said rear posts.

2,028,524
COMPRESSOR FOR REFRIGERATING SYSTEMS
John C. Buchanan, Detroit, Mich., assignor, by mesne assignments, to Borg-Warner Corporation, a corporation of Illinois
Application October 8, 1932, Serial No. 637,727
9 Claims. (Cl. 230—205)

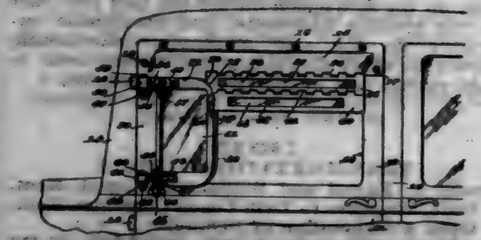
1. In a refrigerating system a refrigerant compressor associated therewith, said compressor being provided with a chamber into which said compressor discharges and which forms a refrigerant and lubricant reservoir, a shaft projecting into said chamber below the lubricant level therein and having a running seal associated therewith,

said seal being disposed in a region remote from said chamber, and means associated with said shaft for circulating a continuous stream of lubricant under pressure from said chamber within the space surrounding said seal and thereafter returning said lubricant to said chamber.



2,028,525
SERVICE CONTAINER
Emil Christensen, Canterbury, Melbourne, Victoria, Australia
Application December 30, 1933, Serial No. 705,297
In Australia August 15, 1933
1 Claim. (Cl. 224—5)

A service container comprising a cylindrical casing of double wall type, insulating material between the walls, end walls for the casing, a chamber mounted axially of the casing, means for rotatably supporting the chamber in each end wall of the casing, means carried by one end wall of the casing to permit access to the chamber to utilize the chamber as a refrigerant receptacle, means connected with the chamber and extending through the opposite end wall thereof for rotating the chamber, and a series of walls radiating from the chamber into substantial contact with the casing and substantially coextensive in length with the distance between the end walls of the casing, whereby to provide merchandise receptacles surrounding the chamber and open toward the casing, the casing being formed with an opening extending longitudinally thereof for substantially the full length of a merchandise receptacle, whereby access is had to all the articles in a merchandise receptacle in registry with said opening in the casing.

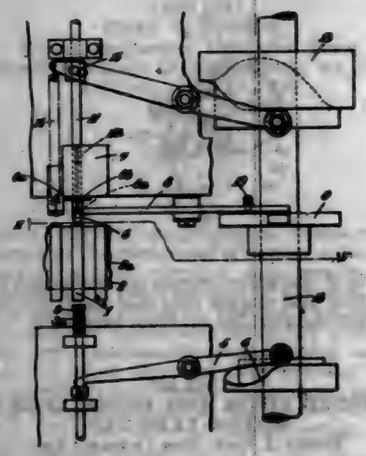


2,028,526
ENGINE ACCESSORY
Alfred Copony, Mount Clemens, Mich.
Application January 19, 1933, Serial No. 652,512
8 Claims. (Cl. 184—6)

1. In a centrifuge for the purification of oil in internal combustion engines, the combination of a rotating shell actuated by said engine, means on the outside periphery of said shell to create a current of air over the surface of said shell when said

engine is in operation, means for admission of polluted oil of said engine into said shell, and means to extract the purified oil from said shell.

2,028,527
COMBINED VISOR AND VENTILATOR FOR MOTOR VEHICLES
Henry J. Cox, New Orleans, La.
Application November 12, 1934, Serial No. 752,779
4 Claims. (Cl. 296—84)



3. A combined visor and ventilator for windows of automobiles comprising a door frame having an opening, a stationary panel secured to the frame above the opening and having a panel depending from the free edge of the stationary panel and hingedly connected thereto, a panel having a transparent section swingably mounted at one side of the opening of the door frame and movable into association with the depending panel for protecting the occupant of the car against rain and sunlight along two edges of the opening, a portion of the free edge of the swingable panel neatly fitting an outside end portion of the stationary panel, a free end of the depending panel engaging over the outer face of the free end of the swingable panel, said panels cooperating to divert rain from the opening while permitting ventilation.

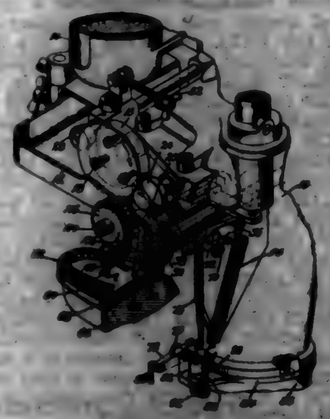
2,028,528
CIGARETTE
William Frederick Maitland Edwards, Earls Court, London, England, assignor to Filter Tips Limited, London, England, a British company
Application February 25, 1935, Serial No. 8,195
In Great Britain April 13, 1934
16 Claims. (Cl. 93—77)

1. In apparatus for the manufacture of filter tip cigarettes, means for introducing mouthpiece insertions into tubular mouthpieces, such means comprising a spoon on which the tubular mouthpiece is positioned, a plunger axially aligned and co-operating with the said spoon to eject a mouthpiece insertion therethrough, means oper-

ating the said plunger so that one part of its ejecting movement positions the said insertion flush with the end of the said mouthpiece, while a second part of the ejecting movement ejects the said insertion and mouthpiece from the spoon,

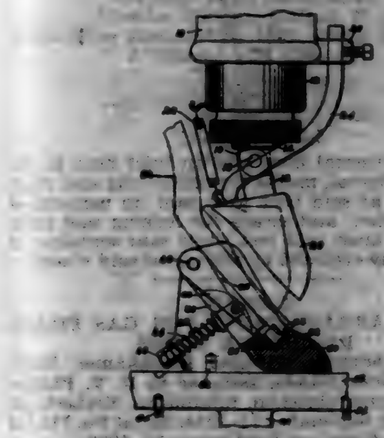
means for maintaining the mouthpiece in position on the said spoon during the said first part of the ejecting movement, and mechanism operating on the said mouthpiece-maintaining means to effect disengagement thereof prior to said second part of the ejecting movement.

2,028,829
TRANSPORTATION VEHICLE
Frank R. Fageol and William B. Fageol, Kent, Ohio, assignors to Twin Coach Company, Kent, Ohio, a corporation of Delaware
Application December 7, 1931, Serial No. 579,576
10 Claims. (Cl. 180—54)



2. A passenger-carrying road vehicle characterized by its light weight and low center of gravity comprising a base frame constructed of relatively light members and including a peripheral frame member extending completely around the vehicle, a plurality of transverse members connected at their ends to said peripheral member; an internal combustion engine mounted on said base frame adjacent the front end thereof; a front dead axle and a rear driven axle connected to said frame by springs; a drive shaft extending from said engine to the rear axle, said drive shaft being above the plane of the peripheral member and passing above some of said transverse members; a longitudinal aisle substantially in the plane of the peripheral frame member and to one side of the drive shaft; a seat platform extending from one side of the vehicle to the aisle and covering said drive shaft; and relatively light metal body framing members and metal body rigidly united to said base frame and reinforcing said base frame.

2,028,830
TUBE CAP
Walter M. Glienke, Sandusky, Ohio
Application August 14, 1934, Serial No. 739,761
1 Claim. (Cl. 221—60)



A closure comprising a cylinder having one end screw threaded for attachment to the neck of a collapsible tube, a discharge neck extending laterally from the cylinder and in communication therewith and located adjacent the screw threaded end, said cylinder having a slot, a cap closing said cylinder and one end of the slot, a plunger slidable in the cylinder, a coil spring bearing against the cap and one end of the plunger to urge the other end of the plunger to lie between the discharge neck and the screw threaded end of said cylinder for closing the discharge neck to the collapsible tube, a pin secured to the plunger and projecting through the slot for limiting the movement of said plunger by the action of the spring, a channeled closure element secured to the pin and movable with the plunger to close and open the discharge neck, and a guide slidably receiving the closure element and secured to the cylinder.

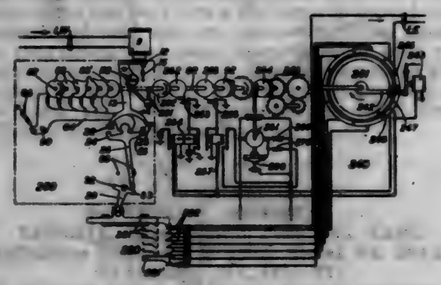
2,028,831
TREATING SOLE CHANNELS
John B. Hadaway, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application September 28, 1932, Serial No. 634,837
Renewed June 22, 1935
37 Claims. (Cl. 12—39)

1. In a machine for cementing the channels of shoe soles, a rigid coating-applying member having angularly related peripheral surfaces adapted for engagement respectively with the flap and the bed of a channel in a sole, and a power-driven movable flap-engaging tool for holding the channel flap in firm engagement with one of the surfaces of the applying member.

2,028,832
APPARATUS FOR MOLDING SOLES
Harry Hallam and Cyril Harry James, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application April 5, 1933, Serial No. 664,646
In Great Britain May 26, 1932
13 Claims. (Cl. 12—33)

1. A molding machine having, in combination, a concave mold, a convex mold movable in a straight line path toward and from the concave mold, and means comprising a fixed arm arranged to engage the mold during its straight line movement for swinging said convex mold transversely when it has been retracted from the concave mold, for the purpose of increasing the clearance between the two molds.

2,028,833
OSCILLATION GENERATION
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application July 16, 1930, Serial No. 467,811
19 Claims. (Cl. 250—36)

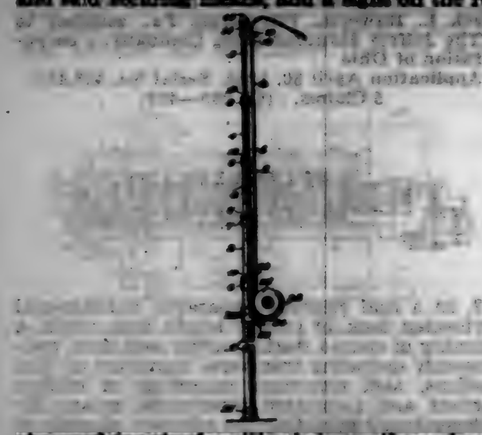


1. In an oscillation generation circuit comprising an envelope and a conductor in close proximity to said envelope, the method of producing electrical oscillations which includes producing an arc discharge within said envelope and establishing relative motion between the discharge and the conductor whereby the field of the discharge induces potentials in the conductor.

2,028,834
COAL CLEANING APPARATUS
Mack E. Haverth, Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application April 30, 1930, Serial No. 448,493
5 Claims. (Cl. 209—466)

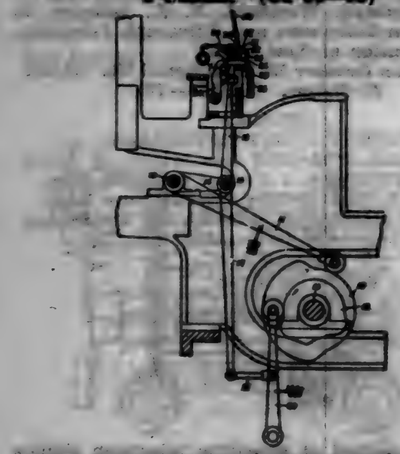
2. In a coal cleaning apparatus, a horizontal perforated deck, of greater length than width, a plurality of spaced stations along said deck, continuously operating transverse conveyors at said stations, said conveyors consisting of endless carriers and associated receptacles, means for independently adjusting the effective capacity of said conveyors, a longitudinal conveyor having channels lengthwise thereof, said transverse conveyors discharging into predetermined channels of said longitudinal conveyor.

2,028,835
START-STOP TELEGRAPH REPEATER
Joseph Herman, Westfield, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application October 23, 1934, Serial No. 749,634
22 Claims. (Cl. 178—70)



1. The method of repeating telegraph signals which comprises retransmitting successive signal impulse series with a lag between incoming and outgoing signal impulse series which varies in response to varying operating conditions, changing once during each impulse series the speed of retransmission to be higher at any large lag than at a smaller lag to automatically limit the lag not to exceed the time of retransmitting one signal impulse series.

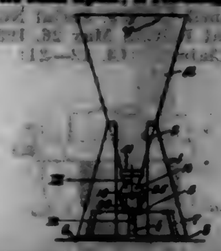
2,028,836
TAPE CARRIER
Clarence G. Holgate, Milwaukee, Wis.
Application November 6, 1933, Serial No. 697,574
8 Claims. (Cl. 33—137)



8. A tape carrier comprising an elongated rod, tape reel carrying means secured to the rod near one end thereof for holding a reel on the outside of the rod, a tape reel carried by said means, securing means near the other end of the rod for the free end of the tape when unwound from the reel, whereby the tape when unwound is held

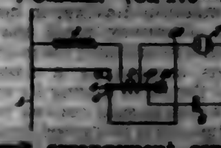
substantially parallel to the rod between the reel and said securing means, and a sight on the rod

at a predetermined position between the reel carrying means and the said securing means.



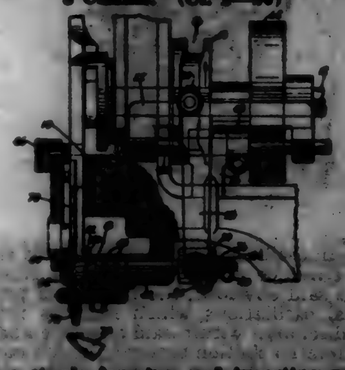
2,028,237
STRAIGHT BAR KNITTING MACHINE
Samuel Holt, Somerseton, England
Application May 28, 1932, Serial No. 613,077
In Great Britain June 1, 1932
5 Claims. (Cl. 66—98)

1. In a straight-bar knitting machine of the type described, having sinkers provided with throats disposed immediately below the points on which the new courses are drawn, a fixed presser disposed immediately above the sinkers, a set of needles, a needle bar, yarn feeders, and means for actuating the latter, the needle bar and the sinkers whereby the knitting of each course is effected solely on the sinkers by limited movements of the latter and the needles, substantially as described.



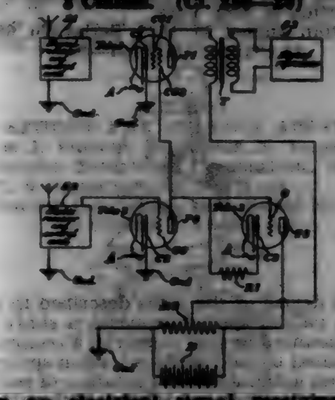
2,028,238
CONTAINER AND DISPENSER
Henry Kerwin, San Bernardino, Calif.
Application June 3, 1935, Serial No. 24,694
3 Claims. (Cl. 222—97)

6. In a device of the character described, the combination of a conical stand provided with an enlarged base and a constricted top, a vertically extending opening in the wall of said stand, and a rest positioned therein spaced from the bottom of the stand; a conical fibrous and destructible container comprising a conical body portion, a flat base, a plurality of added thicknesses of fibrous material connected to the exterior of the body portion at the apex and a substantially cylindrical lip member arranged over the said added thicknesses and to the body portion adjacent said apex; a feeding device provided



with a horizontal bore and an inlet port in the rear half thereof, means for connecting said feeding device at said port with said lip member of said container, and means for locking said feeding device upon said rest while said container is supportingly retained by the top of said stand.

2,028,239
CIRCUIT ARRANGEMENT FOR GAS FILLED DISCHARGE TUBES
Hendrik Abraham Wijsend Klinkhamer, Eindhoven, Netherlands, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application September 14, 1934, Serial No. 744,060
In Germany September 15, 1933
7 Claims. (Cl. 176—124)



1. A circuit arrangement comprising a gas-filled discharge tube, an inductance connected in series with the tube, a capacity, and switching means to alternately connect said capacity in parallel with the discharge tube and in parallel with the series connection of the discharge tube and inductance.

2,028,240
FASTENING INSERTING MACHINE
Fred L. MacKenzie, deceased, late of Beverly, Mass., by Ella L. MacKenzie, administratrix, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 7, 1935, Serial No. 9,845
3 Claims. (Cl. 1—30)

1. In a staple forming and inserting machine, an inside former, an outside former arranged for movement to form a staple about said inside former, and means constructed and arranged to move said inside former into the path of movement of the outside former prior to the staple forming operation and also further to move the inside former to deflect the point of one of the staple legs after the staple has been formed.

2,028,241
MEANS FOR ELIMINATING STATIC AND OTHER DISTURBANCES
Charles Mertz, Clifton, N. J.
Application January 17, 1933, Serial No. 707,009
3 Claims. (Cl. 250—20)

3. In an electrical signal receiving system, means for separating undesired electrical oscillations from desired electrical oscillations comprising a receiving unit tuned to the frequency of the desired oscillations, a thermionic relay having a cathode, two grids and a plate, the cathode and one grid being connected to the output circuit of said unit, a signal reproducer operatively connected with the output of said thermionic relay, a second receiving unit similar to said first-named receiving unit but tuned to a frequency different from that to which said first-named receiving unit is tuned, a second thermionic relay having its input connected to the output of said second receiving unit, a resistance device connected in series in the output circuit of said second relay and having substantially no electrical capacity or time lag, the other grid of said first named thermionic relay being connected to a point in the output circuit of the second relay between the resistance device and the anode element of the second relay.

2,028,242
INK PAD FOR RUBBER STAMPS
Leland A. Phillips, Rochester, N. Y.
Application August 28, 1934, Serial No. 741,177
In Canada February 27, 1934
3 Claims. (Cl. 91—54.5)

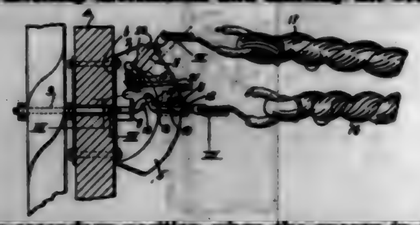
1. A stamp pad consisting of a block of balsa wood cut across the grain thereof to a suitable thickness and impregnated with ink.

2,028,243
COLLAPSIBLE CONTAINER OR THE LIKE
Alexander Fleshler, Trail, British Columbia, Canada, assignor of one-third to David Chew, Trail, British Columbia, Canada.
Application March 22, 1933, Serial No. 661,530
7 Claims. (Cl. 222—80)

1. A closing device for the discharge neck of a collapsible container, said closing device comprising a plate swingably mounted at its lower end in the neck and extending beyond the outer end of the neck, spring means mounted within the neck between and in engagement with the swing-

able plate and the wall of the neck for normally swinging the plate to a closing position across the neck, a cover member carried by the outer end of the plate for abutting and closing the outer end of the neck when the plate is in closing position.

2,028,244
VALVE
Charles S. Fuge, Chicago, Ill., assignor to Central Valve Mfg. Co., Chicago, Ill., a corporation of Delaware
Application May 23, 1931, Serial No. 539,449
4 Claims. (Cl. 251—44)



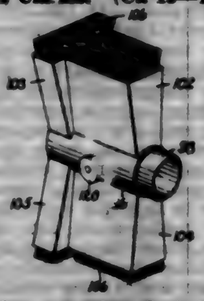
2. In a valve, a seat, a head for coaction with the seat, a stem on which the head is mounted, the mounting permitting the head to shift laterally with respect to the stem into concentric relation with the seat when the head is moved into engagement with the seat, and comprising means for preventing the head from turning with respect to the stem, said last mentioned means also serving in cooperation with coacting surfaces of the head and stem to prevent the head from tilting with respect to the stem.

2,028,245
RELAY MOTOR
Leland E. Reid, South Pasadena, Calif.
Application February 5, 1932, Serial No. 591,128
22 Claims. (Cl. 185—37)

2. A relay motor having a driven member, a driving member therefor, torsion means extending from said driving member, a second driving member, torsion means extending from said second driving member, a transversely movable carriage supporting said driving members, means for guiding said carriage to move in a direction transverse to the direction in which said torsion means extend, and automatic means for moving the carriage to shift the drive from the first-named driving member to the second-named driving member when the torsion means for the first driving member is exhausted.

16. In a relay motor, the combination of a frame, a driven shaft rotatably mounted in the frame, a sector pivotally mounted on the said frame on an axis substantially in alignment with the driven shaft, a primary driving shaft mounted on the said sector, a secondary driving shaft rotatably mounted on the sector, said driven shaft having a crank and said driving shafts having cranks, respectively, capable of engaging the shaft of the driven shaft for rotating the same, torsion members corresponding to the driving shafts capable of being twisted to store up energy in the same, latching mechanism for normally

latching the sector in a primary position with the primary driving shaft in alignment with the driven shaft, and automatic means for releasing the latching mechanism and shifting the sector

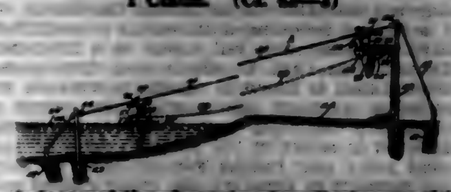


to a secondary position when the energy in the primary torsion member is exhausted, and thereby aligning the secondary driving shaft with the driven shaft to continue driving the same.

2,028,846
CELLULOSE PULP FOR ESTERIFICATION PURPOSES AND PROCESSING OF SAME
George A. Richter, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
No Drawing. Application June 22, 1931, Serial No. 546,151
2 Claims. (Cl. 260—196)

1. A process which comprises suspending preliberated hardwood pulp in a mercerising liquor containing an oxidant for about two to eight hours or more, washing the mercerized pulp free from mercerising liquor, treating the washed pulp with caustic soda to form soda cellulose, and treating the soda cellulose without ageing with carbon bisulphide to form viscose.

2,028,847
DUST REMOVING DEVICE
Fred Richa and Charles Turner Jones, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Original application June 6, 1933, Serial No. 674,565. Divided and this application July 10, 1933, Serial No. 679,696. In Great Britain June 30, 1932
2 Claims. (Cl. 15—158)

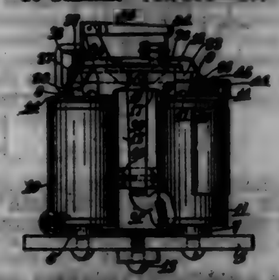


1. A tool for removing dust from shoes comprising a tubular suction duct having an inlet opening in its wall, a head having a cylindrical portion whereby the head is mounted for rotary movement upon said duct and having also two hollow extensions the outer ends of which extensions are open and the inner ends of which are adapted to communicate, one at a time, with the inlet opening in said suction duct, the cylindrical portion of said head being positioned between said extensions and operating to close said air inlet opening when neither extension is in operative position, cleaning means mounted at the outer ends of said extensions and means for locking said head alternatively in positions such that the desired one of said extensions communicates with said inlet opening and also in an inoperative position in which the cylindrical portion of the head closes the inlet opening.

2,028,848
PERFORATOR
Edwin S. Rascoe, Rochester, N. Y., assignor to Yawman & Erbe Mfg. Co., Rochester, N. Y., a corporation of New York
Application August 25, 1933, Serial No. 686,787
13 Claims. (Cl. 164—91)

1. In a device of the class described in combination, a pair of spaced supports, a shaft eccentrically mounted in said supports, a reciprocating part actuated by said shaft, a torsion spring having one end actuated by the rotation of said shaft and having its other end moving with said reciprocating part.

2,028,849
FLYING DECOY
William Thomas Gray, Fulda, Ill.
Application April 2, 1935, Serial No. 14,319
1 Claim. (Cl. 43—3)



A decoy of the character described, comprising a body having a head, wing sections, means swingingly and detachably connecting the wing sections to the body, suspension means connected with the wing sections and adapted to bring the same to flight position, means for removably mounting the suspension means and directing the body to floating position upon the water and means for returning the body to shore and active for changing the position of the body to have the head in flight direction.

2,028,850
MACHINE TOOL FEED
Harry F. Vickers, Detroit, Mich.
Application May 13, 1930, Serial No. 452,845
Renewed December 6, 1935
8 Claims. (Cl. 60—52)

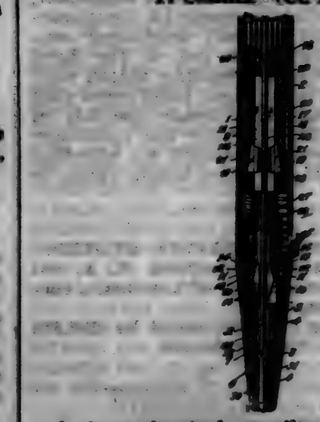
1. In a machine tool, a stationary frame, a movable carriage on the frame, a cylinder and piston mechanism for operating the carriage on the frame, a variable reversible pump for supplying operating fluid to said mechanism, the pump including a rotating cylinder and piston assembly, and ring surrounding the said assembly and cooperating with the pistons of said assembly, the ring being shiftable to vary the stroke of the pistons and to change the direction of flow through the pump, and means controlling operation of the pump, including a shiftable actuating member mechanically connected with said rings, control means engaging said actuating member to operate it, the control means being carried by the movable carriage, and means whereby said control means may be manually operated and held stationary.

2,028,851
TELEPHONE PAY STATION APPARATUS
William J. Vincent, Rochester, N. Y., assignor to Rochester Telephone Corporation, Rochester, N. Y., a corporation of New York
Application October 23, 1934, Serial No. 749,371
10 Claims. (Cl. 194—16)

1. In a coin collecting device, a polarized electro-magnetic unit having an armature movable in one direction in response to operating current of one polarity and movable in the other direction in response to current of the opposite polarity, and means normally locking said armature against movement in one direction, said means being unlocked and said armature being moved by the energization of said electromagnet in response to current of one polarity.

2,028,852
DOOR LOCKING MEANS
Charles H. Vincent, Utica, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application March 30, 1934, Serial No. 718,142
11 Claims. (Cl. 70—30)

1. A construction for motor vehicles comprising two or more doors, means for locking simultaneously said doors, means accessible only from inside the vehicle when the vehicle is closed for operating the locking means to lock and unlock the doors, means accessible from outside the vehicle when the vehicle is closed for operating the locking means to lock and unlock the doors, and mechanism to prevent the first means from being operated to unlock the doors when the second means is in locking position.

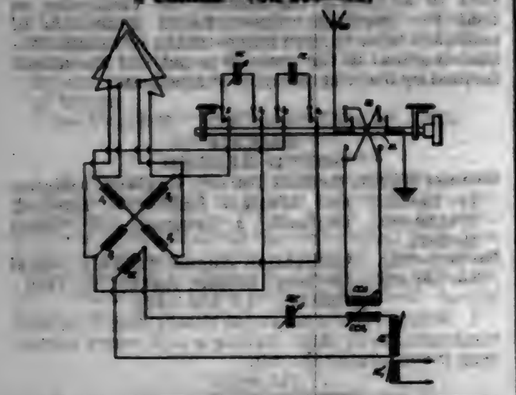


2,028,853
METHOD OF FORMING THIN METALLIC FILMS BY CATHODE DISINTEGRATION
Julius von Bonse, Ehrenberg, Baltic, and Kurt Richter, Leipzig, Germany, assignors to La Dispersion Cathodique, Brussels, Belgium, a corporation of Belgium
No Drawing. Application April 12, 1932, Serial No. 604,598. In Germany February 9, 1931
2 Claims. (Cl. 91—70.1)

1. A process for accelerating the cathodic disintegration of metallic electrodes in a vacuum for deposition upon an article to be coated without excessive heating of the article, which consists in adjusting the size of the electrodes so that the greatest cross-sectional dimension of said electrodes is from three-tenths of to approximately equal to the mean free path of the atoms formed by disintegration of the cathode.

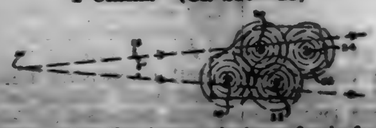
2,028,854
SOUND RECORD
Samuel Whyte, Redhill, Surrey, England, assignor to Electric and Musical Industries Limited, Middlesex, England, a company of Great Britain
No Drawing. Application August 22, 1931, Serial No. 558,828. In Great Britain August 26, 1930
5 Claims. (Cl. 154—43)

1. Sound record material comprising a phenol condensation product having a soft water soluble soap incorporated therein.



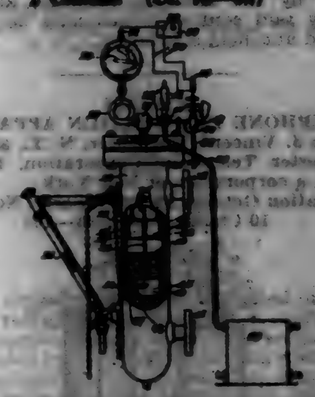
2,028,855
MECHANICAL PENCIL
Arthur Winter, Weehawken, N. J.
Application September 12, 1934, Serial No. 743,873
17 Claims. (Cl. 120—17)

1. A mechanical pencil comprising telescopically associated inner and outer tubular sections, a slotted lead holding tube mounted for longitudinal movement in opposite directions in said outer tube, a clutch on and slidable longitudinally of said tube and having jaws passing through the slots therein to engage a lead in the tube, an operative connection between said inner section and said clutch to cause engagement and disengagement of said jaws with a lead in said tube



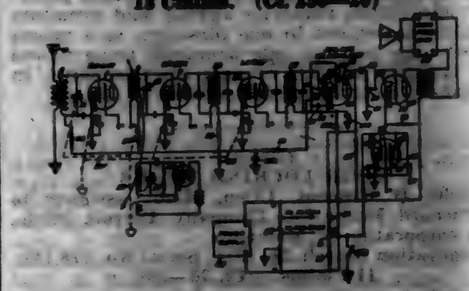
upon movement of said inner section into said outer section and retraction of said inner section respectively, whereby said lead is slid through said tube by said clutch toward projected position from said outer section and released by said clutch upon movements of the clutch in opposite directions respectively, said tube and said outer section, having cooperating parts one of which is operatively connected to said inner section to grip and hold said lead in projected position upon retraction of said inner section and to release said lead upon movement of the inner section into the outer section.

2,028,858
RADIO DIRECTION FINDER
Fred Weeks, Richmond, England, assignor to Radio Corporation of America, a corporation of Delaware
Application April 8, 1931, Serial No. 528,472
In Great Britain April 8, 1930
4 Claims. (Cl. 250—11)



1. A direction finding installation comprising a pair of mutually perpendicular fixed frames, a radio goniometer having mutually perpendicular fixed coils associated each with one of said fixed frames, a search coil connected in a circuit including a tuning condenser, a variable condenser, a fixed condenser, switching means for simultaneously connecting said two last mentioned condensers each in shunt with one of the fixed frames, an open aerial, a reversing switch connecting said open aerial in one or other sense with the search coil circuit, and means operable in common for actuating together the condenser switches and the reversing switch for effecting the change over from one wave length range to the other.

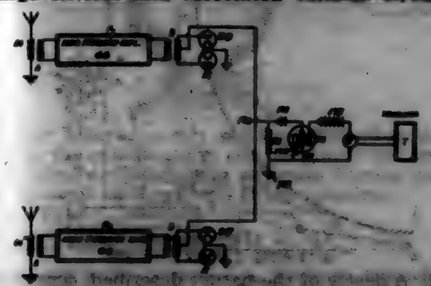
2,028,537
ELECTRICAL COMMUNICATION SYSTEM
Vladimir K. Zworykin, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 27, 1932, Serial No. 595,483
1 Claim. (Cl. 250—15)



A system for the transmission of wireless signals comprising in combination a directive high frequency transmitting station, a plurality of distant directive receiving stations disposed in the path of propagation of the signals, a plurality of non-directive substantially vertical re-radiating tuned antennæ, one for each of the receiving stations, and non-amplifying energy-transfer connections between each one of the directive receiving stations and its associated non-directive re-radiating antenna, whereby the service area of the transmitting station may be increased.

2,028,565
WATER COLUMN DISPLACEMENT WEIGHT
Alfred L. Aicher, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 22, 1932, Serial No. 624,114
2 Claims. (Cl. 73—32)

1. In mechanism of the character indicated, a solid weight unit including an iron shell and an interior filling therein of aluminum.



2,028,580
RADIORECEIVER
Loy E. Barton, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 25, 1933, Serial No. 699,611
13 Claims. (Cl. 250—20)

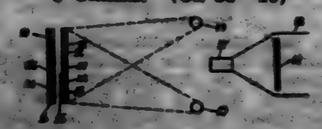
1. In a radio receiver having a signal channel, an electric discharge tube in said signal channel, said tube having a cathode, an anode and a control grid, and a control tube having a cathode-anode space discharge path, said control tube being connected with said space discharge path common to the anode and control grid circuits of said electric discharge tube whereby it functions as a self-biasing resistor for said control grid.

2,028,969
RECEIVING SYSTEM
Harold H. Beverage, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 8, 1930, Serial No. 494,615
Renewed May 24, 1933
2 Claims. (Cl. 250—8)

1. A receiving system for extremely high frequency signals of the order of 30,000,000 cycles per second transmitted at a plurality of frequencies comprising a plurality of geographically spaced antennæ, a radio frequency amplifier coupled to each of the antennæ and each tuned to a different one of the transmitted frequencies, each of said amplifiers comprising a plurality of stages having individual screen grid electron discharge devices and associated tunable circuits,

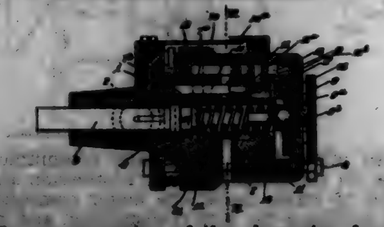
each of said tunable circuits including an inductance coil and a tuning condenser, the inductance coil being grounded at one end through a by-pass condenser and the tuning condenser being separately grounded, full wave rectifiers coupled to each of said radio frequency amplifiers, circuit means including a relay to combine the rectified energies, and translating means responsive to the combined energy.

2,028,991
APPARATUS FOR TREATING REELCLES
Tom Conrad Ekeblad, Alsten, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Application January 5, 1931, Serial No. 508,383
In Germany April 12, 1928
8 Claims. (Cl. 215—36)



1. In a device of the character set forth, a coupling comprising a body portion and a plurality of flanges on said body portion, one of said flanges being dished and resilient and adapted to snap into contact with the other of said flanges, said flanges providing a space between them.

2,029,003
METHOD OF PRODUCING COMPOSITE PICTURES
Conrad G. Brisé, Chicago, Ill., assignor to Cinema Development Company, Chicago, Ill., a corporation of Illinois
Application October 12, 1931, Serial No. 568,284
11 Claims. (Cl. 88—16)

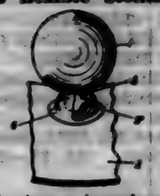


1. The method of producing a composite photograph of the images on two component film transparencies which includes making the images on both transparencies substantially opaque to but reflective of light to show the image details, superposing the two transparencies and illuminating the images by reflected light, and exposing a fresh actinic surface to both images so illuminated and superposed.

2,028,362
METHOD OF PRODUCING COMPOSITE PICTURES
Conrad G. Brisé, Chicago, Ill., assignor to Cinema Development Company, Chicago, Ill., a corporation of Illinois
Application October 12, 1931, Serial No. 568,285
5 Claims. (Cl. 88—16)

4. The method of producing a composite photograph of two or more component parts which includes making transparencies, each transparency having a photographic image of one of said components, providing substantially opaque but light reflective backings for said images, superposing said transparencies and illuminating the images by reflected light, and exposing a fresh actinic surface to the images.

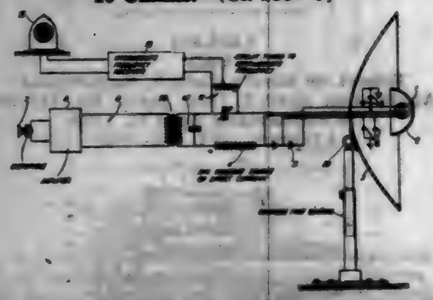
2,028,564
PUMP
Robert de Steuts, Zurich, Switzerland
Application April 7, 1934, Serial No. 719,506
In Switzerland April 13, 1933
4 Claims. (Cl. 103—163)



1. In an apparatus of the character described the combination of a working head with a plane working face having arcuate suction and pressure channels, a cup-shaped housing, a cylinder block rotatable in the housing and having a plurality of cylinders arranged for communication with said channels in the rotation of said cylinder block, pistons for said cylinders, means for reciprocating said pistons in the rotation of said cylinder block, a spring arranged between said cylinder block and the closed end of the housing to press the cylinder block against the working face of the working head, a clearance being provided between the open end of the housing and the working head, tension means taking up the reaction of said spring and limiting the clearance between the housing and the working head with capacity for limited tilting movement of the housing with respect to the working head.

2,028,865
MASSAGING DEVICE
Florence D. Forsyth, Athens, Ohio, and Donald A. Nevin, Waynesboro, Pa.
Application March 3, 1933, Serial No. 659,136
1 Claim. (Cl. 128—62)

In a massaging device, a belt formed of flexible material, a rectangular plate, there being a slot at each end of said plate which fits said belt

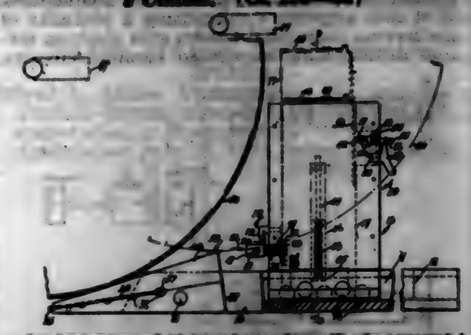


whereby the plate may be detachably secured to the belt, said plate having a plurality of sockets formed thereon, there being a central opening in said socket, a plurality of rubber balls having relatively short flexible stems formed integral

therewith, said stems terminating in a ball of larger diameter than the opening of said socket and adapted to be compressed to enter said socket whereby both a full planetary as well as axial movement of the ball will take place when in use

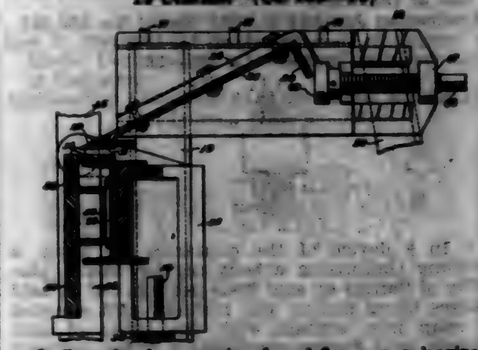
---

2,028,866
ULTRA SHORT WAVE COMMUNICATION SYSTEM
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 2, 1933, Serial No. 673,974
10 Claims. (Cl. 250—9)



5. An ultra short wave radio communication system for the simultaneous transmission and reception of waves below one meter comprising a single oscillator for both transmission and reception, a reflector, said oscillator being at the focus of said reflector, and feed leads having standing waves thereon extending along the focal line of said reflector from the electrodes of said oscillator to energy supply means.

2,028,867
SHEARS AND SCISSORS
William H. Holden, Boise, Idaho
Application May 10, 1935, Serial No. 20,749
1 Claim. (Cl. 30—13)



A pair of shears having two blades, a pivot member pivotally connecting the two blades together, said blades having a limited amount of play on said pivot member so that one blade may tip sidewise or endwise with respect to the other, means cooperating with said pivot member to yieldingly oppose said tipping movement and to urge said blades together, and spring means interposed between said blades between the pivotal connection of the blades and the handle ends thereof adapted to tip the cutting edges of said blades sidewise and endwise toward each other against the opposition of said first named means.

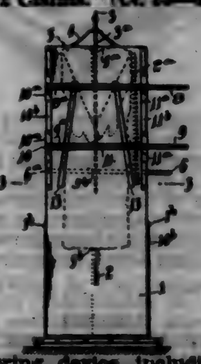
2,028,868
JACK
Joaquim S. Jardim, New York, N. Y.
Application September 21, 1933, Serial No. 690,344
9 Claims. (Cl. 254—95)

1. A device of the nature described, comprising a base, a casing operatively mounted on the base, a spring pressed vehicle supporting member vertically slidable in the casing, means for latching the vehicle supporting member in lowered position, an obstruction extending from the said latching means for releasing same, and a ramp operatively associated with the base for the purpose specified.

2,028,869
BENDING BRAKE
John Jensen, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a corporation of Illinois
Application January 5, 1933, Serial No. 650,215
18 Claims. (Cl. 153—16)

3. In a brake, a pair of end frames, a horizontally disposed platen supported between said frames, a bed positioned below said platen and guided for vertical movement by said end frames, a lever pivoted on each end frame, a link depending from said lever, and a pin projecting horizontally from each end of said bed, said link having a plurality of spaced holes adapted to receive said pin to support said bed in various vertical positions.

2,028,870
SALT SHAKER OR THE LIKE
James W. Jennings, Providence, R. I.
Application August 24, 1933, Serial No. 686,617
1 Claim. (Cl. 65—45)



A shaker comprising a base and a condiment container of vitreous material having an open lower end detachably secured to said base and normally disposed in upright position above the base, said container having a top with a plurality of sifting openings therein, each of said openings having the major portion thereof approximately

frustro-conical and tapering to a relatively small cylindrical outer end portion of less than one-half the length of the opening and of appreciably smaller diameter than the inner end of the open-

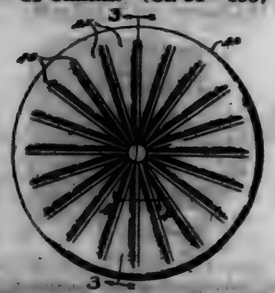
ing, the tapered major portion preventing clogging of the condiment in the container, the openings being arranged with the axes thereof passing through the open end of the container.

2,028,871
MEASURING DEVICE
Howard Addison Johnston, Toronto, Ontario, Canada
Application November 6, 1934, Serial No. 752,222
12 Claims. (Cl. 33—8)

7. A measuring device including a base; a board pivoted intermediate its ends on the base and provided with a graduated scale for measuring the length of a garment; and garment carrying means movable relative to the board and the scale whereby the neck of the garment may be positioned at a predetermined point on the scale.

2,028,872
PILE FABRIC
William D. Kellogg, Amsterdam, N. Y., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y., a corporation of New York
Application January 11, 1934, Serial No. 706,606
3 Claims. (Cl. 112—1)

1. A pile fabric which comprises a self-sustaining, preformed base fabric consisting of interwoven warp and weft threads and pile yarns extending generally lengthwise of the base and having minor portions extending along and exposed on the under surface of the base and major portions extending through the base and beyond the face thereof to form a pile surface, each yarn being colored in unit lengths, each unit length being equal to the distance along the yarn from the midpoint of a minor portion to the mid-point of the next adjacent major portion and each yarn having each end of each unit length thereof coinciding with one of said mid-points, said yarns changing color only at mid-points and at mid-points of both major and minor portions and a binding layer on the under surface of said base and said minor portions of pile yarn.



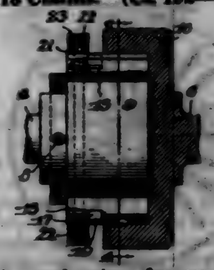
3. A method of producing a fabric having a pile surface which comprises applying colors in spots on pile yarns, the colors and their locations on the yarns being selected in accordance with the pattern to appear on said pile surface and said colors being applied in unit lengths, each of which is equal to half the length of that portion of said yarn which is to form a single pile tuft in said surface, inserting loops of said colored yarns in a base fabric from the back thereof with a major portion of each loop exposed at the face of the base and a minor portion extending along and in contact with the back of the base, said yarn loops being so inserted that said colored portions terminate only at the mid-points of the major and minor portions of said loops, said yarns changing color at the mid-points of both major and minor portions, and applying a coating of binding material to cover the back of the base and said minor portions of the loops.

2,028,873
ELECTRICAL TRANSLATION DEVICE
James M. Kendall, Woodbury Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 6, 1931, Serial No. 555,396
8 Claims. (Cl. 179—100.41)

8. Phonograph pick-up mechanism having a pair of magnetised pole pieces each having an upper and a lower portion, a pick-up coil spool mounted between the upper and lower portions of said pole pieces, and an armature mounted in the center of said spool, characterised by said spool being slidably mounted for adjustment on said pole pieces.

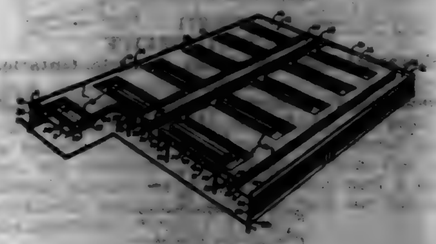
2,028,874
SANDING DEVICE
Paul H. Kramer and Jesse C. Thompson, Detroit, Mich., assignors to Park Chemical Company, a corporation of Michigan
Application March 16, 1934, Serial No. 715,787
11 Claims. (Cl. 51—195)

3. A sanding device adapted to be employed in conjunction with a mobile abrasive composition



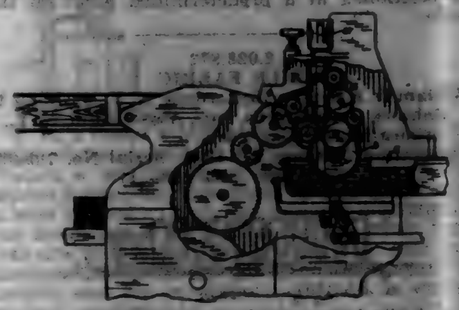
and comprising a disk-like pad, and means for rotating said pad, said pad being provided with corrugations on its working surface and arranged substantially radially of said disk-like pad, said corrugations terminating inwardly of the periphery of said pad.

2,028,575
DOUBLING SPINDLE
Gempei Kawada, Maedani-Mura, Kawabe-Gun, Japan
Application August 12, 1934, Serial No. 740,838
In Japan May 5, 1934
2 Claims. (Cl. 242—46.3)



1. In a doubling spindle, a spindle wharve having a cylindrical top portion, the outer periphery of said top portion having projections formed with vertical sides, a bobbin having a recessed base portion fitting over said top portion, and a ring fitting in the recess of the base portion, the inner periphery of said ring also having projections formed with vertical sides whereby grooves are formed in the inner periphery of said ring between the projections thereon, the projections on the periphery of the top portion of the wharve and the projections on the inner periphery of the ring fitting respectively into the grooves formed between the projections on the ring and the projections on the wharve, the spaces between the projections on the wharve and the projections on the ring being greater circumferentially than the circumferential dimension of the projections on the ring and wharve respectively, whereby the wharve and bobbin may have a limited circumferential movement relative to one another.

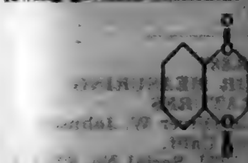
2,028,576
CLUTCH MECHANISM
Delbert L. Lotts, Chicago, Ill.
Application November 16, 1933, Serial No. 642,844
18 Claims. (Cl. 192—48)



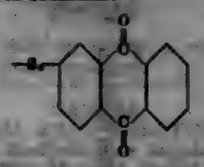
1. A clutch mechanism for connecting a drive shaft and a driven shaft, comprising a driving member, a driven member radially spaced from the driving member, and rollers in the space between said members, some of said rollers being cylindrical, and at least one of said rollers being non-circular in cross-section, and means for rotating said non-circular roller in one direction to cause it to lock the driving member and driven member for rotation together in one direction and for rotating said non-circular roller in the other direction to cause it to lock said members for rotation together in the opposite direction.

2,028,577
ROOF STRUCTURE
Oscar H. Pocock, Ferndale, and Louis Rossetti, Detroit, Mich.
Application October 11, 1933, Serial No. 693,338
13 Claims. (Cl. 98—39)

12. A roof structure comprising a substantially level main roof, a monitor extending longitudinally in a plurality of directions thereon, and intermediate monitors spaced between portions of the monitor, said monitors having roofs spaced at different elevations above the main roof.



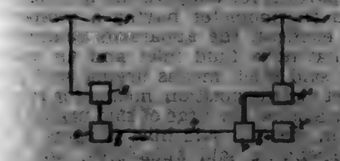
2,028,578
ADHESIVE APPLYING MECHANISM
Ernest G. Rider, Philadelphia, Pa., assignor to Stokes and Smith Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 11, 1931, Serial No. 574,343
1 Claim. (Cl. 91—48)



An adhesive-applying mechanism comprising a roller for applying a coating of adhesive to box wrappers, a reservoir for adhesive, a stationary pump casing normally dipping into adhesive in said reservoir and having an outlet discharging adhesive to said roller for application to said wrappers, and means for changing the position of the reservoir to permit cleaning fluid to be passed through said casing without ejection of adhesive in said reservoir.

2,028,579
PREPARATION OF ALIZARIN AND ITS SALTS
Donald G. Rogers, Ridgewood, N. J., assignor to National Aniline and Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application October 24, 1934, Serial No. 749,765
7 Claims. (Cl. 260—56)

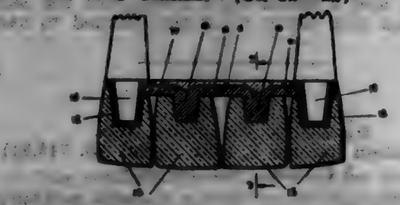
1. The process of preparing alizarin, which comprises subjecting a substance having the following general formula:



wherein X denotes a mercapto group, a sulfinic acid group, or a thioanthraquinonyl group of the following general formula:

where *n* stands for a number having a value of 2 or more, to the action of caustic alkali in the presence of an oxidizing agent.

2,028,580
RADIO TRANSMISSION SYSTEM
Wilhelm Runge and Max Pobanisch, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application May 27, 1933, Serial No. 673,168
In Germany June 16, 1932
1 Claim. (Cl. 250—2)



In a radio signaling broadcasting system having a master radio transmitting station and a remote radio transmitting station connected thereto by a transmission line, the method of synchronizing the frequency produced at said remote station which comprises generating a carrier wave at said master station, obtaining from said carrier a sub-harmonic frequency, transmitting said sub-harmonic frequency over said line to said remote transmitting station, locally generating at said remote transmitting station a carrier whose frequency approximates that of the carrier generated at said master station, obtaining from said local carrier at said remote station a sub-harmonic similar to that received from said master station, comparing the phase relations of both said sub-harmonics and controlling the frequency of said locally generated carrier from the difference in phase existing between said two sub-harmonic frequencies.

2,028,581
EXPANSION DEVICE
Gabriel R. Rohmer Balch, New York, N. Y.
Application May 11, 1933, Serial No. 670,971
10 Claims. (Cl. 72—105)

5. In an expansion device composed of a hard material pressure member and a soft material expansible member adapted to be subjected to pressure by said pressure member, for deforming it, a reinforcing member embedded within the expansible member and forming an integral part of the expansible member, whereby the reinforcing member is inclosed within the expansible member, said expansible member being acted upon by the pressure applied to the expansible member when the pressure member exerts its pressure upon the expansible member, said expansible member surrounding said reinforcing member in an integral manner before and after said pressure is applied to the expansible member.

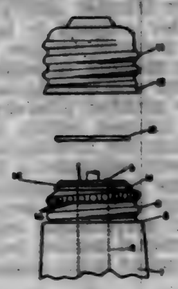
2,028,582
DENTAL RESTORATION
Otto Swan and Franz Pollitzer, New York, N. Y.
Application January 22, 1934, Serial No. 707,629
9 Claims. (Cl. 32—12)

1. An anterior dental restoration comprising a metallic shell adapted to be secured to a tooth stump, a tooth jacket mounted upon said shell, a metallic tooth supporting member extending from and integral with said shell, a tooth jacket secured to said member and formed to cover three sides thereof and a pre-formed non-metallic veneer secured to the surface of the member which is not covered by said last named tooth jacket.

2,028,583
MOP
Edward H. Tate, Malden, Mass.
Application April 14, 1933, Serial No. 666,139
4 Claims. (Cl. 15—147)

1. A mop having a handle, a pair of brackets projecting laterally and downwardly from said handle, a reinforcing member extending across the end of said handle and secured to both said

brackets, a rod having its ends permanently and rigidly secured to respective end portions of said brackets, and a cleaning element loosely mounted on said rod between said brackets to revolve thereon.



2,928,884

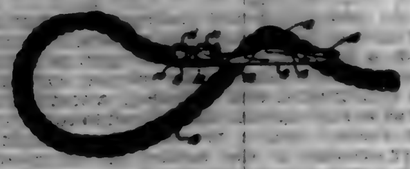
LAMP, TUBE, AND SIMILAR DEVICES

Ralph B. Thomas, Salem, Mass., assignor to Hygrade Sylvania Corporation, Salem, Mass., a corporation of Massachusetts

Application June 21, 1934, Serial No. 731,581

7 Claims. (Cl. 176—32)

1. In combination, a lamp or similar device having a screw-threaded base portion, a plurality of grooves distributed around the periphery of said base, a metal ring surrounding said base and having portions extending into said grooves, and a metal shell fitted over the said base, said ring being integrally bonded to said shell.



1,928,885

ROPE LOCK

Ira Ulfers, Milwaukee, Wis.

Application October 5, 1934, Serial No. 746,941

5 Claims. (Cl. 24—129)

1. A rope lock, comprising a frame having an elongated opening therein, the frame being formed with angularly directed tapered recesses at opposite ends of the opening for receiving angularly extended portions of a rope projected thru the opening of the frame, and means carried by a side portion of the frame for engaging an intermediate portion of the rope and holding it laterally of said angularly extended rope portions.

1,928,886

POLYMERIZATION OF UNSATURATED HYDROCARBONS

Cary R. Wagner, Chicago, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio

No Drawing. Application January 19, 1929, Serial No. 333,756

19 Claims. (Cl. 196—10)

1. A continuous non-catalytic process of manufacturing gasoline-like hydrocarbons from unsaturated hydrocarbons of the ethylene series, which consists in passing gases having an ethylenic content sufficiently high to produce an exothermic reaction when subjected to the condition of temperature and pressure herein specified through a reaction zone wherein the gases are at reacting temperatures of the order of from 650° F. to 1000° F. and superatmospheric pressures varying between 300 to 1500 pounds per square inch, and in regulating the time of residence of said gases in said zone under the conditions specified to convert a substantial percentage of the gases into gasoline-like aromatic hydrocarbons.

1,928,887

APPARATUS FOR MEASURING TEMPERATURES

Philip S. Williams and Oliver W. Johnson, Palo Alto, Calif.

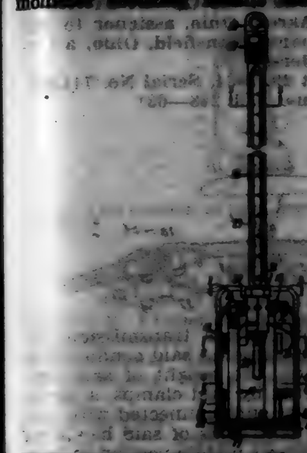
Application August 17, 1932, Serial No. 629,171

Renewed July 3, 1933

10 Claims. (Cl. 73—67)

9. An apparatus for temperature determination including a thermometer having a temperature responsive element, the apparatus comprising a container having a fluid inlet and an outlet, a closure for said inlet, means urging said closure into an inlet closing position, means for retaining said closure against the urge of said urging means in a position wherein said inlet is open, a member for suspending said apparatus, and means responsive to a jerk on said member for releasing said retaining means to permit said urging means to move said closure to close said inlet and trap a body of fluid in said container.

1,928,888



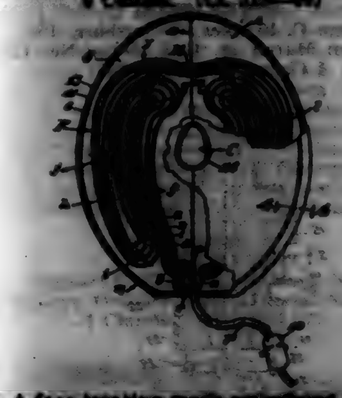
APPARATUS FOR MEASURING TEMPERATURES

Philip S. Williams, Oakland, Calif.

Application July 8, 1925, Serial No. 38,479

5 Claims. (Cl. 73—52)

8. In an apparatus of the class described, a first member, a second member, means securing said members together in an overlying but spaced relation, a shell positioned about said members and said means and cooperating therewith to provide a container opened and closed by relative movement of said shell to said members and said means, a thermometer shell extended through said second member, means for securing said thermometer shell to said second member, and a toggle spring operatively engaged on said thermometer securing means and on said shell to maintain said shell in either a container open or a container closed position.



1,928,889

ELECTRICAL FACE TREATING MASK

Joseph S. Baddour, Los Angeles, Calif.

Application May 18, 1932, Serial No. 727,261

6 Claims. (Cl. 219—46)

1. A face treating mask embodying a substantially bowl shaped face covering portion, an apron portion depending therefrom adapted to overlie the throat, and an electrical heating element carried by said mask comprising a plurality of electrical conductors leading back and forth over the cheek portion of the mask forming spaced groups of conductors, and a plurality of conductors leading across the forehead portion of the mask and electrically connecting said groups of conductors, and conductors connecting said groups of conductors to a source of electrical current supply leading over the apron portion, said heating element embodying spaced portions arranged on opposite sides of and spaced from the vertical center of the mask.

1,928,890

RIVETING MOUSE

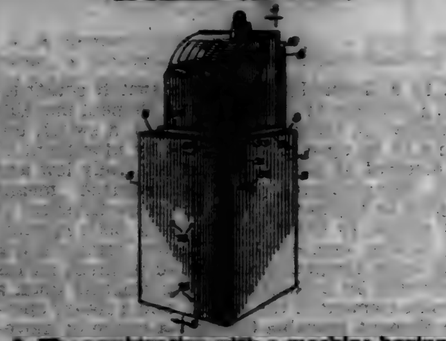
Andrew D. Baker, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash., a corporation of Washington

Application December 5, 1933, Serial No. 700,679

3 Claims. (Cl. 78—48)

1. A riveting mouse comprising a rod, a member secured on one end thereof and extending along the rod, and having two parallel inclined surfaces one at each end thereof and regularly spaced inclined surfaces disposed intermediately between and parallel to said end surfaces, a complemental member straddling the rod and having parallel inclined surfaces, one at each end thereof and intermediate surfaces, complemental to

and engaged with those of said first member, a coil spring surrounding the rod for urging said complemental surfaces on the two members together to expand said members laterally, and stop means for limiting the relative expanding movement of said two members to keep the complemental surfaces in contact.



2,928,891

MACHINE STAND AND CABINET

James E. Bales, Aurora, Ill., assignor to Lyon Metal Products, Incorporated, Aurora, Ill., a corporation of Illinois

Application April 12, 1934, Serial No. 720,187

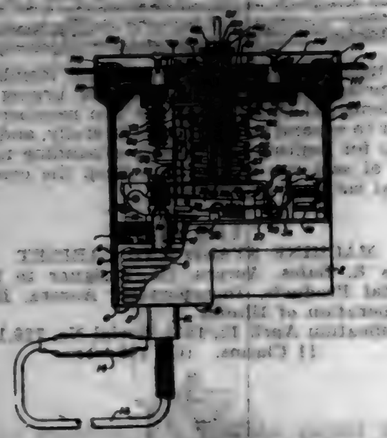
11 Claims. (Cl. 189—1)

3. The combination with a machine having an operating member, a housing therefor, means for supporting the machine in operative position outside of said housing, manually operable control means, and mechanism operated by said control means for causing said machine to move into tamper-resisting position within said housing, and means for locking said machine in such position comprising a door member which follows the movement of the machine and a lock therefor.

2,928,892

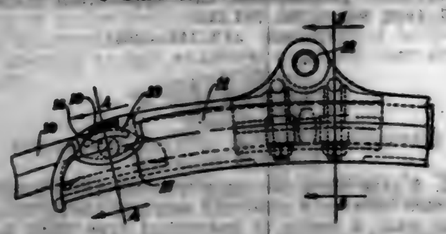
TYPE CLAMP

Charles J. Bock, Philadelphia, Pa.



Original application October 24, 1929, Serial No. 402,054. Divided and this application March 7, 1934, Serial No. 714,515

5 Claims. (Cl. 101—331)

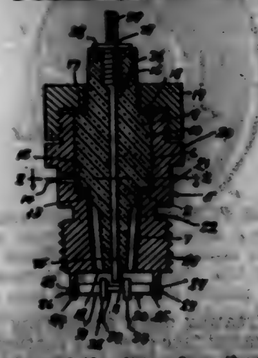


1. A type block having a type-receiving groove formed between a rigid wall and a relatively movable wall, a series of individual type slugs independently slidable to different positions in and along said groove, and means at predetermined relatively closely spaced points longitudinally of said groove for flexing the movable wall toward the rigid wall to clamp said type slugs therebetween.

2,028,295
MEANS AND METHOD FOR CONTROLLING REFRIGERATOR TEMPERATURE
Carlton W. Sensenand, Cleveland, Ohio, assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 4, 1933, Serial No. 693,169
15 Claims. (Cl. 200—81)

1. In a thermally actuatable switch construction, a thermostat comprising an element movable responsive to temperature changes, a switch operable to be opened and closed by movement of the element at predetermined relatively low and high temperatures, and adjustment means adapted to adjustably vary the responsiveness of said switch to effect concurrently both opening and closing operations at higher temperatures or at lower temperatures, the adjustment means comprising an adjustable spring reacting upon a movable element of the switch, and a rotary operable element movable through a range of movement, a threaded element rotatable by the operable element, a second threaded element meshed therewith movable thereby to adjust the spring tension upon rotary movement in one direction, and a cam rotatable by the rotatable element having a cam follower adapted to adjust the spring tension upon rotary movement in the other direction.

2,028,294
CONDUCTOR CLAMP
Floyd G. Bevard, Akron, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application August 28, 1934, Serial No. 741,861
9 Claims. (Cl. 248—63)



1. The combination with a conductor, of a support for said conductor, a seat for said conductor mounted on said support, and a roller bearing having relatively travelling connection with both said seat and support to facilitate longitudinal movement of said seat relative to said support.

2,028,295
SPRING SUPPORT FOR CONDUCTORS
Floyd G. Bevard, Akron, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application August 28, 1934, Serial No. 741,862
11 Claims. (Cl. 248—63)

1. The combination with a transmission line conductor, of clamps engaging said conductor at spaced points thereon, the weight of said conductor being supported by said clamps, a spring bar having its opposite ends connected with said clamps respectively, both ends of said bar being bent downwardly from its middle portion to form a bight at its middle portion, the ends of said bar being curved upwardly at opposite sides of said bight, and a horizontal pivot engaging said bight for supporting said bar.

2,028,296
SPARK PLUG
George C. Brinker, Greensburg, Pa.
Application March 23, 1935, Serial No. 12,721
1 Claim. (Cl. 123—169)

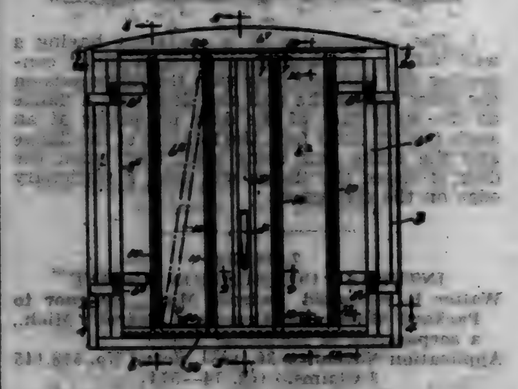
A spark plug of the type described comprising a body containing an insulator, said insulator having an electrode therein having an exposed point at the lower end thereof, said body having a slidable and rotatable shaft disposed adjacent the exposed end of the electrode, and a pair of spaced integral disks on said shaft projecting from said shaft beyond the free end of the electrode and spaced therefrom.

2,028,297
POCKET CIGARETTE MAKING MACHINE
Edward Calderio, Garfield, N. J.
Application January 28, 1934, Serial No. 708,308
11 Claims. (Cl. 131—5)

4. A cigarette making machine comprising a casing composed of two hinged sections, a roller journaled in each of said sections, an apron extending between and connected to said rollers, adapted to form a trough between said rollers, for the rolling of a cigarette, and spring tension members struck from the sides of said casing, centrally of their length, adapted to be moved into frictional engagement only with the central portion of the apron wound on said rollers to

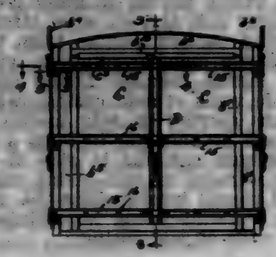
control the tension of said apron while rolling the cigarette.

2,028,296
PROCESS FOR THE PURIFICATION OF CAUSTIC SODA SOLUTIONS
Raymon E. Vander Cook, Inkster, and Alexander M. Lawson, Trenton, Mich., assignors to Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application April 27, 1935, Serial No. 18,602
13 Claims. (Cl. 23—201)



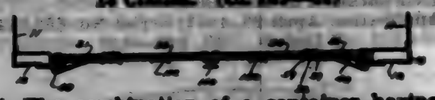
1. In the process of purifying concentrated caustic soda solutions involving the addition of sodium sulphate thereto to form a substantially insoluble complex salt with sodium chloride and caustic soda, the removal of the complex salt from the solution and the recovery of sodium sulphate therefrom; the steps to prevent an accumulation of sodium carbonate in the system, which comprise dissolving recovered sodium sulphate in water; adding sulphuric acid thereto; treating the complex salt with said solution to dissolve sodium chloride and caustic soda therefrom, leaving at least a portion of the sodium sulphate undissolved; separating the undissolved sodium sulphate from the solution; and thereafter reusing at least a portion of the recovered sodium sulphate in the process for the purification of further amounts of caustic soda solution.

2,028,330
OIL BURNER
Herbert E. Earl, Roselle Park, N. J.
Application October 2, 1931, Serial No. 691,585
7 Claims. (Cl. 158—77)



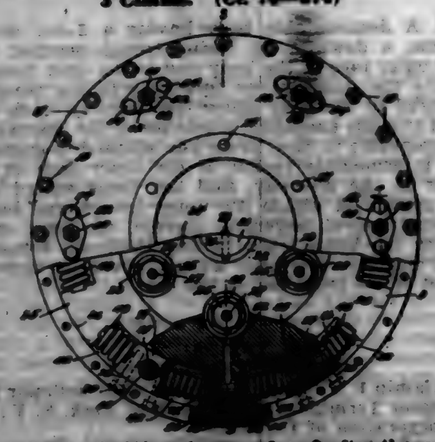
1. In a device of the class described, a casing, a hollow shaft journaled in the casing and having an intake end and a discharge end, means for rotating the shaft in one direction, a pump for fluid fuel operatively connected to the intake end and driven by the shaft, said pump constituting means for driving fluid fuel through the shaft, from the intake end to the discharge end, a tip on the discharge end and including a thimble having an outlet in its forward end, and a nozzle in the thimble and communicating with the discharge end, the nozzle having a transverse port through which the fluid fuel is discharged and caused to move forwardly, and circumferentially in the thimble in said one direction, when the shaft is rotated, and means interposed between the nozzle and the outlet of the thimble for causing the fluid fuel to move forwardly, and circumferentially in the thimble, in a direction opposite to that mentioned, while the shaft continues to rotate, and before the fluid fuel reaches the outlet of the thimble.

2,028,906
DEMOUNTABLE FREIGHT CONTAINER
Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware
Application April 29, 1935, Serial No. 668,514
5 Claims. (Cl. 236—1.5)



1. A demountable body having a Z-bar door frame, a downwardly facing trough secured to the outer face of the body and to the door frame above the doorway, an upwardly facing trough secured to the body below the doorway, each of said troughs extending crosswise of the doorway, a removable vertical brace bar adapted to engage an intermediate region of the outer face of a door in the doorway, said bar being seated at its upper end within the upper trough and held against lateral movement therein, the lower end of the bar being seated within the lower trough, and means in the lower trough preventing movement of the lower end of the bar.

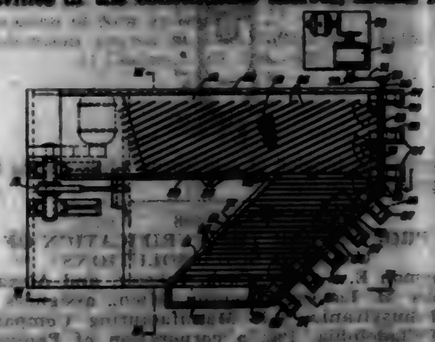
2,028,961
DEMOUNTABLE BODY
Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware
Application May 18, 1933, Serial No. 671,717
7 Claims. (Cl. 220—1.5)



2. The combination of a demountable body having an end wall with a doorway in it materially narrower than the body and, which leaves wall portions between the outer edges of the doorway and the body sides, a pair of doors adapted to seat in the doorway hinges carried at the end corners of the body having reinforcing straps leading across the end walls and secured to the doors, and means for locking the doors to the body adjacent the inner edges of the doors, and a tension brace within the body for the end wall above the doors leading from the central region of the end wall to each of the sides.

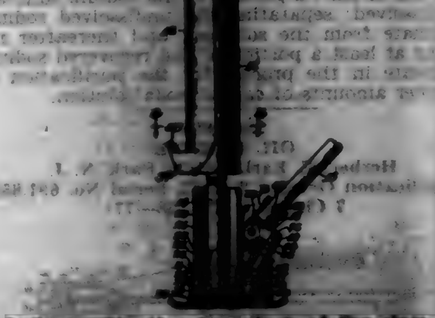
2,068,902
REMOUNTABLE BODY
Benjamin F. Pitch, Greenwich, Conn.
Application September 13, 1933, Serial No. 689,130
10 Claims. (Cl. 189—46)

1. The combination of a container having a wall with a doorway through it, a hinge connecting the wall and door with the hinge axis on the outer side of the wall and door, and a flange on the outer face of the door projecting at an angle to such outer face, the location of the flange and the hinge axis being such that when the door is closed the flange will abut a stationary edge on the container.



2,068,903
INTERNAL COMBUSTION ENGINE
Walter E. Griswold, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 20, 1931, Serial No. 576,145
3 Claims. (Cl. 74—574)

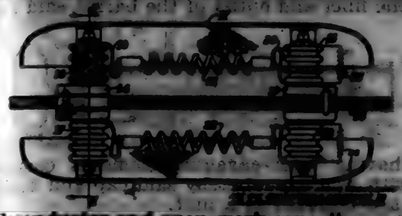
1. In a vibration damper for shafts, the combination with a casing adapted to be secured to a shaft, said casing having an inner portion adjacent the shaft axis and an outer circumferentially extending portion remote from the shaft axis, of an inertia member rotatable within said casing, said inertia member fitting closely between the side walls of said casing, radially extending means carried by said inertia member and casing and cooperating to form a plurality of fluid chambers variable in size in response to relative movement of said casing and inertia member, and means intermediate the inner and outer portions of said casing for definitely spacing the side walls of said casing.



2,068,904
COAL CLEANING APPARATUS
Mack E. Haworth, Pittsburgh, Pa., assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application April 9, 1931, Serial No. 528,725
17 Claims. (Cl. 209—467)

2. A coal cleaning apparatus comprising a main perforated deck, a supplemental perforated deck branching laterally and rearwardly from one side of the forward end portion of said main deck, a plurality of spaced guiding devices on the main deck, a plurality of spaced rifles on the supplemental deck, means for stratifying the materials on said decks according to the specific gravities of the constituents thereof, means for

progressively removing the lowermost strata from the forward edges of said decks and discharging the lightest material from that end of said supplemental deck remote from said main deck.



2,068,905
JACK
Gothard G. Hein, Waukesha, Wis., assignor to Hein-Werner Motor Parts Corporation, Waukesha, Wis., a corporation of Wisconsin
Application April 1, 1935, Serial No. 14,196
15 Claims. (Cl. 254—93)

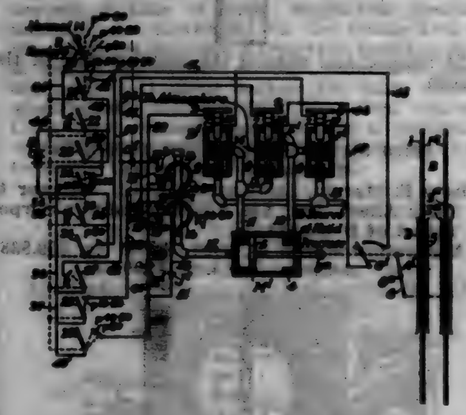
9. In combination in a jack of the class described, a base, an upright reservoir cylinder supported upon said base, a plunger cylinder disposed within said reservoir cylinder and supported upon said base, a plunger operable within said plunger cylinder, a depending head structure rigidly attached to said plunger and otherwise out of contact with the remainder of the jack, said head structure being guided and supported solely by said plunger throughout its range of operation.

2,068,906
MARKER LIGHT
Ralph Higgins, Akron, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application October 10, 1932, Serial No. 637,108
11 Claims. (Cl. 177—352)

1. The combination with a high voltage transmission line conductor, of an open-work capacitance member of conducting material disposed adjacent said conductor but insulated therefrom, and a lighting element disposed at one side of said capacitance member in position to shine therethrough and electrically connected between

said conductor and open-work capacitance member and energized by charging current flowing between said conductor and capacitance member.

2,068,907
CONDENSER
Ralph Higgins, Akron, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application November 2, 1932, Serial No. 642,924
5 Claims. (Cl. 175—41)



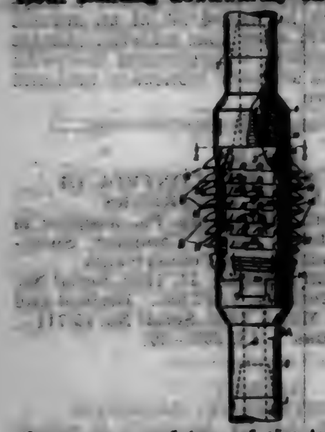
1. A condenser comprising a pair of hollow, tapered, dielectric shell members nested together one within the other, conductor elements separated by said shell members, the inner of said shell members projecting from the end of the outer shell member, a conductor element between said shell members projecting from the end of the outer shell member, and a dielectric shield surrounding the projecting portion of said conductor element.

2. In a condenser, a pair of hollow, dielectric shell members nested one within the other, a conductor element interposed between said shell members and comprising a conductor coating on the outer surface of the inner shell member, and a backwardly directed flange on said inner shell member forming a pocket receiving the terminal edge of said conductor element.

2,068,908
POLYHYDRIC ALCOHOL-POLYBASIC ACID-MONOBASIC ALIPHATIC ACID ANHYDRIDE CONDENSATION PRODUCT AND PROCESS OF MAKING THE SAME
Gilbert F. Hoffmann, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
No Drawing. Application June 26, 1929, Serial No. 373,042. Renewed May 20, 1932
11 Claims. (Cl. 260—6)

1. The process of producing a hard, soluble resin which comprises heating together a polyhydric alcohol and an anhydride of an organic dibasic acid to form a resinous material capable of further esterification, incorporating therewith an anhydride of an aliphatic monobasic acid and heating the mixture.

2,068,909
APPARATUS FOR THE CONTROL OF RAILWAY CAR RETARDERS
John W. Livingston, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application February 11, 1932, Serial No. 592,262, now Patent No. 2,022,696. Divided and this application May 2, 1935, Serial No. 19,711
6 Claims. (Cl. 303—26)



1. Apparatus for controlling the supply of fluid pressure to a car retarder actuating motor comprising an application magnet, an exhaust magnet, a normally closed contact responsive to the pressure in the application end of said motor and arranged to open at a predetermined pressure, a normally open contact responsive to the pressure in the application end of said motor and arranged to become closed at a pressure somewhat higher than said predetermined pressure, two line wires, means for reversibly supplying current to said line wires, two asymmetric units, means including one of said asymmetric units for connecting said application magnet with said two line wires, means including said normally closed contact and the remaining asymmetric unit for connecting said application magnet with said line wires, said two asymmetric units being oppositely disposed with respect to said line wires, and means including said remaining asymmetric unit and said normally open contact for connecting said exhaust magnet with said two line wires.

2,068,910
REAMER
John W. MacClatchie, Los Angeles, Calif.
Application February 3, 1934, Serial No. 709,551
14 Claims. (Cl. 255—71)

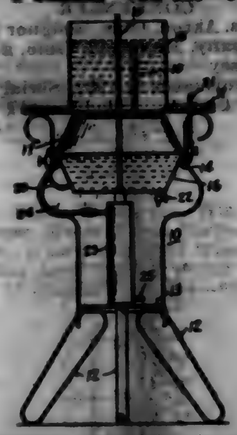
1. In a rotatable well reamer, a plurality of radially projecting cutting teeth relatively spaced around the entire circumference of the reamer, the end of each tooth which is its leading end with relation to the direction of rotation of the reamer extending below the trailing end of the next preceding tooth, and the lower faces of the

teeth slanting downwardly circumferentially of

the reamer and toward the trailing ends of the teeth.

2,028,911
PROCESS FOR MAKING TUNGSTEN CARBIDE CASTINGS
Orrin F. Marvin, Los Angeles, Calif., assignor to Mills Alloys, Inc., Los Angeles, Calif., a corporation of Delaware.
Application March 19, 1932, Serial No. 599,838
4 Claims. (Cl. 22—200)

1. The process of manufacturing thin castings made from material difficult to fuse, which comprises pouring the fluid material from which the casting is to be made, into a mold and also around the outside of the mold.

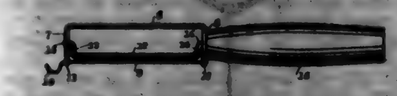


2,028,912
VISCOUS FLUID PUMP
Rudolph D. Mazlo, Ravenna, Nebr.
Application August 25, 1934, Serial No. 741,474
1 Claim. (Cl. 103—163)

In a grease pump, a barrel having its inner end permanently closed and provided at its upper side with an elongated inlet extending throughout the major portion of the length of the barrel from a point near the inner end of the barrel to a point adjacent its outer end as well as extending down at the sides of the barrel nearly to a horizontal plane touching the axis of the barrel, the outer end portion of the barrel being provided with an outlet at the lower side of the barrel diametrically opposite the said elongated inlet, a detachable cap closing the barrel at its outer end, a bushing swiveled upon said cap, a sleeve valve rotatable in the barrel and having an inlet and an outlet identical with the inlet and outlet of the barrel displaced relatively and adapted to register alternately therewith, and a piston reciprocable in the barrel and including a square piston rod slidable through said bushing but rotatably supported thereby, said sleeve valve being closed at its outer end and rotatable by said square piston rod for actuating the valve to control the inlet and outlet of the barrel, said bush-

ing having latch-engaging elements cooperating with said cap whereby said cap and bushing only are replaced as a unit.

2,028,913
AQUARIUM
Paul Neumann, Milwaukee, Wis.
Application May 27, 1933, Serial No. 673,134
4 Claims. (Cl. 119—5)



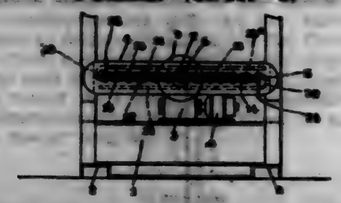
1. An aquarium comprising in combination, a frame including a plurality of legs, a fish bowl carried by the legs, a storage tank frustro-conical in shape disposed between the legs and below the fish bowl, a fountain nozzle for discharging water from the storage tank to the bowl in the form of a spray, a compressed air reservoir disposed between the legs of the frame and connected to the water storage reservoir for building up a pressure on the water to cause it to flow through the nozzle to the bowl, a frustro-conical drain receptacle disposed between the storage tank and the bowl, the frustro-conical storage tank and drain receptacle being positioned base to base to adapt them for mounting between the legs of the frame to give an appearance of symmetry, a valve control connection between the storage tank and drain receptacle to transfer water by gravity, a standpipe connecting the bowl and drain receptacle, the standpipe serving to maintain a predetermined water level in the bowl, and means for controlling the flow of air from the compressed air reservoir to the storage tank thereby to control the delivery of water to the bowl through the fountain nozzle.

2,028,914
PRODUCTION OF RESIN LIKE MATERIALS
William A. Hayes, Oshkosh, Ill., and Gilbert F. Hoffmann, Milwaukee, Wis., assignors to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
No Drawing. Application June 27, 1929, Serial No. 374,265
7 Claims. (Cl. 260—6)

1. The method of producing a soluble resin-like material which comprises reacting upon an ester

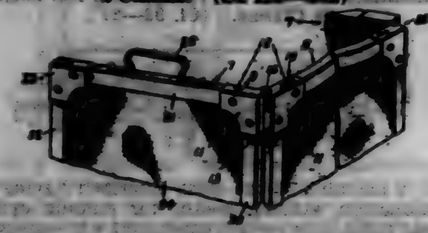
capable of further esterification of a polyhydric alcohol and an aliphatic monobasic acid having less than five carbon atoms with an anhydride of an organic dibasic acid.

2,028,915
VEGETABLE PEELER AND SLICER
Charles J. Ott, Bellingham, Wash.
Application August 19, 1933, Serial No. 685,788
1 Claim. (Cl. 30—30)



A device of the kind described including, a blade holder, a blade having a cutting edge fastened in the said holder, a gage including a gage rod having a bent-over outer end with an axle thereon and a bent-over inner end with an axle handle rod thereon mounted for oscillation in bearings in the said holder to dispose the gage rod parallel with the said cutting edge and at adjustable spaces therefrom, a handle having a longitudinal hole therethrough and a nut recess in the outer end thereof disposed with its inner end bearing on the said blade holder with the said axle handle rod extended through the longitudinal handle hole, and a nut engaged in the said handle recess and with a thread on the outer end of the said axle handle rod.

2,028,916
APPARATUS FOR LAMINATING GLASS
William Owen, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application March 5, 1934, Serial No. 714,778
6 Claims. (Cl. 49—81)



1. In apparatus for making laminated glass, a vertical tank containing a body of heated liquid, an endless conveyor movable vertically into the bath and then upward and out of the bath, a plurality of carriers for the sets of sheets to be laminated, each comprising a flat rubber container closed at its upper and lower sides and open at one end pivotally and removably connected to the carrier so that the container and the sheets therein lie in a vertical plane during their movement to and from and through the liquid, and clamping means for closing the open ends of the containers.

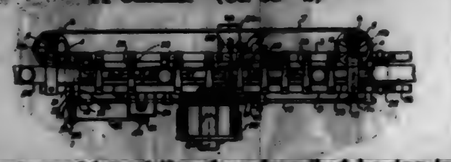
2,028,917
TURNOVER TABLE FOR GLASS SHEETS
William Owen, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application May 15, 1935, Serial No. 21,437
4 Claims. (Cl. 214—1)

1. In combination, a turnover frame for glass sheets mounted for rotation about a horizontal axis intermediate its ends through an angle of 180 degrees, a pair of sheet supporting members mounted for movement on the frame and arranged when in sheet supporting position to lie in opposition parallel to each other and closely adjacent, and guide means for each member whereby the member may be moved edgewise from sheet supporting position to a position in which it no longer lies above the glass sheet so as to permit the removal of the sheet.

2,028,918
FOLDABLE SCREEN
Ralph Paxon, Los Angeles, Calif.
Application February 12, 1935, Serial No. 6,312
3 Claims. (Cl. 129—32)

1. A screen of the kind described including a plurality of sections each of which is provided with a rectangular frame of angle iron, the angle irons at the sides, top and bottom of the frame being arranged to have one leg of each in a common plane and the remaining leg of each projecting in a common direction from said plane, corner pieces for said frame each having a plane body portion provided with a pair of side flanges at right angles to each other and projecting in like direction from the body, said body being riveted to adjacent sides of the frame with the flanges embracing the corners, the corner pieces of adjacent frames having projecting and overlapping hinge eyes, and pivot rivets extending through said eyes, said hinge eyes being arranged on the horizontal flanges of the corner pieces with their centers alining with the free edges of the vertical flanges.

2,028,919
TEXTILE PICKER
Edward H. Parker, Arlington, Mass., assignor to W. H. Bagshaw Co., Lowell, Mass., a corporation of Massachusetts
Application June 27, 1934, Serial No. 732,587
3 Claims. (Cl. 19—97)



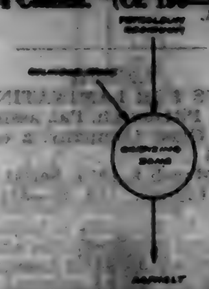
3. A picker pin for use with a picker drum lag, said pin having a body portion designed to fit

snugly in a preformed hole in such a lag, the body portion of the pin being of substantially rectangular elongate cross section, its front and rear faces being narrower than its side faces, the latter faces having integral segmental buttresses projecting from them, the curved surfaces of each buttress being the arc of a circle of a diameter

intermediate the transverse and front-to-rear dimensions of the body portion of the pin, said buttresses extending longitudinally of the pin beyond its body portion but terminating at a substantial distance from the free end of the pin, the free end portion of the pin being substantially rectangular in transverse section.

2,022,920
LABELING AND WRAPPING MACHINE
Ferentus Reid, Cincinnati, and Henry Hettinger, St. Bernard, Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Application January 13, 1932, Serial No. 586,278
14 Claims. (Cl. 93—8)

1. A machine of the class described having in combination, guiding means for guiding cylindrical containers as said containers are conveyed through the machine, feeding means for intermittently admitting the containers to said machine, a belt receiving the containers from said feeding means and movable in a horizontal plane in such spaced position relative to said guiding means as to frictionally bear against the sides of containers in upright position and to cause said containers to be advanced with continuous rotary movement about vertical axes, said admitting means dependent for operation upon the presence of a definitely arranged group of containers thereat.



2,022,921
BEATER
Axel H. Ross, Chico, Calif.
Application September 8, 1934, Serial No. 743,710
3 Claims. (Cl. 259—132)

1. A hand member comprising a frame member, a shaft depending below the frame, a beater element on the lower end portion of the shaft, a tubular shaft surrounding the first named shaft above the element, means between the frame member and shafts to rotate the latter, a beater element supported by and depending from the tubular shaft about the first named beater element, a boss on the last named beater element in which the lower end of the first named shaft is turnably supported, said first named shaft also being tubular, and a rod having a head on its lower end projecting upwardly through said first

named shaft and secured in the frame member; the head engaging the bottom of the boss.

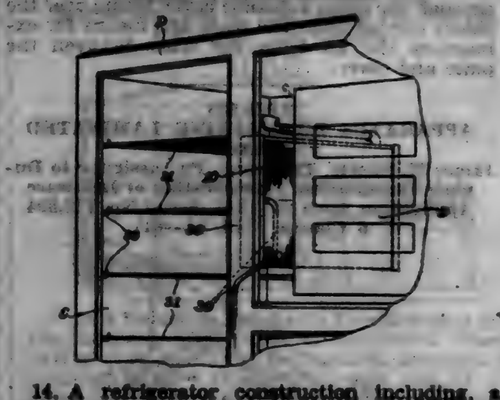
2,022,922
PROCESS OF MAKING ASPHALT
Bernard L. Ross, Cleveland, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
Application June 17, 1933, Serial No. 677,059
4 Claims. (Cl. 196—74)

1. A process of making asphalt, which comprises mixing a distillation residuum substantially freed from lubricating hydrocarbons and an oily distillate cylinder stock having a viscosity of at least 100 at 210° F. Saybolt, and oxidizing the mixture.

2,022,923
ALL METAL SPRINGLESS AUTOMATIC FAUCET AND VALVE
James C. Ross, Seattle, Wash.
Application July 24, 1934, Serial No. 736,695
3 Claims. (Cl. 251—126)

1. A self-closing faucet including a body formed with an upper chamber having a discharge outlet and a lower chamber open to service flow, a partition dividing the chambers and formed with an upwardly converging opening to establish communication between the chambers, the lower end of the opening merging into a conical valve seat, a valve operative in the lower chamber for cooperation with said seat, a plunger operative in the upper chamber, a conical stem connected to the valve and rearwardly with the plunger, the stem being of a dimension to substantially fill the opening in the partition when the valve is closed, and to gradually increase the free space of the opening as the valve is moved away from its seat, whereby on closing the valve the free space of the opening is gradually reduced to thereby serve as a gradual check for the flow of water prior to the closing of the valve, whereby to prevent water hammer impact between the valve and its seat, and means for operating the plunger.

2,022,924
PENCIL SHARPENER
Claude O. Rowe, Santa Monica, Calif., assignor of one-half to Wright Fillmore and Lil A. Johnson, both of Los Angeles, Calif.
Application June 4, 1935, Serial No. 24,569
3 Claims. (Cl. 120—93)

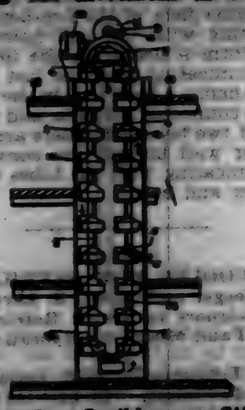


1. A pencil sharpener including, a relatively large and heavy wheel, mounted for revolution in bearings, having a central opening therethrough, and pencil-sharpening means fastened in the said central opening disposed for sharpening any pencil extended and retained therein by revolving the said wheel.

2,022,925
STEAM GENERATOR
Henry J. Schneider, Quincy, Mass.
Application February 14, 1931, Serial No. 6,513
6 Claims. (Cl. 122—329)

1. A boiler comprising a substantially horizontal upper chamber, two lower smaller substantially horizontal chambers defining the upper lateral boundaries of a fire-box, an inner bank of generating tubes connecting respective lower chambers to said upper chamber, and an outer bank of convection tubes connecting respective lower chambers to said upper chamber, a multiplicity of water tubes extending downwardly from respective lower chambers and defining the sides of a water wall of the fire-box, water tubes communicating with the last named tubes arranged to form a water floor of the fire-box, water tubes communicating with the last named tubes arranged to form a heater in the fire-box, water tubes communicating with the last named tubes arranged to define a back wall in the fire-box, and water tubes connected between said upper chamber and said two lower chambers arranged to define a water wall beyond the convection tubes and communicating with the tubes of said walls, floors, heater and boiler.

2,022,926
WATER COOLER FOR REFRIGERATORS
Walter G. Seeger and Robert S. Ahrens, St. Paul, Minn., assignors to Seeger Refrigerator Company, St. Paul, Minn., a corporation of Minnesota
Application February 14, 1934, Serial No. 711,227
19 Claims. (Cl. 62—141)



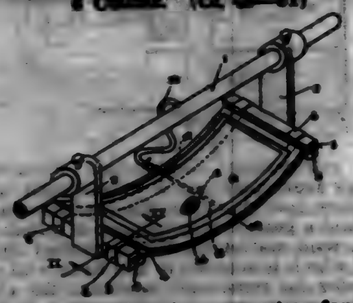
14. A refrigerator construction including, a stationary front member, a water cooler including a hollow body portion, a filler member, a drain faucet, and a pair of brackets one of which is secured to said stationary front member and the other of which is secured to the back wall of the refrigerator for removably enclosing the ends of said body portion, one of said brackets including spring clips for holding one end of said body portion in said bracket.

16. In a refrigerator cabinet, in combination, a cooling compartment, a door for said compartment, a drinking water receptacle fixedly supported in said cooling compartment, and a filling spout for said tank pivoted thereto at one end, the other end of said spout being swingable to a position exterior to said cabinet when said door is in open position and being normally positioned within said cabinet when said door is closed.

2,022,927
APPARATUS FOR MAKING LAMINATED GLASS
James H. Sheris, Tarentum, Pa., assignor to Duplate Corporation, a corporation of Delaware
Application February 17, 1934, Serial No. 711,726
8 Claims. (Cl. 18—17)

1. In apparatus for making laminated glass, a vertical tank containing a body of heated liquid, an endless conveyor movable vertically into the bath and then upward and out of such bath, a carrier for the sheets to be laminated comprising a base plate having a curvature correspond-

ing to that of the sheets to be laminated pivotally supported on the conveyor so that the plate lies transverse to the line of movement of the conveyor during the movement of the conveyor



through the bath, a flexible cover fitting over the sheets carried upon the plate and means for exhausting the air from the space between the plate and cover.

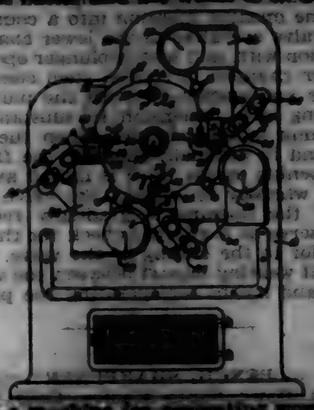
2,023,928
APPARATUS FOR MAKING LAMINATED GLASS

James H. Sheris, Tarentum, Pa., assignor to Duplate Corporation, a corporation of Delaware

Application April 23, 1934, Serial No. 722,894

6 Claims. (Cl. 49—61)

1. In combination in apparatus for making curved laminated glass, a base sheet of rubber supported so that it has longitudinally substantially the curvature of the glass sheets to be laminated with its side edges free to move toward each other, a flexible sheet of rubber having its edges free adapted to fit over the glass sheets carried upon the base sheet and engage the base sheet outside the edges of the glass sheets, and means for exhausting the air from the space between the rubber sheets.



2,023,929
METHOD OF AND APPARATUS FOR GENERATING HOLLOW FACED WORMS AND THE LIKE

Oliver G. Simmons, Lakewood, Ohio, assignor, by mesne assignments, to Dual L. Simmons

Application July 31, 1931, Serial No. 554,926

25 Claims. (Cl. 90—4)

1. The herein described method of generating worms and the like, which consists in so positioning a gear shaped cutter with respect to a worm blank that the teeth of the cutter in proximity to the blank, extend in the direction of the worm thread to be generated, and relatively feeding the blank in a planet path across the face thereof in the direction of the worm thread while continuously rotating the blank and cutter at relative speeds corresponding to the tooth ratio between the cutter and the worm to be generated.

13. In a machine for generating worms or the like, a frame, a rotatable turret having its support carried by the frame, a rotatable work spindle angularly mounted in the turret at an angle to the plane of revolution of the turret equal to the helix angle of the worm to be generated, a rotatable cutter spindle carried by said frame, means for rotating said spindles in time relation, and means for continuously rotating said turret during the operation of the machine.

2,023,930
VIBRATION DAMPER AND PROCESS OF ASSEMBLY

John J. Tayler, Barberton, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey

Application March 2, 1934, Serial No. 713,659

9 Claims. (Cl. 173—13)

9. The combination with a hollow conductor, of a weight disposed within said conductor and resiliently pulled therein out of contact with the interior of said conductor, means cooperating with said weight to dissipate energy when said conductor is moved relative to said weight and means secured to the interior of said conductor and supporting said energy dissipating means.

2,023,931
CONDUCTOR SUPPORT

John J. Tayler, Wadsworth, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey

Application May 17, 1933, Serial No. 23,121

3 Claims. (Cl. 248—63)

1. A cable clamp comprising a main body member having a longitudinally extending cable seat
